# "John Bull"

## Larrigans & Leggins

We illustrate two of our products that should be in the outfit of every lumberman. Both the larrigans and leggins are made of a special oil-tanned leather of our own tanning. It is unusually tough and absolutely waterproof.

When you need larrigans or leggins ask for "John Bull" brand and insist upon getting it. Every pair stamped with our trade mark.

# Model 5 Number 77—

## Watch The Imitators Get Busy

**They may try to follow our lead, but they will only flatter us.**

Brains and methods perfected the Model 5, and we haven't discharged our engineers and our crew of mechanics, who are busy turning out 77's from morning till night.

Speed? That's a thing you don't hear much about these days, for that's been solved. The Model 5 not only leads in speed but workmanship and efficiency are paramount.

**The Seventy-Seven was the first successful fast feed Planer and Matcher—The Model 5 is the last word on the subject down to date Feb. 15, 1913**

P. O. Box 1384 - CALGARY, ALTA.

# An Elucidation

"Breddern! I'se gwine t' tell yo how long 'ternity is. Ef lil sparrer'd take a drap o' watah in his lil bill from de 'Lantic ocean an' hop, a hop, a day, all de way 'cross 'Merica to de Pacific ocean and drap it in dat ah ocean and turn hissef eround and hop, a hop a day, all de way back, an' take 'nother drap o' watah, an' continner on in dat way til dat ah sparrer had cahied all de watah in de 'Lantic ocean to de P'cific ocean den it'd be on'l ahly mo'nin' in 'ternity," expiated the Rev. Dr. Johnsing.

This is similar to the way some people sized up the timber supply of the United States. They thought the timber would last forever, that it would be early morning in eternity before our virgin timber resources were exhausted. They have had a sad awakening.

A remnant only of the White Pine and hardwood timber is left; yellow pine has passed the peak of production. Values and uses of all kinds of timber are increasing steadily.

Opportunities for profitable investment in the south and west are now ripe. After five years of lassitude the timber market has become active. That means a big increase in values. Old top-of-the-market prices have become the ordinary valuation and the next two years will witness the establishment of new price records.

Wise men buy at the beginning of a rise. The beginning is here. Are you wise?

## The Truck That Saves It's Cost Several Times Over in The Year

This truck is designed for lumber yards and planing mills and will be found invaluable for loading and unloading cars.

The front gearing is detachable and may be used with eight or twelve hind gearings. It is a double-header, nuts on axles being kept tight with Steel Cotter Keys.

Oil cups on the wheels and the fact that there is no resetting of tires saves any amount of trouble.

The old wooden-wheeled truck is a back number in comparison with this. It will pay you to write for our general catalogue which describes these trucks in detail, and pick out the style you want now.

## SELECTION OF LOCOMOTIVES

WHAT SHOULD BE KNOWN BEFORE YOU PURCHASE LOCOMOTIVES:—

Nature of the service.

Capacity of the cars and weight of train.

Character of track—is it new or old.

Length of haul.

Is time an important factor.

Do you want a quick locomotive or a big puller.

Distance from base of supplies and quarters for the men.

Water and coal carrying capacity.

All these items and more should be considered.

A careful study of conditions may mean larger profits.

Our experience may be valuable in considering them.

A dollar saved is more than a dollar earned.

Write or wire us, or better still, come to see us.

## The Shimer Cutter Heads For Door and Sash Work

These Heads are designed especially to meet the requirements of Door and Sash makers—to save all the hand fitting. The shape of the mould desired is turned into the Circular Bits, guaranteeing a uniform pattern, and that there will be no trouble in framing door and sash parts when matched with Shimer Cutter Heads. Prices are as follows:

|                                                                                    |         |
|------------------------------------------------------------------------------------|---------|
| Door Head in solid section, complete with Bits to work 1 to 1 1/4 in. Doors, ..... | \$18.03 |
| Door Head with Expansion feature complete, extra .....                             | 2.60    |
| Bits for heavier doors \$7.28 to \$9.36 per set.                                   |         |
| Sash Head in solid section, complete for 1 to 1 1/4" Sash, .....                   | \$17.91 |
| Sash Head with Expansion feature complete, extra .....                             | 2.60    |
| Bits for heavier sash \$7.40 to \$7.66 per set                                     |         |
| Cope Heads without Bits, each .....                                                | 6.45    |
| Cope Bits moulded to pattern, \$1.43 to \$1.56 each.                               |         |

If you wish to reduce running expenses it will pay you to study the advantages offered by the Shimer Cutter Heads. There is nothing like them for strength—for Reliability—for Fast Cutting—for Quick Adjustment—for all-round work and lasting qualities.

These tools are turned out of Solid Steel Forgings—have the Shimer "make-ready" which saves you all the fitting and trying—keep your work up to the standard.

**W**ATEROUS Steel Carriages are being used in the largest, best equipped Mills in Canada to-day. Built for fast cutting, for accuracy, and to give operating service, they are carefully put together of the best materials obtainable—they stay right.

**I**NCREASE in cutting efficiency and the increase of cutting speed have been taken care of in the design of these Carriages. Improvements in the knee and head blocks and in all moving parts to overcome lost motion; a new Setworks—our No. 4—which absolutely prevents and will not develop slack; new style, inserted tooth, quick and easy operating dogs; a friction receder that

is operated with the Setworks—these special features are what keep the Waterous Steel Carriage at its place at the head of the list of "Up-to-date Sawmill Equipment." We build our Steel Carriages in sizes of 36" to 72" knee opening, in any length and with any number of head blocks—screw or rack motion. They are adaptable for rope or gunshot feed.

# Fully Guaranteed Sawmill Machinery

This is the only kind for you to buy to ensure satisfactory and continuous operation throughout the entire sawing season.

All our sawmill machinery is sold on an absolute guarantee of proper operation and perfect construction.

Naturally, therefore, we buy only the highest grade materials and use only skilled workmen, and everything is built under the most careful supervision.

These things are necessary to produce well built machinery, but they would be useless without proper design—and the “know how” of designing sawmill machinery can only come after long experience.

We have such complete confidence that our machinery is correctly designed that our guarantee is:

**“These machines are guaranteed against defective materials and workmanship for the period of one year, and their proper and successful operation is also absolutely guaranteed. Should any parts fail through defects, we will replace them free of charge, or should any machine not work properly, we will remove it at our expense and refund any part of the purchase money which may have been paid to us.”**

This guarantee goes with all our machines and we have never had to take back a standard machine yet.

And back of this guarantee is our fifty years' experience building sawmill machinery for stationary mills only.

It will pay you to buy your machinery from us this winter.

VIEW OF OUR MILL AT CACHE BAY, ONT.

# CHOICE PINE

Lumber buyers who come face to face with the consuming public are to-day experiencing a demand for quality products that we anticipated a good many years ago.

Our first move in the production of Pine Lumber was the acquisition of a good supply of timber—not only a good quantity, but particularly a good quality, and the best proof we can offer you of our success in the selection of this kind of timber is found to-day in our

# Don't Hesitate

You know the old proverb "He who hesitates is lost"—Well, of course, we know that that is contradicted by the just as old proverb "Look before you leap"—The logical conclusion therefore is—"you can't do both." But that is just the trouble with many business men. They take a good look and then they hesitate. There is no need to hesitate in deciding where to purchase

## Hemlock, Pine and Hardwood

You are quite safe in coming to us—we will give you the best on the market at the right price.

Write us for quotations—take a good look at our proposition then send us your order at once. Don't Hesitate.

# First Class Opportunity to buy Standing Timber and Mill Machinery CHEAP

The undersigned offer for sale in large or small blocks all their remaining timber lands, mills and town property situated in the Town of Parry Sound, Ont.; Tug Scow and other Lumber Equipment, including boom chains, plows, sleighs, etc.

We have sold quite a number of timber parcels but still have some good bargains left in Townships of McDougall, Foley, McKellar, Monteith, Carling, Christie, Shawanaga, Burpee, McConkey, Mills, Allen, Secord, Falconbridge and Street.

Tenders will be received up to March 15th for the purchase of the following Sawmill Machinery:

- 1 8 ft. Double-cutting Telescope Band Mill, made by Waterous Engine Works.
- 1 3-block right hand steam feed carriage fitted with steam set works, made by Wm. Hamilton, Peterboro, with 10-in. steam feed cylinder.

- 1 Double cylinder steam nigger, right hand.

- 1 Log Loader for right hand mill.

- 1 8 ft. Double-cutting Telescope Band Mill, made by Waterous Engine Works.

- 1 10 in. Double-cylinder steam feed carriage, left hand, for cutting 24-ft. logs.

- 1 left-hand steam nigger.

- 1 Log-loader.

- 1 Endless chain jack ladder with two kickers complete for right and left hand mills.

- 2 Roger Gang Edgers for 8-in. cants and lumber.

- 1 Waterous double edger, 6 saws.

- 2 2-saw trimmers.

- 1 16-ft. Slash table.

- 1 20-ft. Slash table.

- 1 16-ft. Revolving Slash Table.

- 1 Horizontal Slab Resaw with 5-ft. wheels, made by Diamond Iron Works.

- 1 70-ft. Transfer Chain for sorting lumber, with necessary levers, rolls and transfer chains to complete outfit.

- 1 Lath Mill with bolter.

- 2 Lath Trimming Saws.

## FILING ROOM

- 1 Automatic Filing Machine for 12-in. D.C. band saws.

- 1 Automatic Grinding Machine for 8-in. S.C. band saws.

- 1 Automatic Machine for circular saws.

- 1 Hand Machine for cut-off saws.

- 1 Lap Grinder.

- 1 Set Band Saw Rollers and levelling blocks, with necessary swedges, a number of second-hand band, gang, edger and slash table saws.

## POWER PLANT

- 1 24 x 36 Slide Valve Engine with 40-in. x 12-ft. extra heavy double arm split fly wheel.

- 2 Double Duplex, high pressure Water Pumps.

- 5 60-in. x 16-ft. Return Tubular Boilers, allowed 125 lbs. steam.

- 2 125 h.p. Water Wheels.

- 1 Upright Engine for sawdust conveyor.
- 1 10 h.p. Engine.

- 1 Mitts & Merrell Hog.

- 1 Wood Machine for 22-in. wood.

- 1 Wood Machine for 16-in. wood.

- 1 Edger for ripping dry lumber, installed.

- 1 Edger for ripping dry lumber, not installed.

- 1 30 h.p. Generator, 250 volt.

- 1 30 light arc generator.

There is also a large quantity of shafting, pulleys, hangers, belting, tram cars and rails and turn-tables, particulars of which may be had on application.

Also, contents of machine shop, containing Planer, Drill, Lathe and Machinery, with tools necessary for repair work.

The lowest or any tender not necessarily accepted.

All of the above open for inspection at Parry Sound.

Message  
to You**

(Please read)

DOES it mean anything to you to know that **you** can get prompt shipments of the highest quality Lumber and Shingles at the same prices you are paying for inferior service and goods?

IS there anything more unsatisfactory to **you** than being held up by delays in receiving the stock you are in urgent need of—maybe it is only a few pieces of lumber or bundles of shingles out of a car?

HOW do **you** feel when stock for which you have been waiting arrives and is poor quality—unfit for the use you require it?

WHY don't **you** place your orders with a Company who can, in shipping you, obviate the worries and dissatisfaction mentioned above.

**OUR MESSAGE TO YOU — DEAL WITH US.**

## Cross - Cuts for Good Hard Work

The "SAW KING" Cross-Cut Saws have won exceptional favor throughout the trade by the good work they do, the hard ware they stand and their general reliability. These saws have stood the test of Camp and Mill and have proved their worth—their high quality steel and perfect tempering and grinding sets them far above the average and places them in a class by themselves.

### THE "SAW KING" CROSS-CUT

The "Saw King" Cross-Cut Saws have merits possessed by no other saws. By looking at the above cut you will see that the chip spaces are wider and deeper in the centre than they are in any other part of the saw, thereby giving a capacity for the accommodation of the largest accumulation of sawdust, which is always in the centre of the saw. The chip spaces decrease in size from this point of the saw, as also does the quantity of sawdust. All users of saws know that the teeth at the centre wear much faster than they do at the ends, as the teeth are longest at the centre, it gives greater wearing capacity to the saw, and as the teeth are smaller at the ends of the saw and leaves the saw blades wider between the teeth and at the back. Where the blade is narrowest, it gives more strength and stiffness at the point where it is most required. The saws are tempered by our new improved process, giving them a keener cutting edge than any other Cross-Cut Saw made. They are thoroughly warranted. Any defective saws will be replaced by the seller.

# Same Old Story

A good product and persistent advertising in a good medium brings results every time.

ERIE, PA. 1/27/13

Canada Lumberman & Woodworker,

Toronto, Canada

Gentlemen:

We have pleasure in handing your Representative, contract for 1913 and wish to state our high appreciation of your publication. We have had numerous inquiries during the term of the original contract and also had the pleasure of booking Canadian order within thirty days of our first announcement in 1912.

Within the near future, it is our intention to send you some data regarding equipment we have supplied for Canada which we trust you will find of sufficient interest to publish in your columns.

Yours very truly,

HEISLER LOCOMOTIVE WORKS

- 4 Efficiency

TRADE MARK  
**HANCHETT**  
U. S. REG. 59,352, JAN 6, 1907

No. 3

## Hanchett Automatic Gang Saw Sharpener

The Hanchett Gang Saw Sharpeners have the same general features of construction as the Hanchett band saw sharpeners including the direct belt drive for the emery-wheel arbor, sliding gear transmission with variable speed of feeding saw, adjustable cam, beveled gibs of head for taking up wear, improved feed finger construction, forked feed arm connections, etc.

The saw carriage runs on dust proof ways, and the tension of the carriage in its bearing on the carriage track or ways is adjustable and so arranged that by raising the lever at the left end of the carriage, after grinding the last tooth at the end of the saw, the tension is removed so that the weight returns the carriage to the starting point without effort on the part of the operator, thus giving perfect control of the carriage and enabling very rapid and easy operation, as the carriage returns itself when the lever is raised, without requiring the operator to pull back the weight of the carriage. The clamp for holding the saw is locked in place by a lever at each end, which insures that the saw shall be held rigid the entire length and will not spring at either end, and the clamp opens down so that the saws are easily removed from or placed in the carriage. The head is raised by a foot lever as shown in the cut (or by hand lever if preferred), which at the same time raises the feed finger out of the throat of the tooth to permit the return of the carriage.

*Unquestionably this is the greatest Gang Grinder ever built.*

*Built for all size gang Saws.*

*Write today for our No. 5 catalogue.*

**Hanchett Swage Works, Big Rapids, Mich., U. S. A.**

# A Belt which Conveys ALL the Power

Practical men know the drainage of power from a slipping belt, *and because they know*, they are buying

## GOOD YEAR RUBBER BELTING

**Which Neither Slips Nor Stretches**

It is built up, layer upon layer, of close-woven, long-fibre, cotton fabric, rubberized and cured under Goodyear processes. And every Goodyear belt has in it the lowest possible minimum of stretch, because the belt is "cured" whilst stretched to the limit of safety in a special machine.

### That is the Goodyear Method of Belt Manufacture

And the result is entirely satisfactory to belt users—a fact to which our enormously increased sales testify. What is the significance of this **CONTINUED SALES INCREASE** — 50% over last year? Simply that Goodyear Belting more than fulfills the claims made for it by the

Goodyear people—who know what a belt should do, and make a belt to do it.

It has cost us less than \$200.00 for claims or adjustment of every kind in connection with our total output for the past two years—a remarkable tribute to Goodyear reliability.

**Look into the Belt for Yourself—Try to Tear It Apart.**

Make a cut in the top layer—and then try to pull it apart. You will get a faint idea of its strength.

That is the result of forcing rubber at tremendous pressure through the fine cotton fabric—separating every strand—thus abolishing all internal friction or grinding. Whilst these layers of fabric are afterwards so compressed as to be almost homogeneous, the finished belt bends easily, the "duck" being so woven as to retain complete pliability in the finished belt.

**For Main Drives and  
High Speed Pulleys  
GOODYEAR Belting is the Best**

It has all the tensile strength necessary to absorb tremendous strain without slip, stretch or rent. The grip of rubber and the prodigious strength of hard-twist cotton fabric are united, and prove equal to every emergency.

Where the power transmitted is high, and great tensile strength is essential, Goodyear Rubber Belting proves its worth.

EVERY GOODYEAR BELT IS SUB-

JECTED TO A STRINGENT TEST BEFORE LEAVING THE FACTORY, and what is more, the materials used in the manufacture are also tested in the Goodyear laboratory before using.

### IF YOU USE A BELT AT ALL IT WILL PAY YOU TO USE A GOODYEAR

Loss of power is loss of profit—and an inferior belt is dropping power all the time. Goodyear belting quickly earns its cost in power saved and trouble avoided.

### TWO HUNDRED AND FORTY ROLLS—A TOTAL OF 72,000 FEET

We have just received an order for this quantity of GOODYEAR RUBBER BELTING from one business concern in the west, for the equipment of interior elevators. Such an order shows supreme confidence in the quality of GOODYEAR Belting.

If we have not just the belt you require we will make it for you.

In the choosing of belts our booklet would be of great assistance to you. We supply it free. Write to our nearest Branch for one.

## TERMS OF SUBSCRIPTION:

Canada, United States and Great Britain, \$2.00 per year in advance; other foreign countries embraced in the General Postal Union, \$3.00.

Single copies 15 cents.

"The Canada Lumberman and Woodworker" is published in the interest of, and reaches regularly, persons engaged in the lumber, wood-working and allied industries in every part of Canada. It aims at giving full and timely information on all subjects touching these interests, and invites free discussion by its readers.

Special care is taken to secure for publication the latest and most trustworthy market quotations throughout the world, so as to afford to the trade at home and abroad information on which it can rely in its operations.

Advertisers will receive careful attention and liberal treatment. For manufacturing and supply firms wishing to bring their goods to the attention of owners and operators of saw and planing mills, woodworking factories, pulp mills, etc., "The Canada Lumberman and Woodworker" is undoubtedly the most direct and profitable advertising medium. Special attention is directed to the "Wanted" and "For Sale" advertisements.

No. 6

## Trained Foresters Needed

The urgent demand for trained foresters in all parts of Canada has been discussed in these columns many times of late. Foresters, who know the forests and who know the uses to which forests are put, are needed to-day in Canada, as they never were before. Perhaps it is not quite accurate to say the need is greater to-day. The need was always great, but of late the demand has increased because governments, corporations and individuals have found out that the trained forester can make money for them. What has been said in these columns is amply backed up in other quarters. The American Lumberman, in a recent issue speaks of the situation as follows:—"The field for young men in the Forest Service, not only in the United States but in Canadian Provinces, is broadening. The demand is constantly growing for both technically and non-technically trained men, rangers, cruisers and forest engineers, who can assist in conserving and managing forest property along modern lines. Hundreds of young men in this country mentally and physically fit to take up the work of foresters are now plodding away at vocations where compensation is no larger than that of the forester, the work they are engaged in offering no future. The position of forest worker offers them opportunity to get out of a rut.

"The work of forest ranger, cruiser or engineer is hardy; perhaps there is no healthier vocation in the world. Those engaged in the work find many hardships, often being isolated from trading places or towns for weeks, perhaps months. A lot of loneliness and other drawbacks go with the job, but its advantages are alluring. That the pay of the forest worker is no larger than in many other different lines of work is true, but the training of men for forestry work is in its infancy, and the field is yet to be developed. Compensation will keep pace with efficiency.

"Technical colleges and State universities now have forestry departments, but so far the demand for trained men far exceeds the supply. That Canada is in need of trained young foresters was shown

in a speech made recently in the British Columbia parliament by Hon. Mr. Ross, minister of lands. He said that though much was being done to attract young men to the field of forestry and to provide for their training at colleges, recruits were far fewer than positions waiting to be filled. He declared that not only do the forestry departments of the Provinces need these trained young men, but natural resource departments of railroads and logging and lumber manufacturing operations continually have calls out for them which can not be fully answered. The minister said that to recruit the ranks of foresters in British Columbia from native-born British Columbians was impossible. Young men are needed, and at once, for the work.

"Many schools and colleges in United States and Canada are offering courses in forestry, and publicity of the alluring field that such work offers should be widespread so that more young and able-bodied men may be attracted to the vocation."

## Compromise Reached in B. C.

As a result of the unanimous objections to the proposed increase in royalty upon timber in British Columbia which have recently been expressed by British Columbia lumbermen, the Minister of Lands, Hon. Wm. R. Ross, has decided to amend the bill recently introduced dealing with this point. The direct result of the recent announcement of the proposed increase in royalties was the holding of a number of meetings for discussing proposals against the alteration. These meetings were followed by an important conference between the Minister of Lands and a number of influential and representative lumbermen. The lumbermen have been successful to a large extent in persuading the minister to modify the proposed amendments to the Forestry Act. In explaining his sudden change of front the Minister stated that the government had decided to conduct a further enquiry into the question of royalties on timber, in order that every aspect of this vitally important matter might be investigated. The Minister's statement was in brief as follows:—Early in the session the government had announced its intention of raising the royalty on timber to \$1 per thousand. An amendment of the Forest Act had been introduced for this purpose. The government had announced its intention to give the lumbermen every opportunity to present their views. Accordingly a deputation representing coast and mountain lumber manufacturers and other interests affected had been given a hearing by the executive council. The Minister had pointed out in reply to the deputation that the increase, at a date not later than 1916, was necessary in the public interest and was final. Since the matter involved many complicated considerations he had asked the lumbermen to appoint a committee to confer with the Minister of Lands concerning the working out of this main principle. A long conference had resulted between the lumbermen, the Minister and the officials of the Forestry Department.

The government recognized its duty to safe-guard the interests of the people of the province in the timber held by licensees, while adjusting royalties in a way that would encourage vigorous development of the industry. The government must secure the public's fair share of the "unearned increment" and at the same time security of tenure necessary for financing new lumbering operations. It must allow both for present and past market conditions and for the changes that would soon occur through the completion of the new transcontinental railways and the Panama Canal. The comparative value of stumpage in the coast, mountain and northern interior sections must be judged with care. The competition of other timbers with those of British Columbia must be borne in mind. The probable rise in stumpage values must be gauged. The waste of inferior species and grades of timber must be diminished as far as practicable by imposing a lower rate of royalty.

In its relation to the financial standing of the province this question was by far the most momentous they had to consider. An error might involve millions of dollars essential to the future development of the country. The government felt that it should spare no effort to avoid the possibility of mistake.

In conclusion the Minister of Lands said: "That the rise in western timber values requires the raising of the royalty to \$1 in 1916 is incontrovertible. That a certain stability of royalty conditions should

be secured to the lumber industry is also desirable. Taking these two principles as a basis, we are nevertheless convinced that further consideration of subsequent royalty adjustment and the attendant problem of stable tenure is desirable in the public interest. The government has therefore decided to conduct a further enquiry into every aspect of this vitally important matter, so that nothing may be overlooked.

"The proposed amendment will therefore be left for further consideration pending the result of this enquiry and within a few months

the decision reached through the enquiry will be published so that no feeling of suspense may injuriously affect the industries concerned, and, at the next session of the Legislature, this published decision will be embodied in an amendment to the Forest Act, thus settling the whole matter in a thoroughly equitable manner."

The compromise arrangement under which the government will to a large extent meet the views of the lumbering industry is published elsewhere in this issue and will probably be embodied in the bill in an amended form.

## The Importance of Lumber Statistics

The report of the Director of Forestry for the year 1912, which has recently been published contains a great deal of interesting detailed information regarding the forest reserves of Canada. Discussing the collection of statistics the report says:—

The collection of statistics in regard to forest products is an important corollary to the other work of this branch. Previous to the starting of this work by this branch in 1908, there were no reliable records of the yield of the forests of Canada or of the value of the forest as a producer of wealth and a support of native industries. These reports, combined with the export and import returns of the Department of Customs, have revealed our strength and our weakness. They show an annual value of Canadian forest products of \$166,000,000, second only to the agricultural production; that, as far as pulpwood is concerned, Canada is the greatest producer and supplies not only Canadian requirements but a large part of those of the United States, but that as far as the more valuable woods are concerned, especially hardwoods, the supply is steadily approaching the point of exhaustion and in most hardwoods has already practically

reached it. A strengthening of the staff in handling this work would make the reports still more valuable and useful.

A further development that would properly round out the natural work of the Forestry Division of this branch would be the investigation of waste in the forest and in the manufacture of wood and experimentation in new processes to prevent waste. Unquestionably one of the developments in the direction of economy must be in the elimination of waste outside the forest as well as inside. The drain upon our wood supplies will become so great that they must not only be protected when standing in the forest, but must be followed all along the line of use and made to spread as far as possible both in quantity and time. The work of this branch cannot be considered as complete until it can follow the products of the forest through this whole cycle and assist in economizing them to the end. Provision for investigation on the lines indicated should be made without delay.

The report states that the total area included in the Dominion forest reserves was increased during the year by 13,403,600 acres. The total now included in reserves is 16,128,920 acres.

## The Problem of Log Rules

The recent action of the government of British Columbia in deciding to extend the "British Columbia" rule for the scaling of logs so as to apply to both the mountain and coast districts will probably give rise to a great deal of interested discussion upon the subject of log scales in general. The more one studies the log scale problem, the more he becomes impressed by the serious difficulties which confront anyone who undertakes to draw up a log rule which will be both accurate and just, for the measurement of logs in the different parts of Canada. Conditions vary so greatly in different parts of the country where the trees have their own characteristics, strongly differing from the characteristics of other trees, that, however fair and just a log rule may be in connection with a fairly uniform class of timber, it cannot be equally fair and just in connection with a different class of timber.

In this connection it is interesting to note that the Canadian Forestry Association recently appointed a committee to investigate the feasibility of adopting a uniform log rule throughout Canada. This committee has studied the question carefully and, while admitting the desirability of such a rule, expresses doubtful as to the practicability of the introduction of such a measure at the present time. The committee consisted of Dr. B. E. Fernow, Judson F. Clark, Alex. McLaurin, G. C. Piche and Ellwood Wilson. They have recently prepared a report which is to be presented to the association. This report after referring to the general difficulties which beset the introduction of a uniform log rule, says:—

"The first difficulty in introducing a uniform log rule lies in the fact that, unlike lumber, logs have a local market and the market adjusts itself to the peculiarities of the log rule in use in the locality without very serious detriment to all parties concerned, as long as the price is made in proportion to the greater or less liberality of the log rule; there is, therefore, a natural tendency of conservatism to keep up the usage.

"A second reason rendering uniformity difficult to attain is the fact that each province has adopted a rule and its licenses are based on it, hence the same conservatism animates the governments, al-

though there is no doubt, that, for instance, Ontario loses, wherever small logs form an essential part of the cut, by the adoption of a log rule which is illiberal to the seller of small logs, and Quebec, having a few years ago changed its usage, gains by a rule based upon better practice.

"There are now at least five different log rules in practice, which vary by from 10 to 50 per cent. and more in giving contents of logs, according to the assortment of the latter. It can therefore happen that a lumberman, logging in Quebec, Ontario and New Brunswick at the same time pays for the same sized log, say a 12 inch log 12 ft. long, if the stumpage dues were \$2; 10, 12 or 15 cents. Of course, the limit-holder can take care of this difference in the bonus which he pays additionally.

"In order to meet the difficulty in securing a fair measurement of small logs the proposition is advanced by one member of the committee, to have all small logs, say below 9 inch diameter at the small end, piled and measured by the cord, or else to measure at least by carefully constructed tables which give the number of logs of varying sizes, diameter and length, that go to a cord.

"This would result in a great reduction in the cost of scaling, especially as small logs form more and more the bulk of the cut, at least in the eastern provinces.

"It should be thoroughly understood that log rules are not really actual measurements, but a mixture of measurement plus a judgment, namely as to how much saleable material can be cut from the given cubic contents. It is, of course, well known that this result at the mill depends on a great variety of conditions, such as the size and character of the timber, the character of the mill and saw, the skill of the sawyer, the kind of lumber to be cut, and various other variable conditions.

"The only absolute measurement—as absolute as anything in such a variable material as logs can be—is the cubic contents.

"It would appear, therefore, desirable and from many points of view eminently practicable to make the cubic foot (or cubic meter) the unit of measurement, leaving entirely to the logger the judgment

which log scale fits his case, in order that he may get an idea of how much he may produce from a given cubic log content.

"For forestry purposes, i.e., for the purpose of studying rate and amount of production of wood material, a uniform unit of measurement is absolutely necessary and cubic contents alone, measured by the cubic foot or cubic meter, are acceptable. Hence the present necessity of having to translate various log rules into cubic contents is a very considerable drawback and impediment to progress in developing forestry knowledge.

"The only way in which a uniform log rule can be expected to be

adopted is by conference of the provincial governments and their agreement as to the fairest rule. At least the eastern provinces which handle timber of more or less the same description could, it seems, very rapidly come to an agreement to use one log rule.

"No attempts have been made by the committee to bring the matter to the attention of the provincial governments.

"The effort, however, when any change is contemplated, should be at once to press for the adoption of the cubic foot or better still of the cubic meter; tables giving contents of logs of different diameters and lengths being now in existence in either measure."

## Editorial Short Lengths for Busy Readers

Discussing the recent increase in demurrage charges, a prominent Toronto wholesale lumberman mentioned a transaction which had caused a considerable loss to him. On February 10th a car of lumber was consigned from Burks Falls to Toronto. Nothing further was heard of this car until March 7th, at 9.45 a.m., when he received notice of its arrival from the railway company. Owing to presence of business he was unable to arrange for the disposal of this car until 2.30 p.m. the next day when he was informed that \$2.00 demurrage was due. Owing to the long delay in receiving this lumber, the customer who had order it cancelled his order and bought locally, so that the wholesaler had to sell it again. This is by no means an isolated instance. The railway companies have practically an autocratic power over shippers, which makes all the more urgent the necessity for some reciprocal demurrage arrangement.

Taking heed of the action of the administration in the matter of the modification of the Quebec regulations for the cutting of Crown land pulp wood, Western United States paper manufacturers have petitioned the Treasury Department to make a similar ruling as to paper and pulp from British Columbia. The Treasury Department has replied by asking these manufacturers to prove their case. The United States Government declined to admit paper and pulp made from Quebec Crown land pulp wood because the relaxation made in the provincial regulations was not general. It did not apply to all Crown land wood nor did it apply to all Crown land wood made into pulp and paper. The relaxation in the British Columbia case is in favor of one mill only.

The lumber section of the Montreal Board of Trade held a meeting recently to consider the question of changes in the present allowances from track scale weights. The weights now allowed are—on lumber and forest products: box cars, 500 lbs.; flat cars during the summer, 500 lbs.; and in winter, 1,000 lbs., plus 500 lbs. for stakes and fastenings used on flat cars. The railway companies propose to ask the Railway Commission to allow them to cancel all allowances, excepting what their weighmen should estimate to cover the accumulation of ice, snow or refuse, plus the 500 lbs. allowed for stakes and fastenings. The Montreal Board of Trade will be represented at the meeting of the Railway Commission on March 18th and will protest against any change being made.

It is estimated that during the present year 150,000 people will come into western Canada from the United States. The aggregate wealth of these immigrants will probably be \$225,000,000. The immigration from Great Britain during the present year is expected to be 25 per cent. larger than in any previous year. The lumber and building supplies needed for this large influx of settlers will be enormous. Another indication of the activity which may be expected during 1913 is afforded by the fact that the Great Transcontinental railways will spend, during 1913, about \$60,000,000 in new lines, a large proportion of which expenditure will go to wage earners. In addition to this construction work the railroads will spend about \$20,000,000 upon rolling stock.

A deputation of British Columbia lumbermen recently called upon Honorable George E. Foster, Minister of Trade and Commerce, who

was at the time on a visit to Victoria on his way to Australia. The object of the deputation was to impress upon the Minister of Trade and Commerce the desirability of promoting the interests of the British Columbia lumber in the markets in Australia. The Minister was urged especially to use his best endeavors to the end that the lumber industry should participate in the benefit of any trade preference which may result from the negotiations which he is about to institute. The deputation also asked the Honorable Mr. Foster to urge New Zealand to include lumber in its preferential trade agreement with Canada. The trade agreement entered into some years ago between Canada and New Zealand did not include lumber. Mr. Foster was also asked by the deputation to make enquiries as to the willingness of the government of Fiji to extend a preference to lumber exported from Canada.

According to statistics presented by the deputation to Mr. Foster, the Pacific Coast last year exported 197,000,000 feet of lumber to Australia. Of that quantity only 27,000,000 went from British Columbia. If they had a preference in Australia, British Columbia lumbermen declared that they would soon secure the lion's share of the trade, in spite of the fact that they have to pay slightly higher freights than their competitors in Washington, Oregon and California.

The railway companies have been successful in their application to the Railway Commissioners for higher rates on pulp wood from Ontario, Quebec and Maritime Province points to points in the Eastern States. It was contended that the traffic was unprofitable and the Commissioners heard considerable evidence on the question. The owners of American mills strongly objected, on the ground that higher rates would injure their business. It is calculated by a Montreal lumberman that the new rates will mean an additional charge of from 45c. to 50c. per cord going from Canadian points to points in northern New York and Pennsylvania. Consumers of pulp wood will have to come to this country for their material, as it is extremely scarce, and the mills in Canada are likely to require all the wood available. This scarcity is almost certain to affect the ground wood market favorably. Ground wood is now being produced in large quantities and piled until a favorable turn takes place.

In an interview with the representative of the Canada Lumberman, the head of a Montreal pulp and paper manufacturer expressed the opinion that the question was dealt with by the Railway Commissioners from a purely traffic standpoint. Higher prices were charged by the companies for the carriage of pulp wood from Canadian mills to other Canadian points, while from Canadian mills to points in the Eastern States the rates were lower. In addition the railways had in some cases three hauls of the wood, pulp, and paper, and to the United States there was only one haul. The price of the raw material is very good, and it is almost impossible to secure. Owing to the scarcity of snow there is a shortage of wood in the United States, and manufacturers in Maine and Wisconsin have been in Montreal lately trying to buy large quantities.

Another Montreal lumberman interested in the pulp trade is of opinion that it is yet too early to predict the effect of the higher rates as these will not come into operation until August. By then the position both as to pulp and paper may have changed materially, especially in view of the proposed legislation in the United States.

# Hemlock Trade in a Strong Condition

Manufacturers Report Dry Stocks Practically Off The Market—Output for 1913  
About An Average—Demand Continuing Very Strong.

A meeting of Ontario hemlock manufacturers was held on March 5th at the Queen's Hotel, Toronto. There was a very representative attendance, and the discussion upon trade conditions was exceptionally interesting. The attendance included:—Norman Hocken, Otter Lake, who occupied the chair; S. Dymont, Barrie; R. B. Elgie, Toronto; W. B. Maclean, Toronto; J. D. Shier, Bracebridge; W. J. MacBeth, Toronto; W. Martin, Hillsdale; Chas. McGibbon, Penetanguishene; G. W. Lankin, Utterson; Geo. Tennant, Bracebridge; R. Shier, Bracebridge; Frank Foster, Toronto, and Fred Baechler, Powassan.

After the routine business had been disposed of the meeting developed into a discussion of trade conditions and the general opinion was that on account of short stocks of dry hemlock, and the moderate cut in the woods during the present winter, manufacturers would have no difficulty in securing \$20 for their No. 1, on a car load basis.

Mr. Norman Hocken expressed his opinion of the situation in a manner which practically summed up the views of the others present. The hemlock situation heretofore, he remarked, had been a very difficult one. He did not think that up to a year ago anyone had been making money out of hemlock. Certainly the manufacturers had not been making a profit. He had been led to believe that the wholesalers had not been making a profit either. He also doubted whether the retailers had made much out of their hemlock until quite lately. The trade had been handled on a very small margin until a year ago. One often heard contractors expressing a belief that the manufacturer was getting too much for his hemlock. This was far from the case. The wages bills in connection with manufacturing of lumber were now a little more than double what they were ten years ago. The actual wages however, were not the most serious feature of the situation. The decrease in the efficiency of labor was most noticeable. In his opinion they were not getting to-day more than 50 per cent. from their laborers, of the work that was obtained ten years ago. Wages had advanced from about \$16 a month to an average of \$30 to \$32. He recalled having heard a manufacturer recently say that he remembered taking out logs when the snow was six feet deep and the wages were ranging around \$16. They got out their logs in those days for \$2.68 a thousand from the stump to the ice. To-day they could not start to skid the logs for \$2.68 a thousand.

## Increasing Cost of Operations

Coupled with the decrease in the efficiency of labor was the high cost of living. Lumber operators had felt this very seriously. They were providing a much more expensive living for the men in the woods to-day than they used to years ago. Moreover, their cooks were not as careful as they used to be. They were more independent to-day and possibly more wasteful. Probably the manufacturer had a fair margin of profit at \$20 a thousand, but he was getting no more than he should.

They had had a very expensive winter from the operating point of view. In January they had not had any frost. February had been very severe during the first two weeks on account of prolonged storms. Drawing the logs at that time had been a very difficult matter. During the past two weeks there had been a decided improvement. He believed that in many places operators had had a great deal of difficulty in making ice for their dumps. He had not had any difficulty in that regard himself but had experienced a lot of difficulty in hauling logs down the river.

Mr. A. C. Manbert, of Graves, Bigwood & Company, Toronto and Byng Inlet, said that his firm had been pretty well occupied with their own troubles in connection with the loss of their mills last year and they were pretty much occupied just at present with the question of rebuilding. Therefore they had not as much in anticipation in the way of manufacturing as they would like to have. He was always interested of course in trying to get a fair price for the article which they had to sell and he thought they could get \$20 for their stocks. His company had been getting that for the past month or more without much difficulty although they had not sold a great deal of hemlock during that time. They really had not had a great deal to sell.

Mr. Manbert, who had come to the meeting late, asked the chairman what the general opinion was in regard to trade conditions.

Mr. Hocken in reply, said that so far as he could gather from the discussion and from his own experience, the present winter had been much the same as last winter so far as the demand for hemlock was concerned, but there was practically no stock on hand at present.

Mr. Manbert remarked that his impression was that stocks on hand were almost up against the new stocks to be manufactured.

Mr. Hocken replied that this was the case. 1912 stocks had been

cleaned up. He had been obtaining \$21 and was even unable to fill orders at that. Of course his stock was dressed and sized. For some time past his company had not had any large stock on hand. During 1913 they expected to cut between nine and ten million and hoped that they would never have more than one million feet on hand at a time. He thought they could safely count upon obtaining \$20 on 10 and 16 foot lengths. There would be some off sizes of course, such as 2 x 6, which would be slow, but generally speaking the demand to-day was ahead of the supply.

## Building Demand Will Be Heavy

The building trade throughout Ontario, according to his opinion, had never looked brighter, if it had ever looked as bright. In the face of this, stocks of hemlock were low in practically all the yards. It was going to be a question of securing material much more than a question of price. Although market conditions were most satisfactory he thought it would be wise to be as considerate as possible of the contractors and the retail men. Even if the contractor and the retailer were crowded to obtain stock and willing to pay a little more, he thought it was up to the manufacturers to give them a certain measure of protection and not to jump the price out of reason, even though they had the opportunity.

Mr. W. Martin, Hillsdale, Ont., was asked by the chairman as to the quantity of stock which would be taken out for his mill this year. He replied that it would only be about quarter of what they took out last year and they had no dry stock on hand.

Mr. Hocken stated that enquiries had led him to the conclusion that the cut throughout Ontario during the coming season would be, if anything, less than during the previous season, although no doubt a great many, who were in a position to do so, were endeavoring to take out large stocks. He understood that the Conger Lumber Company of Parry Sound would be taking out only the same amount as last year, about three million feet. Mr. Peter, of Parry Sound, he believed, would take out the same. He understood that Mickle, Dymont and Son would also be taking out about the same cut. These were the largest operators in the province and the general cut could be pretty well estimated from their operations. Of course a number of the small mills were taking out stocks this year more extensively than in previous years, but it took a lot of them to make up a fair sized stock. The strongest feature in connection with the market situation to-day, was the fact that there were no dry stocks on hand.

Mr. W. B. Maclean remarked that a year ago the Conger Lumber Company of Parry Sound, had had five million feet in the yard, to-day they had only one and a-half million feet.

## Financial Conditions Discussed

Mr. J. D. Shier introduced a discussion upon financial conditions and asked Mr. W. J. MacBeth when he expected the best prices would be secured during the present year.

Mr. MacBeth thought that they would be secured between the winter and the summer or in other words when dry stocks were at their lowest and new stocks had not yet come on the market. He also expressed the opinion that there was a possible danger in the large number of small operators who would be taking out stocks. Wholesalers would in all probability sit back for a time and the small operators, being pressed for money would have to get rid of their stocks and let them go at the best price they could secure. This was likely to have an easing effect upon prices.

Mr. Hocken remarked that he had not much fear on this account as practically all the small stocks had been picked up already.

Mr. MacBeth also drew attention to what he considered to be a rather panicky condition in the money market. This might have the effect of preventing operations from continuing on the same rapid basis as at present.

Mr. R. B. Elgie, Toronto, introduced a brief discussion upon the subject of cutting hemlock to 1½ in. instead of 2 in.

Mr. Dymont, Barrie, said that his firm had practically decided to cut their stocks in this manner.

Mr. MacBeth remarked in this connection that one of the reasons why 2 x 6 had worked off so quickly of late was because 1 x 6 was scarce and the 2 in. could be resawn satisfactorily to take the place of the 1 in. If they were to cut their 2 in. stock thin, there would be great danger that 2 x 6 stocks would accommodate again. The retailer who resawn his stock would be forced to carry a greater amount of stock.

A brief discussion also took place upon the southern pine situation, the general opinion seeming to be that although large quantities

continued to come into Ontario, the competition was not so serious as it was up to a year ago.

This practically concluded the meeting although members discussed trade conditions privately for some time. The unanimous opinion was unquestionably that conditions to-day were extremely promising for a profitable season's trade for all who had hemlock stocks for sale during the balance of 1913.

### Startling Yellow Pine Statistics

At the annual convention of the Yellow Pine Manufacturers' Association, held recently at New Orleans, R. A. Long presented some statistics which caused a sensation, says the Mississippi Valley Lumberman. Mr. Long has a reputation for going to the bottom of things. Some years ago, at a similar meeting, he delivered an address on the value of knowledge, which was the result of considerable study of the yellow pine supply, and the statistical statement more recently prepared is along similar lines. He stated that the time is near at hand when the yellow pine manufacturer who sells his product on a basis less than twenty dollars a thousand will be losing money, and he backed this up with figures which show the rapidity with which the supply of available stumpage is being exhausted. He presented figures furnished him by sixty-eight of the large yellow pine mills in Mississippi, Louisiana and eastern Texas with an annual capacity, based on the output for 1912, of 2,486,665,971 feet of lumber. Following is the statement:

| No. of Mill | Probable life of operation based on present holdings, (years) | Amount and percentage of supply exhausted at end of each year from 1 to 30 |        |    |
|-------------|---------------------------------------------------------------|----------------------------------------------------------------------------|--------|----|
| 5           | 1                                                             | 63,292,125                                                                 | 2.542  | 1  |
| 3           | 2                                                             | 102,623,962                                                                | 4.127  | 2  |
| 2           | 4                                                             | 164,767,020                                                                | 6.628  | 4  |
| 3           | 5                                                             | 230,249,878                                                                | 9.258  | 5  |
| 4           | 6                                                             | 350,286,331                                                                | 14.085 | 6  |
| 2           | 7                                                             | 386,801,086                                                                | 15.555 | 7  |
| 3           | 6-8                                                           | 459,097,953                                                                | 18.46  | 8  |
| 3           | 7-9                                                           | 521,283,677                                                                | 20.96  | 9  |
| 4           | 10                                                            | 653,939,015                                                                | 26.31  | 10 |
| 2           | 11                                                            | 705,247,673                                                                | 28.37  | 11 |
| 7           | 6-12                                                          | 894,158,754                                                                | 35.96  | 12 |
| 11          | 14                                                            | 1,245,510,449                                                              | 50.08  | 14 |
| 6           | 10-15                                                         | 1,468,265,826                                                              | 59.04  | 15 |
| 1           | 16                                                            | 1,500,427,624                                                              | 60.34  | 16 |
| 1           | 17                                                            | 1,583,669,489                                                              | 63.69  | 17 |
| 2           | 15-18                                                         | 1,666,819,732                                                              | 67.03  | 18 |
| 1           | 19                                                            | 1,688,166,743                                                              | 67.89  | 19 |
| 4           | 16-20                                                         | 1,829,600,333                                                              | 73.58  | 20 |
| 1           | 16                                                            | 1,843,383,876                                                              | 74.13  | 21 |
| 1           | 24                                                            | 1,973,477,250                                                              | 79.33  | 24 |
| 2           | 30                                                            | 2,486,665,971                                                              | 100.00 | 30 |

These figures, taken in connection with the evident fact that the peak of production in the yellow pine industry has been passed, should make the manufacturers of that wood realize the situation and govern their operations thereby. Of course, this production of approximately two and a half billion feet does not represent the entire yellow pine industry. The output last year was more than five times that amount. But the mills included in the compilation are representative in that they probably indicate the average life of the yellow pine plants now in existence. There may be a considerable number of mills that will be manufacturing lumber longer than thirty years, but there are as many, if not more, that will have exhausted their timber before the end of thirty years. The figures show that at the end of fourteen years forty-nine of these mills, with a trifle more than half the capacity of the entire list, will have ended their operations. Mr. Long stated further that the showing made by the figures represented not only the probabilities as regard the supply of stumpage now held by these mills, but also the probabilities as to additional supplies which might be secured.

### American Lumber in Great Britain

A United States Consular Report contains an interesting article by Mr. E. P. Secker, commercial lumber agent of the Bureau of Foreign and Domestic Commerce, on American lumber in English ports. Mr. Secker discusses general conditions and also gives some information regarding trade at the various ports. He states that hardwood lumber is used more freely in London than in any other port. He says it is comparatively easy to handle the trade in Liverpool, and remarks that it is by far the best port for transshipment purposes, being a cheap port in which to handle or store timber. The trade in Manchester caters largely to shipbuilding, for which log timber rather than lumber is favoured, inasmuch as the wood fittings of steamers run largely in special dimensions which cannot be anticipated in advance. In oak a good trade is being built up in dimension stock, and ash is capable of the same treatment. In general, the use of sawn lumber is increas-

ing, as compared with sawn or hewn logs, although some woods, such as ash and hickory, are generally imported in the log, because of the irregular sizes into which they are manufactured. Absolute uniformity of grading is desirable, for if in one order a better grade than necessary is sent a second shipment will meet with dissatisfaction, even though up to standard grading. American shippers who have established a reputation for uniform quality of product are thereby enabled to market to much better advantage.

### Quebec Spruce in England

The Timber Trades Journal, London, Eng., referring to Quebec spruce in a recent issue says: "Representatives of the leading shippers of Quebec spruce are now on this side, and have had, we understand, no difficulty in effecting large sales, which in some cases have only been limited by shortage of stocks on the other side. Many large concerns manufacturing proprietary articles pin their faith for packing-case stuff to spruce from the Quebec district, and these requirements in some quarters run to quite extensive sales. For packing-case material, in which a long average length is not of any consequence, and in which all needs are covered by the usual specification of 10 to 16 ft., the careful manufacture and excellent texture of the spruce shipped from the St. Lawrence River easily put it in the highest place among the various classes of wood which the packing-case maker cuts up. Short supplies of Lower Port shipments have also stimulated an active inquiry for Quebec stocks, and the sister isle has bought pretty extensively. For 3 x 7 in. unsorted quality sales have, we understand netted shippers equal to about £7 10s. f.o.b., with 3 x 8 at 2s. 6d. more.

### Timber and Deals Moving Well

A Quebec, P.Q., despatch says: In consequence of an unusually brisk demand for timber and deals, the Canadian timber and deal firms have cut and manufactured more lumber this winter than for several years past, and the mills are busy all over the country. The demand comes from both the United Kingdom and United States markets, and the price of lumber has advanced \$3 per thousand feet.

The unusually large orders from both these markets foretell a brisk shipping trade in the St. Lawrence next summer to European ports, and a heavy lumber traffic by rail to the United States. In the meantime, the shipping rates by steamers have increased, but the British merchants have made such favorable contracts that they expect to make fair profits. The demand for shingle is also greater than usual, and the Canadian firms, including Quebec mills engaged in this special business, have large orders to fill.

### Excellent Outlook in Eastern Quebec

An Eastern Quebec firm of lumber manufacturers report that they have sold at their mill, the stock of deals and scantling which they had wintering, in conjunction with all they could manufacture during 1913 at prices as follows:—Deals, at \$16.50; six-inch scantling, \$14.50; five-inch and under scantling, \$14.00; ends, two-thirds of \$16.50, and fourth quality deals, \$14.50. They have also sold under contract a part of their cut of boards at \$14.00 for one inch, which will dress 7/8 in. and \$17.00 per M. for 1 1/4 in. boards in their yard at the mill. With the good prospects for the coming season and most favorable conditions for work in the bush, they are increasing their cut as much as possible.

### New Brunswick Selling Limits

At the New Brunswick Crown Land department recently \$9,007.50 was realized on a sale of twelve timber berths in the Salmon and Gas-pereaux Rivers districts in Queens and Kent counties. John E. Sayre of St. John bid in seven of the berths for Messrs. Sayre & Holly, St. John, while G. G. Baird, Chipman, Queens county, bid in the remainder. It is said that Messrs. D. Fraser & Sons of this city are interested with him. The top price paid was \$200, which Mr. Baird bid for three square miles on Salmon River. The other prices ranged from \$76 per mile upwards. Messrs. Sayre & Holly bought berths as follows: Three square miles at \$116; six square miles at \$150; eight and a half square miles at \$150; three and a half square miles at \$146; two square miles at \$151; three square miles at \$130; eight square miles at \$141, and ten square miles at \$149. G. G. Baird's successful bids were: Three square miles at \$76; four square miles at \$127; eight and a half square miles at \$135, and three square miles at \$200.

A possibility of utilizing more thoroughly the enormous quantities of waste resinous wood produced in the lumber industry has been indicated by an investigation just completed by the bureau of chemistry of the United States Agricultural Department. The annual waste, it is estimated, is not less than 8,000,000 cords. This, according to the investigators, can be manufactured into paper pulp, turpentine, resin oils, pine oils, wood alcohol and other products to a value of nearly \$300,000,000.

# Compromise Reached on B. C. Royalty

No Increases Before January 1st, 1916—After That One Dollar Per Thousand on the Coast and Seventy-five Cents in the Mountains

A compromise agreement has been reached between the British Columbia Government and the representatives of the lumbering industry in connection with the proposed alterations in the royalty on timber and the log rule to be used in the mountain district of the province. This compromise is the result of a number of conferences which succeeded the announcement of the Minister of Lands when the proposed changes were to be made.

As the compromise agreement stands there is to be no increase whatever in royalties until January 1, 1916, and then the royalty is to be \$1 a thousand feet on fir logs and No. 1 cedar, the increase not affecting second-grade cedar, hemlock, balsam, and cottonwood, of which there are large quantities in the province. This royalty of \$1 a thousand is to remain fixed from January 1, 1916, to January 1, 1926. From January 1, 1926, to January 1, 1931, the royalty on fir logs and No. 1 cedar is to be increased to \$1.25 a thousand feet.

As the act was originally framed, the increase to \$1 a thousand feet could be made at any time between now and January 1, 1916, by the government giving six months' notice to the owners of timber licenses. The act as framed gave no assurance to lumbermen when the increase would be made, and neither did it give any assurance that a further raise above \$1 a thousand feet would not be made sometime before January 1, 1916.

The compromise more specifically provides that from January 1, 1916, to January 1, 1926, royalties from timber cut under special and handloggers' license shall pay \$1 a thousand feet west of the Cascades while east of that range where the Doyle scale has been in use, the royalty shall be 75 cents a thousand feet. From January 1, 1926, to January 1, 1931, all timber cut under special handloggers' license is to pay an additional royalty of 25 cents a thousand feet, making a total royalty of \$1.25 west of the Cascades and \$1 east of that range during the five year period.

Provision is also made that on and after January 1, 1916, the British Columbia log scale, now in use west of the Cascades, shall be used east of that range—the section of the province where the Doyle scale is now in use. The concession in the matter of royalties to the mountain millmen is because of the inferiority of timber of that section of the province compared with the timber of the coast districts. After January 1, 1916, the royalty on railway ties, now 50 cents, will be \$1 a cord.

It is now proposed, with the acquiescence of the interested trade, to reserve to the Crown in respect to timber cut under special or handloggers' license or lease or timberlands Crown-granted subsequent to April 28, 1888, and upon any lands granted subsequent to February 20, 1913, and prior to January 1, 1916, as follows:

## The Compromise Regulations

(a) Upon all timber suitable for the manufacture of lumber, spars and shingles, a royalty of 50 cents for each thousand feet, board measure, one cord of bolts being taken as equivalent to 500 board measure;

(b) Upon all timber suitable for piles and poles, a royalty of one cent for each and every four feet of running length;

(c) Upon all timber suitable for railway ties, fence-posts or mining props, a royalty of 50 cents a thousand feet or a cord of ties, fence-posts or props;

(d) Upon all timber to be manufactured into pulp or paper cut as aforesaid (except so far as may otherwise be provided in any existing pulp lease), a royalty of 25 cents per cord, or, when the minister may so decide, an equivalent royalty per ton of pulp paper;

Provided that a number of feet, board measure, to be established by order-in-council, shall be taken as equal to a cord of pulp wood; and that until such order shall be issued 700 feet, board measure, shall so be taken; but in any case in which he may deem it desirable the minister may require pulpwood logs to be measured by the cubic foot, or alternately may require the scale of such logs to be computed on the mean diameter or diameter at the middle of each log, 1,000 feet, board measure, of such scale being taken as the equivalent of a cord;

Provided also that a weight of ground woodpulp and a weight of chemical pulp, to be established by order-in-council shall be taken as equivalent to a cord of pulpwood, and that until such order-in-council be issued one short ton of air dry ground woodpulp or half that quantity of air dry chemical pulp shall be so taken.

Upon all other wood or bark cut as aforesaid, a royalty of 25 cents a cord.

Provided that all merchantable timber left uncut, or cut and not removed in any logging operations upon any such land, which timber,

according to the regulations of the department, should have been cut and removed, shall be subject to royalty payable upon demand:

(2) From January 1, 1916, to January 1, 1926, there shall be paid in respect of all timber cut upon land comprised in any special or handloggers' license and also in respect of merchantable timber left uncut or cut and not removed as provided the following royalties:

(a) Upon all timber suitable for the manufacture of lumber, spars and shingles, a royalty of \$1 a thousand feet, provided that in that portion of the province east of the Cascades and south of or immediately adjacent to the railway belt, in which the Doyle rule prior to the enactment of this section has been currently in use for the scaling of crown timber, there shall be paid upon said timber a royalty of 75 cents a thousand feet and provided also that in the remaining portion of the province the royalty upon hemlock, balsam (genus abies), cottonwood, and an inferior grade of cedar (said inferior grade to be specified and described by regulations issued by the forest board) shall be 50 cents a thousand feet.

(b) Upon piles, poles, fence-posts, mining props, and pulpwood and shingle bolts, the royalties provided in sub-section of this section: Provided that the royalty upon spruce timber to be manufactured into pulp or paper shall be 50 cents a cord.

(c) Upon railway ties a royalty of \$1 per cord.

Provided that upon and after January 1, 1916, all royalties due to the Crown in respect of timber as aforesaid shall be paid at the aforesaid rates without regard to when said timber may have been cut.

(3) From January 1, 1926, to January 1, 1931, there shall be paid in respect to all timber cut upon land special or handloggers' license, and suitable for the manufacture of lumber, spars and shingles, a royalty of 25 cents a thousand feet in addition to that provided in subsection 2.

An agreement has also been reached and embodied in the revised bill concerning the question of scale. Heretofore, the scale has differentiated in sections of the province of varying timber characteristics—the British Columbia scale being enforced on the coast and the Doyle scale in the mountain districts. There will be in the agreed act when finally passed the following substitute for Section 84 of the present act:

West of the Cascades and in such other districts as the Lieutenant-Governor-in-Council may prescribe, the British Columbia log scale shall be used for the measurement of all timber measured under this act: Provided that in any portion of the province east of the Cascade Range the Lieutenant-Governor-in-Council may, by proclamation, permit the use of such scale as he may consider advisable and provided further that on and after January 1, 1916, the British Columbia log scale shall be used in that portion of the province east of the Cascades and south of or immediately adjacent to the railway belt, in which the Doyle rule has been currently in use for the scaling of Crown timber.

## Imports From U. S. Still Increasing

New Westminster, March 3rd:—The great inroads made by the United States sawmills on Canadian lumber markets and the reason therefor were forcibly brought out recently at the annual meeting of the New Westminster Board of Trade by the chairman of the lumber committee. Great increases in the importation of United States lumber over those of 1911 were proved by figures and it was claimed that Americans were selling millions of feet of lumber below cost on the Canadian side of the line.

Mr. J. G. Robson, of the Timberland Lumber Company, chairman of the committee, stated that he knew of a sale in Calgary of 16,000,000 feet of lumber at \$16 a thousand. Coast manufacturers would have to pay from \$10 to \$11 a thousand in freight alone. He also knew of millions of feet of lumber sold on this side of the line by Americans at \$5.50 f.o.b. which was less than the cost of logs.

Import figures from the United States were quoted as follows:

|                           | 1911<br>Feet | 1912<br>Feet | Increase<br>Per Cent. |
|---------------------------|--------------|--------------|-----------------------|
| Pitch pine . . . . .      | 55,000,000   | 57,000,000   | 3½                    |
| Timber . . . . .          | 158,000      | 430,000      | 250                   |
| Lath . . . . .            | 65,000,000   | 80,000,000   | 25                    |
| Shingles . . . . .        | 46,000,000   | 146,000,000  | 300                   |
| Free Lumber . . . . .     | 311,000,000  | 359,000,000  | 17                    |
| Dutiable lumber . . . . . | 43,000,000   | 64,000,000   | 50                    |

The reason for these increases was stated to be the condition of the lumber industry in Washington and Oregon. The home de-

mand in these states had been very small during the last two years. The mills were forced to realize on their lumber at any price, regardless of profits and even of the cost of production.

An interesting feature of the report was that in New Westminster and the Fraser Valley the lumber industry gave employment to 4,765 men in fifty-six mills, woodworking companies and logging camps. This would represent in wages about \$3,000,000 and an output of 350,000,000 feet of lumber or nearly one-quarter of the whole output of British Columbia.

### The British Columbia Log Rule

The British Columbia rule for the scaling of logs, which has been the statute rule for the province in the coast district and which the government intends to extend to the mountain district, is based upon the following formula: for logs up to 40 feet in length deduct  $1\frac{1}{2}$  inch from the diameter on the small end inside the bark; square the result and multiply by 0.7845; from the product deduct  $\frac{3}{11}$ ; multiply the remainder by the length of the log and divide by 12. Reduced to an equation the formula is as follows:  $B. M. = (D - 1\frac{1}{2})^2 \times 22/28 \times 8/11 \times L/12 = .0476 (D - 1\frac{1}{2})^2 L$ ; where "B. M." means board measurement, "D." diameter in inches and "L." length of the log in feet. For logs over 40 feet in length an allowance is made on half the length of the log in order to compensate for the increase in diameter. This consists of an increase in the diameter on the small end of the log of one inch for each 10 feet in length over 40 feet. Thus for logs between 50 feet and 60 feet in length the board measure of half the log is computed on the diameter at the small end. The other half is considered to have a diameter 1 inch larger. This rule permits of a larger edging allowance per unit of bark surface for the large logs than for the smaller ones, because, first, where large and small logs have a similar natural taper the bark surface of the large one bears a smaller proportion to the small end diameter than for the small ones; second, the volume of a  $\frac{3}{4}$ -inch layer of wood beneath the bark is a larger proportion to the bark surface of large logs than for small ones. For logs between 6 inches and 50 inches in diameter the combined influence of these two factors amounts to nearly  $1/10$  of a foot board measure per square foot of bark surface, and results in a tendency to underscale the larger logs and overscale the smaller ones.

The Doyle rule was used throughout British Columbia previous to 1902, and each mill had its own scaler, who scaled all the logs bought or logged for the mill. The government appointed several scalers without salary who could be called on in case of dispute. The system was not satisfactory and gave rise to many disputes which were difficult to settle. In 1901 the government of British Columbia appointed a committee to formulate a log scale that would correct the errors of the Doyle rule. The committee consisted of Messrs. Alexander, King and Haslam. Mr. Alexander represented the mills, Mr. King the loggers and Mr. Haslam the government. This committee ignored all previous rules and, to arrive at an accurate result, had a drawing made of the end of each size of log from twelve inches in diameter to 73 inches, including both. The drawing was made showing a slab three-fourths of an inch thick on each of the four sides. Inside of the slab a kerf three-eighths of an inch, then the log inside that was laid off in inch boards and three-eighths of an inch kerf alternately. Everything three inches and over in width was calculated in the contents, but under was not.

Logs that are not round are measured two ways, and the mean diameter on the small end is taken for calculating the contents of the logs up to forty feet long. Over forty feet there is an increase in the diameter of one inch for each ten feet over forty feet.

The rule made on this base was legalized by an act of the legislature in 1902. It was named the "British Columbia Log Scale," and the use of it was made compulsory west of the Cascades Range Mountains.

The old method of allowing the mills to have their own scaler was legal until July 1st, 1906, when the government appointed a supervisor and scalers to do the work west of the Cascade Range of Mountains.

In making appointments of supervisors and scalers the government paid a regular monthly salary and charged five cents per thousand feet for all scaling, or, if called for, grading. The mill was supposed to pay all the scaling fees, but charged the logger one-half.

Mr. Andrew Haslam, one of the authors of the scale, discussing it at one time wrote as follows:—"In all cases the scaler has the right to use his own judgment. There are defective characteristics of timber in certain lengths for which it is impossible to make rigid rules."

"Take the scale as a whole, and the method of operation, I believe it is as free from defects or from influence of either parties interested as it can be at the present time. No doubt changed conditions may make changes necessary, but so far, I believe there has been an honest effort to do what is fair between man and man. I believe the effort has been fairly successful."

### The Fraser River's Important Industries

New Westminster, February 4th: The important position held by the Fraser River and valley in the lumbering industry of British Columbia is shown by the fact that one-third of the total output of this Province came from this locality. Nearly 350,000,000 feet of lumber out of a total of 1,189,000,000 feet is manufactured on either side of the Fraser River. In the city of New Westminster there are eleven sawmills and woodworking plants including the Canadian Western Lumber Company, while throughout the valley there are forty-five more sawmills, shingle mills, and logging camps. In all about 4,086 men are employed with an annual pay roll of about \$2,500,000.

Prospects for British Columbia lumbermen are exceptionally bright this year and prices are much stronger than twelve months ago. The Canadian Western Lumber Company will do a very large export trade to Australia and South Africa, 25,000,000 feet of lumber having already been reported sold for exportation during the next six months.

### Reduced Cost of Timber via Panama

At present only a few of the mills in British Columbia are shippers of any consequence to Europe. Rates from Vancouver or the Fraser River to Europe through the Panama Canal will be about \$8 per 1,000 feet of lumber. Instead of costing \$300 or more to ship a carload of lumber from the Pacific to the Atlantic seaboard by rail, it will cost only in the neighborhood of \$160 through the canal, even with the payment of canal tolls.

### Portable Telephones for Forest Rangers

A meeting of forest supervisors from forest reserves in Alberta was held recently at Calgary. One of the most interesting features of the meeting was the exhibition of a portable telephone weighing only a little over nine pounds and being a little larger than a kodak. Two of these instruments were recently secured for experimental purposes. If they are found practicable, they will be used by the forest branch in conjunction with telephone lines for better protection against fire in the timber on the Rocky Mountain slope.

### Improved Hauling Conditions in New Brunswick

A despatch from Sussex, N.B., states that snow storms recently occurred in that part of New Brunswick and were of great value to the lumbermen. It was reported that in some cases the outlook for getting out logs had been so poor that men were sent out of the woods. The cold snap however, quickly brought about a change. Before the snow arrived, the lakes, rivers and swamps had been well frozen up by the cold. Roads were all therefore in good solid condition. They were in fact, practically ideal for conducting operations in a hurry. Under these conditions it is believed that great quantities of logs will be brought to the river banks during the last few weeks of the winter. The same report states that the different operations and the estimated cuts in that district are as follows:—Jones Bros., on the Millstream, three million; S. H. White Company, Limited, Pollet River, three million; Havelock, one million; Evandale, Queens County, one million; and odd lots, two millions; C. T. White & Son, Alma, four million; West River, one million; Little Salmon River, one million, and Point Wolfe, four million; Pejepscot Lumber Company, Martin Head and Great Salmon River, eight million; G. & G. Flewelling, Limited, four million; Mills-Eveleigh, Limited, two million at Boundary Creeks, Salisbury and Anagance; Prescott Company, one million at Goose Creek. Many other smaller cuts are being made at various places, and the smaller men will be in a sense more benefitted by the improved conditions than the larger concerns. Mills-Eveleigh, Limited, are cutting their stock with portable mills. Another operation of the same character is being carried on again this season at Newtown and Smith's Creek, by the Crandalls, who, as usual, will haul to the siding at the camp grounds and ship from there. John E. McAuley is also cutting again this winter and will have several millions of boards to bring out.

### Lumber Waiting for Transcontinental Shipment

At a meeting of the Quebec Board of Trade the question of traffic accommodation on that portion of the Transcontinental Railway on the south side of the river was discussed. It was decided to write to the Minister of Railways, pointing out that millions of feet of timber and lumber manufactured on the south shore along the line of the Transcontinental Railway would require to be shipped overland to Quebec next summer, and requesting the Minister to make an arrangement with the contractors in control of the road to facilitate and expedite the transportation of this immense quantity of lumber over the finished portion of the railway to Quebec.

The Logging Department of the Laurentide Company, Limited, have made an interesting study of the cost of lopping the tops of trees felled in their operations. About 15,000 tops have been lopped and the cost works out at 35 cents per thousand feet, board measure.

# New Brunswick Needs Perpetual Leases

Lumbermen Present Strong Arguments Before Government—Interests of Province in Forest Resource Revenue Involved—The Premier's Reply

The provincial government of New Brunswick has been considering of late the problem of readjusting its system of leasing Crown timber lands to lumber operators. The present regulations were enacted in 1893 and the leases granted under them were for a period of twenty-five years. Under these conditions they will run out in 1918 and the government, realizing the importance of having the whole question settled considerably in advance of that date, are working upon a plan for regulations to be passed during the present session of the Legislature. On March 6th, a public hearing was given by the government to a number of lumbermen and their representatives. The principal point brought forward by the lumbermen was the necessity for perpetuity in the leases of Crown timber lands. They urged especially that perpetuity was essential in the interests of conservation of the forest resources of the province. Previous to the meeting with the members of the government, the lumbermen held a meeting to draw up a statement of their case. At this meeting sheriff John O'Brien, of Nelson, held the chair. Those present at the meeting included: Messrs. James Robinson, ex-M.P., Miramichi; D. E. Richards, Max W. Mowatt, F. E. Blackhall, F. M. Anderson, Campbellton; John O'Brien, Nelson; George E. Fisher, Chatham; C. L. Fenderson, Jacquet River; W. R. McClockey, Boiestown; D. J. Buckley, G. P. Burchill, William M. Sinclair, E. A. McCurdy and J. Ander, Newcastle; D. R. Clark, of Montreal; Fred A. Sumner, Moncton; J. D. Walker, of Beersville, and a number of others.

Messrs. James Robinson, ex-M.P., of Miramichi; F. M. Anderson, of Campbellton, and Senator W. C. Edwards, of Ottawa, were appointed a committee to draw up a resolution to be presented to the government. This resolution was presented by Mr. H. A. Powell, K.C., of St. John, and was as follows:—

Resolved, whereas the approaching end of the twenty-five years term on which the present leases of the lumber lands of the Province are held is having the effect of making it more difficult to secure from the banks the advances necessary to carry on the lumbering operations of the licensees, and the result will inevitably be, unless remedial measures are adopted by the Government, to cripple the lumber industry in the Province and injure financially the holders of the licenses, which holders comprise the great majority of the persons engaged in the lumber business.

And whereas, the stumpage is and must for the future remain the largest source of Provincial revenue, next to the Dominion subsidy, and our lumber lands must in order to raise this revenue be leased practically in perpetuity either by a lease as such or by a succession of leases or renewals of leases, and the experience of this and of every other Province and of every other lumber country has shown that short term leases are destructive of lumber lands, not only by their failure to offer any inducement to conserve the lands but also by their making the interest of the lessees lie in depleting them, while on the other hand leases in perpetuity make it the interest of the lessees to conserve the forests and thus enhance the value of the lumber lands to the Province and ensure permanency of revenue.

And whereas, the present licensees have necessarily invested enormously in improvements to rivers and streams, erection of mills and necessary equipment for carrying on their large operations in the belief that the tenure would be permanent.

And whereas, the lumber leases in the Province of New Brunswick are of limited duration and the leases in the Provinces of Quebec, Ontario and British Columbia are practically perpetual, the lumber industry in this Province is much more heavily taxed than in any of the other named Provinces. Taking into consideration the difference of lumber scales the stumpage in New Brunswick is practically \$2.00 to \$1.00 in the Province of Ontario, and \$1.40 to \$1.00 in the Province of Quebec, and \$1.25 to 50c. in the Province of British Columbia.

This meeting of the Lumber Licensees of the Province and their representatives desire to impress upon the Government that the interests of the lumbermen, the interests of the lumber industry and of the Province all require:

(1) That the leases of the lumber lands of the Province should hereafter be in perpetuity.

(2) That, while the interests of the public should be safeguarded in the matter of new and renewal licenses, the lumber trade should be leased with due regard to the vested interests involved.

Mr. Powell in addressing the government outlined the history of the timber regulations in New Brunswick, and made some comparisons with those in other provinces. In Quebec for instance, he said, the purchase of a lumbering privilege, meant ownership of the rights involved, once and for all. Practically the same conditions existed

in Ontario. As the present New Brunswick leases would expire five years hence, the question of securing advances from the banks was becoming a serious one. Already the banks were bringing pressure to bear upon the lumbermen and informing them that unless a long extension of the leases was issued, their security was not sufficient. The lumbermen of New Brunswick were seriously handicapped by this and they were placed at a great disadvantage because capital was very timid and would remain so until a definite policy in regard to the Crown lands had been adopted. Any new industry depending upon the forests for its raw material would find it difficult to interest large quantities of capital until the question of tenure had been settled.

Mr. Powell drew attention also to the stumpage situation, stating that the lumbermen of New Brunswick paid exactly double the amount of stumpage dues which were paid by the lumbermen of Ontario, while the mileage charges were less in Ontario. Taking into consideration the difference in the scale, the lumbermen of New Brunswick were paying \$1.40 per thousand in stumpage while in the province of Quebec they were paying \$1. From the government's point of view he claimed that perpetuity of leases would be a distinct advantage. Men who held permanent tenure of their timber leases, would conserve the timber, while those who had only short leases would make the most of it during the passing hour and slash it down so as to get all the good out of it during the limited time of possession.

Mr. F. M. Anderson, of the Shives Lumber Company, Campbellton, referred to the numerous difficulties which the lumber industry had to face and which made it important that they should be in a position to secure liberal advances from the banks. In order to carry on a lumbering business it was necessary to tie up large sums of money for a considerable period of time. In the matter of supplies for the lumber camps alone, a great deal of money had to be tied up. His company for instance had over 20,000 bushels of oats as one item among the supplies which they had stored up in the woods for next season. Prices of lumber might be high, but the increased cost of production, as a result of higher wages, higher prices for supplies and the decreasing efficiency of the men employed in the woods, was advancing more rapidly than the price of the finished product.

Senator W. C. Edwards, Ottawa, said that the New Brunswick timber regulations, so far as the tenure of leases was concerned, were the worst in existence in Canada. They produced instability in the lumbering industry which was dangerous to the general interests of the province. Short tenure placed a premium upon the depletion of timber resources, while long tenure put a premium upon the preservation of those resources. On the Ottawa River the lumbering business was carried on by large organizations who made heavy expenditures in the carrying on of their work. If the leases were short the object of these companies would be to realize as rapidly as possible before their term was up. With long leases the very opposite was the case and the companies were anxious to conserve their resources. Senator Edwards believed that lumbermen would always be borrowers. On the Ottawa River it took from two to two and a-half years to make a turnover. The man who can carry on such a business without requiring to borrow from the banks was certainly a wonder. Conditions must be such as to warrant the confidence of the banks if the business was to enjoy reasonable stability. If, in four or five years, the New Brunswick leases were to be put up for sale and the present holders deprived of their limits and left with their large mills upon their hands, they would be in a very unsatisfactory situation and would be unable to obtain funds from the banks. The province of New Brunswick received a very large revenue from its forest resources and it was important that this revenue should be of a permanent nature. The only way in which this could be done would be by making the leases perpetual. It would be a great mistake, if the province failed to safeguard its revenue from the forests by insuring their permanency by adopting perpetual leases.

Senator Edwards made reference to the opinion, held in some quarters, that the timber limits should be divided up more generally, to encourage the operation of smaller mills. In his opinion, the man who built a mill without timber was taking improper chances. The man who should be taken into consideration was the one who invested his money in mills and limits and who went into business with the understanding that in his lease he has a valuable asset. He was interested himself in two mills in New Brunswick, only one of which was operated, but he was not asking the government to divide things up so that he could have both of these mills operated instead of only one. He believed that the government would find that the course

which the lumbermen were advocating was in the best interests of the province as well as of the lumbermen.

Honorable J. K. Flemming, premier of New Brunswick, replying to the lumbermen said that the government fully realized the enormous importance of the lumbering industry to the province. The government were studying the subject to the best of their ability and endeavoring to secure all the information obtainable, before taking definite action. They wanted to work out a policy that would not only give reasonable confidence to the men engaged in the lumbering business and to the capital involved in it, but would also do justice to the province. The time had come when the lumber leases should be dealt with, but the province expected to see them dealt with in a proper way. He would not say that the policy of the government would please everyone as various views were held in regard to the situation. He would say however, that they would deal with the matter in a manner which they would believe to be in the interest of all concerned.

## Trade Notes and Personal News

The Charlton Saw Mill Company, Collingwood, Ont., expect to start again in full swing early in April.

The Bryan Manufacturing Company, Collingwood, Ont., are pushing along their new plant in an endeavor to handle their ever increasing business.

The Knight Manufacturing & Lumber Company, Limited, Meaford, Ont., manufacturers of interior fittings, are working full time and have many orders ahead.

James W. Sewall, timber estimator, of Old Town, Maine, has returned home from a four months' exploring and surveying trip in the Adirondack Mountains of New York State.

Wilson Bros., Collingwood, Ont., manufacturers of doors, flooring and interior fittings, report that last year they did more business than at any time previously, and prospects are bright for even a better year in 1913.

The department of natural resources of the C.P.R. has engaged J. H. Mitchell, of Lethbridge, to superintend the work of the forestry branch. Mr. Mitchell is a well known landscape architect and practical gardener, and has made a special study of Southern Alberta.

Mr. William Rutherford, of William Rutherford and Sons Company, Limited, Montreal, P.Q., has been elected a member of the Westmount School Commissioners, in succession to Mr. J. McKergow, mayor of Westmount, and a member of the Montreal Lumber Company.

The Seaman Kent Company of Canada, Limited, Meaford, Ont., report that their plant is taxed to its full capacity to supply the orders they have on hand. Good progress is being made with their new plant at Fort William which will be completed within the next few weeks.

The Parry Sound Lumber Company, Traders Bank Building, Toronto, will move their office to the office of the Consumers' Box and Lumber Company, Limited, Ernest avenue, Toronto, on April 1st. The Consumers' Box and Lumber Company, Limited, have recently increased their capital stock from \$100,000 to \$500,000.

W. E. Kelsey, North Tonawanda, N.Y., who has conducted a wholesale lumber business on Main street announces the reorganization of his business under the name of W. E. Kelsey & Son. A son, Robert E. Kelsey, who has been in his father's employ, is the new junior partner. The office and yards will be retained on Main street.

Mr. R. O. Swezey, who has recently accepted the general membership of the Montreal Engineering Company, Limited, has organized a most efficient timber cruising and forestry engineering department for the company. Several big forest surveys are about to be commenced for large lumbering and financial institutions.

Mr. W. S. Rogers, superintendent of the Canadian Western Lumber Company, Fraser Mills, B.C., has had his duties increased by being appointed superintendent of the company's mills at Comox, Vancouver Island and Columbia River, Washington. Mr. T. Ryan, former yard foreman at Fraser Mills has been made superintendent and Mr. Geo. McLachlan has been appointed to the position vacated by Mr. Ryan.

The impression in Penetanguishene, Ont., and its neighborhood, is that the supply of lumber this year from the Georgian Bay district will be considerably smaller than last. Most of the lumbermen however, have taken all their logs out. Business is particularly brisk and several new propositions are under way here. The C. Beck Manufacturing Company, the Northern Timber Company, McGibbon Lum-

ber Company and Gropp Bros., all report good business at present and bright prospects for the spring.

R. H. Campbell, director of the Forestry Branch of the Department of the Interior, is endeavoring to promote the establishment of a series of forest fire protective associations from Gaspé to the Ottawa River as a result of the success which attended the organization of such an association by the lumbermen of the St. Maurice Valley in Quebec. The more general use of the telephone in the forests to allow of ready communication in case of fire is also being urged.

The Quebec Lands department has sold by auction 1,103 acres of land on the line of the Transcontinental Railway in Champlain county, for the sum of \$9,895. The land was divided into five blocks of lots, three of which were purchased by Mr. G. A. Bergeron, of Quebec, for the sum of \$7,303, the other two blocks having been acquired by Mr. Napoleon Kirouac, of Quebec, for the sum of \$2,592.

Shipping is expected to be very brisk at Midland, Ont., this season, and all the lumber yards and planing mills are working at full capacity. It is thought that there will be a good supply of lumber to cut this season. In fact the mills will have more business than they can take care of. The Georgian Bay Shook Mills are endeavoring to keep pace with their orders for doors and sash and will shortly have some interesting novelties for their customers.

Mr. John Hanbury, the well-known lumberman, of Vancouver, B.C., and Brandon, Man., returned to Brandon recently after a trip to the coast. He reports that the lumber trade at Vancouver is enjoying a splendid boom. The price of logs has increased upon the coast but has not had any adverse effect upon trade. Mr. Hanbury is arranging to increase the output of his mill which is now running at its full capacity of 125,000 feet every ten hours. The output of doors amounts to 3,000 weekly. This will be doubled in the near future.

Dr. Simon Kirsch gave a lecture before the monthly meeting of the Natural History Society of Montreal recently, on the subject of "Products of the Forest." In this connection a resolution was adopted to the effect that, recognizing the great importance of the conservation of forests and of the scientific control of the use of forest products to the present and future development of Canadian industries, the Natural History Society heartily endorse the steps taken by the Canadian Forestry Association and the Dominion Forestry branch towards the establishment of a Canadian forest products laboratory.

Prof. E. J. Zavitz, provincial forester for Ontario, as a result of a recent appointment, has been appointed provincial fire inspector by the Board of Railway Commissioners, and, subject to the general supervision of the chief fire inspector, will direct the enforcement in Ontario of the railway fire regulations of the board. Similar action as to Quebec has been taken by the appointment as provincial fire inspector of W. C. J. Hall, chief of the forest protection branch of the Quebec government service. It is expected that co-operation with the railway commission will be extended to the provinces of New Brunswick and Nova Scotia through action taken by the respective provincial governments.

Frank Hawkins, secretary of the Canadian Lumbermen's Association, represented lumber interests in the hearing before the Railway Commission last week of argument in regard to a new draft inter-switching order of the board. The case also concerned the interpretation of the original order providing interswitching facilities on railroads to shippers. The railways have refused to recognize that it implied the obligation to switch on to their own team tracks, after having been carried by another company, even if the receiving facilities of the consignee were more convenient of access thereby. The shippers urged that the original order did include this service. The new draft order, which specifies team track delivery, was discussed and will be again taken up at a further sitting.

### The Meaning of "Entire Cut of the Mill"

An interesting legal decision regarding the construction of a contract for the purchase of the entire cut of a mill for a certain period has recently been made by the supreme court of the State of Arkansas. The mill man was W. E. Talley and the purchaser was the Paepcke-Leicht Lumber Company. The difference arose over the construction of the term, "board measure." Mr. Talley held out that all thin lumber should be measured as inch, while the Paepcke-Leicht Lumber Company contended that "board measure" meant the actual measurement of the length, width and thickness of the lumber computing 144 cubic inches to the foot. The supreme court decided that the contention of Mr. Talley was correct. Suit was for \$29,609; the verdict was for \$9,998, which was affirmed. One justice dissented and another did not participate.

The Forest Branch of the Department of the Interior has signified its intention of using all the indoor space allotted to it at the Dominion Fair in Brandon next summer.

# Lumbering Operations at Campbellton

One of New Brunswick's Chief Producing Plants—Excellent Lumber and Shingle Mills of Large Capacity and Modern Equipment

The Restigouche River district has long been known as the scene of some of the most extensive lumbering operations in the Province of New Brunswick. One of the chief companies operating on the Restigouche, and in fact one of the most important companies manufacturing lumber and shingles in New Brunswick is the Shives Lumber Company, Limited, at Campbellton, N.B. The business of the Shives Lumber Company is carried on at Campbellton, and Shives Athol, Restigouche County, New Brunswick, with offices and stores at both points, the long lumber mill being situated at Shives Athol, while the shingle mill is situated in the town of Campbellton, both of the plants having their log holding booms on the Restigouche River.

In 1888 the late Kilgour Shives moved to Campbellton from Dunstan, Kings County, where he had been operating a small rotary mill, and bought from the late William Richards the rotary mill then running on the site of the present Shives shingle mill. Shortly afterwards he improved the plant, adding an annex into which he put four Dunbar shingle machines.

At the New Brunswick Crown Land Sale in 1893, Mr. Shives increased his previous limit holdings considerably, and a little later he added to the mill a live gang. In 1897 he added four additional Dunbar shingle machines to the same plant, and with additional power as well, he operated all under one roof.

A year or two later he purchased the four machine shingle mill situated further down the river, and at the lower end of the town, which had been built by John Andrew and afterwards run by Chamberlain & Champion and later by W. P. Gray.

In 1901 Mr. Shives added largely to his land holdings in New Brunswick and Quebec, and joining with Messrs. Stetson, Cutler & Company, of St. John, Boston and New York, he converted the business into "an incorporated company," under the name of the Shives Lumber Company, Limited.

## A Saw Mill Site With Many Advantages

After looking around everywhere for a good mill site with most advantages, Athol was decided upon, as, while it did not have a deep water approach sufficient for large vessels, it was adjacent to the Restigouche boom, making rafting of the company's logs unnecessary; it had an ideal yard site on the flat between the Intercolonial Railway and the Restigouche River. Connection with the railway could be had without any great expense. The boom privileges in front were large and safe, and at high tide there was always ample water to float the lumber scows to and from the mill premises. A quarter of the Athol Farm, about 480 acres, was purchased from the Ferguson Estate, and in the winter of 1901-1902 the mill known as the Athol Mill was built, being ready for sawing in August, 1902. The plant has run for six months of each year since that date.

The mill at Athol is equipped with two Wickes gangs, twin circulars and rotary, and has an average capacity of 225-250 M. ft., according to the class of stock sawn, as much as 350 M. ft. has been sawn in ten hours. Everything about the mill is up-to-date. In addition to the large saws the equipment includes a large gang edger for cutting River Platte strips and scantling, also the usual lath and

other small saws for getting everything possible out of the logs in as economical a manner as possible.

Situated near the mill is a large machine and carpenter shop with its own boiler and engine all fitted complete with lathes, planers, drills and other machines for doing every part of mill repairs, including all light foundry work. Separate from both the mill and the machine shop is the planing shop driven by motor supplied with power from the mill dynamo, where, in addition to the company's own work, much outside dressing is done.

There are three large stables on the premises with stable capacity for one hundred horses.

Fire protection is obtained from a Smith-Vaile Underwriters' Pump housed in brick, entirely separate from any of the other buildings, supplied with water through a 10-inch main direct from the river.

## Excellent Booming Privileges

The booming privileges in front of the property cover over one hundred acres and can easily store over ten million logs with safety.

The piling ground, which is not surpassed by any mill in Canada, has a very large capacity, and is so situated that it can be greatly extended without expense. It is connected with the Intercolonial Railway and has a three-track siding running right through the yard and down to the mill, so that the cars can always be shunted right up to the piles. The yard is also equipped with transfer runs and rollers so that the lumber can be loaded to advantage and cheaply, into scows along the mill wharf front, and then towed by tugs to vessels lying at the railway wharf at the lower end of the town of Campbellton.

The company have at Athol some forty cottages for their workmen, together with large store and office, and they also have a boarding house with accommodation for one hundred and fifty men. In an effort to take care of their employees the company have their own schools, two departments, together with two churches on their own ground, one being Roman Catholic and the other a united Protestant place of worship. Around the industry has grown a large village, as during the past few years employees of the company have secured building lots from the owners of land adjoining Athol, and built for themselves homes—over one hundred in number.

The two shingle mills, together with the offices, stores, warehouses and stables in Campbellton, were destroyed in the fire which cleaned out the town in July, 1910.

A new shingle mill to take the place of the two that were burned, was commenced in the autumn of 1910 and was ready for sawing in the spring of 1911.

This mill is the most modern in Eastern Canada, being built to the requirements of the New Brunswick Board of Fire Underwriters, and is one of the lowest rated unsprinkled shingle mills in operation. It is equipped with 18 Dunbar and 2 Perkins shingle machines, 2 saw railway tie machines, capable of turning out about 350 M. shingles and 600 ties daily. This mill is run eleven months each year, 6½ months on logs taken from the water during the open season and

Shives Lumber Company, Campbellton, N. B.—Long Lumber Mills at Shives-Athol.

Shives Lumber Company, Campbellton, N. B.—Shingle Mill from River Showing 51,000 Cedar Logs for Winter Sawing.

Shives Lumber Company, Campbellton, N. B.—View of Plant at Shives-Athol.

4½ months on logs piled out of the water near the mill. Owing to the short open season the company pile on the wharf adjacent to the mill, sufficient logs to run the mill during the winter months. The logs are all taken out of the water and up the mill slip in the customary way. They are then rolled over and piled commencing beside the slip, the first block being kept within six feet of the top of the slip, and as soon as the pile gets sufficiently long a car is brought into service, being used on ordinary railway irons and operated with drum and cable, with power from the mill. The track is worked in different directions and the logs rolled from the car each way between the tiers. As the pile gets larger the track is moved higher and higher.

As soon as the frost makes it impossible to take logs from the water, the mill slip is altered for getting logs from the piles, and as the logs get too far away from the mill for using the mill power to take them into the mill, they are dragged by horses and travoys into reach of the mill haul-up, two horses being sufficient to keep the mill in logs.

The company have about one thousand square miles of lumber lands in New Brunswick and Quebec, and operate in both provinces. They log both by their own camps, and by contractors or jobbers, and of late years have been getting more of their log crop through the latter than formerly. They get their men largely in Quebec, most of them coming from the Gaspé Peninsula.

#### Markets in Many Foreign Countries

The long lumber, which is practically all spruce, not over three per cent. of the company's log crop being pine (the pine on their limits being mostly cut into square timber over a generation ago) has largely been marketed heretofore by water in the British, Argentine and Australian markets. The high rail rates, owing to Campbellton being so far away from the large Canadian and United States centres, made water shipments better paying business, but the high water freights of the past year interfered so much with shipments, and made the net price so unprofitable, that the company were able to market their product with better results in the United States, Ontario and Quebec, and a greater portion has been shipped there by rail than ever before.

The laths find ready sale in the United States, being on account of their great weight, shipped by water to New York, Philadelphia, Baltimore and Washington.

The shingles in the best grades are sold largely in the New England and Eastern States, with some in Ontario, while the lower grades are disposed of in the Maritime Provinces, Magdalens, Newfoundland, and the West Indies.

The railway ties made by the company are entirely in cedar, and are sawn altogether in connection with the manufacture of shingles, being cut largely from the coarse, knotty tops, usually by taking a tie length from the log on the bed of the mill, and before it is turned over to the cut-off saw to be cut into shingle bolts. The ties are made into 7 and 8 foot lengths, largely the latter, which are sold to the different large railway companies, while the former, with what cedar poles are got out in connection with the cedar logs, are sold to street railway companies, although many of the poles find their way to the telegraph, telephone and electric power companies.

The present President of the Shives Lumber Company is Mr. F. B. Cutler of Boston, Mass. He succeeded the late Franklin Stetson, of St. John, who was the first president of the company, and who died early in 1905. The late Kilgour Shives was the first secretary-treasure and general manager of the company, and at his death in November, 1905, Mr. W. F. Napier was promoted to his position, F. M. Anderson being made logging superintendent, John M. Maclean, superintendent of mills, and F. P. Wetmore in charge of the Athol Yard and the shipping.

The accompanying illustrations show the mill at Athol, the village

Shives Lumber Company, Campbellton, N. B.—Interior of Long Lumber Mill at Shives-Athol.

at Athol, and the logs piled at the shingle mill at Campbellton for winter sawing.

#### Eastern Manufacturers Expect Good Year

Chappell Brothers, St. Omer, P.Q., in a recent letter to the Canada Lumberman, write as follows: "The outlook for the lumber trade for the year 1913, is exceptionally bright. Yard stocks are light both in the United States and Great Britain, and with trade in general in a strong healthy condition, demand for lumber is above the average. During 1912, the buyer of stock in the United States and Great Britain paid a high price for the goods, but the excessive freight rates left the shipper only a small net price for his stock. The accumulation of goods piled up during the English coal miners' strike, when so many steamers had to tie up for want of coal, has been pretty well attended to and vessel owners will have to be content with a more reasonable rate of freight than they demanded and received during 1912, although we do not expect to see them back to the low rates which prevailed before the coal strike. Operating expenses have increased for vessel owners as well as for the manufacturer and the owners of tonnage must have a living price. With the old rates, I doubt if they could make ends meet and we will not again get as cheap freight rates as we did before 1912. Still during 1912 demand for vessels was so strong, that the owners received a greater return than they can expect to have every year and they will have to come down to a rate nearer to the happy medium than in 1912.

It has taken considerable time and holding up of stock to get the price of lumber up to the present level which will meet freight rates and other increased costs, but now it has advanced to a living price to the manufacturer and I doubt if it will ever again drop back to the figures of 1911 and 1912.

#### Edward Partington Company's Plans

Hon. N. M. Jones, manager of the Edward Partington Pulp and Paper Company, St. John, N.B., reports that the company's cut for the past season on the Gibson lands amounted to between 17,000,000 and 18,000,000 superficial feet. Of this amount about 14,000,000 feet was cut on the Nashwaak and the balance on the Bartholomew River. Referring to the company's plans for Marysville, Hon. Mr. Jones said that a decision had not yet been received from the company's headquarters in the old country as to whether a pulp mill would be selected at Marysville or not. The intention at present was to saw only about 2,000,000 or 3,000,000 feet of the company's cut at Marysville this year, while the cut on the Bartholomew River would be manufactured as usual at Blackville. The company have a bill before the Legislature to give them power to establish rafting grounds at the mouth of the Nashwaak, and expect to handle their logs cut on the Nashwaak from that point.

#### New Hardwood Lumber Directory

The National Hardwood Lumber Association have published a new issue of their Hardwood Lumber Directory. This issue contains quite a lot of new information relating to the work of the association and draws particular attention to the new reporting department which furnishes members with financial statements and lists of the lumber requirements of the hardwood consuming trade of the United States and Canada. The success of this department is already assured, as it has received the hearty co-operation of the consuming trade. The directory contains an official list of the membership of the association, including the 102 new members who have joined since last June.

## Pulp and Paper Men Will Organize

**Important Meeting Held at Toronto—Plans Made for a Further Meeting at Montreal**

A number of prominent representatives of the pulp and paper manufacturing industry in Eastern Canada held a meeting on Saturday afternoon, March 8th, at the King Edward Hotel, Toronto, for the purpose of considering the formation of a pulp and paper association in Canada, along lines similar to those of the American Pulp & Paper Association in the United States. Recent important developments both in the way of expansion in the Canadian manufacturing industry and in the way of alterations in the customs tariff upon pulp and paper entering the United States, have lead the members of the industry in Canada to unanimous opinion that the formation of an association is practically essential to their future welfare.

The representatives who attended the meeting held a very pleasant luncheon before settling down to business. After this, Mr. A. G. McIntyre, Toronto, was selected as chairman of an informal meeting and the question of the formation of an association was then discussed. A number of those present gave their views regarding the feasibility and advisability of taking such a step. Every one was agreed that the formation of an association would not only be a wise undertaking, but one which would equally justify itself from every economical and strategic point of view. The brief addresses delivered by several of the members present indicated clearly the line of action which such an association would probably take. The chief among these was the collection and distribution of statistics of production and consumption, upon which members would be able to form an accurate judgment in regard to the state of the market and the wisdom of curtailing, increasing, or continuing without alteration, the current rate of production. There was an equally unanimous conviction that it would be both improper and unwise to attempt anything in the form of regulation of prices. It was clearly shown that any such course would be contrary to the best interest of the industry and at the same time illegal. It was just as clearly shown that the desired result would be far more definitely and satisfactorily secured by the distribution of accurate statistics. When a manufacturer had before him a statement of the requirements of the market and of the stocks available and being produced, he would invariably regulate his production for the time being, in accordance with reasonable economic principles.

After the discussion had brought out these essential points the actual procedure in the formation of an association was discussed. This resulted in the appointment of a committee composed of Messrs. Geo. E. Challes, Toronto; A. G. McIntyre, Toronto; J. Campbell, Windsor Mills; Howard Wilson, Montreal; Geo. H. Millen, Hull, P.Q.; J. E. G. Debuck, Chicoutimi, P.Q.; O. A. Porritt, Quebec; A. F. Cayford, Three Rivers, P.Q.; Geo. H. Med, Sault Ste. Marie; N. M. Jones, St. John, N.B.; C. Howard Smith, Montreal; J. H. Weldon, Toronto, and G. A. Howell, Toronto. The duty of this committee will be to communicate with all the other pulp and paper manufacturing companies in Canada and obtain expressions of opinion regarding the advisability of forming an association. They will report at a meeting which is to be held at Montreal on Wednesday, March 19th. The committee themselves will hold a meeting on the day previous, when they will be entertained at luncheon by Mr. C. H. Smith at the Montreal club.

Representatives from the following mills were present, Spanish River Pulp & Paper Company, Barber Paper & Coating Mills, Riordon Pulp & Paper Company, Limited, St. Lawrence Paper Mills, Limited, Montrose Paper Mills Company, Don Valley Paper Company, Brompton Pulp & Paper Company, Laurentide Company, Limited, Rolland Paper Company, Edwin Crabtree & Sons, Wayagamack Pulp & Paper Company, Howard Smith, Abitibi Pulp & Paper Company, and Dryden Timber and Power Company.

An interesting visitor at the meeting in Toronto was Mr. R. H. Campbell, Director of Forestry for Canada. Mr. Campbell, when invited to address the meeting, expressed his approval of the movement and bespoke the co-operation of the pulp and paper manufacturers in connection with the proposed establishment of a forest products laboratory at Ottawa. He referred to the excellent work which had been done at the United States Forest Products Laboratory at Madison, Wis. A number of pulp and paper manufacturers in the United States had practically altered their whole method of manufacturing as a result of valuable information which they had secured from the laboratory at Madison. It was his hope to be able to establish a similarly useful laboratory in Canada, and he hoped that the pulp and paper manufacturers would do all in their power to co-operate in this movement. He was glad to announce that the government had already included in the estimates for the coming year an appropriation of \$10,000 for this purpose.

After the meeting in Toronto a business meeting of the committee which had been appointed to arrange for the next meeting at Montreal

was held, and encouraging progress was made toward securing the co-operation of the whole pulp and paper manufacturing industry in Canada.

### Fire at Riordon's Merriton Sulphite Mill

A portion of the sulphite plant of the Riordon Pulp and Paper Company, at Merriton, Ont., has been destroyed by fire. The greatest damage was done to the screen room and digestors, the total loss being between \$40,000 and \$50,000. The sulphite mill is closed down, which involves the loss of 25 tons per day for six months, and at a time when every ton can be sold. The deficiency will be supplied from Hawkesbury, where the enlarged plant will come into effect in April. The screen and digester departments at Merriton will be replaced by a steel and concrete fireproof structure built in a most substantial manner, and the engineers are now looking into the question of re-construction. The fire in no way interfered with the paper mills, which are running without interruption. These mills have been in continuous operation for 45 years. This is the most serious fire which has occurred at Merriton, there having been only two or three small warehouse fires at previous periods. The mill was sprinkled throughout, and the loss was due to a strong wind which fanned the flames, thus giving the fire a big start before the fire brigade could check them. It is believed that the outbreak was caused by a spark getting on to a belt saturated with oil. The building was insured, while the loss of profits during the re-building is also covered by insurance.

### German Paper Men Studying Canadian Pulp Resources

Montreal, March 2nd, (Special to the Canada Lumberman): That German pulp and paper men are keenly looking to Canada for a supply of pulp wood, wood pulp and paper, and also for attractive sites to establish pulp and paper industries, is well indicated by the number of enquiries recently made through correspondence and responsible agents. Shut out from Austrian forest supplies and parts of Russia hitherto supplying raw material for German paper mills, the situation is naturally causing some alarm, and what is more natural than to look to Canada? The plan to organize a tour of German business and financial men to this country next spring has some significance in this connection.

### Want Duty Reimposed on B. C. Paper

Paper mills in Washington and California have appealed to the Treasury Department to rescind its order of some time ago admitting paper from British Columbia free of duty. This request follows the Treasury's recent refusal to abolish the duty on paper from Quebec, Canada, on the ground that Quebec had not removed export restrictions from wood and wood pulp, but only from paper. The Treasury has informed the western mills that if they prove conclusively that British Columbia would refuse to remove export restrictions from wood and wood pulp the duty on paper would be restored.

### Quebec Firms Taking No Action

Montreal, March 6th: The Laurentide, Wayagamack, Belgo-Canadian Companies and Price Bros. are taking no action in connection with the refusal of the United States Government to admit their products duty free into the States, following the decision of the Quebec Government to lift the embargo on the companies' Government timber limits. They are awaiting the action of the Democrats. The Booths and the Soo Corporation, are still exporting their goods free of duty, the two companies having private limits.

### Consumer Will Pay the Increased Freight Charge

With reference to the recent judgment of the Board of Railway Commissioners of Canada in allowing an increase of 1 cent per 100 lbs. on freight rates on pulp wood to New York points. A prominent Toronto authority says that the situation appears to be the same as was the case with sulphite. It will undoubtedly not be to the interests of the pulpwood dealers but it will be to the advantage of the paper trade in general. However, except on present contracts, pulp wood dealers will hardly be the losers as, in the present active state of the market, the buyers will undoubtedly have to pay the increase.

The enlargement of the Hawkesbury mill of the Riordon Pulp & Paper Company, which has been going on for six months, is nearing completion. One digester is in operation, and the second one will be ready a few weeks later. This will increase the capacity by one-third more than previously.

The Laurentide Company, Grand'Mere, P.Q., now have their new digester running. About 500 men are at work on the dam being built by the Talbot Construction Company in connection with the Laurentide Company's new power plant.

## Builders Interested in Demurrage

Hear Claim for Reciprocal Charges Upheld by C. M. A.  
Representative — Chief Points at Issue

Montreal, March 6th, (Special to the Canada Lumberman): The question of reciprocal demurrage was discussed at the noon-day luncheon of the Montreal Builders' Exchange held to-day, by Mr. J. E. Walsh, transportation manager of the Canadian Manufacturers' Association, Toronto. Mr. Walsh stated that reciprocal demurrage was in force in thirty states on the other side of the border. The most recent state to adopt it was Washington, and reports stated that, so far, it was working out satisfactorily. The subject had been a live one with the Canadian Manufacturers' Association since 1906. He was of the opinion that there were few receivers of freight who desired to use cars as warehouses. In 1906 the Railway Commission had stated that they were willing to discuss reciprocal demurrage further, but nothing had yet been done. There had however, been so many delays and losses that the Canadian Manufacturers' Association had decided to ask the Railway Commissioners to take up this question again, and to impose penalties for delays. They desired uniform penalties similar to those which were granted to the railway companies and imposed on consignees. The late government had made an amendment giving the Railway Commissioners power to fix penalties for delay. The manufacturers were of opinion that it was time to get some relief from the unsatisfactory conditions which prevailed, and on the 15th of April they proposed to make representations to that effect before the Railway Commissioners. The Manufacturers' Association had drawn up a resolution to submit to the Commission, and some manufacturers were of opinion that they had not gone far enough in the relief they were asking. They had no feeling of retaliation. What they wanted was a service for which they were willing to pay a reasonable rate. They were entitled to get that service for which they paid and it was the duty of the railway companies to see that the manufacturers obtained it.

### The Average Demurrage Plan

Mr. Walsh spoke at length on the average demurrage plan now in force in the United States. This, among other things, provides that forty-eight hours free time is allowed for unloading or loading on all commodities. After the expiration of the free time allowed a charge of \$1.00 per day or fraction of a day is made until the car is released. When, by reason of delay or irregularity of the carrier in filling orders, cars are bunched and placed for loading in accumulated numbers in excess of daily orders the shipper is allowed such free time for loading as he would have been entitled to had the cars been placed for loading as ordered. When, as the result of the neglect of any carrier, cars designed for one consignee at one point are bunched at originating point in transit or at destination, and delivered by the carrier line in accumulated numbers in excess of daily shipments the consignee is allowed such free time as he would have been entitled to had the cars been delivered in accordance with the daily rate of shipment. When a shipper or receiver enters into an agreement the charge for detention to cars, on all cars held for loading or unloading by such shipper or receiver is computed on the basis of the average time of detention to all such cars released during each calendar month. This average detention is computed as follows:—

A credit of one day is allowed for each car released within the first 24 hours of free time. A debit of one day is charged for each 24 hours or fraction thereof that a car is detained beyond the first 48 hours of free time. In no case is more than one day's credit allowed on any one car, and in no case is more than five days' credit applied in cancellation of debits accruing on any one car, making a maximum of seven days that any car may be held free; this to include Sundays and holidays.

At the end of the calendar month the total number of days credited are deducted from the total number of days debited, and \$1 per day charged for the remainder. If the credits equal or exceed the debits, no charge is made for the detention of the cars, and no payment is made to shippers or receivers on account of such excess of credits, nor are credits in excess of the debits of any one month considered in computing the average detention for another month.

A shipper or receiver who elects to take advantage of this average agreement is not entitled to cancellation or refund of demurrage charges under other sections.

### The Optional Feature

Mr. Walsh explained that this agreement was optional, and they were asking the Railway Commission that this should be adopted as an extension of their present rules.

Mr. Pauze, the chairman, commented on the good work that the Canadian Manufacturers' Association were doing in connection with the demurrage question, and said that the Builders' Exchange would do all they could to help in this matter.

In reply to questions as to loss incurred by reason of undue delays on the part of the railway company, Mr. Walsh said he was of the opinion that it was not advisable to press for compensation for delays between terminals, but there was room for improvement in the matter of delays within terminals. At the same time he did not see how penalties for delays in transit could be worked out. No doubt one could recover for goods being detained unreasonably. Some bodies were holding out for a clause to the effect that goods should travel at the rate of 100 miles per day.

### A Progressive London Wholesale Firm

The incorporation of the London Lumber Company with a capital of \$40,000 which was recently announced in the Canada Lumberman, is the result of the rapid growth in recent years of a company which has established for itself an exceptional reputation for shrewd business methods and square dealing. The head office of the company will be continued in London and they will conduct as formerly, a wholesale lumber business. The president of the company is Mr. Frank E. Harley and the secretary, Mr. Charles R. Hoare.

The London Lumber Company was established in 1890 by the late Robert McLeod, who conducted a successful hardwood business, under the above name for a number of years, being succeeded in 1907 by Mr. Harley. Some years ago a large percentage of the firm's business was in shipping birch, ash, etc., to the markets of New York and Boston. Of late years, the increased demand in Canada has made it more profitable for them to ship most of their stock to the Canadian trade.

During the past three years the firm have controlled a large cut of American oak, poplar and gum, which has been distributed among the

Charles R. Hoare, London, Ont.

Frank E. Harley, London, Ont.

furniture and other manufacturers throughout Ontario, and have handled in addition a large quantity of yellow pine. In addition to hardwoods they also handle a large quantity of pine and spruce in car-load lots only.

Mr. Frank E. Harley, president of the London Lumber Company, was born in London, Ont., in 1876, and received his education in the public schools of that city. The first two years of his business career were spent in the city ticket office of the C.P.R., and in 1894, he entered the employ of The London Lumber Company, under his grandfather, the late Mr. McLeod. After serving several years as inspector, he became assistant manager, and on the retirement of Mr. McLeod in 1907, assumed the management.

Owing to his successful management during the last five years, which was marked by a very substantial growth in the volume of business handled, he and his partners, Mr. Richard Hoare and Mr. Frank Harley, deemed it advisable to apply for incorporation, which, with increased capital, would enable them to extend their business still further.

Mr. Chas. R. Hoare, the secretary, was born in London, in the year 1886. For a number of years he was associated with the Stevens Manufacturing Company and McClary Manufacturing Company of that city. In November, 1907, he joined the office staff of The London Lumber Company, and in 1908 was appointed secretary, since which time he has, in this capacity, ably assisted in carrying on the successful business of the company.

Owing to the growth of their business, the company now maintain a capable staff of hardwood lumber inspectors, throughout the mills, and the new organization anticipates doing a still larger business in the future.

# Market Correspondence

SPECIAL REPORTS  
ON CONDITIONS AT  
HOME AND ABROAD

## Good Trade Prospects at Ottawa

Ottawa, March 10th; (Special to the Canada Lumberman).—The snow storms of the past two weeks have had the effect of curtailing somewhat the demand for retail lumber, but trade is still reported remarkably active. The prospects are exceptionally bright for a good season's business. Prices continue firm and several grades of pine have increased during the last two weeks. One inch s.c. strips are from \$1. to \$2 higher.

If an amicable settlement between the carpenters in Ottawa and the Builders' Exchange is not brought about in the meantime there is likely to be trouble on the first of March. The union carpenters have notified the Exchange that they want an increase of pay from 35 to 42½ cents per hour. It is yet early to predict whether the demand will be granted. The notice was only served two days ago.

Though the recent cold weather has interfered with the lumber trade in some respects it has been beneficial in others, for it has permitted the piling of logs for the spring drive, hitherto delayed by the mild weather. In many of the camps the winter's work is practically over and the men are returning to the cities. The employment agencies are now on the look out for good river men, but find it rather difficult to get them.

About 2,200 feet of square timber has been taken out this winter by the Petawawa Lumber Company at their limits at Brule Lake. This may be regarded as an exceptionally good cut as few limits in the east now contain trees of sufficient thickness to yield square timber.

Wall board is to be manufactured from spruce logs by the Beaver Board Company, at a factory now in course of erection at Beaverville, Que., quite near to Ottawa. The company announce that they will commence operations in about two weeks' time and will employ 150 men. The factory is a one-storey structure measuring 500 x 75 feet. Mr. E. B. Smith will be in charge of the manufacturing end of the business, while Mr. A. Smith will look after the office work. The company also have plants at Buffalo, Roanoke Rapids, N.C., and other places in the United States.

A few increases in the tolls charged by the Upper Ottawa Improvement Company have been approved by the government.

## Companies Case Before Supreme Court

Practically every lumber company in Canada is interested in the Companies Case, which again came before the Supreme Court last week. The Provincial and Dominion governments have opposite views as to the status of a company holding a Provincial or a Dominion franchise. The case has been oscillating from one court to another during the past two or three years. All the arguments have now been presented and the Supreme Court is expected to give judgment in the course of a few weeks.

The Canadian Manufacturers' Association was represented at the last hearing by F. H. Crysler and he argued that while a general trading company, provincially incorporated, could buy and sell almost anywhere, yet lumbering and fishing companies were considerably restricted from doing business beyond the limits of the province in which the company obtained its charter. Mr. A. W. Atwater, K.C., took a different view and said that the E. B. Eddy Company, for instance, could buy pulpwood in Ontario and sell it in the same province if there was a glut of pulpwood in the Quebec market.

## May Appeal Pulpwood Rate Decision

There is a good deal of talk going the rounds, of an appeal being registered against the decision of the Railway Commission authorizing increased rates on pulp wood from shipping points in Canada to those in the Eastern States. The effect of the increase will not be felt in Ottawa very much as there is little, if any pulpwood exported. Mr. C. J. Booth, of the firm of J. R. Booth, when seen by the correspondent of the Canada Lumberman, said: "We do not ship any pulpwood to the United States. We do, however, ship a good deal of pulp and paper so the advance in the pulpwood rates does not affect us." He ventured the opinion, though, that one result of the increase will be to discriminate in favor of pulpwood areas adjacent to water routes. During the hearing of the case before the Railway Commission it was explained that only about 17 per cent. of the pulpwood shipped to New York State goes by rail from Canada.

## Ottawa Lumbermen Attend National Convention

Among those who went from Ottawa and Montreal to attend the annual meeting of the National Wholesale Lumber Dealers' Association of New York State, held in Atlantic City last week, were: Gordon C. Edwards, R. G. Cameron, E. R. Bremner, Frank Hawkins, secretary of the Canadian Lumbermen's Association of Ottawa; D.

H. McLennan, Angus McLean and Walter C. Laidlaw, of Montreal. E. M. MacDonald, M.P. for Pictou, was one of the chief speakers at the annual banquet held in the Hotel Chelsea.

Gordon C. Edwards has been elected president of the newly formed Ottawa Lumbermen's Credit Association. W. H. McAuliffe is vice-president, and the members of the executive are: Messrs. George Mason, Rose, Grant, and Barrett.

Mr. W. H. McAuliffe, of the firm of McAuliffe Davis & Company, is away on a holiday trip to Panama and Cuba. He will be home again at the end of the present month.

## Serious Fire at McAuliffe Davis Plant

Ottawa, March 8th; (Special to the Canada Lumberman).—The woodworking building, including all the material in it, a dry kiln and the boiler house at the Chamberlain avenue yards of the McAuliffe Davis Lumber Company were completely gutted by fire here to-day. A spark from the electric motor, which propelled the machinery, caused the blaze. The loss totals about \$55,000, all covered by insurance. Only the good work of the firemen prevented the fire from spreading to the adjoining warehouse in which was stored thousands of dollars worth of lumber.

Sparks from the fire also ignited seven cars of lumber and three empty cars on the Grand Trunk siding close by. All these were burned to the trucks and the loss to the Grand Trunk was \$10,000, covered by insurance. The lumber on these cars was being shipped by J. R. Booth, McLachlin Bros., Arnprior; the Rideau Lumber Company and McAuliffe Davis, to Toronto, Montreal and New York firms. As the freight was paid on it the Grand Trunk will have to compensate the shippers.

## Nova Scotia Market Conditions

Halifax, N.S., March 3rd, (Special to the Canada Lumberman): The conditions in Nova Scotia, are at present, rather difficult to outline accurately owing to the fact that the winter has been the mildest for years, and while considerable lumber is being moved at present, there is so very little snow, that very little warm weather or rain would remove practically all of it, and leave conditions as bad as they were in January. Even should the present weather conditions continue, the cut cannot reach an average. In all probability, the American market will receive pretty nearly an average amount from Nova Scotia.

The English market exports will probably be about three-quarters of an average, while the South American shipments will be light. A quantity, not quite up to the average, should go forward to the West India market. Local market demands continue strong, and a record amount of lumber will be used this year within the Province.

Some of the larger operators are not cutting anything at all this year, while a great many more are doing very little. The Maritime Lumber Company have all their plants closed this winter, while the Davison Lumber Company, on the other hand, expect to have a large cut. Portable mill operations are about the same as usual. All the available mills are being operated.

All the manufacturers are looking forward to a good season, so far as prices go, and it is to be hoped that good winter weather will continue for the balance of the season to enable them to get out logs which they have, now yarded, in the woods.

The English market is the strongest that it has been for a great many years, even with the high liner freights which are ruling, at from 50s. to 60s. Deals are netting a very high price. Most of the winter cuts have been sold at prices ranging from \$14.50 to \$16.00. The American market is strong, probably the strongest it has ever been, and the general feeling is, that 1913 will be a banner year in that market.

Just at present, random spruce is bringing around \$22.00 to \$25.00, specification hemlock from \$20.00 to \$22.50, planed hemlock boards, from \$21.00 to \$22.50, and lath around \$4.00.

The winter has been fairly open along the Atlantic Coast of the United States, and building operations have not been held up by bad weather, to any extent. This, of course, reduces the stock in the yards, and by holding off shipments until April or May, the market should be even stronger than at present.

It is rather difficult to foretell what tonnage rates will be for this season, and a great many different opinions exist. Some of the larger operators think that freights will open around \$4 on spruce to New York for large vessels, and gradually increase through the season. One thing is certain, that the quantity of lumber on hand in Nova Scotia and along the Maine and New Brunswick coast for shipment

to the United States points, is very much less than last year, and rates should be considerably lower than they were at the close of the season, last fall.

There have been very few changes of large areas in the past month or two, although some of the largest areas in Nova Scotia are either under option or offered for sale. One property of 150,000 acres is now under option to an English house, while several others of smaller acreage, are under option to Provincial people.

### St. John Cut Shows Decrease of About One-Third

St. John, N.B., March 8th; (Special to the Canada Lumberman):—The lumber industry, especially that of the hauling of logs from yards to rivers, has shown marked activity during the past two weeks. The snow being so late in coming left the operators with an extra amount of work to be done in a very limited time, but should the snow remain during the next ten days about all logs will have been delivered on banks of rivers. The cut on the St. John and its tributaries will not be more than two-thirds of last year, this falling off being more marked on the lower sections of the river, where the snow did not come until the first week in February, making the operators fearful that they would not be able to haul all logs which they could have cut, had the winter been favorable. Should the driving season not prove a successful one, the shortage will be very much more marked, and the mills at St. John will suffer for want of logs, being forced to shorten their season's sawing. Prices of logs are very high, being about \$1 per M. over last season's prices.

Practically all the mills on the river at St. John have sold their cuts of English deals for the coming season, the figures being around \$16.50 per M. for specification of deals running 50 per cent. 7 x 8 x 3, balance 9 x 3 and up; with 3 x 4 and 3 x 5 about \$14; 3 x 6 about \$4.50; fourth quality, \$13.50 to \$14; ends at usual reductions. The cut of English deals from St. John for the season of 1913 will not be as heavy as usual owing to the shortage of the log cut. Prices remain firm, with rising freight rates. What effect this will have on prices of deals it is hard to say.

Prices for New York and New England stocks remain firm, with plenty of buyers who are offering good figures for contracts, viz., for 2 x 3 about \$15 per M.; 2 x 4 \$16; 2 x 6 \$15; 2 x 8 \$17.50; 2 x 10 \$18.50; all delivered on cars at St. John or by sailer, according to sale.

Rates of freight remain at \$3.25 for New York with no signs of advance for a time at least, until something is ready to be moved.

Laths are being sold for future cuts seasons 1913, at \$2.70 per M. on sellers' docks; this is about 20c per M. higher than last year for season's cuts.

Low grades of inch, two and three inch are being sold at about an advance of one dollar per M. over last year's prices. At present there are no stocks for sale for immediate use.

Merchantable spruce boards are being sold at about \$1 per M. advance over last season, viz.: \$14.50 per M. All grades of clear spruce or pine will advance in 1913, as the supply will be very limited.

Practically all woodworking factories in this section are very busy and have been so during the whole winter, when as a rule they are not very busy.

### Splendid Demand at Montreal

Montreal, March 10th, (Special to the Canada Lumberman): From every quarter one hears of the good condition of business—"Never better—phenomenal" was the expression of one lumberman. This, indeed represents general conditions, and if the building programme outlined is only partially carried out, there promises to be a shortage and still higher prices. Reports received here show that all the important manufacturers have sold this year's cut, but some of the smaller mills are holding out in the expectation of getting even better prices which, at present, are considerably higher than for last year's cut. The weather has been very unsatisfactory for logging, but with the fall of snow present conditions have considerably improved.

There is almost a famine in dry stock, and certain lines are practically impossible to obtain. Common grades are especially difficult to secure. Orders are coming freely into the market, but the problem is to secure the lumber.

The markets in Canada, Great Britain and the United States are all good, a rather unusual circumstance and one that points to satisfactory business all round.

There is a tendency for prices of hard woods to rise, and indications point to a short cut. Some manufacturers state that they have not yet a quarter of their lumber cut.

Birch is selling well for export. Lath is very difficult to obtain and it is quite on the cards that there will be a famine in this section until the new cut comes in.

The activity in the local building trade is shown by the fact that permits for the last month were \$647,667 as against \$467,220 in the corresponding month last year, while the total for 1913 so far is \$1,106,290 as compared with \$739,718.

The ground wood market is a little stronger. Careful investigations show that for the month of January 14,000 tons were imported into the United States. Of this 2,200 tons came from Newfoundland, and the balance from Canada. In January of last year the imports were 4,300 tons below January of this year.

The sulphite market is also firm, consumption about balancing production, so that any special quantity required above the ordinary demand will be difficult to procure.

### Increasing Demand at Tonawanda

North Tonawanda, N.Y., March 6th; (Special to the Canada Lumberman).—With large employers of labor urging that houses be built at once and real estate men, lumber dealers and wood workers giving assurances that the local house famine will be alleviated during the next few months, the biggest building boom the Tonawandas have ever had is bound to come as soon as spring weather makes it possible to begin building operations. Employers of labor proved by actual figures at a recent mass meeting to discuss the scarcity of houses, that close to 500 families could be added to local population were there that number of homes available. There isn't a house in either Tonawanda renting under \$20 a month that is not occupied. Already sufficient local and outside capital has been interested in the situation and plans have been perfected for building as many houses as will be needed, so that by next fall the present scarcity will be entirely wiped out. This building boom will mean the expenditure of at least \$500,000 for building, as the demand is for homes that will cost at least \$1,000. In fact the latter figure is a low estimate. Most of the houses that will be built will average not less than \$1,500 each. As lumber will be used almost exclusively the boom will have no small effect on the lumber and woodworking field.

Hector M. Stocum, one of the pioneer lumbermen of the Tonawandas, died recently at the advanced age of 77 years. The deceased came to North Tonawanda shortly after the close of the civil war, in which he served as a volunteer and reached the rank of captain. He organized one of the first lumber firms to do an extensive wholesale business in the Tonawandas and up to the time of his retirement from active business life a few years ago, he was one of the most prominent wholesalers in the east. Even after leaving the lumber business he found it impossible to remain inactive, and was nominated and elected to public office in both city and county. He leaves two sons, Thomas E. Stocum, who is a lumberman in St. Louis, and Benjamin Stocum, a prominent lumberman in Baltimore, Md.

Robert L. Kelsey, one of the best known of the younger lumber dealers of the Tonawandas, has been made a partner in the lumber business of his father, W. E. Kelsey. The firm name is now W. E. Kelsey & Son. The yard and offices will be continued on Main street, North Tonawanda.

Local lumbermen are so pleased with the operation of the parcel post that they are perhaps the largest users of this new postal accommodation in the Tonawandas. Samples of lath, shingles and even siding are sent through the mails. Woodworkers find it very convenient to mail samples of bevel siding, the showing of the actual design of the beveling having proved to be extremely satisfactory in securing satisfied customers. Lumbermen are demanding, however, that the special stamp regulation be removed and that packages be accepted anywhere instead of only at the main post offices.

Representatives of the Hines Lumber Company's fleet and the Blodgett Transit Company are in the Tonawandas trying to sign up with local lumbermen on contracts for next summer's tonnage to bring lumber down the lakes. Lumbermen in the Tonawandas are holding off, however, for the reason that they have contracted for but little lumber for summer shipment. The high prices prevailing at the upper lake Canadian and American mills have delayed buying. Until orders are actually placed for lumber, local dealers will not contract for boats to bring it down the lakes.

Business is still quiet with local lumbermen. The severe winter weather of the last ten days has had its effect and building is practically at a stand still throughout a large part of the territory served from the local market. Canadian stock is still scarce. The probability of the duty coming off imported stock is chiefly responsible, however, for this condition. Wholesalers are holding off with the expectation of getting Canadian lumber without the added charge for import duty that is now in effect. Canadian lumber still maintains its high place in the eyes of builders and its local handlers could sell several times as much as they have been able to secure.

A report of the proceedings of the Forest Fire Conference of the Forest Protective Organizations of the Pacific Coast which was recently held at Seattle, Wash., has been issued in booklet form by "The Timberman," Portland, Ore., U.S.A. The booklet contains all the interesting addresses and discussions which were delivered and took place at the conference. For all who are interested in the practical questions of forest protection and conservation, the booklet will be of great interest and value.

# The Retail Dealer and His Problems

## Limitation of Territory—Salesmen's Methods

### A Question Peculiar to the Lumber Trade

Probably in no other line of trade has the question of territory cut such a figure as in the lumber business, and it has, I believe, been responsible for more trouble among dealers than almost any thing else that I know of in the retail trade. Every dealer naturally wants his share of the business that is within the natural territory of the town where he has his yard, and failing to get it through fair means, he is also naturally tempted to reach out for it, through the unfair means of cutting prices. Very often this precipitates a contest which becomes more or less long drawn out and when it ends it is either a truce or a selling out by the weaker of the parties. This is within the town and its territory, and where this has become contracted and smaller than formerly by reason of its being cut off by a new railroad with its new towns. This is the natural process of eliminating that which is not needed.

In the olden days there was no such thing as a limitation of territory for a dealer to sell his lumber in. Such a thing was not within the field of his understanding. "The world was all before him where to choose" and was only limited by his ability to sell and furnish the stock to supply it. But all this is changed. He is expected to be careful about taking a customer from his neighbor over the way and also to preserve the amenities by respecting the rights of the dealer in the town that is five or six miles distant. No matter if he is carrying double the stock of his neighbor he must exercise constant vigilance lest he sell to a customer that is over the line of the demarcation of territory. If he is careless about this and unintentionally sells a farmer who drives to his yard with out asking him just where he lives he is apt to hear from that dealer about "poaching" on his trade. For no matter how small a stock the regular dealer may be carrying, he is as tenacious of his territorial rights as though he had ten times as much in his yard. He is a member of the same association as his neighbor who has the larger yard in the next town, and according to the idea of the trade ethics which he has imbibed, it means the equalizing of unequal men, unequal stocks and unequal situations. There is no question but this attitude is responsible to some extent for the number of yards that are not really needed. We don't like to limit this, of course, but the older dealers know that it is so, because they have had to train themselves down from the unrestricted limits to which in the past they were accustomed to the restriction of ethical boundaries and conditions which have become a recognized feature of the retail trade. Ideally it may be correct, but in its practical workings there is a strong tendency for this policy to go to the extreme, and all extremes of whatever character are liable to be hurtful.

### Artificial Restrictions Will Disappear

It is one of the laws of human action that every movement carries with it its own corrective. There is no escaping from this fact, and sooner or later the artificial restrictions which hamper the free action in the business will be eliminated by the natural forces which govern trade. I have reason to believe that this is the latent opinion of the thinking minds in the retail business, and I am only expressing what they are talking about among themselves "on the q.t." It is true, however, there are many places where the good sense of the dealers prevents a too rigid observance of the territorial limits between them, and where this freedom of action is allowed there is less liability of a rupture in their relations. In the crowded conditions which affect many localities such harmony can only be maintained through frequent getting together and a unanimity in the policy of "give and take" by all concerned. But even in this great care and good judgment must be exercised in the practice of these harmonious relations, or else the corrective in the form of co-operative yards will be the forthcoming result.

In some parts of the country this extreme protective policy has been followed by this class of organized competition. Co-operative effort in relation to trade may make mistakes at first, as we all know they have, but the principle of it being right it is only a question of time and effort before its practicability is solved. As I have said before, the corrective is brought into action in everything that is carried to the extreme. Whenever I hear of a farmers' yard being started on the co-operative plan I am pretty well assured that there is a cause for it and that cause is mainly the result of the mismanagement of the situation there by the lumbermen. There are exceptions to this, of course, but in the main my observation has been that where there are two or more yards in a town where there is only a good fair business for one, and the attempt has been made to squeeze enough profit out of the community to support them, it has been productive of a co-operative revolt in one form or another on the part of that community.

Everywhere I go almost I hear the expression which is almost a complaint that there are too many yards in this or that place or locality for any profit to be made out of the business other than a bare living. This has started the revolving of the question in my mind as to when and how will the retail lumber business return again to its former status with every other line of business in respect to the freedom of trading where and with whom it pleases.

Did it ever occur to you, my friend, that yours is the only business in your town that is supposedly expected to observe a territorial limit to its scope of action? I say supposedly because you and I know very well that this part of the ethics of trade is "more honored in the breach than in the observance." For the unwritten law in the relations of dealers in neighboring towns is to keep out of the territory of another, which is all very well where the range is large enough without crowding. But nowadays in the greater part of the country, it is crowding, and hence for protests of the crowded ones. Did you ever know of an instance wherein your bank refused to make a loan to a responsible party just because he lived in the next town a few miles away? Did you ever know of a case where your dry goods store turned down the sale of a suit of clothes to a cash buyer in the nearby town even though he could have been accommodated at home? Was there ever a case where your implement dealer refused to sell a wagon or any other farm tool to a farmer who lived within a fifteen minute drive of another town where he could have gotten anything he wanted in that line and could have paid for it, or whose credit was good? Would your grain dealer refuse to spring the market price on a lot of grain offered by a farmer who lived several miles nearer the other town because it was within the territory of the grain buyers there? Would the stock buyer do the same thing and for the same reason? Does a physician or a lawyer refuse a call for his services in the next town because the business belongs to the doctors and lawyers there? I could go further into details to demonstrate to you that the whole business interests of your town know no territorial limit or other restrictions in competing for all the trade within its radius of action or beyond that if it can get it. But the lumber dealers are presumed among themselves to be the exception to this display of natural freedom. No one else is supposed to know of this tacit agreement of policy which if conscientiously observed and practiced can but do otherwise than act as a handicap to the ability and enterprise of those dealers who want to see their business expand in proportion as their ability grows in the taking care of it. The fundamental nature of all human action, naturally expressed, is selfishness, and the collective feeling and action of all communities is expressed along this line of feeling. Every town wants to grow and expand in every way, and if it is at the expense of the smaller and weaker place so much the worse for the interest of that town. The larger towns may feel sorry, in a sense, for their smaller neighbors, but they are not sorry enough to want to share with them in an equal division of trade. Do you see the parallel, my friends? It is not an imaginary one. It is a state of actual existence. Those who are feeling the pressure are doing some thinking on the subject, and the man who thinks and acts as he thinks is apt to change the order of things in his sphere of action.

### Imaginary Lines Being Disregarded

As far as I can judge at the present time by what I see and gather from talking with dealers in different sections this question of how far from his yard a dealer may sell his stuff is being settled by tacitly ignoring any such thing as an arbitrary line. Any sensible man knows, if he has had any experience with it at all, that it is practically impossible to observe at all times a strict adherence to any such rule, for the simple reason that there are influences against it over which he has no control. The only thing he can do is to be reasonable with his neighbors and they to be reasonable with him. A man who carries at all times a large and well selected stock, understands well his business, is popular because of his courteous treatment of everybody and, in addition, possesses a drawing personality, exercises an influence which he himself cannot control and to attempt such a thing is to practically penalize and tax him for his superiority.

Towns are built up through the drawing power of such men in the different lines of trade that are in such places. You cannot chain up the power which the energy of such men gives them. It will find a free course somewhere. In many cases it has taken the form of buying out the yards of the surrounding towns and settling the question of territory for all time as far as it affects him. If he is unable to do this and elects to stay in the one place, he will make his yard the centre of the lumber interests with a radius of action extending as far as a farmer can drive one day and return with a load. But such dynamic men are scarcely to be found now in the country districts.

They have either made their pile and are now globe trotters or they have removed to the larger centres and are operating on a scale commensurate with their capital and energies. The rank and file of the individual yard owners, who have only the capital to operate one yard, are feeling more than any one else the crowding of the yards around them and with whom this question of territory is often a troublesome one to take care of.

### Want to Make the Best Possible Bargains

The reason that impels a farmer to go from one town to another to get figures on a bill is a natural one and must be taken into reasonable consideration. In the olden days every dealer thought he was justified in capturing a bill no matter where the buyer came from, and it was considered a stroke of good business if it was hauled to a neighboring town and landed under the nose of the local dealer there. The tendency, though, in these latter times is for every dealer to give his neighbor in the next town an opportunity to take care of his own trade. But there is so much of what we call "irregular" competition from the outside that a local dealer cannot always be safe in trying to get a good fair profit on a bill from a customer whom he thinks he "has solid." If this customer finds in going to the next town to get figures that there is not as much difference as he considers there ought to be, he is apt to have the thought strike him that there is some collusion between the dealers, and the chances are he sends off somewhere and gets another estimate. Now, here is where there often occurs the beginning of trouble between neighboring dealers.

A dealer wishing to save for his neighbor the bill that has come to him, discovers on questioning the farmer that he is going to send away for another estimate, and not wishing to see it shipped in from the outside even into his neighbor's territory, he tells the farmer to let him run over that bill again for some possible mistake in figuring. He does so, and lo and behold, he does discover a serious mistake(?). The new figures he gives him satisfies the farmer and the deal is made there and then. The farmer comes in and hauls out the material and is blissfully unaware of the potential trouble he is likely to cause among the lumber dealers. His home dealer soon hears of his straying away from his home pasture and he either writes a letter, telephones or makes a personal call on the dealer who has also strayed over the line and into his preserves. If he is sensible, he will accept the situation and the conditions under which it was made and return in a thankful spirit that it was not shipped in by an outside "poacher" to trouble him for many days afterward.

### Does Not Like to Lose a Bill

The average dealer, though, don't like to lose a bill from any cause and he is apt to lay it up against the dealer in the next town who sells it away from him, and at the first opportunity he will retaliate if he can, and it is principally for this reason that dealers don't ordinarily care to invite reprisals of this character. On the other hand, in the ordinary course of trade it is becoming allowable for every dealer to sell a man what he wants when he drives into his yard, no matter where he comes from. As in the case of the historic miller, "all is grist that comes to his mill." It is not necessary always to cut the regular prices to secure this kind of non-competitive trade. Fair dealing and good treatment combined with a good stock are all that is necessary in many cases to draw men from their home towns, and if trade is drawn for these reasons the dealer who gets it is entitled to all that comes his way.

Farmers who live on the dividing line of the natural territory between towns are usually not slow in discovering their advantage and therefore the town they like best to trade in will find them on its streets and in its places of business pretty regularly. He may not get any better goods or better prices, but he has conceived a liking for the place and the atmosphere of cordiality and welcome tendered him by its business men. And if the lumber dealer is one of these there can be no question about territory in such a case. If a dealer loses trade that he considers belongs to him, it is because of one of two reasons; either the other dealer has a lower scale of prices or he is driving it away through his own fault in being remiss in his efforts to hold it, and the latter reason is more often the true one.

The Great Teacher once gave out this startling saying: "To him that hath shall be given and from him that hath not shall be taken away even that which he hath." No wonder his hearers murmured among themselves and expressed their opinion that it was a "hard saying," but it is a great truth nevertheless, and nowhere may it be seen better exemplified than in the business world where the prizes generally go to those who don't always need them. It is up to the present-day business man, therefore, to put off the old destructive ways of doing business and adopt the more modern policy of gaining business through emulation which is not only constructive but creative. Study yourself, young man. Study your business, and with both study your community and learn all you can of its affairs and those of the individual characters in it and give out the best there is in you.

C. H. Ketrledge, in the Mississippi Valley Lumberman.

## Salesmanship — Its Chief Elements

### Perseverance and Tact the Greatest Factors in Success—Profits Depend Upon Persistence

One of the best ways of improving the quality and the quantity of business conducted by a retail lumber yard, or rather by a line of yards, is to hold an annual meeting of managers and to tell them plainly where they have succeeded and where they have not. The exchange of views at a meeting of this sort cannot fail to be profitable. The Long-Bell Lumber Company and its allied companies held a meeting of this nature recently at Oklohoma City and one of the most practical address ever delivered upon retail matters was that of Mr. J. H. Foresman, manager of the company's retail interest. Mr. Foresman said in part:—

A man must be a good salesman, otherwise he cannot succeed. If you are most successful in the sale of your goods, you must first be in love with your business, selling lumber and building material because you like to do so.

Second: You must believe in the goods you are selling.

Third: You must know all about your goods and how to talk them to the trade. Misrepresentation should be farthest from your thought, and means failure when practiced. It is never necessary for any business man in any line to misrepresent his goods in order to sell them.

Fourth: Above all things else, have confidence in your ability to sell your goods for what they are worth and do not feel: "I must make a low price in order to sell, or because my competitors are selling low." "Anyone can give goods away, but it takes a smart man to sell at profit," an old saying but true.

It is very sure if you do not ask what your material is worth, thereby enabling you to make a profit, the fault is all yours. The salesman who must have the price in order to make the sale is not the kind of a salesman our company are looking for, nor any other concern, so far as that goes, as he is not the kind of a man any concern wants in their employ. The day of the old-time merchant is past—this is a new era in which we live and new methods must be used. You must be able to sell paint, hardware, cement, silos or any other side line that is carried in the average lumber yard at this time, if you are a successful salesman.

How much stock have you piled on the upper deck of your shed somewhere, or off in an out-of-the-way place, that is dead and unsaleable—as you call it—that you haven't tried to sell because you think it is that kind of stock, when in reality you are not alive to the fact that it can be sold; or in other words, not salesman enough to sell it. For I say to you if you were active and a good salesman you would get rid of that very stock; someone would buy it, give it a trial.

Not long ago in conversation with a friend in our city who operates a line of yards, he asked me as to our success in disposing of this class of material at our yards. When questioned as to his success in that direction he said this:

"I made up my mind that those representing our interests were employed to handle the business, we believing at the time of their employment they were salesmen, and that they would be able to sell such stock as we have in our yards, and if we are not able to accomplish that through their efforts, it is time for us to look up the man who can sell the goods."

After this statement he made mention of a talk he had with one of his managers not long before, stating:

"I stopped off at the point in question between trains, and in looking around the yard I noticed about 10,000 feet of cedar siding which had been in stock for some time, and looked at it. I questioned the manager as follows:

"Mr. Blank, why do you not sell that cedar siding?" His reply was:

"No sale for it here, cannot sell it to anybody."

"How long has it been in the yard, Mr. Blank?"

"Ever since I've been here."

"How long have you been here?"

"About five years."

"Now, Mr. Blank, have you tried to sell this siding?"

"Yes, sir, but it won't go; there is no sale around here for that class of material at all." Then I said to him:

"Mr. Blank, we must sell that siding, and would like to sell it through your efforts, but if it cannot be done that way, then we must sell it through your successor."

From that they went on looking through the plant, he going on down the round that evening to visit other points, and upon returning home came back that way some four or five days later and stopped off between trains. He went up to the yard and found the manager busy loading up a wagon, and he was piling on the load about 2,500 feet of cedar siding. He made no mention to the manager of what he observed, however, as soon as the manager got through waiting upon the customer, came around and said to him:

"Did you notice I was loading quite a bunch of cedar siding on that wagon? And by-the-way, I got \$4 per thousand more for it than it had been invoiced to me."

And in a short time he wrote me that the cedar siding had all been sold, and that at a profit.

You and I would naturally ask ourselves why this man was able to dispose of that siding so quickly after his employer had talked to him concerning it, and we answer, "It was because of the fact that he, himself was to blame; he had not tried to sell the stock, and so it is in our opinion, nine times out of ten where we have dead and unsaleable stock the manager is to blame. He is not a salesman in the true sense. If he were, we would have no such stock around any of our yards. Are we not right in this. It takes tact also, to make a salesman.

Another friend of ours who operates a line of yards was telling me not long ago of sending out a request to his managers to write him something on, "Tact as Applied to the Business." One of the men in his general office—after reading over this letter of his—expressed his opinion like this:

You will not be able to make much of anything out of that, as most of our men haven't time to study the dictionary, also the subject will be too much for them to handle, as you know none of us could write much on a subject of that kind anyway," etc. His reply was:

"Why, that is easy and it will not take them long. To my mind very little effort upon their part is required to write something on "Tact as Applied to the Business." They have observed, or perhaps some time during their lives an incident of some kind has come up in their business to which this will apply, and I want them to tell me about it. I will write what I have on the subject and pass to you in a few moments to show you how easy it will be, and will expect you to write something also."

And the article this man wrote was from observation of an incident that happened not many months before, and I am going to tell you about it, as I believe it is to the point. As I remember it now, it was something like this:

This man was visiting a certain yard, and upon entering the office found the manager comfortably seated by the fire, seemingly content to sit and chat. In a short time a customer came in. The manager—without getting up or giving the would-be customer anything more than a passing notice as he came in, waited for the customer to ask for what he wanted, and when he did, it was something like this:

"Have you cedar shingles, and what are they worth?"

The manager, as stated, being so comfortably seated, without moving from his chair, replied:

"Yes, sir, we have cedar shingles, and they are worth \$4 per thousand."

After which he assumed an air of "I guess you better drive in and get them, as that is enough information for you."

The customer, after giving the manager one of those looks which means, "I guess he doesn't want to sell his shingles, so I will hunt up the fellow who does," remarked as he turned to go, "I will look around."

And at that he walked out.

Our friend decided that he would walk over to the yard of this man's competitor and call upon him. He did so and found him in the office. After he had been greeted most cordially, the manager in charge asked our friend to be seated. They had been talking but a few moments when in walked a customer. The manager asked to be excused, jumped up, and as the customer approached, greeted him in a very nice way and immediately asked him what he could do for him, when the customer replied:

"I want to buy some cedar shingles. Have you got them, and what are they worth?"

To which he received this very prompt reply:

"Yes, sir, the best in the market, and they are worth \$4.25 per thousand. Come right out in the yard and let me show them to you."

He led the way out into the yard to show his shingles, and our friend noticed it was the same party who had asked the price of shingles at the other yard, and becoming interested he went with them. This man called the customer's attention to what he considered the good qualities of his shingles and closed the sale to the customer at \$4.25 per thousand and you will remember the first man's price was \$4 per thousand—some tact, wasn't it? In other words, a salesman with tact. It may be true that some business men have more tact than others; to my mind it is one of the essential qualifications of the successful salesman, and if you haven't as much as the other fellow, you undoubtedly need to cultivate it. Most courteous treatment in connection with tact will always help in making a sale.

Now, gentlemen, this is only one of many instances that we might mention to you which go to prove the results come only to the business when you show tact along with salesmanship, but you must

need be shrewd, and by that I mean know how to meet the trade when they come into your place of business.

I believe we all agree that a book of many pages could be written upon the subject of "Salesmanship" and what it takes to make a good salesman, and then to my mind, the subject would be no more than half covered. I wish to leave this thought with you, "that you cannot know too much about how to sell the goods you are handling."

### Profit

The next important feature in our business is "Profit" and how to obtain it. We must get a profit or we cannot continue in business, which is true of any merchandise line. In our business we want what we consider a legitimate profit upon the goods sold, which we feel we have a right to expect, and perhaps you would like to know what we consider a legitimate profit.

If you do, I would say 25 to 30 per cent. on sales. Whenever we get less than 25 per cent. on sales we are not making the money out of the business that we should have. In fact, the way expenses have increased in the past five years, during which time our gross profits have been sliding down until the way things are going now, that after paying our running expenses and 6 per cent. upon the money invested, and you know it is easy to get 6 per cent. for your money by loaning it out, there has been nothing left for the investor. To be most frank with you, as it looks to me as the manager of the retail interests of this company, they would be better off to convert their retail yards into money and loan it out at 6 per cent., and thereby save themselves the strain of looking after so vast a business as we handle each year, which, as above stated, is not remunerative to them, to say nothing about the large amount of outstanding accounts they must carry on their books, the collection of which they have to contend with. A certain per cent. of the outstanding accounts is bound to be very aggravating to us, and perhaps in the end a part of them lost. What is the remedy? To my mind it is entirely up to you and me if you please, to work it out, and I ask you the question: "Can we do it, and if so how?"

As for myself, I say to you it can be worked out if we got at it as we should, and that it shall be my pleasure to help you from our end of the line. To this you may answer, "It is easy to give instructions, but if you were on the ground, I believe you would find it quite different."

To which I would answer as follows:

"I would endeavor to be a salesman of the first class. I would ask a price for my goods that would give me a profit, and further I would do as our shingle friend's competitor did, that is, ask \$4.25 per thousand for my shingles as against the other man's price of \$4 and try to be salesman enough to get it. If I were not successful in selling my goods at a profit, I would have no room for complaint if my company would feel that they must look up a man who was as good a salesman as the fellow who could sell shingles at \$4.25 per thousand as against his competitor's price of \$4 and it seems they can be found.

Now, if you make up your minds upon returning home from this meeting that you propose to do that very thing and follow up the resolution you make, practice it all this year, as well as for the future, should we meet in one or two years from now, I predict we will at that time, have very different results than we have had for some years past, which we have a right to expect.

### Outstanding Accounts

To my mind the handling of the outstanding accounts is also one of the principal features of our business, or any other, so far as that goes, and the collection of the accounts means the success or failure of any concern who do a credit business. Did you ever hear of a concern failing who were able to collect in all their outstanding accounts? On the other hand, untold numbers have failed because they did not collect their accounts. I believe I am safe in making the statement that our company become dissatisfied with more of our men because of their inability to collect their accounts than for any other one reason, which is quite natural, for I say to you, we do not intend that failure shall come to us because of the fact that we may have associated with us those who cannot collect their outstanding accounts as they should, when we know it is within our province to employ men who can collect for the goods when sold, the same as the successful management of any other part of the business. I know those of you who have more accounts from time to time than you should have, always have what you believe to be a good excuse as to why it is necessary for you to have so large an amount upon your books, and let me say to you now before you make your excuse, if it should be your promise to do so at this meeting, for if you have one in mind to make, do not offer it, as I am of the opinion nine times out of ten you are wrong and your excuse is not justifiable. I presume you will think this a pretty broad statement upon my part, hence let us see about it.

If any one of you were looking for a man to handle a yard doing a business of \$19,000 in a year, for instance, no other competition in the town, prices in outside territory low, trade hard to handle because of

that, with such a condition before you, would you then have any misgivings by making a statement to the man when you thought you had found him, something like this?

"Now, sir, with such a business we are looking for a man who can make 15 per cent. net on sales and close the year's business with no more than 12½ per cent. of the sales on his books, with but \$54 spent for extra labor."

I am going to give you a chance to answer me upon this question some time during the meeting when we will discuss the outstanding accounts with you. At the present time, by looking at the showing most of you have made the past year and before, the figures above do not indicate anything like the per cent. some of you had on your books at the close of the year. Then the question with us, "Why is it that the per cent. of your sales on your books from time to time should be so large?" I dare say you would only have a man in such a point as referred to whom you considered most active, would you not? Would you think a man 70 years old could be active enough to make such a showing in the way of profits and in the collection of his accounts? I believe we are not over exacting when we say to you who are not yet 70, and are supposed to be most active, your showing should really be as good, if not better, than the one above referred to.

We will tell you later of a party handling such a point who did it well.

Now, gentlemen, when your accounts are allowed to drag so long past due, not collected as they should be, we have a right to feel that the fault is all your own and means one of two things; you either did not exercise due care at the time the sales were made, or you have not put forth proper effort in the collection of your accounts at all times, either of which will mean failure to you, if you are not careful. This you can least afford to have happen, therefore I beseech of you before it is too late, to wake up to the fact that you are not exercising the splendid talent the good Lord has given you, and failure is sure to follow. Your pride should check you in this and your family is appealing to you to work and succeed, and your success or failure means so much to them. You owe to them the very best you have the ability to earn, and how happy you should be in making the greatest success because of them. And last but not least, your company, or the people with whom you are associated in business are looking to you to come up to the standard of the man they thought you to be at the time of your employment, and that was, you could sell as much goods as any man might select for the position you were to fill at just as good a price as any man in their employ, and the collecting of your accounts was easy for you to handle.

Competition is most keen at this time and is becoming more so from day to day, and from the trend of the times it is going to so continue in the future. If you make the success out of our business that we expect, it is absolutely necessary for you to put forth your every effort, bending all the energy at your command, that the greatest success will come to you and through you to the interests you represent, otherwise we will not be satisfied with you and you will fail because you have not applied yourself.

"No good thing is failure, no evil thing is success."

The calling of you together for this meeting means much to our company; the expense is quite an item of itself, the loss that will come to our several yards during the time that you are away would be hard for us to estimate. We must feel there will be necessarily be a loss, for we know the man you leave in charge cannot handle the business as you would. We do not want you to feel that we are not glad to do our part, and more too, if necessary, although you can hardly appreciate the strain a meeting of this character means for those having it in charge.

In conclusion I will quote from *Eternal Progress*:

"Never talk or think of failure or adversity. Be determined to succeed, and permit no thought nor word to suggest anything else. No matter if things to-day go wrong. This shall also pass away. The world is your friend, though it may seem at times to be against you. The world seems to be against you because you have not met the world in the right way. Change yourself. Be a friend to everybody, the whole world. Expect everybody to be good to you and desire constantly to be of real service to man. And ere long fate will change. Believe that everybody is against you and you rub them the wrong way. Know that the true side of mankind is a true friend to every aspiring soul, and then place yourself in touch with the ideal in man; meet only his better side and your life, as well as the life of the world, is made richer thereby. Never think or speak of failure nor adversity. Think success, speak success, breathe success, attract success, live success and be saturated through and through with absolute faith in your own success. Believe that the whole world is for you, that nothing is against you; and as your faith is, so shall it be unto you."

The Quebec Government has decided to erect a new building for the school of forestry which was established four years ago.

### Points on the Care of Matchers

The operator of a machine should try to learn something of the machine he is operating. Many times he can correct some minor trouble, saving time, and repairs.

The machine man is responsible only for neglected things. He has to divide his time in different parts of the mill. Necessarily he must be a thorough mechanic and one who can run over a machine quickly. Nuts, bolts, screws, springs, and keys are just as important in their places as knives on the heads. If neglected, it means trouble.

One should never be stingy of oil. Use the best quality and before you need it. If a bearing burns out it not only ruins the metal but it hardens the surface of the journal and it will never run as good again.

Watch your belts. The best time to look over belts and other things, so you can find every defect, if there is any, is before shutting down every evening. A little inspection saves belts, shafts and pulleys.

Be mighty careful in the use of jointer and grinder. Don't assume that the grinder will stand everything. Touch up your knives lightly, and save metal. Get all the good out of your Pyts steel you can and this depends solely on the care you give them.

Set the heads before starting the work. Very often the operator starts the stock in before the setting is complete, putting so much strain on sideheads or cylinders that something is liable to break. Once this happens the heads will never do as good work as before. Keep the rolls down just enough and start it up.

### Fredericton as an Industrial Centre

An excellent booklet dealing with the numerous advantages of Fredericton, N.B., as an industrial and distributing centre, has been published by the Fredericton Board of Trade. The booklet contains a number of interesting articles and illustrations. A specially interesting section is that relating to the development of electric power on the St. John River and its importance in connection with the promotion of important manufacturing industries. The lumbering and pulp and paper industries of the St. John River are specially noted and the importance of Fredericton in this connection is clearly described. The booklet is one which will be of much interest to a large number of readers.

### An Instructive Contrast

The *Disston Crucible* for January, contains on its cover an illustration of two of the company's order books, which tell an interesting tale. A little book—comparatively speaking—shows what was necessary in the earliest days of the company to contain the orders for several months. This book weighs five pounds. A large book beside the other, shows the extent of the orders of the present day, for a single month. The latter book weighs no less than thirty-eight pounds. The company aptly remarks that "There must be more than ordinary merit in that brand of goods which creates and satisfies an ever-increasing demand over a long period of time."

Reports from Washington, D.C., state that the proposed increase in freights on lumber and timber products from points in the southern States to Canada has been abandoned by the railroads and that the Interstate Commerce Commission has ordered the old rates to be continued until a new application is made. The rates which the railroads wished to establish involved an increase of from 1 to 7c. per hundred pounds, which would mean an increase in the price of yellow pine shipped to Canada of not less than \$4.50 per thousand feet. It is understood to be the intention of the railway companies to submit a new proposition at a later date.

The Railway Commission has been applied to by the Federation of Chambers of Commerce of Quebec Province for an order requiring railway companies to furnish shippers of lumber with a certificate showing the gross, tare and net weights of each shipment weighed on the track scales of the company, together with the number of the car, date of weighing and the name of the station where weighed. The case will be heard.

Hon. George H. Perley, a director of the Riordon Pulp and Paper Company, and a widely known lumber, pulp and paper investor, is spoken of at Ottawa as the likely appointee as Canadian Minister on the Imperial Defence Commission of Great Britain, the new position arranged by the Prime Minister on his recent visit to the Old Country and designed to give Canada a voice in the policy of the Empire.

Receipts taken at the Crown Timber office, New Westminster, for the nine months ending December 31st, 1912, amounted to \$56,235, an increase of \$10,440.59 over the same period in 1911. Receipts for December, 1912, were \$5,031.78, as compared with \$2,438.65 for the same month in 1911.

# WANTED & FOR SALE DEPARTMENT

## PUBLISHER'S NOTICE

Advertisements other than "Employment Wanted" or "Employees Wanted" will be inserted in this department at the rate of 15 cents per agate line (\$2.10 per inch) each insertion, payable in advance. An up-to-date planing mill and sash and door factory; 150 horse power; in a large town, Western Ontario, Box 721, Canada Lumberman, Toronto, Ont. 5-8

### For Sale

Saw Mill and fifty-three miles timber limits in County of Bonaventure, Quebec Province. For further particulars apply to J. D. Sowerby & Co., Oak Bay Mills, P.Q. 22-71tf

### Wanted

To contract for stocks of birch, maple, elm, ash and basswood, dry or green, for cash. Correspondence solicited. Box 268, North Bay. 6-9

### Wanted

A party with a portable saw mill to saw about half million feet of saw logs, or we might buy a portable saw mill ourselves. For particulars address Geo. Neibergall & Son, Parry Sound, Ont. 4-7

### Timber Limits For Sale

Can be quickly and profitably disposed of by advertising them on this page. This is where buyers of timber property look for opportunities to invest, if your "ad" is here the investor will see it. Canada Lumberman, Toronto, Ont. 1f.

### For Sale—On Georgian Bay Eighty Miles East of Soo

Mill site, railroad, locomotives, cars, docks, trams, camps, equipment with 125 million feet White Pine, Hemlock, Hardwood. Large piling capacity, low taxes, employees' cottages, etc. This operation is first class in every respect, and ready to start any time. Box 727, Canada Lumberman, Toronto, Ont. 6-T.F.

### Wanted — To Buy a Good Timber Tract

Of White and Norway Pine, Hemlock and Spruce. Would consider buying first-class running operation. In replying, give full details of what you have to offer and your lowest price and terms. Address Box 615, Canada Lumberman and Woodworker, Toronto, Ontario. 3-8

Timber limit and saw mill for sale with an estimated cut of eight million feet, with saw mill outfit complete capable of cutting 30,000 feet per day; also full equipment of buildings for 48 men. Particulars on application to Box 740, Canada Lumberman, Toronto, Ont. 6

### Mill Site and Timber For Sale

Eleven hundred acres (deeded) well timbered, surrounding Raft Lake, Seven miles from Novar, Ont. Excellent winter road. Also four hundred acres (deeded) well timbered, four miles south of Ravensworth, Ont. Each of the above properties will be sold on easy terms. Address Box 711, Canada Lumberman, Toronto, Ont. 4-7

### Sawmill For Sale

On Georgian Bay, near Little Current, close to north shore; practically new, well built and equipped with shingle machinery; over one mile of water front, loading dock and sheltered booming ground; plenty of timber available locally or can be rafted in from north shore or Georgian Bay. Good opening for retail store in connection. This is a splendid chance for millman with small capital; price right. Good reason for selling. Great Lakes Lumber Co., Ltd., Owen Sound, Ont. 5-T.F.

### Timber Lands For Sale

About 680 acres, approximately four million feet mixed timber, consisting of hemlock, spruce, balsam, birch, basswood, elm, maple, one thousand cords of hemlock bark, besides a large quantity of wood. There is also a sawmill of fifteen to twenty thousand capacity in connection with above. A large quantity of this timber can be logged during the summer, as it is located on a lake three miles from railway station, good road. Will sell with or without sawmill. Box 728, Canada Lumberman, Toronto, Ont. 6

### For Sale

Saw and planing mill in Western Ontario. Paying business. Terms arranged. Box 734, Canada Lumberman, Toronto, Ont. 6

### For Sale

Established Lumber Business, with first-class mill, now running full time. Timber limits with 20 to 30 million feet of standing pine timber conveniently located, and all merchandise, etc. Price \$55,000. This is worthy of investigation. Address Box 332, Canada Lumberman, Toronto, Ont. 19-22-t.f.

## AUCTION SALE OF VALUABLE TIMBER LIMITS

The co-partnership of "Klock & Brother," for the purpose of winding up their business, will, subject to a reserved bid, offer for sale by public auction at Fraser Bros.' Auction Rooms, No. 453 St. James street, in the City of Montreal, on the 8th of April, 1913, at the hour of three o'clock in the afternoon, those valuable timber berths on the Manouan Branch of the Lievre River, in the Province of Quebec, bearing the numbers 3, 4, 5, and 6, and comprising 196 square miles, more or less. . . . Terms: one-third of price payable in ten days; one-third in nine months from date of sale, and balance in eighteen months from date of sale; interest at the rate of six per cent. per annum from date of sale, to be also paid with instalments. Balance of price and interest to be reasonably secured on limits and products thereof.

These timber berths are held under license from the Province of Quebec, and will be sold subject to the provisions and conditions of said licenses and the laws and regulations of that province relating to such matters. For further particulars apply to—

Casgrain, Mitchell, McDougall & Creelman, Canada Life Building, Montreal.  
Johnston, McKay, Dods & Grant, Solicitors, Toronto, Ont.  
Aylen & Duclos, Solicitors, Ottawa, Ont.  
R. A. Klock, St. John, N.B. 4-7

## TENDERS Timber Lands, Saw Mills, Etc.

Sealed tenders, addressed to the undersigned, East Florenceville, N.B., will be received until 12 noon on Tuesday, April 15th next, for the purchase of Timber Lands, Saw-Mills, Lumbering Equipment, etc., as follows:

1. 30 square miles, more or less, Crown leased lands, heavily timbered with spruce, fir, pulpwood, hardwood and cedar, situated on Monquart, Chiktehawk and Tobique Rivers, in the counties of Carleton and Victoria, in the Province of New Brunswick.

2. 15 square miles, more or less, Crown leased lands, heavily timbered with spruce, fir, pulpwood, etc., situated on Salmon River, in the County of Victoria, in the Province of New Brunswick.

3. Two thousand acres, more or less, freehold lumber land, heavily timbered with spruce, fir, pulpwood and hardwood, located in the County of Carleton, in the Province of New Brunswick, and conveniently situated to a railroad.

4. One stationary saw-mill, located at Stickney, in the County of Carleton, N.B., equipped with a rotary, having steam feed, edger, trimmers, lath machine, planer, one 120 horse power engine, two large Robb-Armstrong boilers, separate engine room, located with convenient platforms and switches on the line of the C. P. R., having this railroad on one side and the main St. John River on the other side of the mill.

5. One hardwood factory 40 ft. by 70 ft., with separate dry house, fully equipped with belters, trimmers, four rod machines, pointing machines, one 100 light dynamo, one 85 horse power steam engine, with belting and shafting complete. The factory can be used to manufacture small hardware squares of any dimension, or meat skewers. The mill and factory are lighted with electricity.

6. 3 dwelling houses at Stickney, including a foreman's and engineer's dwelling.

7. Camps in woods, camping supplies, rafting and driving accessories, and general lumbering outfit.

Offers for the entire property, including all the above, or offers, including any one or more of the different numbered parcels as listed, will be received.

Intending purchasers will receive all necessary information by calling on or writing to the undersigned.

The undersigned does not bind himself to accept the highest or any tender.

JAMES POWRIE,  
Assignee, Peel Lumber Co., Ltd.

## Miscellaneous

### Wanted

Three to five miles of 30 to 40 lb. relays for delivery May next. Box 723, Canada Lumberman, Toronto, Ont. 5-7

### Wanted

White pine for export trade for England. Advertiser would also be prepared to engage himself with some firm of good repute who require a first-class man, either as salesman or bookkeeper. Has had good experience in the lumber business in Canada, United States and England. Box 744, Canada Lumberman, Toronto, Ont. 1f

## Mail Contract

Sealed tenders addressed to the Postmaster General, will be received at Ottawa until noon, on Friday, the 11th of April, 1913, for the conveyance of His Majesty's Mails on a proposed Contract for four years, six times per week, over Rural Mail Route No. 1 from Woodbridge, Ont., to commence at the pleasure of the Postmaster General.

Printed notices containing further information as to conditions of proposed contract may be seen and blank forms of tender may be obtained at the Post Offices of Woodbridge, Humber, Elder's Mills, and at the office of the Post Office Inspector at Toronto

G. C. ANDERSON, Supt.

Post Office Department,  
Mail Service Branch,

# Review of Current Trade Conditions

## Ontario

Business during the last few weeks has not been as brisk as was anticipated, partly owing to the stormy weather which has been prevalent and partly owing to the monetary situation. There is no reason to believe however, that prospects are not good in all legitimate lines of building, but the tight hold which bankers are keeping over the money market will no doubt put a stop to a good deal of speculative building, which is rather an advantage than otherwise. Owing to these conditions, there has been very little change in the market, prices remaining steady and everybody acting with caution in their purchases. Culls of all descriptions are still very scarce but they do not appear to have affected the middle grades materially yet. The supply will probably be better than was anticipated a few weeks ago, the cold weather having been propitious for getting out the logs. Most manufacturers have now completed their logging operations. In a few districts where there has been an absence of snow and frost the supply will probably be small.

The retail lumber trade in Ottawa continues very active, in spite of recent severe weather. Prospects for the coming season are very bright. Firm prices continue and advances have been made on several grades of pine during the last few weeks. Cold weather in the woods has had a good effect upon logging. Reports from employment agencies are to the effect that they are having difficulty in securing good river men for the drives.

## Eastern Canada

Exceptionally satisfactory conditions are reported by practically everyone in the lumber trade at Montreal. All foreign markets, as well as Canadian markets, are strong. At home, the building programme is so extensive that there promises to be a continued brisk enquiry for all classes of lumber and a shortage is expected even in the face of higher prices. Practically all of the important manufacturers in Quebec have sold out their season's cut, although a few of the smaller mills are holding for better prices. Better weather conditions prevailed during the first two weeks of March and logging operations were continuing successfully. Dry stocks are practically off the market. Common grades are scarce. Orders are plentiful, but stocks are hard to secure. Hardwood prices show continued strength and a short cut is expected. The export demand for birch is strong. Lath is scarce and a shortage is expected before the new cut arrives.

Reports from Nova Scotia and New Brunswick state that the improved logging conditions which commenced about the middle of February have continued well up-to-date and are now very good. In the more open sections of the country however, there has been very little snow. Ocean freight rates are still very high, but no further advances are anticipated. Prices in England have advanced now to a figure which amply covers the higher freights. Prices for Eastern spruce are now from \$2 to \$3 higher in England than ever before. This has resulted also in higher prices in the United States and Montreal and Western markets.

A temporary lull is reported in the demand for dimension spruce at Boston. Concessions of 50c. are reported. This is not expected however, to have any effect upon the trade once the spring season is opened. The general opinion is that business will then become as active and as firm as ever. Spruce boards of all sorts are being held at very high prices and holders of all sorts are being held at very high prices and holders are able to obtain what they are asking. Stock lengths in No. 2 matched spruce at Boston are again bringing \$26. Among the hardwoods at Boston plain oak is in more demand than anything else. Hemlock boards are very firm. Clipped boards are selling at \$24. There is a scarcity amounting almost to a famine. Lath, 1½ in., at Boston are worth \$4.50 although some wholesalers say that \$4.40 is the selling price. Business is being transacted at both prices. The indications are that before long nothing will be sold at less than \$4.50. For 1½ in., some firms are securing \$4.10. The best brands of white cedar extra shingles are moving at \$4.25.

At New York, orders for Eastern spruce for early spring work are coming out well. The yard stocks are rather broken, although they are approaching the spring trade in a rather better condition than was expected a month ago. A steady market continues for hemlock at New York with nothing of importance to feature.

## United States

Latest reports from many of the manufacturing districts in the Northern States gave promise that the anticipated shortage in the log crop will not materialize. The cold weather which arrived during the end of February and continued into March has practically assured the getting out of at least an average quantity of logs in practically all districts. In Northern Michigan and Wisconsin, the logging con-

ditions have been exceptionally favorable during the past three or four weeks. Practically the same thing applies to Northern Minnesota. With few exceptions the whole northern district is assured of a full input of white and Norway pine, spruce, hemlock and hardwoods. Although this situation is not so important as it would have been in the days before logging railroads had been introduced, it is of considerable importance and will be quite a factor in the regulation of market conditions during the coming season. The long period of mild weather in many parts of the United States, at the same time, permitted building operations to be carried on with very little interruption. This has had an excellent effect upon the demand for lumber.

The demand for yellow pine has continued with little or no falling off during the past fortnight. Many manufacturers report that their product is still sold ahead of the saw. Weather conditions have been such that in a number of cases mill stocks are considerably broken. The prices of yellow pine are reported as being fully maintained.

In connection with the white pine trade, reports from all centres indicate active and encouraging markets. At Buffalo, the recent price advances are firmly maintained. The same applies to Minneapolis and the Tonawandas. Throughout the months of January and February, a splendid demand continued for all kinds of northern pine stocks and no falling off has yet been indicated. Pine is moving freely in the Saginaw Valley, a good demand being especially noticeable for box material. At Toledo, Buffalo, Cleveland and the Tonawandas, similar conditions are reported.

The trade in hemlock is marching ahead easily on a level with the white pine. In January, the mills in general resumed their activities and the cut immediately commenced to increase. Shipments however, were so extensive that total stocks did not increase. In the Saginaw Valley, manufacturers of hemlock advanced their price \$1 per M in the middle of February. This put piece stuff at \$20 to \$21 and boards at \$22 to \$23. The stocks of dry lumber are not adequate for the demand. At Pittsburgh, Buffalo and the Tonawandas, the base price ranges from \$23 to \$24.

In the hardwood trade there is nothing new to report. There is still a strong demand for all kinds of stock and prices continue high with the tendency to go still higher. Warnings are commencing to come out regarding the stiffening tendency. Some manufacturers report that it would be wise to hesitate about advancing prices as consumers are already hesitating and substitution is liable to commence if higher values are established.

## Great Britain

A rather uncertain business condition is reported in the lumber trade at London. Some firms are very busy with spot selling and forward orders. Others however, report only a moderate amount of trade. Deliveries from London docks continue at about an average quantity. They indicate that a fair amount of stock is going into consumption. There are reports still of a probable drop in prices. These are thought to be cases however, of the wish being father to the thought. The rise in values has been so general and extensive and the volume of sales has been so great that it seems improbable that producers would consent to lower prices and spoil their chances for shipments later on in the season, especially when so many of them are reported to have only small quantities of stock unsold. At Foy, Morgan & Company's recent auction sale the only sales of Canadian goods were some 3 x 10 in. Quebec spruce 10 to 13 feet, seconds, which brought £12 per standard; some 3 x 4 and 5 in. spruce from Halifax 8 to 17 feet, U/s, which sold at £8 10s, and some 3 x 7 in., 8 to 20 ft. of the same quality spruce, from Halifax which brought £9.

The c.i.f. market at Liverpool continues firm, but business is on a small scale. Practically nothing is being done outside of liner parcels and reports state that all contracts have been filled. This means that transactions are confined to parcels sent over on consignment to shippers, which are disposed of while on the water. Up to date these have realized market values, according to specification and port of shipment. It is considered fortunate that these parcels are on the small side, because trade at present does not indicate any inclination on the part of importers to pay market values for large quantities. The spot market is steady but the demand is light, so that there is no difficulty in securing stocks from the quay, unless large quantities are required. Present indications do not point to any immediate improvement, although contractors show a tendency to come into the market with encouraging orders in the near future. Pitch pine is in a peculiar position as shippers are insisting on full prices but are commencing to realize that the market is over-supplied. Some of their agents have been obliged to dispose of consignment parcels at less than the shippers' ideas of prices which should be obtained. There is practically no consumptive demand at present.

A Winter Scene at our Mills in Sarnia.

# We Saw all Winter

¶ You can always be sure of getting what you want from us because we saw all Winter and all stocks are always "piled high."

¶ Norway and White Pine a specialty. We are able to make large or small shipments on very short notice.

¶ Are you in the market for heavy timbers? We cut them any length required up to 60 feet from Pine and B. C. Fir.

## Cleveland-Sarnia Sawmills Co., Limited

SARNIA, ONTARIO

A. F. HOLDEN, Pres. F. H. GOFF, Vice-Pres. E. C. BARRE, Gen. Mgr. W. A. SAURWEIN, Ass't. Mgr.

Birch values at Liverpool are steady although the volume of business being transacted is small. Stocks are ample for present requirements, so that importers are not inclined to negotiate.

At Manchester, enquiries are increasing and stocks are very firm at £10 15s. ex quay for 3 x 6 in. Floorings are firmer being up to £11 2s. 6d. c.i.f. Stocks are reported to be low.

Glasgow trade in Canadian goods has not developed much this season. There has not been any volume of contracting for Quebec goods up to the end of February. Shippers reported having met with a good deal of indifference on the part of the merchants, the latter not seeming at all anxious to state their requirements. It was believed at latest advices, that the volume of business at Glasgow in Quebec goods during the present season would be quite light. This is, in fact, becoming a more noticeable feature of the trade each year and is a result very largely of advancing costs. In the case of waney pine, it was thought for a time that the anticipated boom in ship-building would stir up a large demand, for decking, etc. Some merchants, under this impression, laid in good stocks last year and many of them still hold these stocks untouched, the demand having been quite disappointing. Other and cheaper woods have been substituted on account of the high price of waney pine. Spruce also is meeting with increased competition from the Baltic and is gradually losing ground.

### A New E. Long Machinery Catalogue

The E. Long Manufacturing Company, Limited, of Orillia, have recently issued catalogue No. 100. This catalogue gives a full description, with illustrations, of their various standard and heavy duty saw mill carriages. The information has been carefully compiled and the catalogue should be useful to those interested in saw milling machinery. This company are equipping the River Ouelle Pulp & Lumber Company's plant at Menie River, N.B., with steam actuating machinery, double kickers and steam niggers, and a circular resaw 44 ft. wide by 122 ft. long. They have also supplied the two saw mills of Messrs. Lauder, Spears and Howland in Blair Township, Ont., with saw mill and lath mill machinery. They are now manufacturing for the Pacific Coast, specially heavy block carriages, also large edgers equipped with a steam lift on the press roll. A new departure in their business is the building of mining machinery, stamp mills and crushers.

### Are Your Horses Ready?

This is a good time of the year to look over your horse stock critically and get them in the best possible condition for the spring season of hard work. See that they are rounded out with good hard flesh that will stay and enable them to do their best work. Heal up any sores, remove blemishes that would decrease their value or reduce their usefulness. Pay a little attention to any old strain, get the ligaments by the mild stimulating action of some good liniment so that the strained tendon or ligament will be normal and strong for the season's work or pass a critical examination. Should some of your stock be for sale, or a critical buyer come along, you know the added price and profit that a clean, smooth horse will bring over one even slightly blemished with a thickened ankle, filled tendon, stocked leg, a slight cap on the elbow or hock, or a little swelling on the shoulder result of some bruise from the harness and hard work last fall.

Thick glands in the throat that interfere with the breathing should be softened up and removed. A little running at the nose, a cold in the head should have attention. In fact, any horse that has a blemish, or is out of condition, should be made right while you have the time this quiet season of the year. From such time and attention you will secure a good percentage of profit, not only from any added increase in value of a horse that may be sold a few weeks hence, but also from the increased service the horse is able to render during the busy season.

The feet should be looked after. Keep them perfectly level. If the horses go bare foot, level the feet up occasionally with a rasp file. If they are shod, have the shoes removed occasionally so as to keep the feet to a proper length and level, in this way avoiding strain on the joints or ligaments. Many horses are made lame and get strained, due to the foot being out of true, or the toe being so long that it gives them added leverage, so it is important that the feet should be kept in a normal good growing condition.

A good dependable liniment for any troubles that may be laying up your horse is Absorbine, the antiseptic liniment. This liniment has been on the market for a good many years and has made good. One reason for its success is that it does not blister or remove the hair and the horse can be used during treatment. Absorbine costs \$2.00 a bottle at the dealers, or will be sent direct, charges prepaid upon receipt of price. W. F. Young, P.D.F., 424 Lyman's Building, Montreal, P.Q.

Private advices received from Quebec, P.Q., state that waney pine timber has fallen off considerably in demand in Great Britain and that this is likely to cause some reduction in price at Quebec.

### Swage Set in Small Circulars

By Lewis R. Brown, in Berlin Quality

In saw fitting—as in all branches of industry—each year, month or week calls for some new development, to keep pace with the changes that are continually coming into use.

An old, grey-haired veteran of the filing room once told me that when he first began his career as a filer, the only set in use was the spring set. Later came the "half-spring and half swage" set, then came the advent of the "full swage" set.

Although at that time—about fifteen years ago—its real value was not realized as clearly as it is to-day. Yet there are many to-day who fail to realize the merits of the full swage set as it is valued by the more progressive ones among practical mill-men. There are two distinct classes of saw-fitters at least, who are termed by their friends and acquaintances as progressive headliners, and intuitively they often feel secure in their friends' belief.

One class believes that any deviation from the old way of doing things, regardless of results, as a sure step forward in the right direction. Personally, they believe as soon as it is possible to get along without it, any old method should be discarded at once. In the other class will be found the more conservative ones, who believe in adopting new methods only when the merits of the new idea are unquestionably visible; yet retaining the old as long as it continues to be useful.

It is true that the former class do many great things in their own great way. And usually their efforts are, either a marked success, or a miserable failure. And their rise and fall in the estimation of those who know them, not uncommonly comes on very short notice.

The latter makes progress in a way that is scarcely susceptible from observations of a day, or perhaps a week; yet each year will usually find new methods adopted, all of which are real improvements over the ones discarded, and all have—as the old saying goes—"come to stay."

In the case of the spring-set, it was the easiest way to give a saw clearance with so few tools to do it with; and naturally first to be used. Then with the advent of the swage-bar and upset swage, came the "half-spring and half swage" set, then the full swage set. The perfected full-swage was quickly recognized as the most efficient.

## Ontario

W. R. Stephenson, Appin, Ont., is advertising his planing mill business for sale.

The International Land & Lumber Company, Limited, Ottawa, Ont., recently suffered loss by fire. The loss was covered by insurance.

Hon. Adam Beck, 169 Albert street, London, Ont., is considering the purchase of sawmill equipment, kilns, etc., for a plant at Iroquois Falls, Ont.

J. B. Lebarge & Sons, Sudbury, Ont., are preparing plans for the erection of a sash and door factory. They are in the market for general machinery.

The Riordon Paper Mills Company suffered a loss by fire recently when the sulphite department of their paper mills at Merritton, Ont., were completely destroyed. The estimated loss is \$150,000.

The Seaman Kent Company, Limited, 239 Wallace Avenue, Toronto, Meaford and Fort William, are planning to double the capacity of their plant at Fort William. The additions will include four new dry kilns.

H. W. Ansley, Port Dover, Ont., has secured a building in which to establish a woodworking business. He intends to start work in the spring. Mr. Ansley is in the market for woodworking machinery.

Consumers' Box and Lumber Company, Limited, has been incorporated with a capital of \$500,000, to manufacture and deal in lumber, woodenware, logs, timber, shingles and all kinds of builders' supplies, with head office at Toronto.

Caledonian Investments Limited, have been incorporated with a capital of \$40,000, to manufacture and deal in lumber, brick, cement and other building materials, with head office at Toronto. The provisional directors are T. M. Mulligan, law student; Trafford Jones, engineer, and Robt. Baird, insurance broker, all of Toronto.

The town of Dryden, Ont., will celebrate the opening of the Dryden Timber and Power Company's plant by a civic holiday and banquet, as the first manufacturers to turn wheels in the district. Mayors of adjoining towns will also be present and friends of the company. The whole event will be one fitting for such an occasion.

The lumber yards of J. B. Smith & Sons, Strachan avenue, Toronto, were threatened with fire recently, when flames caught hold in the shavings vault. No serious damage was done, beyond the messing up of the vault, owing to the fact that the employees had just arrived and emergency sprinklers held the flames down until the fire department arrived.

J. J. Smith & Sons, lumber dealers, 255 Sherman avenue north, Hamilton, Ont., report that the fire which recently destroyed their mill was a most disastrous one, involving a loss of about \$11,000. They have commenced to rebuild and the new mill will be larger than the one which was destroyed. They are installing the best machinery and expect to be in running order again about April 1st.

The Eastern Canada Lumber & Pulp Company, Limited, were recently incorporated at Ottawa with headquarters in that city. The company will have a capital stock of \$50,000. The incorporators include: Geo. F. Perley, manager of the Capital Office Supply Company; A. B. Rowan-Legg, manager of the Ottawa branch of the Union Bank; R. W. Dawson; G. R. Radmore and W. C. Greig. The company will manufacture and deal in wood pulp, sulphite paper, etc., as well as timber.

Graves Bigwood & Company, Toronto, have decided to erect a modern and thoroughly up-to-date mill at Byng Inlet, Ont., to take the place of the one which was destroyed by fire last year. The foundations for the new mill are already in and contracts for the erection will be let immediately. The plant will have a capacity of about 175,000 feet per day, and will be equipped with modern machinery and all the latest labor-saving appliances. It is expected that the plant will be in readiness for operation about the first of June. The company will have a good stock of logs ready when the mill opens. They are looking forward to a very satisfactory season's sawing.

The London Lumber Company, Limited, 487½ Richmond street, London, Ont., which was founded in 1890 by the late Robert McLeod, has been incorporated in Ontario. The capital stock is \$40,000, and the stated object of the incorporation is to carry on a wholesale lumber business. Mr. Frank E. Harley is president of the company and the secretary is Mr. Chas. R. Hoare. The London Lumber Company have carried on a successful hardwood business since 1890, and in 1907 Mr. Harley succeeded the late Robert McLeod in the position of manager. The head office of the company will be continued at London and in addition to hardwood lumber of all kinds, the company will handle pine and spruce in car and cargo lots only. The president, Mr. Frank E. Harley, has had eighteen years' experience in the hardwood business as inspector and assistant manager, and is well known throughout the hardwood lumber districts. The Secretary, Mr. Chas. R. Hoare, has held this office for the past six years. The London Lumber Company have made an excellent name for themselves and look forward to being able to carry on a much larger business under the new organization.

## Eastern Canada

The Nadeau Lumber Company, Montreal, Que., have been registered. Piette & Frechette, lumber dealers, Stoke, Que., have dissolved partnership.

F. M. Steadman & Company, sash and door manufacturers, Digby, N.S., have dissolved their partnership.

Gingras & Savaria, Canrobert, Que., have been registered to carry on a general store and lumber business.

The Metabetchouan Limits, recently purchased by the Belgo-Canadian Pulp and Paper Company from Messrs. Sharples, Power & Calvin, are ex-

pected to cut out from 3,000,000 to 4,000,000 cords of pulpwood. They cover 475 square miles of virgin forest. The company will take the pulp wood to their pulp and paper plant at Shawinigan.

Carreau & Quintin, sash and door manufacturers, Marieville, Que., are reported to have dissolved their partnership.

Fire recently destroyed the sawmill belonging to Alphonse Lapierre, St. Sebastien De Beauce, Que. The loss amounted to more than \$6,000 and the insurance was only \$1,200.

The rossing mill of the Miramichi Lumber Company at Morrison's Cove will be in operation this coming summer, and the mill is being put in thorough readiness for the beginning of work at the opening of the season.

Napoleon Labrie, St. Charles, Que., is erecting a sawmill. He is in the market for a planer and other sawmill machinery. Second-hand machinery would be suitable. He also requires steam plant and water wheels.

Mr. C. F. Fownes, Nyanza, N.S., is increasing his sawmill capacity by the installation of a 120 horse power stationary boiler. The output of lumber this season will be about two million feet. It will be marketed locally.

J. & W. Duncan Company, Limited, 1833 Ontario street, Montreal, Que., are having plans drawn for a planing mill to cost \$5,000. The building will be of two storey construction, 40 x 80 feet, with cement foundation. The firm will be in the market for machinery.

Pariseau Freres, Limitee, have been incorporated with head office at Outremont, P.Q., to carry on a lumber, pulp and paper business. The incorporations are H. Pariseau, Z. Pariseau and M. Labonte, of Outremont, and S. Pariseau and J. Pariseau, of Montreal. The capital of the company is \$400,000.

Further particulars of the purchase by the Brompton Pulp & Paper Company, East Angus, Que., of the timber limits owned by Mr. J. E. Robarge, of Lampton, P.Q., show that they amount in all to some 5,000 acres, situated in the counties of Compton, Beauce and Wolfe. The purchase price was approximately \$35,000.

Connors Bros., Limited, Black's Harbor, N.B., are considering the erection of a mill at that place. Their intention is to erect a plant operated by a 100 h.p. steam unit, with rotary planer, box making, shingle and woodworking machinery. The firm will be in the market for equipment of this class and also for engines, mill equipment, belting, boilers, etc.

Recent reports stated that the Edward Partington Pulp and Paper Company had decided to erect a pulp mill at Marysville, N.B., early during the present year. The company report to the Canada Lumberman that they are not yet in a position to make an authoritative statement regarding this proposition. They say that they have been considering the proposal, but that many difficult matters have yet to be straightened out before a decision can be reached.

A group of capitalists from Quebec, including Mr. O. Brouillard, M.P., and Mr. George W. Peacaud, recently obtained control of some two hundred miles of timber limits on the Metabetchouan River in Lake St. John district. The purchase also includes the taking over of three valuable power sites, capable of developing some 18,000 horse power. In addition, the new owners have acquired control of thirteen miles of railroad running from the Quebec and Lake St. John line to a proposed pulp site on the Metabetchouan River.

Messrs. Chappell Bros. & Company, Limited, lumbermen, manufacturers and contractors, Sydney, N.S., will build a small stationary saw and lath mill at Grand Mira North in Cape Breton, N.S. The addition of this plant will give the firm two sawmills and two woodworking plants in Cape Breton, N.S., and necessitates the erection of larger and more commodious general offices at their headquarters on Brookland street, Sydney. Mr. R. R. Chappell, president and general manager, is heavily interested in a lumbering business, with large limits in the Province of Quebec on the Bay Chaleur.

#### Western Canada

F. Downs, sawmill owner, Flagstone, B.C., has sold out his business.

The Crown limits, east of Pitt Lake, B.C., which were auctioned recently, were bought by the Small-Bucklin Lumber Company, of New Westminster, and T. W. Gray, the prices being \$3,267 and \$2,685 respectively.

The Cariboo Timber Company, Fort George, B.C., are arranging for the erection of a sawmill near Fort George. The daily capacity will be 25,000 feet, and it is expected that the plant will be in readiness as soon as navigation opens.

The Corona Lumber Co., with headquarters in Winnipeg, Man., which is an associate company of the Shevlin-Clarke Lumber Company, of Fort Frances, Ont., will establish a retail yard at Fort Frances. The buildings will be rushed through in time to be ready for business at the commencement of spring.

The year 1913 will see a number of new firms in the shipping field in British Columbia. One of the important ones will be the British Canadian Lumber Company at New Westminster, and another, The Brunnette Lumber Company, also on the Fraser River. The Canadian Western Lumber Company, at a recent date had orders on hand for 12,500,000 feet to be shipped to Australia.

The Gas City Lumber Company, Medicine Hat, Alta., have disposed of their lumber and building material business to the Riverside Lumber Company, Limited, with headquarters at Calgary. The Riverside Lumber Company operate two sawmills, cutting a quarter million feet per day, situated on the Crow's Nest line. Their mill at McGillivray, B.C., has been operated throughout the winter in order to keep up with the requirements of the market. Mr. Morris Kleiner, a shareholder of the company, who has been identified with it since its formation in 1906, will act as manager at Medicine Hat. Mr. Pentland, who was with the Gas City Lumber Company, will be in charge of the office of the Riverside Lumber Company.

W. H. Cushing, M.P., of Cushing Bros., Calgary, Alta., predicts that the demand for lumber on the prairies during 1913 will be greatly in excess of the supply. He recently visited Vancouver to purchase stocks for the increased trade which he expects. It is reported that his orders alone would probably amount to between 5,000,000 and 8,000,000 feet.

# FOR SALE

## Second-hand Machinery

One Twin Buckeye Steam Engine, 500 H.P., Cylinders 22 x 44, Flywheel 14 ft. x 28 in. face

One Leonard Engine 9½ x 10

One Leonard Engine 9 x 10

One Leonard Engine 6 x 7

One Leonard Engine 8 x 8

One Manning Boiler 21 ft. long, Firebox 7 ft. x 6 ft. 371 tubes 15 ft. long x 2½ in. Tested for 200 lbs.

One Manning Boiler 19 ft. 3 in. long, Firebox 7½ ft. x 5 ft. 3 in., 256 tubes 14 ft. long x 2½ in. Tested for 200 lbs.

Four Jones Underfeed Stokers with boilers fronts and fan.

One Double-action Northey 500-gallon Boiler Feed Pump; 5 in. Plungers.

Two Wood Pulp Conveyers complete; one 500 ft. long, the other 700 ft. with 1½ in. Hemp Centre, Crucible Steel Cable, Engines, Belts, Gears, Pulleys, etc. Everything extra heavy.

Pulleys, Belts, Chain, Pumps, Steam Traps, etc.

Two 14-Plate Waterous Pulp Screens with Bronze Plates.

Fourteen Drying Cylinders 48 in. x 100 in.; with Drives, Steam Connections, Stuffing Boxes, etc.

Chipper, Rechipper and Chip Crusher, etc.

Most of this machinery has been used only a short time and is in good shape. We are dismantling our mill and will sell at a large discount to get rid of it quickly.

## St. John Pulp & Paper Company

Box B, St. John, N.B.

cient method of giving a saw clearance, yet with only crude tools to work with, it was a tiresome and somewhat uncertain task.

As the band-saw came into use, the primitive methods of swaging were too slow, and the tools inadequate; and for some time band-saws up to three or four inches wide were being operated with spring-set for clearance, and consequently with more or less indifferent results. Finally the idea of the machine swage was made a practical thing, and probably few, if any tool on the market to-day—as complicated as the swage—was developed so quickly, and improved on so rapidly, and made to do practically perfect work in so short space of time as the modern machine swage.

Efficiency in the band-saw demanded its development and inventive geniuses made good. And yet after all these many years it has been in use, its efficiency can be greatly extended in the majority of manufacturing plants with a good showing of better results. Of course, there are some who are making good use of its advantages, and are doing everything possible to profit by the swage wherever its work can be made profitable; on circular saws as well as on bands.

On the other hand there are many who believe swage was only made for the band alone; and fully realize that only by its use good results can be obtained, yet are letting the possibilities of the full swage set in small circular rip saw slide. Thinking the spring set is good enough and more easily put in and believing the swage set too tedious to be considered; while in reality it is a saving of labor when properly equipped with appliances to do the work with.

Being at present located in the filing-room of a factory where we get from 300 to 500 saws per week to be sharpened, there has been a plenty of changes to make experiments in regarding swage set and incidentally a few other things. And it has proven out decidedly that the swage set in all kinds of rip saws on which it can be used, insures better running saws and is a saving of labor in the filing-room. Of course, the outfit for swaging and sharpening circular saws must practically correspond to the outfit for swaging and sharpening bands.

Yet one outfit can not successfully do both. While it may be possible if one uses good sense in selecting an outfit suited to do both circular and band fitting, yet a separate outfit for each is much more practical.

As all practical saw fitters know, an automatic grinder is absolutely necessary where a machine swage is being used; for unless the teeth are perfectly uniform in size, length, pitch and general outline the machine swage will fall far short of doing its best work on any saws and will prove a comparative failure on small circular saws unless the teeth are kept uniform, by using an automatic sharpener.

The circular outfit in our filing-room consists of an automatic grinder, machine swage (with extra large die), side dresser, swage, shaper, filing-vise, (heavy, strong and adjustable).

The circular saws range from 12 gauge by 12 inch diameter to 18 gauge by 40 inch diameter, and we have two machines that use 17 gauge by 50 inches diameter.

Much of the work calls for extra smooth sawing and straight lines, which can be much more easily accomplished with swage than spring set. One very strong point in favor of the swage, in any saw that cuts lengthwise of the grain, whether in the factory, saw-mill or elsewhere, is, when the saw comes in contact with a spike, nail, rock, gravel or any hard substance. Of course the corners are ruined or some of the teeth at least, and if spring-set is being used, it calls for a whole lot of grinding to get down to where the points are good again. And it is nearly impossible to get it back in good condition on a single sharpening. While if the swage set is used the corners are drawn out on the first sharpening and made as good as before it came to grief, consequently, the saw makes its regular run as usual. While the poorly sharpened spring set would soon be returned for a second sharpening. Here is one example of a saving of labor in caring for a swage set with the profits of a good running saw while on the machine thrown in.

It is, no doubt, a fact that it requires some more skill and a little more work to maintain a swage set in any saw band or circular either; but if the results are fully considered the actual saving of labor—with corresponding results—are all on the side of the swage, for the saw will run longer and do better work.

In the case of fitting band-saws it has long been an established fact. But in the small circular its merits are greatly overlooked by many good mill-men and saw fitters.

The Canadian Department of Customs has issued an order prohibiting the importation from New England states of forest plant products including logs, tan bark, posts, poles, railway ties, cordwood and lumber, unless accompanied by a certificate from the United States Department of Agriculture that such products are free from the gypsy moth.

# Put “AMPHIBIA” Planer Leather Belting

On your planers and get a maximum of production from them. “AMPHIBIA PLANER” is a belt designed and made especially for this heavy fast work, the material coming from the exact centers of the very best hides obtainable in the world. The workmanship is of the finest and the result is the very acme of leather belts.

## “AMPHIBIA PLANER” Costs Less per day of Service

“Costs less per day of service”:—Remember that phrase always. It represents the true basis for decision as to whether the belting you purchase is expensive or otherwise.

## INDUSTRIAL LOCOMOTIVES

WHAT SHOULD BE KNOWN BEFORE YOU PURCHASE LOCOMOTIVES:—

Light Locomotives for logging service and switching around industrial plants, must be just as carefully designed and constructed as larger locomotives.

We have spent a great deal of time and money in developing our light locomotives. The designs have been carefully considered

and the locomotives are as good as they can be made. Every bit of material is carefully selected and tested.

Remember that we carry interchangeable repair parts in stock for immediate shipment.

Write or wire us, or better still, come to see us.

HORSE DEPARTMENT

"The Place to Buy them Worth the Money"

CLOCK

## This Watchman's Clock Pays For Itself

STATION

The complete cost of

## The Hardinge Watchman's Clock and Patrol System

is entirely offset by the reduction of risk and the consequent drop in insurance rates. Any number of keys or stations can be installed with one watch—and all absolutely fool proof. Full details and prices given on request.

**HARDINGE BROS. (Inc).**

3133-3141 Lincoln Ave.

CHICAGO, ILL.

## The Truck That Saves It's Cost Several Times Over in The Year

This truck is designed for lumber yards and planing mills and will be found invaluable for loading and unloading cars.

The front gearing is detachable and may be used with eight or twelve hind gearings. It is a double-header, nuts on axles being kept tight with Steel Cotter Keys.

Oil cups on the wheels and the fact that there is no resetting of tires saves any amount of trouble.

The old wooden-wheeled truck is a back number in comparison with this. It will pay you to write for our general catalogue which describes these trucks in detail, and pick out the style you want now.

**Tudhope - Anderson Co., Limited**

ORILLIA, ONT.

## Reliable Service Exhaust Fans

The Superiority of the **Sheldon System** is due to our exclusive method of manufacture and to the quality of materials used. Saving in power and speed of 25% to 40%

MONTREAL, Unity Building

# The Three Goodhue Belts

**"EXTRA" "STANDARD" "ACME WATERPROOF"**

These three brands are made for three different services and each brand is the best quality made from selected hides with the stretch taken out.

"Goodhue Belts" stretch less than any other belt by 15 to 25 per cent. This quality effects a great saving because it is unnecessary to be continually shortening the belt to keep it taut.

"Acme Waterproof" brand is made for the wet places in a mill and will give a remarkable service under the most trying conditions.

When you buy a belt—buy a Goodhue. Prices and particulars on request.

# "John Bull"

## Larrigans & Leggins

We illustrate two of our products that should be in the outfit of every lumberman. Both the larrigans and leggins are made of a special oil-tanned leather of our own tanning. It is unusually tough and absolutely waterproof.

When you need larrigans or leggins ask for "John Bull" brand and insist upon getting it. Every pair stamped with our trade mark.

### "Dolphin"

is the belting to use in wet places. It is impervious to moisture and gives entire satisfaction. You can run it in water and the cement will hold fast. No rivets or sewing necessary. A water-proof belt in the full sense of the word. The cement is one of the most adhesive water-proofs known.

ARE YOU HAVING  
BELTING TROUBLES

?

**Providence Belting Co.**

Providence, R. I., U. S. A.

Office and Factory: 25-39 Charles St.

We Solicit a Trial  
Order

### "Black Diamond"

will do more work and easier than any other belt made. Give it a trial. Unequalled for Dynamos, Fans or any high speed machinery with small Pulleys. Does not require to be kept as tight as the regular Oak Belt.

No. 336 "LIGHTNING" DOUBLE SURFACER  
Driving Side

Take a look at this picture! Is it not, at least so far as outside appearances go, the greatest Double Surfacers you ever saw?

And the more you get into the construction and capacities of the "336," the more you realize that the whole machine is in keeping with its outer appearance.

We want you planing mill and box factory men to know this machine—what it will do for you in the way of reducing costs and increasing grades—how—and why—We have, therefore, issued a special book on FAST FEED Matchers and Surfacers, going into this proposition carefully and literally taking the machines apart before your eyes—Write us on your letter head for Book No. 11-D and we'll send it free of all charges.

# Potato Scale Boiler Cleanser

"A Deadly Enemy of Scale"

We absolutely guarantee this Boiler Cleanser to remove all old scale, and if a small quantity is used continually, it will prevent any new scale from forming.

The composition of this Cleanser is of such ingredients that it is harmless to metal.

Send us a gallon of feed water and we will mix a quantity for **free trial** to suit your water conditions.

WRITE TO-DAY

**C. C. Snowdon,** Wholesale  
P. O. Box 1384 - CALGARY, ALTA.

# Timber Values

Timber is cheaper today than it was thirty years ago.

That is our sober conclusion after a review of all the facts that influence or touch timber values.

Thirty years ago neither timber nor its products was worth much. If logs would not produce a heavy percentage of high grade stock they were worthless, and being worthless were left in the woods.

Timber is being used more closely. It is in request for many purposes of which the early operators did not dream. To its use as lumber and in similar forms is being added a demand for timber as the raw material for chemical treatment. For such use wood of sound quality is required, knot, shake and crook defects which render logs valueless for lumber do not reduce their value for chemical treatment.

Thirty years ago about 25 per cent. of the timber in a forest was used. Today there is an outlet for possibly 60 per cent. of it. Within another decade we expect to see 80 per cent. of it used—a gain of 33 1/3 per cent.

Every addition to the list of wood users gives added value to timber of all kinds by broadening the market for it.

All timber owners are sharing in this constant betterment in prices. Do you own timber?

# Opportunity

## For a Timber Bargain

We have the most attractive timber property in British Columbia, most advantageously located for economical logging and manufacture and nearest to the best markets on the continent.

### Canada is Developing

History will repeat itself and the same conditions that have prevailed in the past twenty-five years in the territory surrounding Chicago, which created such an enormous demand for lumber, are being repeated in the territory to be supplied by this property. On the other hand, the amount of timber in British Columbia, which of necessity will have to supply these markets, is very limited and good accessible timber, such as this, will enhance in value more rapidly than it did in Michigan and Wisconsin.

The tract was examined by Brayton & Lawbaugh and James D. Lacey & Co. They report it to contain two billion feet. Members of both firms have been on the property and will recommend it.

It is one of the largest compact and most advantageously located tracts of choice timber in Canada.

It is owned in fee simple by an old Crown Grant and the timber is exempt from all Royalty and Crown Dues.

Logs from this property can be cut and delivered to the mill for \$3.00 per thousand less than practically all other timber in that country.

There is a saving of an average of \$3.00 per thousand in freight rates over Pacific Coast timber to the principal markets of the Prairie Provinces.

It can be logged and put on cars, including stumpage, for less than \$10.00 per thousand. Mill run lumber in this territory is selling for over \$20.00 per thousand.

**An exceptional opportunity  
for operation or investment**

**W**ATEROUS Steel Carriages are being used in the largest, best equipped Mills in Canada to-day. Built for fast cutting, for accuracy, and to give operating service, they are carefully put together of the best materials obtainable—they stay right.

**I**NCREASE in cutting efficiency and the increase of cutting speed have been taken care of in the design of these Carriages. Improvements in the knee and head blocks and in all moving parts to overcome lost motion; a new Setworks—our No. 4—which absolutely prevents and will not develop slack; new style, inserted tooth, quick and easy operating dogs; a friction receder that

is operated with the Setworks—these special features are what keep the Waterous Steel Carriage at its place at the head of the list of "Up-to-date Sawmill Equipment." We build our Steel Carriages in sizes of 36" to 72" knee opening, in any length and with any number of head blocks—screw or rack motion. They are adaptable for rope or gunshot feed.

# Tenders For Purchase of Machinery and Timber

The undersigned offer for sale in large or small blocks all their remaining timber lands, mills and town property situated in the Town of Parry Sound, Ont.; Tug Scow and other Lumber Equipment, including boom chains, plows, sleighs, etc.

We have sold quite a number of timber parcels but still have some good bargains left in Townships of McDougall, Foley, McKellar, Monteith, Carling, Christie, Shawanaga, Burpee, McConkey, Mills, Allen, Secord, Falconbridge and Street.

Tenders will be received for the purchase of the following Sawmill Machinery:

- 1 8 ft. Double-cutting Telescope Band Mill, made by Waterous Engine Works.
- 1 3-block right hand steam feed carriage fitted with steam set works, made by Wm. Hamilton, Peterboro, with 10-in. steam feed cylinder.
- 1 Double cylinder steam nigger, right hand.
- 1 Log Loader for right hand mill.
- 1 8 ft. Double-cutting Telescope Band Mill, made by Waterous Engine Works.
- 1 10 in. Double-cylinder steam feed carriage, left hand, for cutting 24-ft. logs.
- 1 left-hand steam nigger.
- 1 Log-loader.
- 1 Endless chain jack ladder with two kickers complete for right and left hand mills.
- 2 Roger Gang Edgers for 8-in. cants and lumber.
- 1 Waterous double edger, 6 saws.
- 2 2-saw trimmers.
- 1 16-ft. Slash table.
- 1 20-ft. Slash table.
- 1 16-ft. Revolving Slash Table.
- 1 Horizontal Slab Resaw with 5-ft. wheels, made by Diamond Iron Works.
- 1 70-ft. Transfer Chain for sorting lumber, with necessary levers, rolls and transfer chains to complete outfit.
- 1 Lath Mill with bolter.
- 2 Lath Trimming Saws.

## FILING ROOM

- 1 Automatic Filing Machine for 12-in. D.C. band saws.
- 1 Automatic Grinding Machine for 8-in. S.C. band saws.

- 1 Automatic Machine for circular saws.
- 1 Hand Machine for cut-off saws.
- 1 Lap Grinder.
- 1 Set Band Saw Rollers and levelling blocks, with necessary swedges, a number of second-hand band, gang, edger and slash table saws.

## POWER PLANT

- 1 24 x 36 Slide Valve Engine with 40-in. x 12-ft. extra heavy double arm split fly wheel.
- 2 Double Duplex, high pressure Water Pumps.
- 5 60-in. x 16-ft. Return Tubular Boilers, allowed 125 lbs. steam.
- 2 125 h.p. Water Wheels.
- 1 Upright Engine for sawdust conveyor.
- 1 10 h.p. Engine.
- 1 Mitts & Merrell Hog.
- 1 Wood Machine for 22-in. wood.
- 1 Wood Machine for 16-in. wood.
- 1 Edger for ripping dry lumber, installed.
- 1 Edger for ripping dry lumber, not installed.
- 1 30 h.p. Generator, 250 volt.
- 1 30 light arc generator.

There is also a large quantity of shafting, pulleys, hangers, belting, tram cars and rails and turn-tables, particulars of which may be had on application.

Also, contents of machine shop, containing Planer, Drill, Lathe and Machinery, with tools necessary for repair work.

The lowest or any tender not necessarily accepted.

All of the above open for inspection at Parry Sound.

# Dominion Timber Regulations

---

Licenses to cut timber on Dominion Lands in the Provinces of Manitoba, Saskatchewan, and Alberta, the Northwest Territories, within twenty miles on either side of the main line of the Canadian Pacific Railway in the Province of British Columbia, and in the tract of three and one-half million acres to be located by the Government in the Dominion in the Peace River district in the Province of British Columbia, lying east of the Rocky Mountains and adjoining the Province of Alberta, shall be disposed of by public auction at the office of the Dominion Timber Agent for the districts in which the berths are situated.

Before any parcel of timber is offered for sale it shall be surveyed by a duly qualified Dominion Land Surveyor into berths of an area not exceeding twenty-five square miles, and each of such berths shall then be thoroughly cruised by a duly qualified timber cruiser in the employ of the Dominion Government. The Minister shall then fix an upset price at which the berth shall be disposed of, and no berth shall be sold at less than the price so fixed.

Purchases to the amount of one thousand dollars or under shall be paid in cash at the time of sale. Purchases over one thousand dollars and not exceeding five thousand dollars shall be paid, one-half in cash at the time of sale, and a note or notes shall be given for the remaining half of the purchase price, payable in three months, with interest at the rate of five per cent. per annum. Purchases over five thousand dollars and not exceeding ten thousand dollars shall be paid one-third in cash at the time of sale, and notes shall be given for the remaining two-thirds of the purchase price, payable in three and six months, with interest at the rate of five per cent. per annum. Purchases exceeding ten thousand dollars shall be paid one-fourth in cash at time of sale, and notes shall be given for the remaining three-fourths of the purchase price, payable within three, six and nine months, with interest at the rate of five per cent. per annum. Notes shall be made payable at a bank in the city or town in which the sale is held or at a bank in the city of Ottawa. Cash payments must be made at the time of sale in legal tender or by an accepted cheque on a chartered bank, or by a draft issued by a chartered bank, payable to the order of the Deputy Minister of the Interior. If default is made in any payment required by this section the sale shall be forfeited and void.

The purchaser must also pay the cost or the estimated cost of the survey of the berth before a license is issued.

The licensee shall pay an annual ground rent of five dollars per square mile except for lands situated to the west of Yale, in the Province of British Columbia, in which case the yearly ground rent shall be five cents per acre.

The licensee shall pay the following dues on timber cut on his berth :—

Sawn lumber, 50 cents per thousand feet, board measure.

Railway ties, eight feet long,  $1\frac{1}{2}$  cents each.

Railway ties, nine feet long,  $1\frac{3}{4}$  cents each.

Shingle bolts, 25 cents per cord.

And 5 per cent. on the sale of all other products of the berth.

## Timber Permits

Yearly permits are granted to settlers, mine operators and others on application to the Dominion Timber Agents, from whom further information can be obtained.

**A  
Message  
to You**

(Please read)

DOES it mean anything to you to know that **you** can get prompt shipments of the highest quality Lumber and Shingles at the same prices you are paying for inferior service and goods?

IS there anything more unsatisfactory to **you** than being held up by delays in receiving the stock you are in urgent need of—maybe it is only a few pieces of lumber or bundles of shingles out of a car?

HOW do **you** feel when stock for which you have been waiting arrives and is poor quality—unfit for the use you require it?

WHY don't **you** place your orders with a Company who can, in shipping you, obviate the worries and dissatisfaction mentioned above.

# AUCTION SALE

## White Pine Timber Limits and Mill

### Province of Ontario

The undersigned has received instructions from G. T. Clarkson, Assignee to offer for sale by public auction, in the Board Room of the Queen's Hotel, in the city of Toronto, on Thursday, April 24th, 1913, at twelve o'clock noon, the assets of the

## STONE-GRANT LUMBER COMPANY, LIMITED

Successors to Loveland & Stone  
of Cutler, Ontario and Saginaw, Michigan

Consisting of:

**Lot 1.**  
Timber Berth, having an area of twenty-seven square miles, more or less, and being the west half and the northeast quarter of the Township of Ermatinger, held under licenses from the Province of Ontario, being Nos. 197 and 198 for the Season 1912-13. The Berth is estimated to contain 50,000,000 feet B.M. of white pine of good quality.

**Lot 2.**  
Timber Berth, having an area of thirty-six square miles and being the Township of Dowling, held under license from the Province of Ontario, being No. 514 for the Season 1912-13. The Berth is estimated to contain 1,000,000 feet B.M. of white pine.

**Lot 3.**  
Timber Berth, having an area of thirty-six square miles, more or less, and being the Township of Fairbanks, held under license from the Province of Ontario, being No. 423 for the Season 1912-13. The Berth is estimated to contain 1,000,000 feet B.M. of white pine.

**Lot 4.**  
Timber Berth, having an area of thirty-six square miles, more or less, being the Township of Drury, held under license from the Province of Ontario, being No. 422 for the Season 1912-13. The Berth is estimated to contain 1,200,000 feet B.M. of white pine.

**Lot 5.**  
Timber Berth, having an area of nine square miles, more or less, being the S.E.  $\frac{1}{4}$  of the Township of Trill, held under license from the Province of Ontario, being No. 424 for the Season 1912-13. The Berth is estimated to contain 1,200,000 feet B.M. of white pine.

**Lot 6.**  
Timber Berth, having an area of nine square miles, and being the S.W.  $\frac{1}{4}$  of the Township of Perkin, held under license from the Province of Ontario, being No. 342 for the Season 1912-13. The Berth is estimated to contain 3,000,000 feet B.M. of white pine.

**Lot 7.**  
Timber Berth, having an area of nine square miles, more or less, and being the S.E.  $\frac{1}{4}$  of the Township of Hutton, held under license from the Province of Ontario, being No. 341 for the Season 1912-13. The Berth is estimated to contain 500,000 feet B.M. of white pine.

**Lot 8.**  
Timber Berth, having an area of thirty-six square miles, more or less, being known as Berth No. 131, Sable River, being No. 390 for the Season 1912-13. The Company's records indicate that the Berth contains a considerable amount of spruce and a small amount of pine.

**Lot 9.**  
Lumber mill at Cutler, on the Georgian Bay, Ontario, with approximately two hundred acres of land and water rights, together with dockyard and surrounding buildings, including stores, boarding house, office premises and a number of dwelling houses. The mill is situated within a reasonable distance from the mouth of the Spanish River, and has a capacity of 200,000 feet per day—is fully equipped—has two double cut band saws, circulars and gang saws, also edgers, trimmers, etc. There is also a complete electric light plant, steam plant and machine shop. The property is adjacent to the Canadian Pacific Railway, and is valued on the Company's books at \$147,000. Mill supplies inventoried at \$3,290, will be included with the mill property.

**Lot 10.**  
General Stock and Merchandise in Company's store at Cutler, amounting as per inventory to:—

|                     |            |
|---------------------|------------|
| Groceries .....     | \$2,170.87 |
| Drugs .....         | 328.81     |
| Hardware .....      | 458.38     |
| Dishes .....        | 50.98      |
| Dry Goods .....     | 316.73     |
| Clothing .....      | 610.42     |
| Hats and Caps ..... | 348.78     |

|                         |            |
|-------------------------|------------|
| Rubbers and Shoes ..... | 1,295.55   |
| Dry Goods .....         | 2,601.39   |
|                         | <hr/>      |
|                         | 8,181.81   |
| Fixtures .....          | 1,340.35   |
|                         | <hr/>      |
| Total .....             | \$9,522.16 |

**Lot 11.**  
Camp equipment, consisting of sleighs, blankets, cooking utensils and supplies in camps in the Township of Hutton, amounting as per inventory to approximately \$6,603.17.

**Lot 12.**  
Tugs and equipment of the North Channel Towing Company, Limited, Cutler, being:—  
Tug "W. H. Seymour," valued at ..... \$2,500.00  
Tug "Alert," valued at ..... 800.00  
Tug "Lighter Hampey," valued at ..... 1,000.00  
Booms and Chains, valued at ..... 2,500.00

Total ..... \$6,800.00

This lot will be offered subject to prior sale.

All the Lots will be offered separately and subject to a reserve bid.

With respect to Lots 1 to 8, the same shall be accepted subject to the terms and conditions of the Licenses under which they are held and the restrictions in respect of lands withdrawn for settlement or other purposes by the Province of Ontario.

In event of no satisfactory offer being received for Lot 1, the Vendor reserves the right to offer it for sale in either two or three parcels.

#### Terms of Payment:

**For Lot 1**—One-third cash and the balance upon approved security in one and two years, with interest at seven per cent. satisfactorily secured.

**For Lots 2, 3, 4, 5, 6, 7 and 8**—One-third cash and the balance in six, twelve and eighteen months, with interest at seven per cent. per annum, satisfactorily secured.

**For Lot 9**—One-third cash and the balance in one and two years with interest at six per cent. per annum, satisfactorily secured.

**For Lot 10**—One-quarter cash and the balance in two, four and six months, with interest at seven per cent. per annum, satisfactorily secured.

**For Lot 11**—One-half cash and the balance in three months, with interest at seven per cent. per annum, satisfactorily secured.

**For Lot 12**—One-half cash and the balance in six months, with interest at seven per cent. per annum, satisfactorily secured.

With respect to Lots 1 to 9, further particular conditions of sale will be read at the time of the sale.

With respect to Lot 10, the purchaser must accept it as it stands, offering a lump sum for the same, accepting the benefit of the sales since the assignment and paying expenses in regard thereto, including the rental for the use of the premises.

With respect to Lot 11, the purchaser must accept the same as it stands, offering a lump sum therefor.

With respect to Lot 12, the purchaser must take the same as it stands, accepting the title of the North Channel Towing Company, Limited, thereto.

Further particulars as to the properties, together with estimates as to the timber, inventories and conditions of sale, may be had upon application to—

In every woodworking plant by

# "DEFIANCE"

## WOODWORKING MACHINES

Provision was made over sixty years ago when the first DEFIANCE machine was built, that every machine leaving our plant should perform its work with undue accuracy and with such a degree of speed and uniformity that their users would have no cause for complaint. This is a characteristic which we have always adhered to and our customers are proud of the fact that their plants are equipped with machines which lend every assistance available to the yearly profits.

Our catalog will show you how it is done. Send for it today.

**International Stock Food Co., Limited**  
Toronto, Ont.

## Dr. Stewart's Pure Condition Powders

#### LUMBERMEN AND CONTRACTORS:

You can save yourself unnecessary expense and worry by feeding Dr. J. M. Stewart's Pure Condition Powders this Spring.

After horses being highly fed for their heavy winter's work, they are apt to be in bad condition and need a "SPRING TONIC" and nothing corrects it as quickly and thoroughly as Stewart's Condition Powders.

These powders should not be confused with stock foods. They are composed entirely of roots, herbs and barks, free from all injurious dope, such as arsenic, resin or antimony, and are guaranteed to be the greatest disease Preventing Powders on the market.

#### CURES

Coughs, Distemper, Scratches,  
Pink Eye, Worms, Blind  
Staggers, Hide  
Bound, Etc.

Two cans guaranteed to put your horse in first-class condition, 2 lb. cans, \$4.50 per dozen.

**Palmer Medical Company, Limited**  
Windsor, Ont.

## Are Your Horses in Good Condition?

Horses for all lumber work are subjected to the hardest hauling under the most severe conditions. They should therefore be as fit as all possible care and attention can make them.

**In the Lumber Camp,  
Around the Mill, In the Yard**

and wherever lumber has to be hauled the horses are always liable to a multitude of small injuries which if not attended to promptly may develop into lameness or disfigurement, thus reducing the working capacity of the horse and impairing its value from a sale standpoint.

You should always have handy and ready for use

### Good Liniment

to reduce bruises, strains, soreness; allay pain and inflammation quickly, be an antiseptic dressing to a cut or burn, or to heal a wire cut, wound or laceration.

### ABSORBINE

is an antiseptic healing preparation as well as a resolvent and a discutient. It will assist nature in bringing about a dissolution of the bunch, restore the circulation, gradually restoring the part to its normal condition.

It will produce permanent and complete results without blistering or removing the hair, and will leave no blemish. You can work the horse at the same time. All enquiries on special cases answered without delay—full information and instruction on request. Absorbine \$2.00 per bottle at dealers or express prepaid. Manufactured only by

# A Belt which Conveys ALL the Power

Practical men know the drainage of power from a slipping belt, *and because they know*, they are buying

## GOOD YEAR RUBBER BELTING

**Which Neither Slips Nor Stretches**

It is built up, layer upon layer, of close-woven, long-fibre, cotton fabric, rubberized and cured under Goodyear processes. And every Goodyear belt has in it the lowest possible minimum of stretch, because the belt is "cured" whilst stretched to the limit of safety in a special machine.

### That is the Goodyear Method of Belt Manufacture

And the result is entirely satisfactory to belt users—a fact to which our enormously increased sales testify. What is the significance of this **CONTINUED SALES INCREASE — 50%** over last year? Simply that Goodyear Belting more than fulfills the claims made for it by the

Goodyear people—who know what a belt should do, and make a belt to do it.

It has cost us less than \$200.00 for claims or adjustment of every kind in connection with our total output for the past two years—a remarkable tribute to Goodyear reliability.

**Look into the Belt for Yourself—Try to Tear It Apart.**

Make a cut in the top layer—and then try to pull it apart. You will get a faint idea of its strength.

That is the result of forcing rubber at tremendous pressure through the fine cotton fabric—separating every strand—thus abolishing all internal friction or grinding. Whilst these layers of fabric are afterwards so compressed as to be almost homogeneous, the finished belt bends easily, the "duck" being so woven as to retain complete pliability in the finished belt.

**For Main Drives and  
High Speed Pulleys  
GOODYEAR Belting is the Best**

It has all the tensile strength necessary to absorb tremendous strain without slip, stretch or rent. The grip of rubber and the prodigious strength of hard-twist cotton fabric are united, and prove equal to every emergency.

Where the power transmitted is high, and great tensile strength is essential, Goodyear Rubber Belting proves its worth.

ber Belting proves its worth.

EVERY GOODYEAR BELT IS SUBJECTED TO A STRINGENT TEST BEFORE LEAVING THE FACTORY, and what is more, the materials used in the manufacture are also tested in the Goodyear laboratory before using.

### IF YOU USE A BELT AT ALL IT WILL PAY YOU TO USE A GOODYEAR

Loss of power is loss of profit—and an inferior belt is dropping power all the time. Goodyear belting quickly earns its cost in power saved and trouble avoided.

### TWO HUNDRED AND FORTY ROLLS—A TOTAL OF 72,000 FEET

We have just received an order for this quantity of GOODYEAR RUBBER BELTING from one business concern in the west, for the equipment of interior elevators. Such an order shows supreme confidence in the quality of GOODYEAR Belting.

If we have not just the belt you require we will make it for you.

In the choosing of belts our booklet would be of great assistance to you. We supply it free. Write to our nearest Branch for one.

Single copies 15 cents.

"The Canada Lumberman and Woodworker" is published in the interest of, and reaches regularly, persons engaged in the lumber, woodworking and allied industries in every part of Canada. It aims at giving full and timely information on all subjects touching these interests, and invites free discussion by its readers.

Special care is taken to secure for publication the latest and most trustworthy market quotations throughout the world, so as to afford to the trade at home and abroad information on which it can rely in its operations.

Advertisers will receive careful attention and liberal treatment. For manufacturing and supply firms wishing to bring their goods to the attention of owners and operators of saw and planing mills, woodworking factories, pulp mills, etc., "The Canada Lumberman and Woodworker" is undoubtedly the most direct and profitable advertising medium. Special attention is directed to the "Wanted" and "For Sale" advertisements.

No. 7

## New Brunswick's New Timber Land Policy

The new timber land policy announced in the Legislature of New Brunswick by the Premier, Hon. J. K. Fleming, may be characterized generally as a compromise between the desires of the large owners of timber in that province and the small operators who have mills, but very little timber. Roughly speaking the duty of the government was to provide stability for the lumbering and pulp and paper industries so that they might be in a position to finance their undertakings successfully, and at the same time to see that all who had vested interests whether large or small should be protected and encouraged in equal manner. In addition to these duties the government had before it the task of preserving the interests of the people of the province in general in its timber resources, as well as the development of a policy which would place the management of the timber lands upon a businesslike and economic basis. These duties seem to have been kept pretty definitely in mind in drawing up the policy which is indicated by the bill recently introduced in the Legislature, and outlined elsewhere in the present issue of the Canada Lumberman.

The new Crown Lands Bill is a measure of the very greatest importance. It deals with public domain to the extent of about 11,000 square miles, or more than one-third of the whole area of the province. From this territory the province receives its greatest revenue. The lumbering industry stands next to agriculture in importance in the province. The Crown lands during the last two years produced a revenue of more than half a million dollars annually. Premier Fleming pointed out in his address in the legislature that if properly husbanded this revenue would continue from year to year. It was the duty of the government today to protect this revenue and to hand

over these Crown lands to future generations in as good a producing condition as they were in today.

The urgency was great for placing the lumbering industry upon a sound basis so that it will be able to borrow from the banks sufficient money to carry on its operations from year to year. A large lumber operator had been anxious, for this purpose, to secure perpetual leases. The Premier was opposed to such a step, considering it unwise to adopt perpetual leases. He believed that there should be a limitation and did not believe that the government of today had a right to dispose of the Crown lands and the domain of the province for all time. Instead of doing so, they would undertake to say how much should be paid for the right to cut timber on the Crown lands for thirty years under pulp and paper licenses and for twenty years under sawmill licenses, with additional periods of twenty years and ten years respectively. He believed that these provisions would establish sufficient permanency for the industries to secure ample financial assistance from banks to carry out their operations.

The Premier devoted considerable attention to a consideration of the provision in the bill for the conservation of the forests. He believed that it was a wise measure to adopt as it would encourage lumber operators in many cases to allow their timber to reproduce itself over a number of years.

Probably the most interesting feature of the Premier's address in the Legislature was that which came at its conclusion, in which he outlined the benefits which he believed would accrue immediately from the new policy. He announced that the Bathurst Lumber Company, who are the holders of about nine hundred square miles of timber land in New Brunswick as well as a large quantity in Quebec, were anxious to proceed with the development of the Great Falls on the Nepisiguit River. The estimated expenditure upon this development was nearly one million dollars, while the company also proposed to establish a pulp and paper enterprise in the town of Bathurst. The development of these two propositions would mean the expenditure of over five million dollars.

In connection with the pulp and paper industry the Premier justified the course which had been adopted, by quoting statistics which had been furnished by Mr. Jas. Beveridge, president of the New Brunswick Pulp and Paper Company, Limited, who operate a large pulp and paper mill at Millerton on the Miramichi River. The gist of Mr. Beveridge's statement was to the effect that upon every thousand superficial feet of logs brought out of the forest, the paper mills paid from \$27 to \$28 wages before the finished product was secured. Chemical pulp mills paid from \$12 to \$13 and sawmills paid about \$7.

The Premier referred also at considerable length to the development of the power at Grand Falls and the proposed creation of a pulp and paper enterprise at that point. Such an industry would mean the building of a town of about eight or ten thousand people at Grand Falls, the investment of from ten to fifteen million dollars of capital and the payment of large sums in wages to the people of New Brunswick.

The introduction of this new policy by the government of New Brunswick marks an important era in the development of the timber resources of New Brunswick. The future of the industries depending upon the timber resources will be more certain than they have been for some years past. With businesslike management of the Crown timber resources, under the new policy, the probability is that the industries will go ahead steadily. Those who were anxious for perpetual leases will be a little disappointed at first but it is reasonable to believe that they will readily accept what they have received, realizing that the policy now adopted is one under which they can proceed to a satisfactory and extensive development of their operations.

One of the most important and radical departures announced in the new policy is the decision to make a survey, examination and classification of the Crown land areas of the province. In itself, this is an admirable undertaking and one which ought to have been com-

pleted years ago. Under the present conditions, it is made to serve a double purpose. The classification will be used as a basis for a readjustment of the Crown land areas in such a manner as to provide for the timber requirements of small operators who today find themselves with mills, but with very little timber. When the survey and classification has been completed the government will enquire into the rate of growth on all limits and the manufacturing capacity of all plants. With these statistics before it, an effort will be made to readjust the ownership of timber in such a way that large operators who own more timber than they can cut will be deprived of some of it in order to furnish the smaller operators with raw material for their mills.

At first glance this provision may not commend itself to some of the larger operators. It will, however, undoubtedly commend itself to those who desire to see the timber resources of the province utilized up to the limit of annual growth. Everything, of course, will depend upon the manner in which the provision is worked out. It is one of these provisions which is fraught with great possibility both of damage and of benefit. If its working out is developed along the lines so clearly indicated by the Premier, the provision will probably be a benefit and result in a closer utilization of the timber resources of the province, at the same time furnishing smaller operators with the means of securing a profitable return from the money which they have already invested in the industry.

## Wood Block Paving Progress

The prospects for creating a great wood pavement industry in British Columbia are becoming constantly brighter. With the enormous wealth of fir timber of classes Nos. 1 and 2 common, which is regarded everywhere as almost the best, if not the best in the world for the purpose of paving, British Columbia offers a wonderful future to this most important industry in the development of great towns and cities.

The growing communities of the prairie and coast provinces are laying every year hundreds of miles of streets, which might be paved with creosoted wood block if only its virtues were more widely known. The city of Calgary has laid two streets, and they have proved remarkably successful. There have been numerous tests made of paving materials in the great cities of the world in Paris, London, Boston, Chicago, New York and St. Louis, and all of these great cities find wood block paving best, being of reasonable cost, durable under any traffic, easy to maintain and to clean, practically dustless, firm under the feet of horses, and of low traction resistance. The Rue de Rivoli has a pavement of wood blocks which have stood for years the city's heaviest traffic.

In Baltimore in 1901 a test strip of miscellaneous pavement was laid on Holiday street. This strip contained eleven test sections of paving materials, which were in every case furnished by the manufacturer—one of creosoted wood blocks, one of vitrified brick. The superior durability of the wood blocks was clearly in evidence after four years, and in 1907 every area save that paved with wood was in such bad condition that the test was officially declared closed. The wood blocks in question, however, together with such others as were needed, were immediately relaid in paving the entire original test area.

In Chicago also in 1900, a creosoted wood block pavement was laid on Michigan avenue, immediately in front of the Auditorium Hotel, and adjoining it at the same time a strip of asphalt block. In 1905 these asphalt blocks were replaced by wood. During this five-year period the asphalt had worn down an average of an inch,

and so unevenly that ruts formed and the blocks had badly rounded. In the same period the wood blocks lost but an eighth inch in depth, and the surface, save for one badly built gutter at a single point, was of even grade and smooth.

The initial cost of creosoted wood block pavement is on an average somewhat less than that of granite, not widely variant from that of brick, and somewhat greater than that of asphalt, inferior patent pavements and macadam. Its life in anything like satisfactory condition, however, is confessedly longer than theirs. It is but a truism, therefore, to say that the proper basis of judgment, at least of wood block pavement, is the returns upon its total life cost viewed as an investment. This principle, well recognized abroad, though but recently attracting attention here, intimately involves, of course, the question of a pavement's durability.

That the maintenance cost of creosoted wood block pavement is low follows as a necessary corollary to its durability. As a matter of fact, no pavement shows so low an upkeep cost. This is due in great part to the tenacity with which treated wood blocks preserve their evenness of surface and of wear, and in a lesser degree to the ease with which wood pavement is repaired, and, in the case of underground improvements, removed without waste and relaid, in the exact place and quantity necessary.

Certain wood block pavements which have been laid in some cities of Western Canada cannot be regarded as fair experiments, because of the failure to treat the blocks with preservative before use, and because of faulty laying. Wood blocks must be treated with preservative and evenly laid on firm foundation.

The British Columbia Forestry Branch is securing all possible data on this subject with a view to encouraging in every way the development of an enterprise which will prove of tremendous importance to the new towns and cities of the growing West, and which by furnishing another market for wood will greatly assist the lumber industry of British Columbia.

## Preparing for the Summer's Fires

Officers of the Forest Branch, Victoria, B.C., are already laying the field plans for the ranging staff for the coming summer. It is expected that the members of the service will have one of the most difficult years in the history of the province, because of the heavy growth of weeds and grass last fall, the strong probability of a dry spring, and the great amount of lumbering, slashing, railroad and road construction, land clearing and settlement which has been going on in the province since wet weather set in at the end of last summer.

Steps have been taken during the winter to ensure that railway construction gangs and tie cutters shall properly safeguard their operations. There has been adopted a requirement that a strip 300 feet broad shall be cleared of inflammable material after the cutting of the right of way. The fire danger around new construction has been shown by every line in Canada to be greater than in any other operation.

Great devastation resulted many years ago, when little heed was

paid to the forest, and it was a matter of small moment whether it burned down or not. But conditions are changed, and now the provincial authorities are co-operating with the railroads in suppressing what is one of the greatest possible economic losses to the company, and to the government and the people alike. The cost of a very efficient patrol along the lines of construction is a mere bagatelle as compared with the losses prevented. The policy of the Forest Branch is to invest money during the period of greatest danger. Once the line is through and the right of way cleared there is relatively small risk, and development of the country can proceed without the tremendous losses which are apparent in every quarter of the country. A patrol at least as efficient as that established in the past year is to be maintained this year on the new railroads in course of construction. One foot patrolman to each ten miles of track, with additional men on speeders will be required.

The lumbermen and government are working together to the same end in the case of logging operations. The principle upon which

the officers of the Forest Branch are working is the one which is becoming universally recognized; namely, that slash is going to burn at some time, and that usually it can be controlled if its disposal is attended to in proper season. Slash burned under supervision means

the safety of the woods; if on the other hand it is allowed to lie and become accidentally ignited, it may form the basis of a forest fire which will change into barren wastes the rich areas which it is expected to develop.

## Lumber Consumption and Destruction

Canada shares in the remarkable increase in the use of all building materials which has been one of the chief characteristics of the past quarter century. According to the Commercial Review whereas in 1899 we had imports of cement of 93,473 barrels—less than one-fiftieth barrel per capita; and of all classes of steel the consumption was 101,470 tons, a trifle over one fiftieth ton per capita; the wood consumption was something over 3,125,000,000 board feet, or about 650 feet per capita.

In 1911 the consumption of cement was 5,726,282 barrels, almost seven-tenths barrels per capita, and of steel the consumption was 878,093 tons or one-tenth tons per capita.

The figures on timber used in 1911 will certainly be found to exceed those of 1910, when there was consumed well over five million feet of lumber, which would give, with a population of eight millions of people, a per capita consumption of 625 feet or more—almost equal to the figure in 1899. This leaves out of consideration entirely the rapidly growing pulp industry, which had a volume of about ten millions in 1910. Pulp is gradually taking the place of lumber in many forms of interior finishing and box manufacture.

To sum up, we use just as much wood as ever we did, and in ad-

dition we have brought into service seven times the cement per capita, and five times the steel we used in 1891.

"With the forests of British Columbia opening up as they are, it is difficult to estimate the great probable increase in the amount of timber used in Canada," says the "Review." "While the industry is capable of an expansion of five times its present bulk without impairing the wood capital, one rather shrinks from the thought of what condition forest fires, if they once got headway, might leave. Canada has an estimated growth per acre of 150 board feet and cut of 125 board feet, but the fire loss is 525 board feet. The terrible disproportion between the amount grown and the amount removed every year is something which must be overcome if Canada is to maintain her place in the fore of the timber-producing nations.

"There may be some excuse for the use of an ever-increasing absolute amount of timber—jump of fifteen fold in the last half century—or even a slightly increased use per capita, along with enormous increase in the use of other structural materials, but there is no excuse for the waste which we allow to occur annually making us poorer in the present, and crippling the prosperity of generations yet to come."

## The Future of Western Larch

A series of tests to determine the mechanical and physical properties of western larch (tamarack) has been recently made by forest product experts, and it has been shown that the strength is 81.7 per cent., where western hemlock is 88 per cent. and Douglas fir 100 per cent. It is shown that the maximum strength of green bridge stringers average of all grades is 67.9 per cent. as great as the strength of the small clear beams cut from large timbers. The stringers from small trees are of better quality than those taken from old trees, and the material coming from the upper portion of the tree exhibits less strength than that from the lower portion.

These results will assist in making more common the use of many species and grades of timber which have hitherto been thought useless. Just as in eastern Canada red pine, spruce, tamarack and even balsam fir are taking the place of white pine, in western Canada such species as larch can replace Douglas fir in some of the less important industries.

Certain regions, notably the Nelson and Cranbrook districts in the southern part of British Columbia, are cutting large quantities of birch at the present time. This timber is being used in all forms of construction, in making floors, and in many other directions. In east Kootenay, tamarack will rank among the four most important woods. As time goes on there will doubtless be great development of the tamarack trade, mainly because the old-time prejudice against it is rapidly passing away.

One of the problems which awaits the attention of the Forest Branch in the near future is the making of investigations which will show what species can be used to best advantage in various lines of construction and manufacture. The lumber trade and woodworking industries have benefitted in other countries by just such procedure, and with the great resources of inferior sizes and species which British Columbia has in addition to some of the finest timbers in the world, the increase in the value of wood products would be very great.

## Editorial Short Lengths for Busy Readers

A bulletin which has just been issued by the Census Department, dealing with agriculture in the province of New Brunswick states that in 1911 there were 2,445,068 acres of land in natural forest. In 1901 the total was 2,561,494.

Tenders have recently been received by the United States Forest Service for the sale of timber amounting to 267,000,000 board feet in the Priest River Valley, Kaniksu National Forest, Idaho. The tenders were receivable up to April 1st. In connection with this sale the Forest Service published an excellent prospectus furnishing complete information for lumbermen who desired to bid. An unusual feature of this sale was, that on part of the areas the forest will be entirely destroyed. The object is to clear this part for agriculture instead of providing for forest renewal. When the areas have been cleared of timber and the slash burned, the land will be opened to homesteading. The Federal Government will receive about \$650,000 for the timber, of which \$445,000 will go to the benefit of the State for public schools

and good roads. The minimum stumpage price of \$5 specified for white pine on these logging chances is unusually high, because this western white pine is the most valuable stumpage on the National Forests.

The Ways and Means Committee of the United States House of Representatives are reported to have drawn up their revision of the customs tariff and it is also reported that President Wilson has given the draft bill careful consideration. The result of interviews between President Wilson and the committee is that the President is reported to be entirely in accord with the committee regarding the chief features of the draft bill. Schedule D of the proposed bill provides for the free entry of rough and dressed lumber, hewn and squared timber, shingles, laths and fence posts. Schedule M provides for the free entry of wood pulp and print paper and is believed also to remove the present restrictions upon the entry of pulp and paper which have arisen out of the reciprocity situation between the United States and Canada.

# Results of Winter's Logging Operations

Mild Weather Curtailed Cut—But Frosts in February Saved Situation—

A Fair Ontario Cut—Maritime Output Reduced

A number of reports have been received by the Canada Lumberman from lumber manufacturers in various parts of the country, regarding the results of operations in the woods during the past winter. In many cases the gratifying outcome of the winter's operations is that a satisfactory supply of logs has been secured. When the winter was in its early stages the outlook was very dark. Mild weather prevailed all through the early part of the winter and continued practically until the beginning of February. Under these conditions, operators in all parts of Ontario and Eastern Canada were very anxious about their hauling. Much of the month of January was lost, from a hauling point of view. Early in February, however, cold weather set in and lasted long enough to permit the operators, by making a spurt, to get out, in most cases, practically all that had been cut. The effect of this is that nearly everyone will have a fair sized stock of logs, though there will be no danger whatever of a surplus.

Everyone was expecting a mild winter and when the month of January passed without much frost, the cutting operations in the woods were reduced. If a good hard winter had been indicated at first and had materialized, manufacturers would have taken out all the logs they could, so as to take advantage of the excellent market conditions which are now prevailing. The result might have been an easing off in the prices of lumber later in the year. Now that the cut has been pretty well figured out and will be, if anything, less than normal, everyone is expecting that prices will remain at their present level until the new cut commences to arrive and that even after that time the building activity now in progress will prevent anything in the form of a decline.

## A Moderate Cut in Ontario

A variety of reports are included among those that have been received by the Canada Lumberman. In scarcely any case of importance, however, is an increased cut reported. In some cases operators state that their cut is about the same as last year. Others tell of a reduction. In the Georgian Bay district the general report is that there will be a decrease in the cut, some operators placing it at only a small figure and others believing that the decrease will be as much as 40 per cent. Hardwood operators report that the cut will probably not be more than 50 per cent. of normal. Operators in the Ottawa district expect that the output of logs will be about the same as usual.

The cut of hemlock in northern Ontario is reported variously, the general opinion, however, being that it will show a decrease of about 10 per cent. Cooperaage mills report that the output of stock for cooperaage purposes will be only about one-half what it was last year.

In a few cases the reports state that some of the logs cut last winter will have to be left in the woods. In most cases, however, all the logs cut will be brought out without much difficulty. On the north shore of Lake Huron a few logs will be left in the woods, according to several reports, although one important operator states that everything has been brought out easily.

## Operating Costs Increased

Most of the reports are unanimous in stating that the cost of operations during the past winter advanced considerably. One operator asserts that the cost of teams this year was double what it was last year. Another operator tells of an advance in the cost of teams from twenty to twenty-five per cent. Oats and hay remained at about the same price as during the previous winter. The wages of operators are reported as having been on an average about \$3 per month higher than during 1912. One operator estimates that the cost of taking out stock in northern Ontario was on the whole about 10 per cent. higher than during 1912.

Mr. Wm. Henderson, of the Shantymen's Christian Association, who has spent the past winter in the woods of northern Ontario reports that in every camp he visited the foremen were well pleased with the weather and with the snow fall during logging operations. Conditions had been ideal for their purpose. Mr. Henderson covered the country between North Bay and Cochrane on the T. & N. O. and others of his party worked between Parry Sound and Massey and along the Canadian Northern Railway west of Sudbury. Heavy rains occurred in all of these districts during January, followed by sharp frosts which made ice on the lakes excellent. Since that time there was just sufficient snow fall to ensure good roads and not enough to make travel through the bush impossible. As a result many of the camps finished their work a little earlier than they expected. On the

T. & N. O. Railway at present every siding has great piles of pulpwood, ties and poles waiting for shipment. Every available car is in commission to take these stocks out. One railway agent complained that cars were so scarce that, although he needed forty, he had been waiting two days without one. Many of the settlers were commencing to despair of ever getting their wood to market.

## Reduction in Maritime Provinces

In eastern Canada the most noticeable feature of the winter's logging operations is the fact that the cut on the St. John river in New Brunswick will be reduced by about 25,000,000 feet, the total being 75,000,000 feet, as against 100,000,000 feet during 1912. At latest reports the indication was that there might be some difficulty in getting even this quantity safely delivered at the booms at Fredericton as it was rather doubtful whether there would be sufficient water for a satisfactory drive. Generally speaking, the cut of logs, deals, etc., in the lower sections of the province of New Brunswick and throughout the province of Nova Scotia will be curtailed by anywhere from 15 to 25 per cent. of the quantity expected at the beginning of the cutting season last fall.

Following are some of the reports received by the Canada Lumberman:—

## Georgian Bay Conditions Improved in March

March 13th:—While we have not received complete scale covering this winter's cut, we can give you an approximate idea of it. Last season, viz., 1911-12, we took out about 1,900,000 feet bush scale and carried over from previous season about 1,600,000 feet bush scale. This season we shall have approximately 2,100,000 feet scale and carried over nothing. The cost of operating in our case will not be much in excess of a year ago. We think the unusual weather conditions in January had a tendency to reduce this output; to just what extent we are not prepared to say. We know of two firms who would have taken out about 2 million feet more if certain of getting it out. We think, apart from this, the cut will be less than last year. Weather conditions have been so favorable since the 1st of February, that we think the majority will get their logs out. We completed our hauling on March 11th. We have arranged for contract sawing for the balance of the season's supply.—Chew Bros., Midland, Ont.

## A Trying Winter for Huntsville Operators

March 18th:—We took out this year about 4,250,000 feet of logs. Last year we had about 4,000,000 feet. We will have to leave 250,000 feet in the bush with perhaps 500 cords of tanbark. The winter has been rather trying to lumbermen in this section. We did not have sufficient frost until after the middle of January and on the 10th of March we were again unable to draw through the swamps, on account of mild weather and the break-up of the roads.

Hired teams cost at least 20 per cent. to 25 per cent. more than in 1912. Oats and hay were no higher but wages for men averaged about \$3 per month higher. We think that the cost of getting the stock was 10 per cent. higher from our own woods, although we have not the definite figures in yet. Logs purchased, cost anywhere from \$2 to \$6 per thousand, say an average of 20 per cent. higher than 1912. We do not think that there will be nearly the quantity of lumber sawn in this vicinity that there was in 1912.—Muskoka Wood Mfg. Co.

## Shortage Expected in Georgian Bay District

March 17th:—We have put in about 100,000 logs this year, which is less than we had last year. We expect to do considerable custom sawing. As to the cost of operating, as compared with previous years, of at least 35 per cent.—Little Current Lumber Company, Little Current, Ont.

## Slight Increase at Burk's Falls

March 14th:—During the past winter we have taken out 1,500,000 feet of hemlock, 650,000 feet of balsam and 1,350,000 feet of hardwoods. During the previous winter we took out 1,250,000 feet of hemlock, 750,000 feet of balsam and 700,000 feet of hardwoods. We expect to get all our logs out, but hear of a firm to the north of us who may have 20 per cent. of their cut left in the woods.—Knight Bros., Burk's Falls, Ont.

Playfair & White, Midland, Ont., report that they did not put in any logs during the past winter.

**A Bad Winter at Magnetawan**

March 24th.—The loggers have had a very bad winter in these parts. There has been very deep snow and very little frost, just enough not to thaw and enough to make plenty of snow. One half of the small jobbers did not get their logs all out. Some of it is hardwood, which will be spoilt. Most of the logs left are peeled hemlock.

We have 200,000 feet of hemlock and got it all out. It has cost about \$2 per M. more this year than last year. Mr. Geo. W. Ross will have about 400,000 out; taken out by jobbers and about 1,500 pieces left in the bush. I will cut his stock this year. J. D. Nicholson, of the Fred Taylor Lumber Company, of Magnetawan, will have about 950,000, spruce and hemlock, taken out by jobbers. He will have 2,000 pieces left in the bush. All the logs that are banked are safe to get to the mills.

My cut this year will be about 250,000 feet for myself; on contract 400,000 feet; and of custom 100,000 feet; total 750,000 feet.

Last year my cut of hemlock and hardwood was 1,000,000 feet.

The Fred Taylor Company will cut about 1,250,000. During 1912 they cut about 1,000,000 feet, spruce, pine and hemlock.

Wm. McLachlan, Magnetawan, Ont..

**No Logs Left in the Woods**

March 18th.—Our output of logs for the past winter has not been up to the usual amount. We feel safe in saying that there will be a shortage of at least twenty-five per cent. of logs this year as compared with last year. As to the cost of operation, we do not think that it has been reduced in any way. We have all of our output in the lakes and rivers ready for the drive and think that most of the lumbermen, if not all of them, have been able to get out all of their logs into the lakes and rivers. We do not think that there will be any logs left in the woods as all of the lumbermen took precaution to start hauling their logs at the very earliest possible moment, anticipating an early break-up. This report relates to conditions along the Soo line of the Canadian Pacific Railroad.—From a North Shore manufacturing firm.

**Reduced Cut on the North Shore of Lake Huron**

March 19th:—During the logging season just ending we have taken out about eleven million feet bush scale, which is substantially the same as a year ago. We have them all hauled and do not anticipate any difficulty in driving, as there should be plenty of water this spring. Our operating cost us about the same as a year ago. We thought at first that it would be about \$2 less, but labor was scarce and unsatisfactory last fall. Wages were high all season, and the warm weather in January caused us to waste a lot of time getting started on the sleigh haul. Therefore, though we had a little better logging chance this winter than last, we find our logs will cost us about the same, and think that manufacturers whose logging chance is the same will find their logs cost them more than a year ago. The current log output in our immediate vicinity is probably about 30 per cent. to 40 per cent. less than a year ago.—Wolverine Cedar & Lumber Company, Little Current, Ont.

**North Shore Loggers Leaving a Few Logs in Woods**

March 19th:—We did not do any logging at all this winter. So far as our general idea goes however, it has been a fairly good winter for logging. The warm weather of last week came very suddenly, and as a consequence there will probably be some of the loggers who will leave a small amount of their operations in the woods. We think this applies to the small operators and jobbers, more than it does to the larger concerns, as the larger concerns were about all through with their operations before the warm weather came.—Hope Lumber Company, Thessalon, Ont.

**Reduction of Twenty-Five Per Cent Expected**

March 17th:—We will be saving this season about 1-3 of the quantity of lumber we did in 1912. We have all our logs delivered on the water that we cut and will be able to saw them all. Our hemlock cut, however, will only be about 10 per cent. of what it was last year. The cost of operations this year, owing to favorable conditions was somewhat less per M. than 1912. With regard to the general output of logs; from the information we have been able to gather, we think there will be a decrease of at least 25 per cent. over the output of last year and there is a possibility of a further decrease on account of the breaking up of the weather.—From a Northern Ontario Manufacturing Firm.

**Reduced Cut of Hardwood**

March 17th:—Our opinion is that the stocks in hardwood this season will be light, owing to the scarcity of snow. In regard to our own logging operations, we may add that we are getting out our usual amount, about 5,000,000 feet of hardwood, although at considerably increased cost. Our hardwood logs this season are costing us \$4.00 to \$5.00 per M. more than they did in 1912.—Keenan Bros., Limited, Owen Sound.

**Logging Cost More for Owen Sound Company**

March 15th:—We expect our stock of logs will be about the same as last year. We will not have complete reports until about 1st of April. The cost of logs will be several dollars higher per thousand.—John Harrison & Sons Company, Limited, Owen Sound, Ont.

**Reduced Cut at Marmora**

March 19th:—Owing to heavy rains in the fall it was not possible to cut low land stuff to any extent and we doubt if any quantity of cedar products have been taken out. The January thaw, of longer than usual duration looked very serious, but colder weather in February made conditions much better and we managed to get the logs we had cut, landed at the river and mills. Owing to the unfavorable outlook in January, log cutting was stopped, with the result that the total cut is materially reduced. We will not have above 2½ millions, including hardwood. This is about half our last year stock.

The cost of operations has been considerably higher owing to the advance in wages and the higher cost of teams, the latter being practically double last winter's average. Good loggers are becoming scarcer every year. What labor does offer is more or less inferior and shifty.

Lumber prices must advance considerably to enable the manufacturer to get as fair returns as last year. Stocks of dry lumber are sold out and so far as we can judge the demand for the next few months will exceed the supply.—The Pearce Company, Limited, Marmora, Ont.

Lynch & Ryan, Marmora, Ont., report that their cut this year will exceed last year's by about 1,000 cedar poles, 1,000 ties and 1,000 posts. Their cut of logs is about the same as it was a year ago. Weather conditions did not favor an increased cut of logs, otherwise they would have taken out about 300,000 feet more of logs than they did a year ago and also a larger quantity of poles, ties and posts.

**Nipissing Firm Obligated to Leave Some Logs in Woods**

March 18th:—We have about the same amount of logs in this year's cut as last year, but on account of the short winter and poor ice we will have quite a few logs left in the bush. The cost of lumbering this year is \$1.50 per M. more than in 1911 and 1912. We have a number of mills inland where we could not get the logs to the mill in time to have them sawn and the lumber drawn to the track for loading. This lumber will not be on the market until 1914. This is the case with several small mills in this locality. The lumber drawn by wagons will cost \$1.50 to \$2 per day more than by sleigh. We have no dry stock on hand and will not be starting our summer mills for four weeks yet.—The Trout Creek Lumber Company, Nipissing, Ont.

**Kearney Firm Got All Logs Out**

March 18th:—We have just concluded our winter's logging operations and while the cost has been somewhat higher than previous winters, owing to high wages and team hire, together with increased costs of provision and horse provender, still we feel well satisfied to know that we have no logs left in the woods, and also that our logs will cut out a good average of the better grades of lumber. We have taken out a mixed stock of logs of pine, hemlock and hardwood, and do not anticipate any trouble in getting them all delivered, having bank dumped the lot within three miles of our mill, from where they will be easily driven. Enquiries for new lumber of the coming season's cut are numerous, with prices somewhat advanced over those of last year, more particularly for hemlock. In our opinion the outlook for the new season, as compared with last year, is very favorable to the manufacturer.—The Shortreed Lumber Company, Kearney, Ont.

**Increased Cut at Lindsay**

March 18th:—Our cut of logs is about 25 per cent. greater than last season. Operations in the woods have been higher this year than last year. We will have six drives to come down and we expect every one to be landed early. From what we understand, the output of logs will not be as great as the previous season. We will start our mills on the first of April and will run until it freezes up. We have enough logs left over from last season, to run us a couple of months.—The John Carew Lumber Company, Limited, Lindsay, Ont.

March 19th:—On account of the absence of snow the logging this season has been very light. About the same amount has been delivered as last year. The amount of logs delivered at my two mills Ridgetown and Mull last year was 800,000 ft., this year about the same. The cost of operation is about the same as last season. My opinion is that lumber will be high.—Neil Watson, Mull, Ont.

**Favorable Winter at Owen Sound**

March 17th:—Logging operations for the winter of 1912-13 are yet before we will get them, but we might say that the winter has been favorable to us. We expect to get out all we have cut.—Rixon, Ainslie, Stoddart Company, Limited, Owen Sound, Ont.

### Normal Operations in the Ottawa Valley

March 15th:—Although delayed somewhat, early in the logging season on account of soft weather, we have been successful in making and delivering on the ice about twenty-five million feet of saw logs, mostly white pine. We carried over ten million feet from last season so that we will have about thirty-five million feet of logs in the water this spring and expect that about one half the above quantity will be delivered at our mills during the sawing season. So far as the manufacture at the mill is concerned, we do not anticipate cutting as much as last year. If we cut fifteen to eighteen million feet it is about all we can expect, whereas last season we manufactured about twenty-five million feet. We practically have to take our logs out a season in advance.

The Petawawa Lumber Company will manufacture this season about fifteen million feet of lumber, whereas last season they had an output of about eight million feet. They also cut in the woods this season 100,000 cubic feet of waney pine, which is an extra nice lot. This timber will be loaded at Brule Lake Station on the Grand Trunk. In this district we expect that the logging operations will be about the same as previous seasons.—The Colonial Lumber Company, Limited, Pembroke, Ont.

### A Good Cut for Pembroke Lumber Company

March 14th:—We are taking out about 350,000 logs this year, as we did last year. On account of the wet Fall the cost of making logs was increased over that of last season, but on the other hand the drawing, which was poor up to the 1st of February, improved very materially during the month, which enabled us to get our whole cut into the creeks. From all appearances now we will be able to bring down our entire cut to the mills. The output of our logs this year will be materially better than last year on account of the size and grade.—The Pembroke Lumber Company, Pembroke, Ont.

### North Shore Firms have their Logs Well Out

Thessalon, Ont., March 19th (Special to the Canada Lumberman):—The winter, from all appearances is over, and everything will be at a standstill until the opening of navigation. There will not be many logs left in the woods. The majority of the firms have got everything out. The lumber is all sold for the season.

Mr. G. H. Bishop the general manager of the Thessalon Lumber Company arrived at Thessalon last week and reports that his firm have sold all their stock at good prices.

C. H. Sheppard the well known lumberman of Waubaushe, Ont., visited Thessalon a few days ago and purchased the entire white pine stock of the Thessalon Lumber Company. From present appearances it looks as though some of the mills will be out of commission this season. Stone & Grant and the North Channel Lumber Company have been wound up. These mills may not run this summer. About 45,000,000 feet which was cut in these mills will have to be towed down the Bay to Midland and other points.

The railroad bridge now under construction at Little Current, will be a considerable drawback to towing logs down the Bay. The Channel, if I am correctly informed, is only 175 feet in width. This will mean more expense in towing logs and the current runs up and down which makes it difficult to get logs through without obstructing navigation.

The North Channel mill at Thessalon is being offered for sale. It is a very fine mill with a capacity of 20,000,000 feet per season, good piling ground and good shipping facilities both by rail and water. If some of the manufacturers who are thinking of towing logs down the Bay would visit Thessalon and examine this mill they might make a beneficial change in their plans and decide to cut their logs at Thessalon.—Algoma.

### Twenty-Five Million Short on the St. John River

St. John, N.B., March 21st; (Special to the Canada Lumberman).—The cut of logs which it is expected to come into the Fredericton booms during the season of 1913 will be as follows: Messrs. Stetson Cutler & Company, 33 million; J. E. Moore, and Miller Moore & Co., 10 million; Randolph & Baker, 13 million; Murray & Gregory, 12 million; Chas. Miller, 4 million; Warner & Company, 2 million; in all about 70 to 75 millions. This will be about 25 million short of the cut of 1912, should all be driven safely to booms. This at the present time is rather doubtful, as there is not a very great quantity of snow on headwaters and very little frost. Therefore it depends entirely on rains during spring. In the lower sections of the river and through the lake regions, the cut of logs will not be one-half of what it was in 1912, owing to the very backward winter, leaving very little time to haul logs from yards to streams and lakes. Many operators have left about 25 per cent. of their logs on the yards and these will not be had until next year. Last year the cut of logs on the lower sec-

tion of rivers amounted to about 40 millions. This year it will not be over 20 millions.

Practically all the mills will begin sawing on or about April 1st. Messrs. Stetson Cutler & Company will start their mills at Indian-town and Pleasant Point on March 29. Randolph & Baker, April 1st; Murray & Gregory, April 3; Warner & Company, April 1st; J. E. Moore, April 1st; Chas. Miller, April 20, or thereabouts. Messrs. D. D. Glasier & Son will do the entire towing of logs on the river this year, Messrs. Topley Bros. having gone into liquidation since last year.

### Cooperage Cut Seventy-Five Per Cent. of Last Year

March 17th:—Logging operations for the winter of 1912-13 are now practically over, and the cooperage mills will get in very few more logs this season. The cuts of the mills have been much lighter than a year ago, on account of the open winter, especially in the south-west portion of Ontario, where a large number of the cooperage mills are located.

Most of the mills have only got in a little more than half as much timber as they did a year ago. In the northern part of Ontario, north of Toronto, the mills have been fairly well stocked, but there are not very many cooperage mills in this vicinity, the largest mill being our own mill at Sundridge, where we have put in a stock of a little over two million feet of logs, with prospects of another half million. The Orillia mill reports very small stock. The mill at Tara is not stocked up at all, while up till a week or ten days ago, the other mills in this section, Stratford and north, report very small stocks. The mills at Trenton, Smiths Falls, and smaller mills in this section, of the country, report fairly good stocks, the mill at Smiths Falls having eighty per cent. of what they had a year ago.

We should judge from the reports that we had up to two weeks ago, that taking the mills all over the country, the stocks would be about 75 per cent. of what they were in 1911-12. But last week was a good week for putting in logs, in some sections, and there is still a chance of getting in some more logs this season. But we think about 75 per cent. of last season's cut, will be about what the mills will do this year.—The Sutherland-Innes Company, Limited, Chatham, Ont.

### Camp Missionaries Had a Good Winter

Mr. Wm. Henderson of the Shantymen's Christian Association recently returned from northern Ontario. He and his associates have spent the winter in missionary work among the lumbermen's, contractors' and mining camps. Mr. Henderson reports a very successful year's work. In all, some 300 camps were visited. The Gospel Sleigh with a couple of missionaries travelled from Massey to the Parry Sound district, visiting all the camps which could be reached en route. Two other workers visited the camps adjacent to the Canadian Northern Railway from Sudbury westward, going as far as 190 miles from Sudbury to do so. Mr. Henderson and one of his companions spent their time on the T. & N. O. between North Bay and Cochrane during most of the winter. A hearty welcome was received in every district visited. The policy of the Shantymen's Christian Association is not to ally itself with any particular church and to take no collections. This had the desired effect of gaining the confidence of the men in a remarkable manner.

### Death of Whitby Lumberman

The death of George Cormack, lumber merchant of Whitby, Ont., occurred suddenly on March 18th, at the General Hospital, Toronto, following an operation.

The late Mr. George Cormack was born in Whitby, Ont., in 1860 of Scotch parentage. His father was a well known wholesale lumberman and established the business at Whitby, in which he was succeeded by his son.

The late Mr. Cormack was highly esteemed by all who knew him. He was many times pressed to run for office as mayor or councillor, but always preferred to remain a private citizen. He took much interest however, in the business progress of Whitby and was first vice-president of the Whitby Board of Trade. His business interests extended widely both in Canada and the United States. Mr. Cormack was a member of the Masonic order, a member of the Sons of Scotland and of the Chosen Friends.

### Stone and Grant Assets to be Auctioned

An auction sale of the Stone & Grant Lumber Company's assets will be held at the Queen's Hotel, Toronto, on Thursday, April 24th by Peter Ryan, auctioneer, under instructions received from G. T. Clarkson, assignee. The sale will take place at 12 o'clock, noon. The Stone & Grant Lumber Company were successors to Loveland & Stone, Cutler, Ont. and Saginaw, Mich. Full particulars of the lots to be offered for sale are given in an advertisement which appears elsewhere in this issue.

# New Brunswick License System Altered

Radical Changes Proposed by Premier—Twenty Year Period for Timber,  
Thirty for Pulpwood—Small Operator Protected

Hon. J. K. Fleming, Premier of New Brunswick, has introduced in the Legislature of the province, a new bill for the regulation of Crown timber lands. A number of distinct innovations are included in the new measure and the Premier's chief object, he states, has been to protect in a reasonable manner the interests of the large limit holders, while at the same time giving an opportunity to small operators to carry on their work. A noticeable feature of the bill is the fact that encouragement is given for the establishment of pulp and paper industries in the province so that pulpwood may be manufactured into pulp and paper within the borders of New Brunswick. The following is a brief resume of the bill:—

Two classes of licenses will be issued on and after August 1st next, viz.: (a) The Pulp and Paper License, (b) The Saw Mill License.

The Pulp and Paper License renewable from year to year for a period of thirty years and may be extended for a further period of twenty years and subject to payment of bonus for a thirty year privilege and at the expiration of that time of another bonus for the next twenty years.

The Saw Mill License renewable from year to year for twenty years, and may be extended for a further period of ten years, with bonuses payable for the privilege of each period the same as with the Pulp and Paper License.

Present license holders must notify the Surveyor-General by July 15th next that they will come in under the new licenses on August 1st, 1913, or continue under the existing licenses.

The bonuses to be paid per square mile under the new leases shall be payable as follows: Pulp and Paper Licenses, one-third each on August 1st, 1913, August 1st, 1923, and August 1st, 1933; Saw Mill Licenses one-half each on August 1st, 1913, August 1st, 1923.

The power to determine the stumpage rates and make regulations governing the Crown Lands is affirmed in the Lieutenant-Governor-in-Council.

Provision for encouragement of conservation of the forests by allowing operators, who will set aside certain lands for a period of twelve years, before the expiration of their leases and not cut over them, but allow them to reproduce, to have the privilege of cutting on these lands for ten years after the expiration of the lease, without the payment of bonus, and paying only a stumpage and mileage fee.

A survey, examination and classification of the Crown Lands of the Province to be completed by August 1st, 1917, one year before the present leases expire.

Provision is made that in the event of the survey, examination and classification of the Crown Lands showing that present license holders have their leases on territory producing more lumber than is necessary for their needs, a portion of these lands, not exceeding twenty-five per cent., can be taken out of existing leases and leased to mill owners upon application to the Lieutenant-Governor-in-Council.

The clause dealing with licenses divides them into two classes, as follows:—

(a) A license to be known as "The Pulp and Paper License" which shall contain as part of its conditions the following provisions and requirements: At least fifty per cent. of the lumber cut yearly upon said Crown lands under such license shall be manufactured into pulp and paper within the Province of New Brunswick. That the licensee agrees upon taking up the license that he shall acquire or erect and operate a pulp mill within three years of the date of taking out of such license, and that he shall acquire or erect and operate a paper mill within five years from the same date and that both the pulp and paper mill shall be of sufficient capacity to manufacture the quantity of timber above mentioned, and further that the operation of such pulp and paper mill shall be continuous from year to year for a period of thirty years and shall be subject to an extension for a period of twenty years from the termination of the thirty year period upon the condition hereinafter provided. The renewal from year to year for the thirty year period and the yearly renewals during the extended period of twenty years to be subject to a satisfactory compliance on the part of the licensee with such rules and regulations as may be made from time to time by the Lieutenant-Governor-in-Council in dealing with the Crown lands of the province.

(b) A license to be known as "The Saw Mill License." A condition of this license to be that it shall be renewed from year to year for a period of twenty years from the first of August, 1913, and at the expiration of that period may be extended for a further period of ten years, such renewals both as regards the twenty year period and the extended period of ten years being conditional on the satisfactory carrying out of the rules and regulations made in connection with the Crown land areas.

The Lieutenant-Governor in Council will determine prior to the first of July, 1913, the amount of the bonus to be paid under the different classes of licenses. At the end of the period of the license the Lieutenant-Governor in Council will determine the amount of the bonus to be paid for the privilege of cutting during the extended

period permitted by the Act. The bonus in all cases is considered as being in lieu of the lands being offered at public sale.

A provision is also included in the bill providing for protection of the interests of the small operator. It is proposed to reduce the holdings of any large companies which are unable to cut the annual growth on their limits and enable the small operators with idle mills to operate upon them. In order to discover where such changes should be made, the government proposes to have the Crown timber lands thoroughly cruised and surveyed.

## The Case of the Small Operator

This proposal is the result of representations made by the New Brunswick Lumbermen's Protection Association representing the smaller operators of the province who interviewed the Premier on March 11th and presented their case in the following memorial:—

Whereas, the existing leases of the lumber lands in the Province will expire in the near future, and it is currently reported that the Government intends to deal with the question of renewing them at the present session of the Legislature;

And whereas, at a meeting of some of the larger operators in the Province held at Fredericton recently, resolutions were passed calling on the Government to extend the present leases in perpetuity, and representing that with regard to new and renewed leases, the claims of vested rights should be presented;

And whereas, there are quite a number of operators who have a large amount of capital invested in mills and plant but who have little or no timber limits to supply their mills. That on the Miramichi alone there are eighteen of these operators whose mills and plant are valued at \$338,000, and whose limits extend to 213 miles only, while on the other hand there are eight other operators whose mills and plant are valued at \$385,000, and who have 2,306 miles of lumber lands;

And whereas, with the exception of the 213 miles held by the eighteen smaller operators, the 2,306 miles held by the other operators comprise practically the whole of the lumber lands in the district of the Miramichi, and to renew the existing leases in perpetuity in accordance with the request of the meeting held at Fredericton recently, will result in the shutting out for all time of the smaller operators from ever acquiring any additional territory;

And whereas, apart from the fact that the interests of the smaller operators demand that a more equitable distribution of the lumber lands should be made when the present leases expire, it is not in the interests of the Province that a virtual monopoly of these lands should be created, as will be the case if the present leases are extended in perpetuity;

The Memorialists therefore desire respectfully to draw the attention of the Executive Government to the following points, and to ask for such points the Executive's favorable consideration:—

That no future license should cover a greater area than 100 square miles, and that no person or firm, or combination of persons or firms, should be allowed to hold limits exceeding that total area;

That at the expiration of the present leases, all the limits included in them should revert to the Government and that a survey of whole of the lumber lands in the Province should be made prior to such expiration, which shall show not only their exact locality but the precise nature and estimated value of the lumber standing thereon;

That fifty per cent. of such limits should be reserved for the holders of the present licenses; twenty-five per cent. for mill owners and other licensees whose holdings at present do not exceed 50 miles; and the remaining twenty-five per cent. be put up for sale in the open market, to the free competition of persons who at present hold no limits;

That only by these means can the smaller operators who have invested their capital to the extent of \$338,000 in mills on the Miramichi be saved losing the benefit of the same.

## Apple Wood Consumption

A correspondent of the Canada Lumberman inquires whether apple wood has any commercial value and where it can be sold. He reports that he will soon have for sale a considerable number of very old trees.

Apple wood is used for handles in Ontario, chiefly for hand-saw handles. It is also used for mallets, dowels and small light handles of various kinds. The average price paid at the factory in 1911 was \$45, and about 43,000 feet were used in Ontario during that year. The above price would be for good clear stock in the form of planks and three-inch squares. Readers of the Canada Lumberman who may be able to give more complete information upon this subject will be conferring a favor by doing so.

# Swedish Lumber Manufacturing Methods

Cheap Labor and a Good Market for Refuse Make Operations Radically Different From Those in Canada—A Modern Swedish Mill

A Swedish Sawmill—Savenas, Sweden

Interior of Savenas Sawmill, Sweden

Some eight years ago a party of lumber manufacturers in Sweden came to Canada and established at Nordin, N.B., Rexton, N.B., Richibucto, N.B. and Head-of-Tide, N.B., a number of sawmilling plants in which they carried out plans which had been carefully laid, for manufacturing Canadian lumber according to Swedish methods and with Swedish machinery. In a recent issue of the Canada Lumberman an interesting article was published describing one of these plants at Nordin, N.B. To supplement this article and to give the readers of the Canada Lumberman a good idea of the equipment and methods of a Swedish sawmill, we are pleased in this issue to present illustrations of a description of a typical and successful plant in Sweden. The illustrations accompanying this article are of a saw mill situated at Savenas, Sweden, owned by Savenas Aktiebolag. This mill was built in 1907 by one of the best sawmill architects in Sweden. The technical arrangements of the machinery are thoroughly up-to-date. It is all equipped with the latest improvements and was manufactured by J. & C. G. Bolinders, M.V.A.B., Stockholm, Sweden.

The mill is equipped with 12 gang saws installed in two rows and arranged in such a manner that the second row can be used as stock gangs if this is desired. Each gang, by touching a lever, can be moved in an arc of 30 degrees, thus making it possible to cut crooked logs without loss of lumber. The equipment includes six edgers, each with two saws, a corresponding number of trimmers are used for trimming boards and in some cases scantlings. All the deals and battens are taken out from the mill without being trimmed. When the lumber leaves the edger it travels on live rollers until it has passed the trimmerman who picks out what is needed for trimming. The balance is carried on heavy transport belts to a separate building where it is graded and loaded on to the cars.

Three machines are used for the manufacture of by-products, such

as laths, slating battens and staves. These machines are arranged in such a manner that they can each take the edgings from two edgers and the slabs from four gangs.

## Cheap Labor and Good Lumber

Lumber manufacturing conditions in Sweden are not on quite the same basis as in Canada. A considerable difference is caused by the fact that labor is cheaper in Sweden. For this reason the output of a Swedish twelve gang mill, such as the one under consideration, is not so great as would be the output of a Canadian mill with the same equipment. The cheaper labor in Sweden enables the manufacturers to pay more attention to careful manufacturing than is the case in Canada. Greater care is taken to give the lumber a smooth surface and an even thickness and width. For this reason the logs are not forced through the gangs with a heavy feed. The output of the mill at Savenas is 120,000 feet per day or about 30,000,000 feet per year.

The power equipment of the plant consists of one 1,200 h.p. steam engine transmitting power for the mill and for the electric generators. The electric equipment consists of one 400 h.p. generator for lighting and power purposes and one auxiliary generator of 100 h.p. capacity. About two dozen electric motors are used in the mill and in connection with it outside.

The yard has a storage capacity for 16,000,000 feet of lumber. One main double track runs along the upper side of the yard and from it sixteen branch tracks run down to the front of the wharf. The tracks are 20 feet high and the lumber is piled by piling machines. These machines are great labor savers. Every pile is 30 x 30 feet and about 25 feet high. An air space of 10 feet is left between each pile. The bottoms are raised 4 feet from the ground.

The lumber is loaded on cars in the mill, or rather in a grading

Savenas Harbor, Sweden

Engine Room of Savenas Sawmill, Sweden

and loading house by itself. The cars are then hauled out to the yard by two electric locomotives each of 20 h.p. capacity. The larger lumber, as already noted, is not trimmed in the mill. This work is done in the yard according to the measurements required. Various measurements are used according to the market which is being supplied. The principal measurements are English, French, Spanish, Dutch and Danish. For the purpose of trimming the lumber for these markets, eight portable trimmers are placed on the water front of the wharf, each with a capacity of 60,000 feet per day. Between every section of piles live rollers are run, to which electric trimmers can be connected and the lumber can thus be conveyed from the farthest part of the yard to be trimmed and loaded on the scows.

Loading on to the vessels is carried on by means of scows which are brought along side. This is rendered necessary by the fact that a large number of vessels are always in port and it is impossible to moor them at the wharf. The company have 75 scows in its service, each with a capacity of from 40,000 to 60,000 feet.

From a Canadian point of view one of the most interesting facts connected with this plant is the entire absence of waste of lumber. No waste of any kind is permitted. It is a strict rule around the plant that anything which can be made into a slating batten, a stave or a piece of splitwood must be used for such a purpose. The annual shipments of slating battens and staves alone total some 3,000,000 feet and the shipments of splitwood, i.e., ends from deals and boards, one to five feet long, total about 1,500 cubic fathoms. The surplus of sawdust which is not required for fuel, together with bark and other refuse from lath and stave machines is sold as fuel for pulp mills in the neighborhood. Larger slabs and edgings which cannot be made into any kind of lumber because of poor quality, are hauled away some distance from the mill where they are burned for charcoal. The annual production of charcoal in connection with the mill amounts to about 15,000 cubic meters.

#### Two Important Advantages

It will be noticed by Canadian lumber manufacturers, from the above description, that the Swedish mill has two very important advantages as compared with a similar mill in Canada. In the first place the cheapness of labor which enables the company to pay greater attention to the careful manufacture of its lumber is an advantage of the greatest importance. The great cost of labor in Canada is a serious drawback as it induces the manufacturer to seek a large output, sacrificing his lumber rather than his labor. The second important advantage is the fact that the manufacturer in Sweden is fortunate enough to have, close to his mill, a good market for much of the refuse, which in Canada must be destroyed in the burner.

The general manager of the sawmill described above is Mr. J. L. Ekman, a lumberman of high reputation in Sweden.

#### Burglar Makes Desperate Attack Upon Lumberman

Orillia, Ont., March 24th:—Mr. Allan McPherson, the well known lumberman of Longford Mills, Ont., across the lake from Orillia, was the victim of a desperate attack made upon him by a masked burglar at his home, shortly before eleven o'clock last night. The burglar evidently expected to be able to secure money from Mr. McPherson. At about ten thirty o'clock at night he knocked at Mr. McPherson's door and the latter answered. Upon opening the door Mr. McPherson was confronted by a masked man carrying a rifle who demanded "money or your life." Without making any reply Mr. McPherson grabbed the rifle and his quick action probably saved his life. The rifle was immediately discharged and the bullet passed through Mr. McPherson's left thigh making an ugly wound. A struggle ensued and Mr. McPherson managed to obtain possession of the rifle, whereupon the burglar made his escape, before Mr. McPherson could take a shot at him. Mr. McPherson then entered the house and assistance was secured from Orillia by telephone. Mr. McPherson was removed to the hospital at Orillia as quickly as possible. Latest reports state that he is making satisfactory progress and that the wound is only superficial.

Mr. McPherson is well known to lumbermen in Ontario as the president of the Quincy, Adams Lumber Company, Limited, Toronto. He is also interested in the Spanish River Pulp & Paper Company and the Longford Quarry Company.

The profits of the Riordon Pulp & Paper Company for 1912 were \$306,834, an increase of \$54,000. After deducting \$30,400 for depreciation and also the bank interest, the net profits total \$226,249.

The National Hardwood Lumber Association will hold their 16th annual convention at Chicago, Ill., on June 5th and 6th. The headquarters will be at the Hotel Sherman. A large attendance is already assured. The association report that during the month of February their inspection bureau inspected 9,903,727 feet, an increase of 709,394 feet over February, 1912.

## Increased Use of Western Hemlock

Field Enlarged by Recognition of Utility—Attractive Finish Lumber—Good for Framing, Floors, etc.

The British Columbia Forest Service has data showing that western hemlock is being cut in increasing quantities on the coast, is a much more valuable timber than was heretofore thought. The sale is increasing throughout the province, some companies having placed it on the prairie market in successful competition with Douglas fir, on account of the lower freight rate and the relatively smaller danger of splitting in nailing. This latter reason makes it acceptable for jointing and siding. At present the principal use of hemlock in British Columbia is in pulp manufacture, great areas in the north being cut over to supply this growing industry.

Authentic data are lacking with regard to the durability of western hemlock as compared with Douglas fir and other woods. The general impression is that Douglas fir is the more durable. A few experiments made to determine the adaptability of western hemlock to treatment with liquid preservatives indicates that, as compared to Douglas fir, it offers about the same resistance to impregnation across the grain; but that it is easier to penetrate along the grain.

#### Uses of Western Hemlock

Western hemlock is well suited for use in all but the heaviest constructive work, as shown by results of tests which have been made, but up to the present time it has had a limited use in bridges and trestles. It has been used in some instances for caisson construction.

A considerable amount is cut into cross ties. Many of the western railroads use Douglas fir, western larch, redwood, and western hemlock exclusively for tie material. A large percentage of those ties are laid without preservative treatment. Occasionally it is cut into telephone or telegraph poles, but its use in this form has been very limited. It has the requisite strength for pole use and grows in such dimensions as to make it very suitable for this class of work. With a good treatment with some efficient preserving fluid it should give good service as a pole material.

Though practically all piling in the province is of Douglas fir, western hemlock is used to a limited extent for this class of work and has apparently given satisfaction.

In house construction it is used a great deal as a framing material. For this class of work it serves as well as Douglas fir, and locally commands the same price. Western hemlock dimension stock in cargo shipments commands a lower price, however, than Douglas fir, because of the prejudice which exists against it.

#### An Excellent Flooring.

When cut edge grain it makes an excellent flooring material. It finishes smoothly on account of the uniform texture of the wood and it also wears evenly. It is not suitable for use in damp places on account of its tendency to warp under such conditions.

As a finish lumber it has the advantages of containing practically no pitch; it has a beautiful grain, works smoothly, takes stain readily, and when properly dried, will not shrink or swell materially under normal conditions. It presents a comparatively hard surface and consequently does not mar easily.

Western hemlock slabs and edgings are manufactured into lath, and as a lath material it is equally as valuable as Douglas fir or other wood. In this form there is no distinction made as to species, all pieces of a suitable form to make lath being thrown in together and used indiscriminately.

It is used to a large extent for barrels and boxes for shipping foodstuffs. For this purpose it serves admirably, since the wood is odorless and tasteless. A great development along this line may be looked for when British Columbia consumers realize the true value of the wood, and cease wasting it as at present.

Mr. E. Sinton, formerly secretary of the Argenteuil Lumber Company, Morin Heights, Que., has recently joined the staff of Henry Disston & Sons and will cover the province of Quebec.

A report from Port Haney, B.C., states that a large lumber and shingle manufacturing company is negotiating for the erection of a large sawmill, adjoining the shingle mill already established at that place.

Owing to the high water in the Montreal district, the premises of the Dominion Mahogany and Veneer Company, Limited, Montreal West, were flooded for several days, recently, causing a complete interruption of business.

At the annual meeting of the Canada Paper Company the following board were re-elected: Mr. Jos. Kilgour (Toronto), president; Sir Montagu Allan, vice-president; Messrs. C. R. Hosmer, H. S. Holt, Hon. Robt. Mackay and F. W. Folsom.

## Demurrage Case to Come up Again

Important That Shippers and Consignees Send in Evidence of Delays Caused by Railway Companies

The increased charge for demurrage upon freight cars, which was sanctioned by the Dominion Board of Railway Commissioners on December 15th, 1912, to last until March 31st, 1913, is automatically removed and the old scale renewed from April 1st. This situation is one which is likely to bring up the whole question anew. The railway companies are now considering a proposition for entirely recasting the car service rules. The new draft of rules is likely to contain a clause permanently advancing the tolls for demurrage. In justification of this course the railways claim that it will improve conditions for all concerned.

The working out of the increased charges is not likely to substantiate this claim. Complaints of delays are still being received continually. The Canada Lumberman hears many of them. The Canadian Manufacturers' Association and the Canada Lumbermen's Association are both receiving complaints delay. Since the increased charge for demurrage went into effect, complaints have been quite numerous enough to warrant a belief that the railway companies were working upon a false hypothesis when they claimed that the delays in shipments were in a large measure the result of consignees delaying in unloading cars. When the railway companies bring up their request for permission to alter the car service rules, some of the evidence relating to recent shipments will be presented by the shippers and is likely to assist their case considerably. Whatever the result may be, the present situation is one which the Board of Railway Commissioners should remove entirely. Instances of delays in shipments, entirely the fault of the railway companies might be made, almost without number. Recently, for instance, a car from Pembroke to North Toronto reached West Toronto without extraordinary delay. Between West Toronto and North Toronto its journey occupied one month.

### Railway Company Lost Track of Car

Another car from Cache Bay to Tavistock escaped entirely from the railway companies for a long time. The retailer in Tavistock wanted the lumber badly and it was known to be somewhere on the tracks in charge of the railway company but the railway company could not find it. The shippers went to a great deal of trouble about this car and finally located it at London. In the meantime the Tavistock merchant was furnished with another shipment and the original carload had to be disposed of at London. Many similar cases might be cited. Among them would be included a case in which a shipment from Cache Bay to Bowmanville was on the road for fourteen days. A few other cases are as follows:—Sayabec to Preston, fifteen days; Sayabec to Hamilton, twenty-four days; Folger to Kingston, nine days; Pembroke to Tavistock, eight days; Sayabec to London, thirty-one days; Folger to Kingston, five days; Sayabec to Tavistock, two months and one week. Particulars collected regarding the time which cars are in the hands of consignees, show that the railway companies have little or no cause for complaint in this regard. In the cases of some seventy cars regarding which a certain firm of wholesalers have collected reports, it is shown that as a rule the time elapsing between the placing of the car and the completion of the unloading was about one day. In many cases the time was only a few hours. In some cases two days or three days were occupied, but these were exceptional.

The habit of the railway companies of sending along their cars just when it suits them, without any concern regarding the convenience of the consignee, is one of the most unsatisfactory features of the present situation. So long as consignees are charged demurrage for their cars they have a reasonable claim that the companies should avoid sending them cars in bunches, unless they are ordered in this manner. Many complaints about bunched delivery of cars are received. As a rule the complaints do not receive any consideration from the railway companies. Demurrage is charged in spite of the fact that the delay in unloading is the result of the railway companies' unbusinesslike methods. The writer, while discussing this subject recently with a wholesaler was shown a letter from one of his customers. The customer had been calling for a certain carload of stock which he needed badly. Finally the carload arrived and along with it came a number of others. The consignee had not sufficient staff to unload all the cars within the free time and consequently there was a claim by the railway companies for demurrage. In the letter to the wholesaler this consignee said: "We wanted the stock and we wanted it quickly; but we did not anticipate any more than you anticipated, that four cars would be landed at the same time. The same freight brought us three cars from ———, one from ———, one from ——— and fifteen carloads of bolts, so that we are stuffed to the neck with stock. We try to unload our stock and take it direct to the re-saw and load it from there to the kiln cars." Any one in the lumber

business can readily imagine the inconvenience and disorder which resulted in this dealer's business simply because the railway companies were unable to give delivery in a reasonable manner.

### Information Required at Once

Under conditions such as those outlined above, it is important that all the information which it is possible to obtain upon the question of car service should be available and in the hands of the Canadian Lumbermen's Association, or the Canadian Manufacturers' Association when the question is brought up before the Board of Railway Commissioners at Ottawa on April 15th. All lumbermen who can do so are urgently requested to send in information which will be of assistance in the presentation of the shippers' case, either to Mr. Frank Hawkins, Secretary Canadian Lumbermen's Association, Castle Building, Ottawa, or to Mr. J. E. Walsh, manager of the Transportation Department of the Canadian Manufacturers' Association, Traders Bank Building, Toronto, this is a matter of the greatest urgency and should be attended to without delay by all who can give any assistance. The railway companies are certain to have their case thoroughly prepared and the representatives of the shippers will have a hard fight to hold their own.

### Minimum Carload Weights May be Raised

A revision of the minimum carload weights of the Canadian classification, was proposed some time ago by the Canadian railway companies and has been brought before the Dominion Board of Railway Commissioners by a request that the merits of the proposed revision should be dealt with by the Board. The railway companies in their communication to the Board said that they felt very strongly that the proposition was one which, with due co-operation on the part of the shippers, would not impose any undue hardship upon them and would at the same time facilitate the business of the country as a whole.

The Canadian Manufacturers' Association is now sending to its members a circular upon this question and asking them to send in answers to the following questions:—

1. Do you now have any difficulty in loading up to the required carload minimum weights?
2. If so, is it because of the bulky nature of the goods, or because of the inability of the purchaser to take the quantity on account of the limited market?
3. How, and to what extent would you be affected by the proposed increase?
4. Do your shipments consist of straight carloads of one article only, or of mixed carloads?
5. Would a change in the mixed carload privilege affect you? If so, in what way.

Full replies to these questions, by the members of the association will aid greatly in securing proper treatment before the Board of Railway Commissioners if they decide to deal with the question in the near future. Roughly speaking the new scale of carload weights includes four principal changes.

On cars not over thirty-six feet six inches in length, inside measurement (or platform measurement of flat cars not over thirty-six feet ten inches in length), twenty-four thousand lbs., per car is the proposed minimum for first, second and third class instead of twenty thousand pounds. On fourth, fifth and sixth class cars of the above measurement, thirty thousand pounds is the proposed minimum instead of twenty-four thousand pounds. On seventh, eighth and tenth classes of the above measurement, thirty-six thousand pounds is the proposed minimum instead of thirty thousand pounds. On cars over the above measurements a special scale of minimums is proposed which is based upon a scale proportionate to the minimum weights outlined in the above cases.

### Bristol Imports Decreased in 1912

The following are the particulars of the imports of wood goods into Bristol, Eng., during the past two years:

| Imports of Wood Goods        |     | 1912    | 1911    |
|------------------------------|-----|---------|---------|
|                              |     | Loads   | Loads   |
| May & Hassell, Limited       | ... | 27,815  | 20,127  |
| J. S. Fry & Sons, Limited    | ... | 14,161  | 12,771  |
| Taylor & Low Bros.           | ... | 13,710  | 14,851  |
| Jones & Wainwright           | ... | ...     | 17,834  |
| Cox, Long & Company, Limited | ... | 10,888  | 7,630   |
| Messers Limited              | ... | 9,930   | 23,760  |
| Heber Denty, Limited         | ... | 6,421   | 8,980   |
| Other importers              | ... | 60,207  | 44,545  |
|                              |     | 143,132 | 150,498 |

## Track Scale Allowance Case Heard

### Lumbermen and Pulp and Paper Manufacturers Protest Against Withdrawal of Reduced Charge

Ottawa, March 22nd (Special Correspondence of the Canada Lumberman):—A protest against the desire on the part of the railways in Canada to abolish track scale allowances has been made to the Dominion Board of Railway Commissioners by lumbermen and manufacturers in general. The first hearing of the case was given by the Commission last Tuesday and after a good deal of evidence was submitted it was decided to adjourn the case until it is taken up again first in Fort William and later in Winnipeg, Regina, Calgary and Vancouver.

Track scale allowances are made for variations in the tare of cars, extra weight due to moisture, inaccuracies of track scales, accumulations of snow or ice on the cars, etc. These allowances were fixed by the Railway Commission some time ago and are at present satisfactory to all parties except the railways, hence the desire on their part to abolish them and the desire on the part of the lumbermen, manufacturers and shippers in general to retain them.

In arguing the case for the railway Mr. E. W. Beatty counsel for the C. P. R. contended that instead of the present system of a flat rate for track scale allowances it would be better to leave what concessions should be allowed to the shipper, to the discretion of the experts whom the railways put in charge of the scales.

Mr. J. E. Walsh, traffic expert for the Canadian Manufacturers' Association, took a contrary view to Mr. Beatty's argument. He said that when the railways revised their tariffs some time ago it had been considered only fair to allow reasonable allowances for track scale weights the same as is done in the United States.

Mr. Frank Hawkins, secretary of the Canadian Lumbermen's Association outlined the argument of the lumbermen. He read a resolution passed at the last annual meeting of the C. L. A., opposing any alteration of the track scale allowances. "I think the experience of lumbermen has been that the 500 pounds allowance averages up fairly" said Mr. Hawkins. He explained that quite frequently the scales used by the railways show variations; sometimes as much as 200 pounds. Referring to the condition of cars sent to the shipper he said that they often contained refuse of all kinds. This was not allowed in the United States, where clean cars had to be supplied.

The case for the pulp and paper shippers was presented by Mr. W. S. Tilston, of Montreal. "Cordwood, pulpwood and material of that kind is invariably loaded in coal or cattle cars" he said. "How then can the weigh master average the amount of refuse buried under piles of lumber or pulpwood. He referred to the cancellation of the allowance on wood pulp. Why has this never been discussed by the railways? he asked. They have allowed us 1,000 pounds on wood pulp since 1897 and now they propose to abolish it altogether. It would seem that the extra 500 pounds (over the 500 pounds allowed on lumber) would be covered by shrinkage in transit. Mr. Tilston read a letter from the Riordon Paper Company to the effect that wet wood pulp showed a loss of 1,000 pounds per car on an average while in shipment.

Mr. H. R. Erskine, who has charge of the paper sales department for J. R. Booth said that pulp makers had to ship their product partly wet because of lack of sufficient room to dry it and also because it had to be shipped with a certain amount of moisture so that it could be easily worked up after arriving at its destination. He estimated that about 60 per cent. of the pulp shipped was dry, or as dry as it was commercially possible. Mr. Anderson, of the James McLaren Lumber Company, of Buckingham, Que., corroborated Mr. Erskine's evidence.

### Importance of Boiler Inspection and Insurance

The explosion of a digester at the works of the Laurentide Company, Limited, Grand Mere, P.Q., on December 22nd last was an event which brought prominently to public attention, not only the importance of exercising the utmost care and skill in connection with the construction and inspection of all such equipment but also the importance of carrying insurance upon such equipment. The Boiler Inspection & Insurance Company, Continental Life Building, Toronto, carried the insurance upon the digester and digester-house which were destroyed by the explosion. The amount of the damage was \$79,763.76. Proofs of the damage were received by the Boiler Inspection & Insurance Company of Canada, on Saturday the 25th of January and the loss was paid by the company on Monday, January 27th. The technical points in connection with this accident were such as to indicate that it is a matter of the greatest difficulty for those who are responsible, to detect impending danger. Such danger may be the result of small cracks in the interior of the digester or other class of equipment, subject to steam pressure. These cracks are exceptionally difficult to discover. We are informed by the Boiler Inspection & Insurance Company that they are prepared to recommend means by

which the discovery of such sources of danger may be noted speedily and the injury remedied, thus preventing possible damage and loss of life and relieving the owners of all the expense of searching for such danger by round-about methods which after all can only be uncertain in their results.

### Storm Played Havoc With Sawmill

Wm. McLachlan, Magnetewan, Ont., in a letter to the Canada Lumberman says that the wind storm on Good Friday caused a lot of damage in the neighborhood of Magnetewan. It took off the roof of the Fred Taylor Company's sawmill. Some of the lumber was blown into the river. About 20,000 feet belonging to the Magnetewan Tanning and Electric Company was blown into the river, but the company expected to get it all out again. Bark piles were scattered about in many cases. Considerable damage was also done in the woods by the blowing down of growing timber.

## Serious Situation for Employers

### Proposed Workmen's Compensation Act Introduces Liability Out of All Proportion to Accepted Standards

The situation in connection with the draft Workmen's Compensation bill which the Ontario Government is expected to introduce during the present session upon the recommendation of Sir William Meredith has suddenly become one of the utmost importance to large employers throughout Canada. The lumber manufacturing industry is concerned with all others in the situation and to a certain extent, is more intimately affected by the proposed draft bill.

The Canadian Manufacturers' Association recently presented before Sir William Meredith, when he was acting as commissioner upon the question, a clearly defined proposition which apparently met with his approval and admiration. The report which he has now brought down however, is entirely at variance with what was confidently expected. The act as proposed, attempts, what many will believe to be the impossible task of combining the features of the Washington Workmen's Compensation act and the English act.

The proposition submitted by the Canadian Manufacturers' Association was along the lines of the Washington act which grouped employers and paid compensation out of a fund raised by assessing an insurance premium for each group. The proposed bill attempts to combine this grouping system with the English act which is based upon the liability of the individual employer. It is proposed in a schedule of the bill to omit from the general liability certain groups of employers who should be made collectively liable instead of individually. It is not suggested what employers should be left out in this manner although one suggestion was made to the effect that the lumbermen should be omitted in order to make experiments in their case. The Canadian Manufacturers' Association through their legal secretary, Mr. F. W. Wegenast, have objected seriously to this proposition. If any group were left out in this manner it would be necessary to frame the act in a cumbrous and practically unworkable form. The great danger would be that large numbers of industries would be left ungrouped. According to the report made to the Government the idea apparently is to leave the grouping of industries to be arranged by Order-in-council. This would be a most objectionable feature introducing political considerations into a matter from which they should be carefully excluded.

Under the proposed bill the maximum average benefit will be absurdly excessive. The plan proposed by the Canadian Manufacturers' Association would have given the workmen benefits in excess of any system in America, or in fact in the world, and on an average more than twice the maximum benefit of any of the systems of the other Canadian provinces. The proposed scale of compensation is beyond all reason and the system of operation would be unjust and oppressive to employers. A single instance is sufficient to indicate the fact that the proposed benefits are too great. In the case of a widow for instance, the benefit would be \$25 a month for life. This would amount in some cases to \$12,000 or \$15,000. A workman who is totally disabled would be given his choice of a sum varying from \$25 to \$40 a month, or a sum equal to one-half his wages, without any fixed maximum. A workman who lived for an ordinary life time being totally disabled might, under such conditions, draw as much as \$40,000.

The Canadian Manufacturers' Association have sent out a circular drawing attention to the critical nature of the situation and urging manufacturers to use their influence and ingenuity in impressing upon the members of the government and its supporters their opposition to the character of the bill.

A despatch from Washington, D.C., under recent date says that a definite agreement has been reached in the Ways and Means Committee by which wood pulp for print paper manufacture in all its forms will be put on the free list.

### Operations in Full Swing at Iroquois Falls

Iroquois Falls, Ont., March 17th (Special to the Canada Lumberman):—The Abitibi Pulp and Paper Mills, Limited, near this point are making excellent progress with their plant on the Abitibi River. A small mill is in operation at present for cutting logs which are to be used in the construction of the large plant. The entire contract for the plant has been let to Messrs. Morrow & Beattie who are to finish their work by the end of December. The plant has been designed by Mr. G. F. Hardy of New York, with Mr. Henry Holgate, of Montreal, as consulting electrical engineer. The pulp mill with a

Temporary Office Abitibi Pulp and Paper Mills

capacity of 180 tons per day will be constructed first. This mill will be equipped with 18 10-ton grinders, which have been contracted for. A chemical pulp mill will be established later and paper mills will also be erected ultimately. During the winter 300 men have been employed in clearing the site, etc., and there are about 3,500,000 logs on the banks of the river. During the summer the company will employ 1,000 men.

The Iroquois Falls are capable of developing 75,000 h.p. At present only 21,000 h.p. will be developed. The limits contain spruce, balsam, jack pine, poplar and white wood. The company have the right to cut timber 7 inches and upwards on 2-foot diameter from the ground. The average pulpwood stand is reported to be between 13 and 15 cords per acre. Work is now proceeding on the branch line of the T. & N. O. railway to Iroquois Falls which it is expected will be completed by the end of June. The company will derive their power from Iroquois Falls which has a drop of 23 feet. The contractors will increase this by 13 feet, securing a drop of 36 feet in all. The water will be backed right up to Couchiching Falls near Lake Abitibi and up the Black River to the town of Matheson, making both these rivers navigable. In some places the Abitibi will be nearly a mile wide. The government will not allow any timber to be drowned. A large force of men will be employed all summer cutting down the bush up to the high water mark. A good deal of this work has

Plenty of Power at Iroquois Falls

been done already. In these clearing operations lots of good logs which are good for lumber are being sent down to the mill to be sawed. Pulpwood is also being kept for use and a lot of good cedar suitable for posts is being cut. The brush is being burned as fast as the land is cleared.

## Ontario's Forest Rangers—Are they Efficient?

Cochrane, Ont., March 20th, 1913.

Editor Canada Lumberman:

The time is fast approaching when the Government of Ontario will make the annual appointments of men to enforce the act for the Protection of Forests from Fire. Presumably, unless our legislators awaken to the importance of the question, the same band of incompetents will be given the positions—the heedless young college student, and the decrepit old party man, who are looking for an idle holiday with a good fat salary in the bargain. Is it too late to appeal to the powers-that-be to use some sort of discretion in their selection of fire rangers? The problem is too serious to allow party patronage to enter into its consideration. As is only too well known, the Provincial Government pays large sums in salaries every year for the maintenance of a band of fire rangers, most of whom spend their time in indolence. Ask anyone who knows anything of the fire protection system existing on government lands and he will tell you the whole thing is a farce. The rangers will admit it themselves.

If, however, the same policy of giving these "plums" to party friends is to be continued is it too much to ask that some scheme be devised to ensure that the men so appointed do their work? Some of the lumber firms in Michigan have a very satisfactory system of tell-tale checks which are fixed at certain points. The ranger has to visit these points at stated periods, turn his key, and thereby record on a paper disc inside the clock the hour of his visit. It is no mere sinecure the task of these Michigan rangers. They have long distances to travel, and their work is in strong contrast with the lives of idleness which the government fire rangers in Ontario enjoy.

With such a system in vogue in Ontario the number of fires might be greatly reduced, and an immense amount of our timber resources saved to the province, for if our fire rangers did their duty and quelled the incipient outbreaks, much damage and loss might be avoided.

Last summer the writer was proceeding with others on a hand-car along a certain portion of the Transcontinental Railway, not a mile away from a fire-ranger's cabin, when he observed a small fire burning on a settler's clearing. Believing the settler was just burning up his slashing, the party paid little heed to the incident. But the settler, as it happened, was away. The fire had originated from some unknown cause. Returning at night the writer noticed the fire rangers sitting outside their shacks, peacefully smoking their pipes; whilst on reaching the clearance in question he saw a heap of smouldering timber and debris, but, worse still, the fire had spread for five or six miles to the east and done enormous damage.

On another occasion, on another part of the railroad, the writer observed overnight about a square foot of dry muskeg smouldering—not an unusual sight, by any means, and almost insignificant. Next morning at the same spot there was a big conflagration, fanned by a strong breeze. The fire ranger was there in the morning—watching the blaze! What more could he do then? It was too late. His chief concern was to save his shack. The time for acting had gone by. If he had been faithful to his duty he would have been out on his rounds the previous day, and extinguished the fire in the small smouldering patch.

Here are two instances where, if the rangers had been out and about, instead of passing their time lazily in their cabins, much damage might have been avoided. The citation of such cases might be multiplied. Along the railroad there are two fire rangers for every ten miles. They are supplied with "speeders." Would it be any hardship to insist that they travel the whole territory at least twice a day, and extinguish every incipient blaze they discover? They are supposed to do so. What harm then in adopting some check system by which their visits to certain points are automatically recorded?

Lumber firms see that the rangers travel their territory regularly and carefully. Why should the government, with such huge areas of valuable timber in their custody, be less careful?

Another point to which the attention of the authorities may well be called is their system of warning people employed in the bush of the pains and penalties for any infringement of the law concerning fire protection. Every year the fire rangers nail up on trees at short distances the whole act of Parliament, printed on linen, dealing with the question. It is quite a lengthy document, and with all its verbiage, the average bushman has neither the patience to peruse it, nor the ability to understand it if he did. Why not cut out the verbiage, and have placards in bold type, with a summary in plain every-day English, so that he who runs may read, setting forth what the law prohibits, and the penalties attendant upon any infraction of the law.

The whole act might be summarized very briefly, and would have much more effect than the present cumbersome document. Or, if necessary, both the summary and the full text might be exhibited side by side.

But the real key to the whole solution of the difficulty of securing efficient fire-rangings lies in the abolition of the party patronage system. Let college students, and men who have merely claims upon party, seek employment for the summer in some other capacity, and let only careful and experienced bushmen be appointed to the posts. There are hundreds of such men who would not only be willing to accept the jobs with the liberal salary offered, but who would prove themselves competent for the task and thoroughly assiduous in the performance of the duties.

NORTHERNER.

### Wilful Lumber Waste in the United States

By J. H. von Groten\*

I am free to say that if some of the saw mill owners in America were obliged to also plane their boards before selling to the dealers, I feel certain many of them would entirely revolutionize their manufacturing methods. It has frequently been stated that yours is a wasteful country, a condition that usually maintains where nature supplies things in abundance. As compared to our European countries who handle their resources like a small boy eats his single apple at school, you handle yours like the same boy in an orchard.

You Americans should visit Europe to observe the care and economy which scarcity of standing timber has made it absolutely necessary to observe. If, like in England, France and Germany, you had to import a large portion of your pine and other building materials you would handle it very much like you now work up manogany in your country.

In plain words, you waste good wood in sawing it into boards on large and powerful band saw mills, whose production per day is enormous, using comparatively thick blades, 10 in. or 12 in. wide, sometimes toothed on both edges, with wheels 10 or 12 feet in diameter, and a feeding capacity of anywhere from 5 to 100,000 feet per day. This makes lots of boards and the wages of the saw mill operatives are brought down to a minimum per thousand feet.

Your logs are literally chewed up and when a lot of 1 in. boards, that run say  $\frac{7}{8}$  in. at one and  $1\frac{1}{4}$  in. at the other end, with proportionately the same amount of difference between the edges of the boards, have been rejected by the dealers often enough they are loaded in a schooner and sent to Buenos Aires or elsewhere as far away as possible, where they can not be returned.

The next waste comes when the planers and matchers must take heavy cuts to equalize the boards. Tons of chips are thrown into the waste pile and the time gained by the big saws is lost by the planers in retarded speed. Would it not be much more rational now while you still have "a little of it left" to replace the big lumber-wasting mills with blades say about 8 in. wide and 18 to 20 gauge, carefully swaged, running on wheels of say 6 or 7 feet diameter, with cable or steam feed, producing about 30,000 feet per day, thereby obtaining accurately sawed and smooth lumber and producing a minimum amount of sawdust waste, and the important saving of good lumber through a light cut on the matchers? The time lost in production of the boards through more careful sawing, would be much more than compensated for in the speed on the matchers, the improved quality of the grades and the salvation of millions of feet of wood that are now blown out through the exhaust pipes and into the burners. 300 feet a minute is not impossible for planes under such conditions and the saving in wear and tear on both saw mill and planer would be an important item on the repair and renewals account.

England has for many years been boasting of matchers planing 150 feet per minute with square heads and square side heads equipped with thick beveled knives. This was quite possible when we consider that the cut of the knives was never more than 1-32 in. or at most 1-16 in. at any part of the board. There was no thumping of the feed rolls as one board followed another into the planer, and no slipping because there was no variation of thickness to speak of. The boards had all been carefully sawn to accurate sizes at probably a production of 5 or 6,000 feet per day of 10 hours and carefully stored and dried for subsequent use; but this is necessary in those countries and one of these days when you shall be purchasing your wood from Canada and South America, you will have to also be a little more prudent than has thus far been the case.

Foreign countries are relieving you of your pine and other woods much more than you generally suppose, and are helping in the great depletion of your forests. A good example is afforded when I state that the City of Buenos Aires carries in stock at least 20 million feet of yellow pine all the time and boats are leaving Mobile and other Southern ports laden with yellow pine deals destined for countries

like Brazil, which are themselves practically buried in timber. But it is cheaper for them, as yet, to purchase your pine and pay the freight and duties than to get the wood out of their own country. Very soon the conditions will be reversed and you shall then saw up timbers and plane them very much like England and France and Germany are now sawing and planing the lumber they are buying from you.

What is the lesson this teaches? To saw up your lumber into boards more carefully and more accurately, and let the compensation of time lost in sawing be more than made up on the planer and get better work and save the profits you are now throwing away in sawdust and planer chips.

A 6 or 7 ft. pony mill with an 18 gauge blade turning out 30,000 to 50,000 feet accurately is more profitable in the end than tearing along at 75 or 100,000 feet with a thicker blade and at a rate that can not insure correctly sawn or equal lumber.

Your high speed matchers, taking a minimum cut with the new "Tungsten" high duty thin knives, jointed and set on a modern round cylinder, are wonderful machines and if you will pay more attention to your sawing it will economize your valuable timber supply and at the same time improve the grades of the work turned out, to say nothing of the profits gained in converting trees into more boards and less sawdust.

### B. C. Timber Revenue Shows Increase

Under the new regulations in British Columbia license fees, transfer charges, penalties, rentals, etc., during January and February amounted to \$500,805.03. There is to be added to this total the proceeds of the sales by tender of odd remnants of isolated small stands of timber which took place on February 24th. Approximately \$130,965.43 is the immediate contribution to the general provincial revenue through the sale of these odds and ends of timber—a considerable portion of it fire-killed and destined to be a total waste unless immediately cut and utilized—besides which royalty is to be paid on every tree and pole cut, thus eventually bringing to the treasury a further sum.

The special sales of February were the first timber sales by tender held in British Columbia and afforded the first opportunity of purchase of timber from the Crown since the reservation was declared on all Crown lands by the order-in-council of December 24th, 1907. The principal stands of timber disposed of, their area, timber contents and purchasers are as follows: Eighty acres at the Gordon Pasha Lakes in the Powell Lake district, containing approximately 1,300,000 feet of Douglas fir, 600,000 feet of cedar and 200,000 feet of windfall, went to Mr. J. O'Brien for \$2,605.90; two hundred and eighty acres, one and a half miles east of Pender Harbor, carrying 1,600,000 feet of fir, went to Mr. P. B. Anderson for \$1,006.45; fourteen hundred and twenty-eight acres at Myrtle Point, Malaspina Inlet, containing 34,500,000 feet of fir, 7,500,000 feet of cedar, 175,000 feet of spruce, 125,000 feet of white pine, 3,000,000 feet of windfall and 4,000 fifty-foot cedar poles, was sold to Messrs. Bloedel, Welch & Stewart for \$52,962.50; one hundred and twenty-two acres at Point Grey, carrying 2,500,000 feet of fir, 400,000 feet of cedar, 1,450,000 feet deadened cedar, went to Messrs. Young Scott & Company, of Kerrisdale for \$7,192.

The general timber branch revenues of the Province for January and February were \$500,805.98, the several heads of receipts being as follows:

|                                  | January      | February     |
|----------------------------------|--------------|--------------|
| License fees ... ..              | \$141,666.30 | \$203,070.00 |
| License transfer fees ... ..     | 2,000.00     | 285.00       |
| License penalty fees ... ..      | 2,400.00     | 2,375.00     |
| Protection license lands ... ..  | 7,558.40     | 5,619.20     |
| Protection lease lands ... ..    | 43.78        | 324.76       |
| Protection crown grant ... ..    | 5,778.37     | 693.10       |
| Lease rentals ... ..             | 1,882.88     | 7,292.60     |
| Lease transfer fees ... ..       | 15.00        | 20.00        |
| Timber mark fees ... ..          | 56.00        | 46.00        |
| Hand loggers license fees ... .. | 225.00       | 275.00       |
| Scaling fees ... ..              | 3,122.58     | 963.71       |
| Royalty ... ..                   | 62,664.99    | 44,419.91    |
| Timber tax ... ..                | 2,794.45     | 1,431.22     |
| Trespass penalties ... ..        | 205.10       | 551.00       |

| Interest and discount ... ..     | 366.04       | 1,592.60     |
| Miscellaneous ... ..             | 9.00         | 1.50         |
| Pulpwood royalty ... ..          |              | 1,109.66     |
| Total ... ..                     | \$230,731.96 | \$270,073.07 |

A Quebec despatch says that Price Brothers, Limited, have given out a statement that the recent advance in the price of lumber has been necessitated by the curtailment of the cut, due to the mild open weather this winter to the middle of February, and to the enormous demand for dry lumber from the United Kingdom, where a shortage is reported owing to the mild winter in Russia.

\* Herr von Groten, representing large timber importing interests in Hamburg, Germany, has visited practically every lumber producing section in the world. His views of manufacturing methods are, therefore authoritative. Reproduced from "The Lightning Line."

# Your Kindling Pile as a Source

The constantly increasing high price of lumber has compelled many users to consider working material which before they have always rejected and due to its not being saleable, many manufacturers have thrown it into the burner or cut it in short lengths and sold it as kindling wood.

Just take half an hour and walk through your mill and factory stopping at each point where the waste is accumulating and ask yourself, "Can this be saved so as to return a profit?" The man who is familiar with the Linderman method will thoroughly recognize how the waste at many points may be reduced 40 per cent. or even 60 per cent.

In the flooring mill where the hard and soft wood lumber is bundled, where defects are cut out leaving an accumulation of waste of various lengths whose ultimate destination is the kindling pile, fully fifty per cent. of this waste can be converted into flooring. It is true that this flooring is different from any that has ever yet been marketed, but still, owing to the advance in price, it will find a ready sale at \$2.00 or \$3.00 less than the standard price which will yield a vast profit over what can be obtained for it as kindling. The illustration shown above clearly indicates how this can be done. As all flooring manufacturers are thoroughly aware, there is more or less flooring having machine defects on the tongue and groove that prevents its being utilized, yet the face of the board would run as No. 1 or No. 2 grades. If these long lengths were saved instead of being cut up and then, if a number of short lengths which ordinarily would be cut up as kindling were saved, having the ends trimmed accurately and laid out so that their combined lengths would equal the long flooring pieces having defective edges, these can be united into a board 8 in., 10 in. or 12 in. in width and joined together on the Linderman machine so that the entire board has a strength equal to, if not greater than, the wide lumber. Such a floor as this would be very acceptable in all of the cheaper made houses in all parts of the country, where the contractors see that they can save several dollars per thousand. The lasting qualities of the board and its strength are equal to the one-piece stock or narrow widths. This product could also be used for partition work, sub-flooring, shiplap or sheathing.

## CANADIAN LINDERMAN COMPANY

# e of Profit Rather Than Loss

In the sawmills throughout all parts of the country there are thousands of feet being burned up daily of short length narrow width or edgings which, if a Linderman machine were installed, could be built up into wider stock and this wider stock sold to answer the same purpose as the wide one-piece lumber and give as good satisfaction, although likewise, this stock must be used in the cheaper grade houses and the product sold for a few dollars less.

In the West, particularly, where so much lumber is found having a false heart and narrow strips on either side 2-in., 3-in. and 4-in. wide which now are thrown into the burner, this stock can be ripped, then joined up on a Linderman machine and converted into common lumber or shiplap.

On October 18th last, we were sent a number of samples of 4-in. Saskatchewan spruce to join up for 8-in. shiplap. In returning this lumber we saved one piece as a sample, painted one side and left the other side in the natural wood. This sample we then stood on edge exposed both sides of it to the weather throughout the winter and brought it into the office on March 14th last. On the painted side, after having stood in a steam heated office for two weeks, it is impossible to discern where it is joined, the joints being tight and remaining tight the entire length of the board. On the unpainted side the joint is discernible only by the difference in grain and color of the wood. This is a five months' test of one of the most difficult of all Canadian woods to work and have it retain its shape throughout an open winter which would be harder on glue joints than our usual severe winter, proving conclusively that this product cannot only be used for shiplap or sheathing but can also be used for barns and all other buildings where wide lumber is used.

As a progressive manufacturer who desires to get the last cent. out of his investment, will you not take up your proposition with us and let us show you how we can make a saving for you that will figure from \$3,000 to \$15,000 a year?

## Pulp and Paper Association Formed

Canadian Manufacturers Organize to Promote Interests of Trade—Carl Riordon Pres., W. P. Gundy Vice-Pres.

Carl Riordon, Montreal

The Canadian Pulp & Paper Association was formally organized at a meeting held in Montreal on Wednesday, March 19th. Lengthy discussions took place both at this meeting and at one which was held in Toronto a week previously. At each of these meetings the discussion proved conclusively that there was an urgent demand for an association of this nature and that practically all who were interested in the pulp and paper industry were in accord in their views upon the subject. At the Montreal meeting a thorough discussion took place upon the objects of an organization of this nature and it was evident that the association will have the unanimous support of the pulp and paper manufacturing industry of Canada. The most noticeable feature of the

meeting was the unanimity of opinion upon the question of price regulation, etc. It was practically laid down as one of the chief planks in the constitution of the association that it would have nothing whatever to do with the regulation of prices, division of territory or regulation of production.

Most of the firms represented at the meeting signed the roll, the others only waiting until they could have a resolution put through by their directorate. The firms represented were as follows:—J. R. Booth, Ottawa; Dominion Paper Company, Montreal; Price Bros. & Company, Kenogami, P.Q.; Jonquiere Pulp Company, Jonquiere, P.Q.; Interlake Tissue Mills, Toronto; National Paper Company, Valleyfield, P.Q.; F. Florentine Soucy, Old Lake, P.Q.; Joseph Ford & Company, Port Neuf, P.Q.; Alex. McArthur & Company, Montreal; Brompton Pulp & Paper Company, East Angus; Wayagamack Pulp & Paper Company, Limited, Three Rivers P.Q.; Abitibi Pulp & Paper Company, Limited, Iroquois Falls, Ont.; St. Lawrence Paper Mills Company, Toronto; Kinleith Paper Company, Limited, St. Catharines, Ont.; Northumberland Paper & Electric Company, Campbellford, Ont.; Rolland Paper Company, Montreal; Jacques Cartier Pulp & Paper Company, Pont Rouge, P.Q.; Barber Paper & Coating Mills, Toronto; Howard Smith Paper Mills, Montreal; Belgo Canadian Pulp & Paper Company, Shawinigan.

Carl Riordon of the Riordon Pulp & Paper Company, was unanimously elected president of the association, and Mr. W. P. Gundy, of the Kinleith Paper Company, Toronto, was elected vice-president.

A valuable address was delivered by Mr. Arthur C. Hastings, president of the American Pulp & Paper Association, who outlined the important features of that organization and explained the benefits which had resulted from its formation.

Mr. R. H. Campbell, Director of Forestry for Canada, also addressed the meeting upon the work of the Canadian Forestry Association, and spoke of the plans now under way for establishing forest products laboratories in Canada. When Mr. Campbell had finished his address the association put itself on record by passing a resolution heartily in sympathy with the government in this regard and pledging the association to enthusiastic support of the work.

### Quebec's Exports to U. S. Show Increase

Figures obtained at the United States consulate at Quebec, P.Q., show that from the consular district of Quebec to the States the past year was remarkable in several ways. The exports for 1912 attained the highest mark ever reached and exceeded those for the previous year by about \$1,800,000 in value. Another feature was that 1912 was the first year in which the exports of wood pulp were larger than those of pulp wood. In spite of the restrictions placed upon the exportation of the raw material from Crown Lands, the shipments are showing a steady increase, though they have not yet attained the high mark of 1910 when an unusual quantity of wood was shipped owing to the fear of an impending shortage entertained across the border.

An idea of the growth of the trade of the district with the States may be gathered from the increase in the number of consular invoices since 1905. In that year there were only 708. Last year there were as many as 3,855, an increase of more than 3,000 invoices and distinct shipments during the interval.

The value of the annual exports since 1905 is as follows: 1905,

\$761,436; 1906, \$801,045; 1907, \$1,341,247; 1908, \$1,624,250; 1909, \$2,941,329; 1910, \$4,893,550; 1911, \$4,430,000; 1912, \$6,209,423.

Practically the whole of the increase is due to shipments of products of the forest. Lumber exported in the former year amounted to \$149,800 and last year the exports were worth \$1,087,380. Wood pulp in 1905 amounted to only \$29,700 as against the large total of \$1,807,350 in 1912. Pulp wood in the former year was worth \$281,800 and in the latter \$1,480,862.

### Manouan Timber Limits for Sale

The water power and timber limit holdings of the Manouan Lumber, Power and Pulp Company will be sold by auction under the direction of the House of Browne, Limited, 248 St. James street, Montreal, on Thursday, April 3rd, at 11 a.m. The timber limit holdings comprise 65 miles of virgin timber limits designated on the government map as block 4-S, lying between lakes Wabascoutia and Tourbis, in Champlain County, P.Q., and situated within easy access of The Canadian Northern Railway Station at LaTuque and The Grand Trunk Pacific Railway Station at Weymontachene. The water power consists of a lease of ninety-nine years in length from July 1st, 1908, at 4½ miles from the confluence of the rivers Manouan and St. Maurice, with the bed of the river Manouan for a length of one mile, and fifty acres of land on each side of the river. The company report that there is a water power of at least five thousand h.p. The terms of the sale are to be twenty-five per cent. cash and the balance in three equal yearly installments at six per cent. interest per annum.

### The Riches of Quebec's Hinterland

By R. O. Sweezey

The legislation of the Quebec Government which recently granted a subsidy of 8,000 acres per mile for the railway which Mr. F. M. Clergue proposes to build from Montreal to James Bay is so exceedingly generous that capitalists probably will not hesitate long before grasping the opportunity offered. Eight thousand acres to the mile makes a strip of territory eight and one-half miles wide and as long as the railroad. Considering the fact that the builder of this road has the privilege of selecting this land grant in large or small blocks from any portion of the Crown lands of the province, it is not surprising if the information is received with some skepticism. Who is there bold enough to predict that such land will not be well worth a price far in excess of ten dollars an acre twenty or twenty-five years hence. Under such attractive conditions the railroad from Montreal to the G. T. P. crossing of the Bell River, some 250 miles northwest of Montreal, ought to start construction almost at once. The question then that is asked is what kind of country will this road tap? Speaking as one who is familiar with the region the writer may answer that it will tap one of the richest and most promising territories in the country. The development of the water powers, timber and mineral resources will awaken the city of Montreal to the realization of the vast richness of the great, hitherto unproductive hinterland, which must inevitably pour her riches into the metropolis, thence to the world's markets.

### Vast Dormant Possibilities

In several years of travel by canoe and rail through that vast region the writer never ceased to wonder at the vast potentialities lying dormant and yet so comparatively near the city of Montreal.

The "clay belt" which extends from New Ontario to the eastern slope of the Bell River in Quebec Province is covered with a growth of spruce timber unexcelled in any part of the valley of the St. Lawrence, but while this belt will gradually become cleared of timber and turned into farm lands, there yet remain the thousands of acres of territory unsuited to agriculture no less abundantly timbered than the clay belt.

What Mr. Clergue's proposed railway will mean to Quebec Province and particularly to the city and port of Montreal cannot be realized by the man who is unacquainted with the resources of that great region. From points on the Transcontinental Railway (G. T. P.) freight rates of lumber, pulp and paper to United States markets will not exceed by more than one cent per cwt. the rates at present in force from the Laurentide mills at Grand'Mere to Eastern United States markets. This is true of the rates to be applied to the Abitibi Pulp & Paper Mills to be built at Iroquois Falls near Cochrane in Northern Ontario and if there should be any slight difference it will probably act in favor of the mills established along this proposed railway and even on the G. T. P. at or near the Bell River.

It does not require an imaginative mind to foresee the great developments which must take place in this new territory in view of the favorable freight rates which are applicable, but if, added to this grasp of the situation Montrealers and Quebecers in general could see, as the writer has, and understand the vast possibilities of mineral potentialities as suggested in the geological features of a large part of that wonderful country, their enthusiasm would be awakened to a remarkable extent.

# Market Correspondence

**SPECIAL REPORTS  
ON CONDITIONS AT  
HOME AND ABROAD**

## Maritime Province Trade Situation

St. John, N.B., March 21st; (Special to the Canada Lumberman).—The lumber business in this section is now largely in a state of preparation for the coming season. All the mills are being overhauled preparatory to their start, which will take place in some cases on April 1st. Others will not start before opening of navigation, which, should the very warm and wet weather of the past few days continue, will not be delayed much beyond that date. As far as prices for the coming season are concerned the lumbermen are feeling very optimistic. Many buyers, both English and especially American, are in the market to purchase anything in the way of lumber which they can lay hold upon. Practically all the mills at the port of St. John have sold their cuts of deals, scantling and boards for the season; prices ranging on English prices about \$1 per M. better than last year; on specifications of 50 per cent. 9 x 3 and up, balance 7 and 8 x 3 of English deals being sold on sellers' wharves and yards for \$16 to \$16.50 per M. ft.; 6 x 3 at \$14 to \$14.50; 3 x 4 and 5 at \$13.50 to \$14; deal and plank ends, \$12; 2½-in. battens, \$15 to \$15.50; fourth quality deal, \$14 to \$14.50, and for American specifications, which are very narrow, the buyers are offering \$16 to \$16.50 for specifications 30 per cent. 2 x 8 and up, balance 2 x 4, F.O.B. vessel. In many cases the buyers for American stocks are making prices for stock on cars or wharves for individual sizes as \$15 for 2 x 3; \$16 for 2 x 4; \$15 for 2 x 6; which is a hard seller as a rule, so much of it being made from logs as they run here; 2 x 8 \$17.50 to \$18; 2 x 9 and 10, \$18.50 to \$19; 4 x 6, \$16.50 to \$17; 6 x 6, \$17 to \$18; 6 x 8, \$18 to \$19. This stock is from short average logs, being not over 14½ feet lineal.

The demand for merchantable spruce boards is very heavy, already a new market has been opened up for this class of goods and prices for boards have jumped from an average of \$13 per M. to \$14.50 per M. for boards and running to 40 per cent. 6 inch and up wide, balance being 3, 4 and 5 in. wide; the clears being taken out of these boards and sold at \$30 per M. These prices are strictly at the mill yards.

Laths are largely sold up for coming season at prices ahead of last year, running at about \$2.70 per M. on sellers' wharves at St. John and are largely held by Messrs. Stetson Cutler & Company, of St. John and Boston, who have been heavy buyers of lath in this section for many years.

## Refuse Boards, etc., at Higher Prices

Prices of all refuse boards, planks and deals have advanced anywhere from \$1.00 to \$1.50 per M. feet over last year's prices, sales for season's cuts have taken place at \$10 to \$10.50 per M. at mills.

While these prices are very much better than those obtained in 1912, it must be remembered that the price of both logs and labor have increased during the past year. Especially does this apply on the prices of logs along the lower sections of the St. John River and nearby districts, where logging has been carried on during the winter against great odds, with only practically one month's hauling, when as a rule we have about three months to haul logs from yards. Prices, as we said before, are beyond last year, to the extent of about \$2.00 per M.; on logs which last year were bringing \$12 are this year bringing \$14 per M. delivered at the mills, so it will be seen from a glance that the manufacturer, while he is getting more for the manufactured article, is really paying more than the advance in price of the raw material or logs.

## Hauling Season Was Short

It was to be hoped that the season for hauling logs this year would extend up to the first of April, but at the present time it does not seem as if we shall be able to haul any more logs this year, as during the past week all the snow has been carried off by heavy rains which reached about one hundred miles inland from the coast line of Southern New Brunswick and enveloped Nova Scotia. This will cause much hardship to lumbermen, as with the delayed hauling they yet needed about two weeks to complete hauling of logs from yards. Many deals which were sawn in the woods by rotary mills must be left until summer, when they can be wheeled out. In some cases they must remain until next year as roads will be impassable with wagons. Therefore the cut of logs and deals, etc., in the lower sections of the province of New Brunswick and throughout the province of Nova Scotia will be curtailed by anywhere from 15 to 25 per cent. of the expected cut of last Fall. On the upper waters of the St. John River and in the State of Maine, conditions for hauling have been good. This has also applied to the north shore of the province of New Brunswick,

where they have had one of the finest winters for lumbering they have had for many years, but the snow is not deep and unless heavy rains take place the prospects for driving do not look good.

It is said that Messrs. Edward Partington Pulp & Paper Company will saw from four to five million of their larger logs, cut this winter on the Nashwash, at Marysville mills during the coming season. Most of these will be sent to St. John for use at their pulp mills there.

The building trade here is beginning to move ahead. Many of the old buildings are being torn down to make ready for new and more modern buildings, and it can be said that St. John will do more in the building line during the coming year than any year since the fire of 1877. The sugar refinery, the Bank of British North America, the Post Office and many other very large buildings are now in course of construction.

## Ottawa Trade Expecting a Record Year

Ottawa, March 22nd (Special to the Canada Lumberman):—With the arrival of Spring several days ago there came a remarkable increase of business for all the lumbermen in the Ottawa Valley. They are clearing their decks to do a record business this year, if the indications just now may be taken as a criterion. Most of the men have returned from the lumber camps and good river men are being engaged to begin operations in about two weeks' time, providing the weather keeps open and the rivers are fairly well broken up by that time. The cut this season has not been nearly so large as it was last. Operations in the woods were considerably hampered, says Mr. C. Jackson Booth, owing to a lack of snow and ice and then when these elements did come they came rather too heavily to be of the most advantage.

According to information gathered from several prominent lumbermen here there will be a dearth of really first class river drivers this year. Every year they are becoming more and more scarce.

As soon as Mr. W. H. McAuliffe, head of the firm of McAuliffe, Davis Company, Limited, returns from a trip to Panama and Cuba, the final details for rebuilding the woodworking factory and other buildings that were burnt in the fire at the Chamberlain avenue yards two weeks ago, will be settled. He is expected back some time next week. The new buildings will be fireproof and thoroughly up-to-date in every respect. The McAuliffe Davis Company, Limited, will spend a lot of money this year on extending their plants. Work on the erection of all the necessary buildings for a large lumber yard and saw mills will be begun, by the firm, on the 81-acre site bought several months ago.

George M. Mason, Limited, will add about 5,500 additional square feet to their woodworking factory on Bayswater avenue. This addition is made necessary by the steady increase in business during the past year. The firm at present employs about 70 men and when the extension is completed, by the beginning of the summer, an extra twenty or thirty men will be taken on. The cost of the extension to the factory will be over \$10,000.

It looks as if the City of Ottawa may be confronted with a legal fight before the scheme of tapping the Gatineau Lakes for a pure water supply can be proceeded with. The city has intimated its intention of tapping Great Whitefish Lake, but the James MacLaren Company of Buckingham, Que., maintain that the city will have no right to do this. They say they have a charter to drive on the Lievre River and by their charter the level of the water on this river must not be lowered. Great Whitefish Lake drains into the Lievre. Thus before the matter is settled it may be taken into the courts.

## Montreal Trade Busy in all Branches

Montreal, March 24th (Special to the Canada Lumberman):—There is no falling off in the demand for lumber, and inquiries indicate that, in nearly every section of the market, business is excellent. Retailers in particular state that they are well filled with orders. There is the old complaint of the scarcity of common grades, and it is likely that builders will be driven into buying better qualities. It is of course quite possible that the building programme will not be so heavy as anticipated. Money is very tight, and the banks are acting with greater caution than ever. This taken in conjunction with the difficulty in getting the right kind of labor, has led to the hanging up for the moment of several important schemes which were being pro-

moted. Many people also are tied up with real estate speculation, which is wide-spread throughout the Dominion.

There is considerable activity in the dimension timber business, in consequence of the many important contracts which are being carried out. The hardwood market is also in good shape, with prices still firm.

In all classes of paper the situation could not be better. Chemical pulps continue very strong, there being sufficient quantities available to take care of the market, and certain recent enlargements in two of the leading mills have come at a very fortunate time to deal with the increasing demand for sulphite in this country. Reports from some of the ground wood manufacturers at the Montreal meeting, called recently to form a pulp and paper association, indicate that conditions have changed very much for the better, and that sales are becoming more active. It is true that prices have not changed, but it is expected that they will increase before long. It is well known that south of the St. Lawrence the wood situation has been bad during the past winter, this applying both to Canada and the United States, and that considerable shortage will occur, so that by the Fall, prices in ground wood will probably improve to an appreciable degree.

### Firm Prices at Halifax

A Halifax, N.S., firm of wholesale lumber dealers report that during the coming summer lumber manufacturers and wholesalers are more likely to sell only for immediate delivery than to take orders ahead. Last year, the trade had a fair season with steadily increasing values. Those who sold ahead did so at a sacrifice. This year, while values are very high at present, our correspondent informs us that they will continue high throughout the season.

Several days of warm weather have made quite a havoc with the snow, but conditions are still fairly good in the woods. The only market which is not in good condition is South America. It is reported that there is considerable foot and mouth disease amongst the cattle in that country, which is seriously interfering with the beef export, and conditions in general, affecting at the same time, of course, the lumber business. We have never, in our experience, seen as few enquiries for South American cargoes. All other markets are in first class condition. Some of the shippers do not seem quite so optimistic over the English market as they have been, but there is no sign yet of any drop from the present high levels.

Nearly all the operators are still logging, but another week or ten days should see the end of the logging for this season. I do not think there will be any material difference in the cut compared with last season. In the western part of the province the cut will undoubtedly be short of last year, but throughout the rest of the province, from Lunenburg east, there will be very little difference compared with last year.

No changes in properties of any consequence are reported, although there are options pending on several large areas throughout the province.

### Strong Markets at the Tonawandas

North Tonawanda, March 22nd; (Special to the Canada Lumberman):—The favorable weather due to an unusually early spring has had its effect on the local lumber trade. The trade reports improved business all along the line. All departments of the lumber business are favorably affected and the continuance of a steady stream of orders augurs well for business the next few months. There have been more buyers in the local market the last two weeks than at any time since the close of navigation last fall, and contracts are being made for deliveries that will carry the orders along for shipments at regular intervals well into the summer. Prices are holding up well and there will be no change in this particular so long as the demand continues strong. Not even the lifting of the duty on Canadian lumber is expected to have much effect on the local market. This does not mean that there will be little Canadian stock coming to the Tonawandas this summer, for several local firms, some of whom handle nothing but Canadian stock, have bought heavily wherever they could find the stock. There has been such a boom in building throughout the whole territory served from the Tonawandas that the demand is certain to measure up to the supply, with difficulty in filling all orders as promptly as desired. The result will be continued stiff prices. Right here at home is a condition that indicates the general trend of the market. Within the last twenty months local factories, including lumber yards and woodworking establishments, have added 1,200 employees to their pay rolls. The building of houses has not kept pace with industrial growth and plans are now about ready to build at least 500 homes here before another six months passes. In addition to the above increase in employees, which means an estimated increase of at least 4,000 in population, there are 500 more commuters who are travelling between the Tonawandas, Buffalo,

Lakeport and Niagara Falls, who want homes in the Tonawandas if they can get them. Provision for this extensive addition to local industrial growth is sure to have an effect on local lumber and woodworking business, particularly when it is added to a demand that alone taxes the capacity of the local market. J. B. Stillman, of Brooklyn, has decided to build one hundred houses at once. Sinclair Bros. are already building fifty houses and another local contractor has started twenty new houses, but they are only the beginning of the biggest building boom that the Tonawandas have ever experienced.

The Tonawandas are not the only locality on the Niagara frontier that report a startling scarcity of houses, Niagara Falls sends word that there are five hundred families within its borders that are living in rented rooms because they cannot find houses of more pretentious accommodations. Four hundred homes were built at Niagara Falls last year, but even more than that number must be provided in 1913 or the supply will fall short of the demand.

Rates for shipment of lumber east via Erie Canal for the season of 1913 are under discussion at the Tonawandas. It has unofficially come to local shippers of lumber that there will be an advance on the opening rate of last year between the Tonawandas and Albany of 25 cents per thousand feet.

Local lumbermen are favoring plans for installing a fire boat service in the local harbor. While the land fire fighting force at the Tonawandas is one of the best along the Great Lakes, there is no regularly organized fire boat service. Mr. Edward Staley, tug owner and lumberman, proposes to put a fire tug in operation in connection with an independent towing service. Local lumbermen enthusiastically favor both propositions.

Practically all contracts between the Lumber Carriers' Association of the Great Lakes and lumber handlers at both ports of loading along the Great Lakes have been signed with exception of those at Buffalo and the Tonawandas. The local rate will be fixed at a meeting of representatives of the Lumber Carriers' Association and the local Longshoremen's Union on April 1. The most important change in rates so far, occurred at Chicago where an advance of two cents a thousand feet was agreed on.

F. A. Schulmeister and C. B. Thomas, both residents of Tonawanda, have formed a partnership to take over the woodworking plant and lumber yard of the late Leonard Wiedeman on Main street, in the Gratwick lumber district, North Tonawanda. The name of the new firm will be Schumeister & Thomas. The former Wiedeman plant, which is one of the largest and best equipped in the Tonawandas, will turn out all kinds of woodwork and conduct a general lumber business, wholesale and retail.

Messrs. White, Gratwick & Mitchell, one of the largest of the local lumber firms, are arranging for the receipt of nearly 50,000,000 feet of stock to come from upper Great Lake ports in the United States and Canada. This firm brought down 40,000,000 feet last summer. A fleet of eight boats here all winter is being prepared to start on the first trip of the season just as soon as the ice conditions permit them to leave Niagara River.

Captain Thomas Lannan, of Port Colborne, Ont., bought two lumber carriers here this week. They are the schooners Aloha and Franscomb, two boats that have carried lumber to the Tonawandas for years. The purchase was made from Luther P. Graves, of Buffalo. The Franscomb will go to the Pacific coast to enter the coasting trade, while the Aloha will carry coal between Erie, Pa., and Port Colborne.

It is very probable that after July 1st there will be but one customs in the Tonawandas and Canadian boat masters will make report at but one place instead of two as at present. The new customs rules put into effect by former President Taft are favorable to President Wilson who is reported to be unwilling to rescind the order of his predecessor. Hence there will be but one customs district on the Niagara Frontier at Buffalo. The Niagara Falls and Tonawanda collectors will be replaced with deputies and there will be but one deputy to look after customs receipts at both Tonawandas, where there are now two collectors and two offices.

### A Bull Situation in New York Markets

Messrs. Chase, Talbot & Company, New York, report under date of March 15th as follows:—"Prices for lumber of all kinds are high. Some lumbermen are attempting to crowd the advance, with the sky as the limit, resorting to methods not entirely warranted by conditions. A steady gradual advance has never been found objectionable in any quarter. War prices are artificial, while the law of averages cannot be circumvented. The season in this section is about to open, the small fry watching cat-like the movements of those whom they choose to imitate. It has been, is, and promises to be, a bull situation. Shall we kill the goose or act concertedly and rationally, to the end of justified stability and permanence?"

# Annual Report of B. C. Forest Branch

## Important Announcements and Review of Work by the Newly Organized Department—Many Important Problems to Solve

A summary of a few of the chief points in the annual report of the Minister of Lands for British Columbia, was published in the Canada Lumberman of March 1st. The full report has now been published and the following important extracts from it are of great interest to the lumbering industry:

The investigations of the Forest Branch have gone far enough to show that British Columbia contains not less than one hundred million acres of forest land, and that the total stand of commercial timber is certainly not less than three hundred billion feet, and probably much more. At present the lumber output of British Columbia is about a billion and a quarter feet a year. At the present rate of cutting, making no allowance at all for annual growth, it would take the lumber industry of British Columbia nearly 250 years to use up merely the mature timber now standing. The annual growth of the forests of British Columbia is even now, before they are either adequately protected from fire or from waste, certainly not less than five times the present annual lumber cut.

These figures indicate clearly what, at least in part, should be the forest policy of British Columbia. Several times as much timber is now going to waste each year through natural decay as is being used in the same year. Merely to protect our forests from fire, but to lock them up against fuller use, would be only in slight degree less wasteful than not to protect them. Conservative methods of lumbering will not only utilize timber now going to waste, but will actually improve the condition of the forest. To provide adequate fire protection for our forests is one prime need, but to get them adequately used is of equal importance.

The situation calls urgently for a forest policy which will encourage the development of a greater lumber industry for British Columbia along lines which will provide for the prompt utilization of mature timber and for safeguarding the forest against unnecessary waste, and which will ensure a good second crop upon logged-off lands.

Obviously, we must not go so fast in forest-utilization as to depress lumber values by overstocking the lumber market. That would be most unwise, both as a matter of business and in its invitation to increased waste in logging and manufacture. A thoroughly reliable index to the extent of waste in the woods from lumbering is the profit gained from his operations by the lumberman. The higher the profit, the less should be the waste; the lower the profit, the larger the waste inevitably will be.

One of the difficulties presenting itself to the settlement of land are the large areas held under special timber licences and leases. To minimize this as much as possible, special efforts have been made to open such lands to entry as speedily as possible following the lapse of the previously existing licence or lease. In this work the co-operation of the Forest Branch has been found of great value. All of such lands are examined as soon as convenient, and, if found not to be timber land or land required for reforestation, are opened for pre-emption or rendered available for purchase in small holdings at public auction. Extensive examinations of lands of this nature were made throughout East Kootenay during the year, and arrangements have been perfected for the holding of auction sales of the same at frequent intervals during the coming year.

### Duties of The Forest Branch

The Forest Branch faces, as one of the most important duties before it, the establishment of an active and at the same time a well-guarded policy for the utilization of mature timber along lines which will encourage legitimate development, and provide for the utilization and improvement of the forests.

The total damage by forest fires during the past season aggregated more than \$300,000 and about 160,000 acres were burned over. In the light of the inadequate patrol force, the fact that the damage was not greater is exceedingly creditable to the wardens, but in the light of the amount of public property unnecessarily destroyed, this damage is indefensible. The goal which the Forest Branch has set for itself, which is an entirely practicable goal to attain so long as the necessary provision is made for its work, is that there must be in British Columbia no material damage done by forest fires at all.

The experience of the past season and of preceding seasons makes it clear that the following are the most important needs towards further reducing the yearly loss to British Columbia through forest fires:—

(1) A field force picked with an eye single to the work in hand, adequately paid, and, so far as the need justifies, retained throughout the year, instead of merely for the summer months. It will be prac-

ticable, and it is highly advisable, to keep as permanent employees at least a skeleton organization. There is ample and urgent work for many men during the winter months in trail and telephone building where the weather permits, and in forest surveys. Merely temporary employment here, as elsewhere can never get and hold many good men.

(2) The second requisite for better fire-protection is roads and trails over which patrolmen may travel, and over which supplies may be brought in; and telephone-lines, in order to get men quickly to the fire-line when the fire breaks out. Trails and telephone-lines are cheaper in the long run than men. For, in the aggregate, at a relatively small expense the efficiency of the present fire-fighting force can be increased at least two-fold by the necessary telephone lines and trails. The construction of these permanent improvements, useful not merely to the protective force, but to all classes of the local population, should be looked upon for several years to come as an urgent and essential part of our work in forest-fire protection, and adequate funds should be provided for carrying it on.

(3) It is essential, in order to give efficient fire service, that the men should be on the ground before the fires begin. This period will vary in different parts of the Province and in different years, and consequently the need for a wide degree of elasticity is clearly indicated, rather than a fixed date for putting men into the field.

A good beginning has been made. The forest-fire record while still far from good enough, is the best in the history of the Province.

### Will Encourage Forest Utilization

On the side of developing an active policy of forest-utilization, the necessary examinations have already been made as a basis for timber sales which will aggregate an entirely new revenue, apart from royalties, of about \$100,000. Bids for this timber are now being invited. It is probable that, for the next year alone, new revenue from timber sales will approximate about \$150,000, and that the next and succeeding years will show a steady and rapid increase in receipts from this source.

There are, of course, many useful projects upon which work is already in progress by the Branch, or planned for the immediate future, as, for example, its studies to encourage the pulp industry, to invite a more complete utilization of low-grade material, and its investigations of scaling methods and of mill and logging waste. But, as outlined above, the three great tasks before the Branch to which its chief effort will be given, are more efficient fire-protection, the improvement of the forest by an active timber sale policy along conservative lines, and the production of a steadily increasing revenue from forest resources.

### Sawmills, Mines, and Camps

The regulation requiring that inflammable material be cleared from a space around all camps, mines, sawmills, portable and stationary engines has not been strictly enforced during the past season, partly for the reason that the wardens were not able to examine all the places involved, partly because the machinery necessary to enforce the law is not yet complete, and also because it was felt that before attempting to penalize infractions an attempt should be made to persuade the owners of such establishments to comply with the law voluntarily. The wardens, therefore, were instructed to call the attention of mill and mine owners, men in charge of camps, and others to the provisions of the law, and to indicate what measures should be taken by them to comply with its intent. This policy will be continued next year, except where the conditions are exceptionally dangerous, in which case the owners will be given definite and detailed orders to comply with the Act.

Another provision of the "Forest Act" requires all mills and steam plants to equip their smoke-stacks or chimneys or waste-burners with spark-arresters, and prohibits the burning of wood-waste without proper safeguards.

Most of the large sawmills and steam plants have already complied with these restrictions, but a considerable number of small sawmills, especially in the interior, have failed, as yet, to install efficient waste-burners, and a number of complaints have been received in regard to such violations of the Act. Generally, the failure of these plants to construct safe waste-burners results in risk to the plant itself, as well as to the surrounding timber, and it is therefore to the owners' interest to install efficient and safe waste-burners. Hence but little trouble in general is expected.

### Disposal of Logging-Slash

The Act provides that operators of logging camps may be required to construct fire-lines around their cut-over areas, and to cut

down dead trees and stubs within such areas. The Act places, however, upon the logger no obligation to burn his slash. No attempt has been made during the past season to enforce the provision quoted above, but all the most dangerous slashings, aggregating over 60,000 acres, have been reported upon by the wardens, and efforts have been made to get the loggers to burn their slash. Fortunately, a majority of the lumbermen are thoroughly convinced by past experience that a slash is bound to burn sooner or later, and that it is the best policy to burn it at a safe season under proper safeguards. It is usually possible to choose a time of the year when slight fire-lines only need to be constructed around the slash, and it is hoped that there will be but little need for enforcing provisions such as the above, which would inevitably put the operator to considerable expense.

The effective disposal of slash has been an express condition of the free permits of timber for construction purposes conferred by their charters on railways, and regulations calling for the lopping of tops, piling of brush, and construction of fire-breaks are being enforced on the permits granted to the Grand Trunk Pacific and the Canadian Northern Pacific.

Next spring a systematic campaign of slash-burning will be undertaken and followed in the fall by the burning of slash which has been made during the summer, so that in the following year the area to be burned will be as small as possible. It is felt that, if a definite plan of burning slashings twice a year is adopted by the loggers, the slash evil, which has been the cause of a great number of disastrous fires in the past, will be overcome. The adoption of this plan will, besides reducing the fire hazard, increase the safety of camps and equipment, and produce the most favourable condition for the regeneration of the forest.

In carrying out this necessary work, systematic study will be made to determine the best methods and the cost, results being carefully compiled and compared. A number of loggers have promised their assistance in conducting experiments, and it is hoped that information can be collected which will be a distinct help to all operators. It might be interesting in this connection to say that burning of logging-slashings by owners is compulsory under the laws of the States of Oregon and Washington, and that the work is not proving either difficult or costly. Under the charge of experienced men, by choosing the right weather conditions and by making a few preparations in the way of fire-breaks, the lumbermen of these States have found that slashings can be burned safely and at an expense varying from 15 to 50 cents an acre.

#### Forest Reserves

There are in the entire Province over 100,000,000 acres of timber land, of which about 65,000,000 acres possess a topography and soil which will permit of the production of merchantable timber, which eventually, when transportation means become available, can be profitably logged. This immense area is unsuitable for agriculture, and, outside of the forage which grows upon it and which some time will be used for grazing, the only value which practically all this land has is for the production of timber.

It is impossible to estimate in dollars the approximate value of this vast resource. The annual production of these 65,000,000 acres of forest land would be, under proper management and protection, certainly not less than 6,500,000,000 B.F., and as utilization grows closer, greatly in excess of this amount. Even at the low average rate of \$1 per thousand feet, this would mean a return to the Government from the forests of British Columbia of \$6,500,000 a year. Clearly, however, the inevitable increase in stumpage values will raise the ultimate revenue of British Columbia from her forests to several times this amount.

To ensure the production in perpetuity of this timber crop, the timber lands of the Province must first of all be protected from fire; second, the timber must be cut in a manner to obtain the maximum yield per acre; and, lastly, deforested lands must be made. This great work, with the success of which the future of the Province is inseparably bound, can only be accomplished by a broad and definite policy of forest conservation. The first, and most urgent, step in the development of such a policy is the establishment as forest reserves of those areas needed in the public interest for the protection of stream-flow and the protection of timber, and which are unsuited for agricultural use.

#### Timber Sales

The present stand of merchantable timber in the Province is estimated roughly at 300,000,000,000 board feet. This estimate will apparently increase as a result of the forest surveys now being conducted by the Branch, and, of course, through the increase in stumpage values, which will make merchantable timber that is not merchantable now.

Until more accurate data are obtained, the amount of timber which can be cut annually without endangering the forests of the Province is estimated at 6,500,000,000 feet, board measure. This is a rough approximation based upon the information and figures obtainable, and is conservative.

The Government timber sale policy is to increase the annual cut, as business conditions permit, without sacrificing stumpage value, up to the point when the annual growth is equalled.

Under this policy of progressive development, it is of the first importance that the methods of logging should involve as little waste as practicable, and should provide adequately for a second crop upon logged-off lands. In general this result can be best obtained, particularly in the Coast forests, by clear cutting followed by slash-burning. In other cases, particularly in the interior, enough trees must be left to shed seed, and slash disposed of by piling and burning when necessary.

The forest surveys now being conducted will yield prompt and definite information regarding the location, extent and value of those bodies of merchantable timber which the Department should sell in the immediate future. Information from prospective purchasers regarding other bodies of timber will be used as a basis for prompt examinations looking to timber sales.

The procedure in timber sales will involve a cruise by the Government, and the fixing of the price to be paid and of the methods of cutting to be followed by the purchaser. A reasonable deposit will be required as an evidence of good faith, but every effort consistent with the welfare of the forest will be made to facilitate his logging operations.

The timber sale policy of the Department has already resulted in the applications and the new timber business shown in the following table. The sales now being advertised and shown in this table will yield a return of approximately \$176,000 to the Government.

The present large export trade of British Columbia consists almost exclusively of lumber, lath, shingles, poles and ties, while a large import trade consists of manufactured articles made wholly or partly of wood. The Province would benefit greatly by the establishing of local industries which would reduce the quantity of the imports of manufactured goods. The qualities of the leading British Columbia woods fit them for use in many manufactured articles which are not imported.

The problem of closer and more profitable utilization of timber now wasted is most important. Not more than 40 per cent. of the timber standing on the land logged over each year is being used. Part of this is full waste and cannot be helped. Some individual loggers and manufacturers have gone far in reducing waste, and credit is due to those companies which have succeeded in reducing waste far below the average in the Province. In attempting to reduce the waste of timber in logging and manufacture, a method of practical conservation which is second in importance to fire-protection only, loggers and manufacturers are struggling against most unfair market conditions. Complete conservation of our timber resources and complete utilization of our timber can be effected only where it is possible to market low-grade material. The Prairie West affords the only natural market for low grades, and since our timber is shut out of the American Prairies by the tariff, the only market left for this class of material is the Canadian Prairies.

The total quantity of the lumber imported into British Columbia's field of trade in the first ten months of 1912 was 257,053,000 feet, an amount equal to about one-fifth of the annual cut of the Province. The average price of this lumber was from \$11.07 to \$11.44 per thousand feet, which shows that the market could have used the low-grade lumber from British Columbia mills. As the direct result of this importation from the United States, approximately 250,000,000 board feet of timber was left lying in the woods in British Columbia, or went into the incinerators.

The importation of American lumber was 15.8 per cent. greater in 1912 than in 1911. The imports of American cedar in particular have increased most rapidly, being 381 per cent. greater in 1912 than in 1910. This choking of the natural market with foreign low-grade material is seriously impeding the development of forest conservation in British Columbia. The American manufacturer pays no duty on his sawmill machinery. He produces lumber more cheaply than it can be produced in Canada. On the average there is a larger proportion of high-grade timber in the United States than in Canada; a larger percentage of uppers and clears is produced than is possible in British Columbia. The American manufacturer makes a profit on the uppers and clears and can afford to realize on the low-grade stock at a low price. This is not the case in British Columbia. Both in the interior and on the Coast conservative logging would produce a large amount of low-grade material. But the trouble is that the British Columbia millman cannot sell his low-grade material; the British Columbia logger cannot sell his low-grade logs, therefore the low-grade lumber goes into the burner or is used for fuel, and his low-grade logs stay in the woods.

It may be possible to devise profitable uses for the sawmill waste produced in the larger milling centres. It has been shown for example, in the United States that Kraft pulp and paper, a high-class, very strong wrapping-paper, may be profitably manufactured from the edgings, trimmings, and other refuse of Douglas fir. The estab-

ishment of such an industry on the British Columbia coast would depend wholly on the market; the raw material could be cheaply secured in abundance at such points as Vancouver or New Westminster.

Studies have been begun by the Forest Branch to determine the practicability of manufacturing wood-alcohol, turpentine, and resin from the sawmill waste of Douglas fir and yellow or bull pine. A small plant has been working for some time in Vancouver producing turpentine, tar-oil, and pitch. A process has lately been developed in Florida by which turpentine, resin, and chemical paper-pulp may be manufactured very profitably from southern yellow-pine. Since Douglas fir and the yellow-pine of British Columbia are resinous woods, the Forest Branch has sent samples to the Florida plant in order that they may be tested.

A syndicate of progressive Vancouver lumbermen, and businessmen has under consideration a project for using the sawmill waste of that city as fuel for a central heating and power plant.

#### Pulp Industry Encouraging Clean Logging

The pulp industry, now started in British Columbia, will in the future do much to promote cleaner logging and closer utilization of timber. Eastern Canada is always spoken of as best fitted for a permanent pulp industry. The advantages which Eastern Canada possesses over British Columbia are artificial rather than natural. These—namely, cheap transportation and access to centres of population which provide labour, markets, and capital—will eventually come to British Columbia along with improved facilities for manufacture. The forests of British Columbia contain much larger quantities of pulp-wood than any Eastern Province, necessary water-powers exist in conjunction with the pulp-wood areas. There are large areas of spruce and jack pine in the Province which compare favorably, both in quantity of pulp-wood per acre, extent and location, with the pulp-wood limits of Eastern Canada, but which have as yet been considered unmerchantable.

There are five pulp-mills in British Columbia with a combined daily capacity of about 300 tons. Only two are at present working on a steady basis.

There is an opportunity at the present moment for the promotion of the wood-block paving industry. The reputation of wood-block paving has suffered in British Columbia because in the past the wood has been imperfectly treated with preservative and imperfectly laid. Wood-block pavement thoroughly prepared and carefully laid on solid foundations gives as satisfactory service as asphalt. Increased use of

wood-block pavement affords an opportunity to extend the much-needed creosoting industry, and opens a large profitable market for common fir lumber, since paving-blocks (made from 4 by 8 common lumber), consume about 1,000,000 feet of lumber for each mile of road pavement.

Lumber manufacturers of British Columbia who attempt to gain entry into Eastern Canada and foreign markets find that they meet, in addition to prejudice resulting from the comparatively unknown qualities of British Columbia timbers, the competition of foreign timbers the strength and quality of which are advertised by the widely circulated results of Government tests. It is important that assistance should be rendered the lumber industry of this Province in securing entry into such markets. If Eastern Canada builders, decorators, and other purchasers were aware of the finishing qualities of high-grade lumber from this Province, a profitable market could be developed.

A small permanent exhibit of interior finish at a trade centre, such as Toronto, would be a most effective agency in promoting amongst the right class of purchasers a knowledge of the higher qualities of those British Columbia woods which are now known only in their coarser forms.

Great assistance could be rendered in the marketing of British Columbia timbers abroad if reliable Government publications were available to which purchasers could be referred for specific information regarding the strength of the timber under different forms of stress, and other leading characteristics of the wood. The preparation of such material should be undertaken by the Forest Branch at as early a date as possible. It would be necessary at first to have careful tests made at a well-equipped engineering laboratory, to secure accurate data on the strength of our structural woods. As there is no testing laboratory, in this Province, arrangements have been made to have the necessary tests carried on at McGill University in co-operation with the Dominion Forestry Branch.

There are minor forest industries which it may be possible to develop. The bark of the Western hemlock now being logged on this Coast in fairly large quantities is almost twice as rich in tannin as the Eastern hemlock. Most of the bark is wasted now; an effort should be made to develop a market for it. Another example is the bark of the Cascara sagrada (a species of buckthorn growing on the Coast and islands), for which there is a large and active market. One Eastern firm wishes to secure 800 tons annually.

# SHINGLES QUICK

**B**UILDINGS blown down. Barns unroofed and general havoc played by the recent wind storm, means a sharp and persistent demand for Shingles during the next month or two. The thing is to have the goods on hand when wanted. Anticipating this increased demand we got quick connection with the Coast Mills and now have Sixty-Five cars **Extra Clear XXX B. C. Red Cedar Shingles** in transit, about Thirty of which are already allotted to our customers, and take order as received for first arrivals. Place your order and get on this list **QUICK** if you want delivery anywhere in the near future. We handle shingles manufactured by the most reliable mills only.

# Review of Current Trade Conditions

## Ontario

The thunderstorm which took place a couple of weeks ago considerably hampered logging operations and a large quantity of lumber which it was hoped would be got out this season will now have to remain in the woods until next. This is particularly noticeable in the North Bay district, where some good stocks of hemlock and spruce could not be logged and a number of ties had to be left.

Some reports indicate that a good number of the yards are holding large stocks of lumber and will have enough to carry them on for some time. This is probably due to the fact that, owing to the shortage of lumber last Fall, many yards duplicated their orders and have been receiving stocks regularly through the winter for which they had no immediate use. Other reports, however, seem to show that some yards are practically empty, possibly because the owners were a little chary of buying at the high prices which have been prevailing for some considerable time and were hoping to be able to purchase more advantageously.

The mild spell of weather which prevailed in Ontario during the third week of March helped the lumber business considerably. Ottawa lumbermen report that the effect was almost immediate and that a remarkable increase of business resulted. The general feeling in Ottawa is that during the present year a record business will be transacted. The cut in the Ottawa Valley during the winter which has just closed will show a considerable falling off as compared with the previous winter, according to present reports. Lack of snow and ice held back the operations in both places and when ice and snow did come the former was much too plentiful.

Spruce is scarcer now than it has been for a long time and in spite of the high prices being asked, desirable stocks are well nigh unobtainable. Hemlock is practically in the same position and with the conditions obtaining above, it does not appear as though much relief can be expected either as to an increased supply or lower prices.

The financial situation has scarcely changed since our last issue. Bankers are still very unwilling to loan money even on the best security and this has naturally affected credits generally. Wholesalers report that many buyers are asking for extended credit and giving bills where they formerly paid cash. There does not appear, however, to be any genuine cause for alarm as the expansive trade during last year has, in the natural course of events, considerably drawn upon the money reserve.

The hardwood market is still very firm and not much fluctuation has taken place in prices. As in soft woods, conditions indicate that current prices will at least be maintained, if not raised.

Dry stocks of lumber in manufacturers' and wholesalers' hands are scarce. A few lines of white pine such as 6-inch, 8-inch and 10-inch are more plentiful. The box trade is reported to be using common lumber now that culls have become so scarce. Lath are very scarce. It is reported that contracts for lath this year are away in excess of those of last year so far as the price is concerned.

Buffalo and Tonawanda markets have improved considerably as a result of the favorable weather which has prevailed of late. Improved business is reported all along the line. Orders are plentiful at Tonawanda and the outlook is for a couple of months at least of excellent business. Prices are firm and the demand is large. Receipts of Canadian stock at the Tonawandas will probably be heavy during the present summer. The building business is extremely active and seems to be unable to keep up with the demand for houses. This applies practically to the whole Niagara frontier.

Recent reports indicate that rates for shipment of lumber east by way of the Erie Canal are likely to advance 25c per thousand feet between the Tonawandas and Albany.

## Eastern Canada

Reports from the Maritime Provinces indicate that the cut in Nova Scotia this winter will be from thirty million to thirty-five million feet short because there was next to no snow in the woods during the past winter. In parts of New Brunswick the conditions are just the reverse. Operators on the north shore had the best winter in many years and have succeeded in getting out a large cut. A number of them have also managed already to sell their cut at good prices. The freight market shows no improvement. Freight charges for ocean transport are still very high. No falling off is yet in sight. Shipments from the north shore are expected to be heavy, both because of the large cut and also because quite a quantity of stock was held over from last year in the hope that freights would be lower during the present year. Nova Scotia shipments will probably be light.

Reports from Fredericton, N.B., report that the cut of logs going

into the Fredericton booms during the coming summer will total about 75,000,000 feet; about 25,000,000 feet short of the cut in 1912. This total depends upon everything which has been cut, reaching the booms. In the lower sections of the river and in the lake sections the cut will only be about one half of what it was in 1912. Last year the cut in the lower sections amounted to about 40,000,000 feet.

Most of the mills are expected to commence operations on April 1st. Some however, will wait until the opening of navigation which may not be much later than that date. Lumbermen are feeling optimistic about the years prices. Many English and United States buyers are in the market trying to buy anything they can lay their hands upon. Practically all the mills at St. John have sold their cuts of deals, scantlings and boards for the season at prices ranging about \$1 per M better than last year for English shipments. American shipments are selling at \$16 to \$16.50 for specifications of 30 per cent. 2 x 8 and up, balance 2 x 4, f.o.b. vessels. There is a good demand for merchantable spruce boards at \$14.50 per M for boards running 40 per cent. 6 inch and up wide, balance 3 inch, 4 inch and 5 inch wide, clears out; the latter selling at \$30 per M, at the mill yards. Laths are largely sold up for the coming season at about \$2.70 per M on sellers' wharves at St. John.

The demand for eastern spruce at New York is fairly active. Prices are firm in most cases and stocks at mill points are reported low. Wholesalers do not seem anxious to take orders at present prices. The hardwood business at New York is active, in preparation for spring and early summer business. A good trade is expected for at least four months. Plain and quartered oak are in good demand especially the former. The same applies to birch and maple and stocks offering are light. The hemlock market continues steady at New York at the advanced prices. The outlook for the eastern spruce trade at Boston is considered good although trade towards the end of March was rather quiet. The demand for random is better than for lumber cut to lengths. Prices are fairly well maintained. No. 2 matched Canadian spruce boards are selling freely at \$27. Stocks of hardwoods at Boston are light and manufacturers are inclined to stiffen their prices. Enquiries for plain oak are active and dry stock is scarce. Anyone with dry hemlock boards, stock lengths, at Boston should be able to obtain at present \$24.50 or \$25.00. Even at these figures the tendency is upwards. The demand for shingles is improving. White cedar extras are held at \$4.25 and the best of the clears are selling at \$4. The market for red cedars is firm. For 1 5-8 inch lath some holders are now asking \$4.75 although the highest price obtained seems to be \$4.50.

Reports from Montreal state that the demand for lumber continues very strong. In practically every class of lumber the movement is active. Retailers report that they have a large number of orders on hand and others in sight. The common grades continue very scarce and there is a likelihood of builders being obliged to purchase better qualities. Builders however are handicapped by tight money and scarcity of labor. It is not thought that these will reduce the quantity of building materially, but they are factors which must be taken carefully into account. Dimension timber is moving actively. The market for hardwoods is firm. The paper trade and industry is enjoying an excellent business. Chemical pulp is strong and some improvement is reported in the market for ground wood.

## United States

Unfavorable weather conditions continued throughout the United States during the middle of March and held back the opening of spring trade. Everyone was of the opinion, however, that as soon as the weather brightened the movement of lumber would commence on a large scale. All indications pointed to a well distributed demand for all the leading kinds of soft woods and hardwoods. Cyclones in the south, followed by rains brought heavy overflows to the rivers and practically put a stop to woods work. Heavy snow falls in the north had a similar effect. At the same time the result has not been at all serious. The same causes have led to diminution in the building operations through the country. Apparently the situation is simply one of standing still temporarily, with every prospect for exceptional activity as soon as the spring trade gets under way.

The southern pine dimension situation is weak and the same applies to southern pine finish. As a general thing, however, the southern pine market is in a satisfactory condition with a good outlook for business. Many of the mills are counting upon a prosperous year. Car sills and decking are very active at full list prices. Many of the decking orders are being offered at 5 7/8 inch, or 1/8 inch off in width as well as thickness. The indications are that car material throughout the year will be steady.

Encouraging activity is commencing to show in the northern pine

A Winter Scene at our Mills in Sarnia.

# We Saw all Winter

¶ You can always be sure of getting what you want from us because we saw all Winter and all stocks are always "piled high."

¶ Norway and White Pine a specialty. We are able to make large or small shipments on very short notice.

¶ Are you in the market for heavy timbers? We cut them any length required up to 60 feet from Pine and B. C. Fir.

SARNIA, ONTARIO

A. F. HOLDEN, Pres. F. H. GOFF, Vice-Pres. E. C. BARRE, Gen. Mgr. W. A. SAURWEIN, Ass't. Mgr.

trade. There is a very strong demand for low grade stock for box making. Manufacturers at the head of the lakes are looking forward confidently to a good season's business. The demand for No. 2 and better however, is rather quiet. At many of the northern pine points, such as Chicago, the Tonawandas and Pittsburg, the better grades of pine are light, but prices are firm. In Minneapolis and its contiguous territory the market for northern pine has been opening up slowly. In south Dakota everything points to a successful season. The hemlock situation in the United States continues remarkably strong. The market is ready to take all the available output and higher prices are indicated as the spring trade approaches. There is a great scarcity of dry stocks. It would not be surprising, during the next few months, to see hemlock prices advance considerably.

The extensive consumption of hardwoods in the United States continues. The amount of dry woods on hand at southern and northern points is not sufficient for the current demand. Mill men in the south are very stubborn with regard to prices. The input of hardwoods in the north this year was about up to the average in quantity and in excess of that of a year ago; but up to date this has had no effect upon the market. During the last few weeks No. 1 and No. 2 common dry birch have advanced. Soft elm is several dollars above the figures of two months ago and rock elm is higher than at any time since 1906. No. 1 common basswood is rather slow. Low grade basswood is in good demand and the supply is short. Hard maple is bringing fully \$2 a thousand more than a year ago. Plain oak is in good demand and improvement is reported in quartered oak, red and white. Hickory is practically out of the market on account of scarcity. White ash is also scarce and in good demand.

#### Great Britain

Reports from Great Britain indicate that the wood trade is in a very strong position. During the first two months of the present year the consumption was not up to expectations although advanced prices were obtained. Since then the improvement has been steady, as a result largely of the firmness of exporters to Great Britain. The strength is increased by the fact that importers are not showing a tendency to force the pace. The desires of exporters to Great Britain for higher prices are received complacently by importers and consequently the stocks in Great Britain are moving steadily. Importers seem to have made up their minds to encourage the present active demand so as to maintain it steadily until they are paying higher prices for stocks later in the year. Values of all common stuff suitable for case making continue to show a tendency to rise at London. A shortage of stock coming forward this spring is expected on account of the small quantity of logs available at Riga. Satisfactory business is reported to be commencing in forward re-selling. A tendency toward a reduction in ocean freight rates is reported.

At Foy, Morgan and Company's recent auction sale, 3 x 11 3rd Quebec spruce sold for £11 10s. and £11 5s. First Quebec board pine sold for £40 and the 3 x 11 varied from £33 5s. for 15 foot to £42 10s. for 13 foot lengths.

Arrivals of New Brunswick and Nova Scotia spruce and pine deals at Liverpool during the month of February amounted to 1,800 standards, which is 180 standards less than during February 1912. The consumption totalled 1,380 standards being 1,520 standards below the corresponding period of 1912. The imports of birch planks during February totalled 38,000 cubic feet, which was 13,000 cubic feet more than during February, 1912. The consumption also showed a good increase, amounting to 42,000 cubic feet against 34,000 cubic feet during February, 1912. The stock now on hand amounts to 111,000 cubic feet, which is 43,000 cubic feet more than a year ago. Birch logs imports totalled 12,000 cubic feet during February. During February of 1912 there were no imports of these stocks. The consumption during February was 11,000 cubic feet of birch logs against 7,000 cubic feet during February of 1912. The stock stood at latest reports at 40,000 cubic feet against 10,000 cubic feet at the corresponding period last year. There is a good demand at Liverpool for prime maple flooring. During the last two or three months the price has advanced at least £1 per standard.

Prices of all wood goods at Manchester are well maintained. Reports state that a large quantity of spruce has been contracted for at firm figures, indicating that, at least until August, prices will show no decline. Quebec waney board pine has been moving only in small quantities. The decrease in the consumption of spruce is attributed to the rush of Riga goods which showed an increase of 1,800 standards. Birch planks at Manchester are heavily stocked. The total being 79,000 cubic feet at latest reports.

#### A Splendid Insurance Showing

The annual statement of the Lumber Insurance Company of New York appears elsewhere in this issue, showing total assets of \$834,448 and surplus to policyholders of \$550,775. The surplus shows an increase of \$71,227 over the figures of January 1, 1912. This statement covers the first full year since the company's absorption of the

Adirondack Fire Insurance Company and consequent increase in capital from \$200,000 to \$400,000. With a loss ratio for the past year under 51 per cent. of the earned premium, an expense ratio of 37 per cent. and a profit ratio of 12 per cent. the company makes a most satisfactory underwriting showing.

## Machinery and Equipment

### An Illustrated Sander Booklet

The American Woodworking Machinery Company, Rochester, N.Y., have issued a book entitled "Columbia Sander No. 2," which illustrates and describes in an effective and attractive manner the latest production in the way of a triple drum sander which the company have turned out. Particular attention is called to the company's unlimited facilities for producing this new sander. Their factory at Green Bay, Wis., is devoted exclusively to the manufacture of the Columbia Sander No. 2, illustrated herewith. Among the special features illustrated and described in this book are the following:—The Columbia Sander has three speeds of feed produced quickly by

A Beautiful trade Booklet—Printed in four Colors

a gear change operated by a lever on the front of the machine. The sand paper take-up is considered to be the simplest and most efficient of its kind produced. The wedge block adjustment of the drums provides absolutely rigid support. There is therefore no lost motion to disturb parallelism of the drums. The oscillator is perfectly central so that there is no cramping and no pulling up or down. Rigid screw corner posts are used for the support of the upper feed works frame, thus providing the greatest rigidity possible. The automatic take-up prevents sagging of the sand paper. A constantly smooth and even surface is thus provided, so that paper lasts longer than in other machines. Furniture manufacturers and all who are interested in the use of sanders ought to secure a copy of this book. They can do so by writing to the company.

### Belt Advertisements of Much Value

An interesting series of advertisements is being commenced by the Cling-Surface Company, 1021 Niagara Street, Buffalo, N.Y., in this issue of the Canada Lumberman. With each issue they will show new photographs of belt installations, and will describe each installation as fully as their space will permit. They endeavor to furnish live, interesting arguments for Cling-Surface every time, and will publish belt data that are of value to engineers, machinists and all users of belts.

To familiarize readers of the Canada Lumberman with Cling-Surface they furnish the following summary of their claims for their pro-

### The Porter Hand Jointer

is the highest style of jointer made. A machine built by Specialists who specialize in Hand Jointers. Our circulars thoroughly describe our machines and you should not place your order until you look us up. Column Base, Shaving Chute, Steel lipped and ground Tables and Safety Cylinders are a few features. Machines carried in stock by

A. R. Williams Machinery Co. of Toronto, Ont.

**C. O. Porter Machinery Co.**  
Grand Rapids, Mich.

duct: "Cling-Surface-treated belts are not sticky, yet they easily pull full load without slipping, simply because they are made pliable by the penetrating and lubricating qualities of Cling-Surface. The belt is thus made to wrap the pulley very snugly without permitting cause for slip.

"Cling-Surface is a whole-belt treatment—not a surface treatment. Besides stopping slip it waterproofs, prevents chafing, cracking, hardening, burning, and lengthens the life of the belt materially. It positively reduces the power loss in any lumber mill or shop running belts tight and prevents slip better than will tension.

"Few big users of belts nowadays maintain the belief that tightness is essential for prevention of slip. It is universally admitted that slack is desirable and only a question of whether slack belts are possible."

The illustrations of slack belts that this company will show in every issue will not be special cases or freaks, but plain every-day examples of what Cling-Surface is doing all over the world. They say that they are always ready to prove the merits of their product to those who are doubtful. Quotations made by the Cling-Surface Company are f.o.b. Toronto, their branch house.

### Huther Bros.' New Catalogue

Huther Bros., Saw Manufacturing Company, Rochester, N.Y., have issued a new catalogue No. 33 which will be of much interest and value to all users of saws. The catalogue is prepared in handy book form. A large number of excellent illustrations are included and the descriptive matter contains a large amount of valuable information regarding the use of saws of all kinds. All who are interested in saws will benefit if they write to the company for a copy of the catalogue. The accompanying illustration shows the company's factory at 1190 University avenue, Rochester, N.Y.

### A New J. A. Fay & Egan Product

J. A. Fay & Egan Company, Cincinnati, Ohio, have put upon the market a new machine which they believe will make a great change in many box factories. The machine is known as their new Automatic Double Cut-off Saw. The manufacturers state that this machine with one feeder and one off-bearer will take the place of 8 or even 10 of the single cutting saws now used for this work. An illustration of this machine, with hopper feed is shown herewith. In its regular form this machine can be set to cut off box shocks up to 6 feet 6 inches long and 2 inches wide. For wider stock, the hopper feed is not used, as the operator can easily keep the machine filled to capacity without it. For stock 3 inch, 4 inch, 5 inch, 6 inch, 7 inch and 8 inch wide, however, the hopper feed is used. The operator places armfuls of stock in the hopper. The bottom piece rests on the slide and steel dogs in a chain carry the stock under the pressure springs past the two saw blades which trim both ends square and then feed out the pieces to the off-bearer at the rear of the machine. A continuous stream of boards comes through the machine, the only limit being the ability of the off-bearer to take care of the stock as it comes out.

It will be seen from this description that the machine is extremely simple, practically the only mechanism being the chain. Any ordinary box factory employee could operate the machine. The company

claim that the machine should pay for itself in a large box factory, in two or three weeks on labor saving alone, in addition to doing more accurate work, taking up less space and requiring less power than the eight or ten hand or foot operated machines which it replaces. In small shops also, the machine is claimed to be a great cost reducer as it will cut off in one hour as much as the old style machines will cut off in a day.

Further information regarding the machine may be secured from the J. A. Fay & Egan Company, West Front street, Cincinnati, Ohio.

### What Do You Think of a Lumbermen's Club?

About a year ago there was an idea among the lumbermen of Toronto that it would be a good thing if they could get together in a social way and form a lumbermen's club. Nothing has happened in the meantime to make this proposal any less feasible, but the idea has apparently been allowed to remain undeveloped for want of someone with sufficient time and interest to push it to fulfilment.

There is no reason why the lumbermen of Toronto and those of every large city in Canada should not have clubs of this kind. There is good reason why they should look into the matter closely.

Factory of Huther Bros. Saw Manufacturing Co., 1190 University Ave., Rochester, N. Y., U. S. A.

The idea has been worked out successfully in a number of United States cities. Not only is such a club a pleasant social feature in connection with business life but it is an important and valuable factor in the transaction of business, providing a natural rendezvous for visiting and local members of the trade.

The Canada Lumberman would be glad to assist in bringing about the formation of a lumbermen's club in Toronto if the trade would take the matter up seriously. It would not be a difficult matter to carry out such a proposition if the trade took it up enthusiastically. We would like to have the views of members of the trade in Toronto upon this matter. A few letters from lumbermen, published in our columns would serve to draw general attention to the question and bring it definitely to a head.

The Smart Turner Machine Company, Limited, Hamilton, Ont., are supplying The M. Brennen & Sons Manufacturing Company with a Duplex steam pump.

## EDGINGS

### Ontario

John McCormick, Lawrence Station, Ont., is advertising his sawmill for sale.

The Crossing Lumber Company, Limited, Minaki, Ont., are remodelling their old tie mill and altering it to a capacity of 2,000 ties per day or about 30,000 feet of lumber.

Fire destroyed Quance Bros.' sawmill at Delhi, Ont., on March 17th, also a large quantity of lumber in the yards. The loss was about \$12,000, partly covered by insurance.

The McAuliffe Davis Lumber Company, Duke street, Ottawa, Ont., whose lumber mill was recently destroyed by fire at a loss of \$40,000, are now in the market for woodworking machinery.

The mill which is being erected at Fenelon Falls, by Dymont, Mickle Lumber Company, has been completed so far as the buildings are concerned. The company advise us under recent date that they are now installing the machinery.

The Davy Pulp and Paper Company, Limited, has been incorporated with a capital of \$50,000, to carry on business with head office at Thorold, Ont. The provisional directors are G. H. Sedgewick, A. G. Ross, and E. V. Macmillan, of Toronto.

The Haliburton Development Company, Limited, has been incorporated with a capital of \$40,000, to carry on business as lumbermen, sawmill operators, etc., with head office at Lindsay, Ont. The provisional directors are L. R. Knight, J. A. Padget, and R. P. Suggitt, all of Lindsay.

The Kingsdale Planing Mill, Limited, has been incorporated with a capital of \$100,000, to deal in and manufacture all kinds of lumber, timber and wood substitutes, with head office at Toronto. The provisional directors are C. F. Wright, J. G. Wright, Jas. Barr and R. C. Nelles, all of Toronto.

The Shevlin-Clarke Company, Limited, Fort Frances, Ont., have recently purchased a number of timber limits from the Fort Frances Lumber Company. They advise the Canada Lumberman that they are now building a second mill at Fort Frances, which will be ready for operation this spring.

The Springett Brading Company, Limited, has been incorporated with a capital of \$40,000, to erect buildings and manufacture and deal in lumber and building material, with head office at Fort William, Ont. The provisional directors are T. E. Dean, John Wood and E. R. Brading, all of Fort William.

The Smith Furniture Company, Limited, has been incorporated with a capital of \$40,000, to manufacture and deal in furniture, boxes, metal work, etc., with head office at London, Ont. The provisional directors are H. T. Smith, C. J. Smith, furniture dealers, and J. W. G. Winnett, barrister, all of London.

Read Bros., wholesale lumbermen, 43 Victoria street, Toronto, have recently registered their business as Read Bros. Limited, with capital stock of \$40,000. This step was taken on account of the rapidly increasing trade which this firm is doing. The new company is under the same management as formerly.

A report recently appeared in the daily press to the effect that the Rainy River Lumber Company, Limited, were planning to move their mill from Rainy River to Fort Frances, Ont. The company advise the Canada Lumberman that this report is incorrect and that they have not had any thought of such a move.

National Development Limited, has been incorporated with capital of \$40,000, to manufacture and deal in brick, lumber, lime, cement or other building materials, also to carry on business as general contractors, with head office at Toronto. The provisional directors are F. B. Edmunds, W. H. McDonald and R. A. J. Milne, all of Toronto.

McFadden & Gillis have cut some 3,000 sticks of timber varying in size from 15 x 15 inch up to 30 x 30 inch and some of them as long as 50 feet, in Jocko township during the past winter. These are being drawn from the skidways near the camp to the siding of the Cleveland Sarnia Sawmills Company, six miles away, to be loaded on cars there for Quebec.

Taylor-Scott & Company, Limited, have been incorporated with a capital of \$200,000 to manufacture and deal in merchandise and wares of all kinds, to manufacture and generally deal in logs, timber, lumber, wood and metal products, with head office at Palmerston, Ont. The provisional directors are C. E. Perry, J. H. Schaefer and R. J. Knowles, mill foreman, all of Palmerston.

The Abitibi Pulp & Paper Company, who are erecting a large mill at Iroquois Falls in Northern Ontario, report that according to the estimate of their forest engineers there is enough pulpwood on their limits to furnish 60,000 cords of wood a year for ninety years. This estimate is based upon an average production per acre of from eight to ten cords. The company believe that by careful forestry methods they will practically have a perpetual supply of pulpwood.

J. B. Laberge & Sons, Sudbury, Ont., will do all kinds of planing and will make a specialty of transit work at their new sash and door factory which is now under construction. It is expected that the plant will be completed about the end of June. The company report that the plant will be one of the largest in the northern district. Its cost will be between \$50,000 and \$60,000, and they will have a dressing capacity of about 200,000 feet per day. The company have three railroad connections: Canadian Pacific, Canadian Northern and Algoma Eastern. The factory and dry kiln will be constructed of solid brick. The plant will be 80 x 250 feet.

The Riordon Pulp & Paper Company have started their first digester in their new plant at Hawkesbury, Ont., and the second will be running in a few weeks' time. It has also been arranged to put in two additional 12½ ton digesters, which will be in operation by the Fall, thus materially increasing the output of sulphite pulp. The Merritton plant of the company, which recently suffered from fire, will be running again at a much earlier date than was at first expected, the company having arranged to restore the damaged portion with all possible speed. The expectation is that another six weeks

will see the mill running fully. In the meantime, the paper machines have been in operation without any interruption.

### Eastern Canada

The Nadeau Lumber Company, Montreal, Que., has been incorporated. Theodore Dion, pulpwood dealer, Leeds, Que., has moved to Ste. Agathe, Que.

The Modern Woodworking and Construction Company, Limited, have secured registration at Montreal, Que.

The second unit of Price Bros.' new mill at Kenogami has started, increasing the capacity of the plant to one hundred tons per day.

Connors Bros., Limited, Black's Harbor, N.B., have commenced the erection of their mill, which they expect to have completed early in the coming summer.

A report from Nicolette, P.Q., states that owing to the break-up of the ice a sawmill, the property of Mr. Chagnon, of St. Leonard, has been destroyed.

R. S. Carter, M. L. A. and H. K. Stonehouse, Springhill, N.S., have secured 3,500 acres of timber lands near Union Station, N.S. The timber lands were formerly known as the McMullen property and are near properties operated by the Atlantic Lumber Company.

A sulphite pulp mill, the first of the kind in the province, is to be erected at Bear River and news print machines will be installed later. The scheme is to comprise the erection of an electric generating plant, which will supply current to operate the necessary pulp machines, etc. Local and outside capital is interested.

G. D. Steffanson, of Windsor Mills, Quebec, has been making an inspection of the plant of the Miramichi Pulp & Paper Company at Chatham, for a group of Ontario pulp and paper men who have taken an option on the property. It is believed that under the new law relating to timber licenses the mill can be successfully operated.

The Miramichi Lumber Company, Chatham, N.B., report that they will run the Morrison Cove mill during the coming summer. They have been running the mill at Chatham, day and night, having just the capacity of that mill in logs. This plan of operating involved a large risk in case anything should happen to the Chatham mill, and accordingly the company have decided to operate the two mills in the day time. This will reduce the risk and at the same time the company will get the benefit of the better class of work which is done during day time hours.

Finch, Pruyn & Company, Incorporated, Glen's Falls, N.Y., in a letter to the Canada Lumberman report that the statement which recently appeared in the daily press to the effect that they intended to erect a sulphite mill in Canada is not correct. At the same time, they state that they will probably build a sawmill on the Henri River near the Intercolonial Railway, between the stations of Laurier and de Lotbiniere. They have not as yet decided upon the capacity of this mill. The company own 40,000 acres of timber in this location which is already being operated for pulpwood. The sawmill will take care of the saw timber upon these limits.

### Western Canada

The Thompson River Lumber Company, Kamloops, B.C., whose sawmill was recently destroyed by fire, will commence to rebuild at once. The cost of the new mill will be about \$30,000.

The Port Alberni Lumber Company, Limited, has been incorporated with head office at Victoria, B.C., and capital stock of \$25,000, to carry on business as sawmill owners, loggers, lumbermen, etc.

The National Lumber Company has been incorporated with head office at Vancouver, B.C., and capital stock of \$75,000, to carry on business as manufacturers of and dealers in lumber of all kinds.

The Newcastle Lumber Mills, Limited, have been incorporated with head office at Vancouver, B.C., and capital stock of \$500,000, to carry on business as timber merchants, sawmill proprietors, etc.

The Westminster Shingle Company, Limited, has been incorporated with head office at Vancouver, B.C., and capital stock of \$25,000, to carry on business as manufacturers of lumber, shingles, sash and doors and general mill work.

The Mutual Lumber & Shingle Company, Limited, has been incorporated with head office at Vancouver, B.C., and capital stock of \$50,000, to carry on business as shingle manufacturers, timber merchants, sawmill proprietors, lumbermen, etc.

The Larson Lumber Company, Bellingham, Wash., has secured an extra-provincial license to carry on business in British Columbia with provincial head office at 204 Winch Building, Vancouver, B.C. The capital of the company is \$30,000.

The Fort George & Nechaco Lumber Company, Limited, has been incorporated with head office at Fort George, B.C., and capital stock of \$50,000, to acquire the lumber manufacturing and selling business carried on at Fort George by Albert Dollen Meyer.

### Trade Enquiries

The Dominion Government Trade and Commerce reports contain the following trade enquiries. Readers of the "Canada Lumberman" may obtain the names of enquirers by writing to the Department of Trade and Commerce and stating the number of the enquiry.

201. **Agents.**—A London firm of harness and saddlery manufacturers would like to appoint Canadian agents.

202. **Three-ply veneer (maple, birch, oak and walnut).**—A London firm of importers who can handle considerable quantities of three-ply veneer (maple, birch, oak and walnut) invites quotations from Canadian manufacturers.

203. **Lumber.**—A large Japanese firm in Yokohama wishes to get into correspondence with lumber dealers and mills in Canada, where they deal in square lumber and planks.

204. **Deals.**—A South African commission agent desires to be placed in communication with manufacturers and exporters of red deals and white spruce deals. Quotations f.o.b. seaboard.

# MAPLE LEAF SAWS

The Improved Racer Cross Cut Saw, by Actual Test, is the Fastest and Easiest Cutting Saw Made

The Maple Leaf saw is higher priced than the ordinary saw because it costs more to make it. It is made of the very highest quality of steel and tempered by a secret process which toughens and refines the steel. The Maple Leaf trade mark on the saw means that it is the equal, if not superior to any saw made. It also means that you are privileged to test it against any other make and if not found equal or superior in quality you can return it and have your money refunded.

The ambition of the manufacturers of the Maple Leaf Saws has always been to produce the best tempered saw in the world and they are constantly investigating and experimenting with this end in view. They have recently made some valuable discoveries in evenness of temper. It has always been difficult to get a perfectly even temper on long and thin sheets of steel, such as saws are made of. Our recent discoveries make this an absolute certainty. Every user of saws should bear in mind that the temper of the saw is its most valuable quality. High finish and attractive appearance amount to nothing if the temper is not right.

All Maple Leaf Saws are Guaranteed to be Perfect in Temper

—To insure Satisfaction—State where belt is to run—

## Are You Demanding and Getting from Your Molders the Same Efficiency You are Getting from Your Fast Feed Planers?

Has the quantity and quality of your Molding Department been increased proportionately to that of your Planers?—or, are you still going along at the same old speed, tearing out and degrading your stock every time you hit a cross grain or knot?

You can do the same things in your Molder Department that you have already done in your Planer—if you install a <sup>FAY-EGAN</sup> "LIGHTNING" No. 305 HIGH DUTY INSIDE MOLDER.

The 305 is heavy and powerful, all gears cut from the solid and running in grease—it is able, therefore, to handle the heaviest work in a larger quantity than the old style machines.

The 305 is fitted with the new FAY-EGAN patented Molder Heads, combining the advantages of the round head and thin knives with the ability of the square head to carry overswinging cutters. These heads can be jointed on the machine.

Results—instead of degrading your lumber by tearing out and other manufacturing defects, you finish perfectly smooth and uniform, increasing the grade of your product 10 to 30%.

The 305 is wide open, with quick and easy adjustments, so that no time is wasted in long shut-downs—it works up to the maximum efficiency all day long.

Both the cylinders of a 305 are driven DIRECT from the countershaft—transmitting full power to both.

The 305 is fitted with gravity tighteners which automatically increase pressure as load increases and can be thrown back to allow belts to hang slack when machine is not in use.

The 305 is equipped with high speed, side wing, angle clamp bearings—no shut-downs for hot boxes or rebabbitting.

These are but a few of the time and labor saving and grade raising features of the 305 — Our folder No. 2-F tells about the others — Write for it today.

## "IN USE 20 YEARS— NO EXPENSE FOR MAINTENANCE"

That's what the Brown Cotton Gin Company, New London, Conn., say about the J-M Asbestos Roofing on their plant shown below. And this roofing looks good for many years to come.

This is but one of hundreds of buildings on which J-M Asbestos Roofing is still in good condition after fifteen to thirty years of service.

You can't judge how long a roofing will last by the looks. But you can judge pretty accurately how long a roofing will wear by the service it has given them. We'll give you names of responsible business men right in your vicinity who will tell you that such service as above mentioned has been given on their buildings by

## J-M ASBESTOS ROOFING

The reason this roofing gives such long service is because it is made of Asbestos and Trinidad Lake Asphalt—both indestructible minerals. It is literally a flexible stone roofing, so is not affected by water, sun, cold, acids or chemical fumes, and never needs coating. And it affords perfect fire protection.

This attractive roofing can be used on any type of building, and can be easily applied by any one.

Write nearest Branch for Catalog No. 303 and full particulars of our proposition to lumber dealers.

**SPECIAL  
HIGH  
SPEED  
LEATHER  
BELTING.**

For very hard Drives, and high speeds, we recommend our Special Saffron Tanned Leather Belting.

This is made in two weights, Extra and Extra Heavy, from the best selected hides, and is English tanned. It is an extra strong, durable and flexible belt, and will give satisfaction over small pulleys at high speeds where practically nothing else will stand up.

It costs a little more than ordinary leather, but is worth it. Write for prices.

## Federal Engineering Company, Limited

TORONTO, 90 Sherbourne St.

MONTREAL, Unity Building

# GOODHUE BELTING

## FACTORY TO YOUR MILL

**T**O the saw mill and woodworking industries we offer an unusually good belting value in our "Acme Waterproof." This belting is specially made from the best hides to run in wet places where only the best quality belt can "make good." If you require any belting you should enquire into the merits of "Goodhue Belts" then you will buy a "Goodhue."

According to the conditions under which a belt has to run we recommend "Extra," "Standard" or "Acme Waterproof"—each brand the best quality but each made for a different service.

Griplock Riveted Chain Belt

Cross Section of Griplock Riveted

## No More Breakdowns—No More Delays

This is the slogan that users of **Griplock** Chain Belt have adopted. No hooks to be opened up, no breaking of chain belt in **Griplock**. **Griplock** is so constructed that it will withstand the severest kind of service. It is built by the Chain Belt Company, Milwaukee, Wis.; a concern that fully understands the requirements of the Lumber and Saw Mill Trade.

We would be very glad to mail you sample links for your inspection.

## "JOHN BULL" Comfort

FOR real foot comfort there is nothing to equal the "John Bull" larrigans. They are made from the best leather, oil-tanned by ourselves. A desirable feature of "John Bull" larrigans is the counter stiffener that is sewn in with the leg if a sole or heel is required.

On every pair of "John Bull" larrigans you will find our trade mark—look for it and when you get it you know you have the best larrigan made.

We Solicit a Trial  
Order

### "Black Diamond"

will do more work and easier than any other belt made. Give it a trial. Unequaled for Dynamos. Fans or any high speed machinery with small Pulleys. Does not require to be kept as tight as the regular Oak Belt.

# IT'S THE DRUM

to which we attribute mainly the  
success of

## The Columbia Sander No. 2

The Drum is equipped with our Patent Automatic take-up device which keeps the paper at an even tension—at all points and at all times.

Practical demonstration has proven, however, that the Columbia is the **only** Sander that has a **real** automatic take-up for the paper.

COLUMBIA SANDER NO. 2  
Speed of Feed is under instant  
control of operator

FIRST IN

QUALITY

### The Columbia Also Leads in Other Features

- The raising of the drums on inclines—not screws.
  - The extra fine adjustment—so necessary for perfect work.
  - The ease and quickness with which the drums can be covered.
  - The perfectly balanced drums—accomplished on special machines built by ourselves for the purpose.
  - The perfectly central non-cramping arrangement for the oscillators.
  - The short, heavy screws for raising the top feed works—eliminating back lash and vibration.
- And other features—fully illustrated and described in our

### NEW SANDER BOOK

Your enquiry for this book will bring you full details without obligation—you ought to know more about this machine.

P. O. Box 1384 - CALGARY, ALTA.

## INVESTMENTS

If satisfactory they must be safe and profitable. Timber investments are both.

Certain fundamentals must be taken into account in buying timber. The buyer should know something of the intrinsic value of the timber. It should be bought at an opportune time. It should be protected from fire and other enemies. It should be resold or manufactured when the time is ripe.

Such procedure calls for intimate knowledge, such as we have acquired during our connection with the timber trade of America, embracing a third of a century

Our faith in timber is as firm now, when it commands high prices, as it was years ago when timber was sold by the acre at nominal prices.

We make a specialty of managing timber investments, carrying on the detail work from date of purchase to date of sale, our compensation being a part of the net profits.

We will handle an investment for you on that basis.

If you wish to share in the profits to be derived by those who buy timber and hold it until needed, investigate this offer.

HORSE DEPARTMENT

"The Place to Buy them Worth the Money"

## The Truck That Saves It's Cost Several Times Over in The Year

This truck is designed for lumber yards and planing mills and will be found invaluable for loading and unloading cars.

The front gearing is detachable and may be used with eight or twelve hind gearings. It is a double-header, nuts on axles being kept tight with Steel Cotter Keys.

Oil cups on the wheels and the fact that there is no resetting of tires saves any amount of trouble.

The old wooden-wheeled truck is a back number in comparison with this. It will pay you to write for our general catalogue which describes these trucks in detail, and pick out the style you want now.

## "Dunbar" Shingle Mill

THIS mill is acknowledged the most complete and satisfactory shingle mill on the market. It has a capacity of from 1,500 to 4,500 per day, according to the quality of the lumber.

Our literature contains full particulars.

**Maritime Foundry & Machine Works, Ltd.**  
Chatham, N. B.

## Log Handling Machinery

All these machines are made strong and heavy, and they are all built for lots of hard, rapid work.

The cylinders of all the log deck machinery are similar to the illustration. You will notice the absence of all piping—also you will note the check valves in each end.

A good thing to remember is that these machines are all guaranteed as to material, workmanship and proper operation, and we are prepared to put them in on trial at our risk at any time.

Another thing that will interest you at this time is that we have a complete stock of this material on hand and can make prompt shipment.

**William Hamilton Company**  
Peterborough, Ontario

# Lumber Camp Ranges and Heaters

Our stoves are specially designed to meet all requirements of camp work.

We know exactly what is necessary and desirable in this class of stove.

We put into all our stoves the best of material and workmanship coupled with the best of expert experience.

The 'Leader Range' for coal and wood, shown in this cut is specially adapted to Lumberman Camps, Boarding Houses, Hotels and Railroad Construction Camp Work. We also make this Range with side hinge doors.

It is large, heavy and strongly built. Has good oven space and large heating surface. When a good, solid, reliable stove is wanted the 'Leader' will give satisfaction.

Write for our catalogue.

TORONTO, ONT.

## Not altogether what we say but what users say

"We have used the Alligator or Warping Tug manufactured by you for the last 7 or 8 years, and consider them indispensable to lumbermen on waters of French River or similar streams."

Will move a bag containing 60,000 logs, in calm weather, 30,000 in a head wind.

**West & Peachey - Simcoe, Ont.**

from cants and flitches, from either  
hard or soft woods.

## ROUND LOG GANGS

JUST WHAT THE NAME IMPLIES  
—taking all your small logs just as  
they come from the pond and cutting  
them up into boards or dimensions,  
getting every board there is in the  
log, never over-slabbing (wish we  
could say this of all head sawyers.)  
Built to handle either one or two logs  
at once, up to 14 in. diameter.

KEEP THE SMALL LOGS AWAY  
FROM THE HEAD SAW and CAR-  
RIAGE entirely, raise your cutting  
capacity, and install economy by the  
same stroke.

Not an EXPERIMENT, but an  
ECONOMIC NECESSITY.

Think it Over Carefully, then Write  
us for Details.

"The Gang cannot  
Overslab."

**Wickes Brothers**

# Spring Sawing

Yes the days for spring sawing are close at hand and now is the time to put your  
mill in shape for operations. Forestall breakdowns and delays by having your mill  
overhauled by us.

We are equipped to make repairs or supply new machines for any part of your mill.

Our saw mill machinery includes

**Cant Flips, Log Loaders, Log Decks, Board Catchers,  
Steam Feeds, Steam Niggers, Live Rolls, Concave Rolls.**

If you have not our literature you should write for it today. Prices on any  
of our machines cheerfully quoted

"EVERYTHING FOR THE SAW MILL FROM THE MOTIVE POWER TO THE TRIMMER"

**MOWRY & SONS, Gravenhurst, Ontario**

The  
Markof  
Quality

One of the any Unsolicited Statements of Users of Our Feeds:

Burt's Corners, N. B.,  
Jan. 14th, 1913.

The E. Long Mfg. Co.,  
Orillia, Ontario.

"I want to say your steam feed is an 'Ideal'. Some Millwrights told me I would need another boiler and it rather frightened me, but as for steam, I never knew the difference in it. It is just splendid. Have used it ever since it was put in and have not had a bit of trouble."

Yours truly,  
(Sgd.) Elwood Burt

### Direct Acting "Shot Gun" Feed, Fitted with Double Model "D" Valve

Built in sections to make up any required length, 8 in., 10 in., 11 in., 12 in., and 14 in. bore. We positively guarantee that our valves will not stick or kick. They are perfectly steam tight, and are without exception the most economical valves manufactured.

Mill Plans,

**W**ATEROUS Steel Carriages are being used in the largest, best equipped Mills in Canada to-day. Built for fast cutting, for accuracy, and to give operating service, they are carefully put together of the best materials obtainable—they stay right.

**I**NCREASE in cutting efficiency and the increase of cutting speed have been taken care of in the design of these Carriages. Improvements in the knee and head blocks and in all moving parts to overcome lost motion; a new Setworks—our No. 4—which absolutely prevents and will not develop slack; new style, inserted tooth, quick and easy operating dogs; a friction receder that

is operated with the Setworks—these special features are what keep the Waterous Steel Carriage at its place at the head of the list of "Up-to-date Sawmill Equipment." We build our Steel Carriages in sizes of 36" to 72" knee opening, in any length and with any number of head blocks—screw or rack motion. They are adaptable for rope or gunshot feed.

### STRONG GRIPPING POWER

One of the characteristic features of Dick's Belting is the strong gripping power, which ensures the transmission, positively without loss, of the whole power given off by the engine. The entire absence of stretching or slipping is another important quality Dick's Belts possess. It will pay you to investigate these belts before buying any other make.

## Try pulling this Belt apart

That will give you some idea of the enormous strength built into Goodyear Belts. Not an ounce of untested rubber is used, not a roll of untested duck. Each finished Belt is inspected before shipping *to make sure* that it will stand the *wear* and keep *pliable*.

The Goodyear system of Belt making is calculated to give the greatest efficiency in practical Belt Service.

**A close, clinging grip of the pulleys**—absolutely non-slipping. Goodyear Rubber Belting gives this cohesive contact because of its yielding rubber surface, and the practical result is an immense saving of power.

**Pliability under all conditions.** A belt must be pliable to grip the pulleys. The hard cotton fibre of Goodyear Belting is permeated—under tremendous pressure—with rubber. The treated layers are compressed into an homogeneous mass. This preserves the pliability of rubber in the finished Belt.

**Entire absence of "stretch."** The "curing" or vulcanizing of Goodyear Belting is performed whilst the Belt is stretched to the limit of safety in a special machine. "Stretch" in service therefore is impossible. This means no stopping of machines for adjustment—no idle machines, no idle men.

**Enormous strength.** The union of carefully tested hard-fibre cotton with tenacious and elastic rubber "friction"—compressed to make the plies practically inseparable—gives a combination of prodigious strength. A Goodyear Rubber Belt is as nearly unbreakable as any Belt can be.

**Long Life.** The duck or fabric of Goodyear Belting cannot be reached by water, or anything else that would set up rot and destroy the Belt. A Goodyear Belt renders long and efficient service. 103

# CHOICE PINE

Lumber buyers who come face to face with the consuming public are to-day experiencing a demand for quality products that we anticipated a good many years ago.

Our first move in the production of Pine Lumber was the acquisition of a good supply of timber—not only a good quantity, but particularly a good quality, and the best proof we can offer you of our success in the selection of this kind of timber is found to-day in our

# Tenders For Purchase of Machinery and Timber

The undersigned offer for sale in large or small blocks all their remaining timber lands, mills and town property situated in the Town of Parry Sound, Ont.; Tug Scow and other Lumber Equipment, including boom chains, plows, sleighs, etc.

We have sold quite a number of timber parcels but still have some good bargains left in Townships of McDougall, Foley, McKellar, Monteith, Carling, Christie, Shawanaga, Burpee, McConkey, Mills, Allen, Secord, Falconbridge and Street.

Tenders will be received for the purchase of the following Sawmill Machinery:

1 8 ft. Double-cutting Telescope Band Mill, made by Waterous Engine Works.

1 3-block right hand steam feed carriage fitted with steam set works, made by Wm. Hamilton, Peterboro, with 10-in. steam feed cylinder.

1 Double cylinder steam nigger, right hand.

1 Log Loader for right hand mill.

1 8 ft. Double-cutting Telescope Band Mill, made by Waterous Engine Works.

1 10 in. Double-cylinder steam feed carriage, left hand, for cutting 24-ft. logs.

1 left-hand steam nigger.

1 Log-loader.

1 Endless chain jack ladder with two kickers complete for right and left hand mills.

2 Roger Gang Edgers for 8-in. cants and lumber.

1 Waterous double edger, 6 saws.

2 2-saw trimmers.

1 16-ft. Slash table.

1 20-ft. Slash table.

1 16-ft. Revolving Slash Table.

1 Horizontal Slab Resaw with 5-ft. wheels, made by Diamond Iron Works.

1 70-ft. Transfer Chain for sorting lumber, with necessary levers, rolls and transfer chains to complete outfit.

1 Lath Mill with bolter.

2 Lath Trimming Saws.

## FILING ROOM

1 Automatic Filing Machine for 12-in. D.C. band saws.

1 Automatic Grinding Machine for 8-in. S.C. band saws.

1 Automatic Machine for circular saws.

1 Hand Machine for cut-off saws.

1 Lap Grinder.

1 Set Band Saw Rollers and levelling blocks, with necessary swedges, a number of second-hand band, gang, edger and slash table saws.

## POWER PLANT

1 24 x 36 Slide Valve Engine with 40-in. x 12-ft. extra heavy double arm split fly wheel.

2 Double Duplex, high pressure Water Pumps.

5 60-in. x 16-ft. Return Tubular Boilers, allowed 125 lbs. steam.

2 125 h.p. Water Wheels.

1 Upright Engine for sawdust conveyor.

1 10 h.p. Engine.

1 Mitts & Merrell Hog.

1 Wood Machine for 22-in. wood.

1 Wood Machine for 16-in. wood.

1 Edger for ripping dry lumber, installed.

1 Edger for ripping dry lumber, not installed.

1 30 h.p. Generator, 250 volt.

1 30 light arc generator.

There is also a large quantity of shafting, pulleys, hangers, belting, tram cars and rails and turn-tables, particulars of which may be had on application.

Also, contents of machine shop, containing Planer, Drill, Lathe and Machinery, with tools necessary for repair work.

The lowest or any tender not necessarily accepted.

All of the above open for inspection at Parry Sound.

**The Meaford Lumber Co.**

**A  
Message  
to You**

(Please read)

DOES it mean anything to you to know that **you** can get prompt shipments of the highest quality Lumber and Shingles at the same prices you are paying for inferior service and goods?

IS there anything more unsatisfactory to **you** than being held up by delays in receiving the stock you are in urgent need of—maybe it is only a few pieces of lumber or bundles of shingles out of a car?

HOW do **you** feel when stock for which you have been waiting arrives and is poor quality—unfit for the use you require it?

WHY don't **you** place your orders with a Company who can, in shipping you, obviate the worries and dissatisfaction mentioned above.

**OUR MESSAGE TO YOU — DEAL WITH US.**

# AUCTION SALE

## White Pine Timber Limits and Mill

### Province of Ontario

The undersigned has received instructions from G. T. Clarkson, Assignee to offer for sale by public auction, in the Board Room of the Queen's Hotel, in the city of Toronto, on Thursday, April 24th, 1913, at twelve o'clock noon, the assets of the

## STONE-GRANT LUMBER COMPANY, LIMITED

Successors to Loveland & Stone  
of Cutler, Ontario and Saginaw, Michigan

Consisting of:

**Lot 1.**  
Timber Berth, having an area of twenty-seven square miles, more or less, and being the west half and the northeast quarter of the Township of Ermatinger, held under licenses from the Province of Ontario, being Nos. 197 and 198 for the Season 1912-13. The Berth is estimated to contain 50,000,000 feet B.M. of white pine of good quality.

**Lot 2.**  
Timber Berth, having an area of thirty-six square miles and being the Township of Dowling, held under license from the Province of Ontario, being No. 514 for the Season 1912-13. The Berth is estimated to contain 1,000,000 feet B.M. of white pine.

**Lot 3.**  
Timber Berth, having an area of thirty-six square miles, more or less, and being the Township of Fairbanks, held under license from the Province of Ontario, being No. 423 for the Season 1912-13. The Berth is estimated to contain 1,000,000 feet B.M. of white pine.

**Lot 4.**  
Timber Berth, having an area of thirty-six square miles, more or less, being the Township of Drury, held under license from the Province of Ontario, being No. 422 for the Season 1912-13. The Berth is estimated to contain 1,200,000 feet B.M. of white pine.

**Lot 5.**  
Timber Berth, having an area of nine square miles, more or less, being the S.E.  $\frac{1}{4}$  of the Township of Trill, held under license from the Province of Ontario, being No. 424 for the Season 1912-13. The Berth is estimated to contain 1,200,000 feet B.M. of white pine.

**Lot 6.**  
Timber Berth, having an area of nine square miles, and being the S.W.  $\frac{1}{4}$  of the Township of Perkin, held under license from the Province of Ontario, being No. 342 for the Season 1912-13. The Berth is estimated to contain 3,000,000 feet B.M. of white pine.

**Lot 7.**  
Timber Berth, having an area of nine square miles, more or less, and being the S.E.  $\frac{1}{4}$  of the Township of Hutton, held under license from the Province of Ontario, being No. 341 for the Season 1912-13. The Berth is estimated to contain 500,000 feet B.M. of white pine.

**Lot 8.**  
Timber Berth, having an area of thirty-six square miles, more or less, being known as Berth No. 131, Sable River, being No. 390 for the Season 1912-13. The Company's records indicate that the Berth contains a considerable amount of spruce and a small amount of pine.

**Lot 9.**  
Lumber mill at Cutler, on the Georgian Bay, Ontario, with approximately two hundred acres of land and water rights, together with dockyard and surrounding buildings, including stores, boarding house, office premises and a number of dwelling houses. The mill is situated within a reasonable distance from the mouth of the Spanish River, and has a capacity of 200,000 feet per day—is fully equipped—has two double cut band saws, circulars and gang saws, also edgers, trimmers, etc. There is also a complete electric light plant, steam plant and machine shop. The property is adjacent to the Canadian Pacific Railway, and is valued on the Company's books at \$147,000. Mill supplies inventoried at \$3,290, will be included with the mill property.

**Lot 10.**  
General Stock and Merchandise in Company's store at Cutler, amounting as per inventory to:—

|               |            |
|---------------|------------|
| Groceries     | \$2,170.87 |
| Drugs         | 328.81     |
| Hardware      | 458.38     |
| Dishes        | 50.98      |
| Dry Goods     | 316.73     |
| Clothing      | 610.42     |
| Hats and Caps | 348.78     |

|                   |            |
|-------------------|------------|
| Rubbers and Shoes | 1,295.55   |
| Dry Goods         | 2,601.39   |
|                   | 8,181.81   |
| Fixtures          | 1,340.35   |
| Total             | \$9,522.16 |

**Lot 11.**  
Camp equipment, consisting of sleighs, blankets, cooking utensils and supplies in camps in the Township of Hutton, amounting as per inventory to approximately \$6,603.17.

**Lot 12.**  
Tugs and equipment of the North Channel Towing Company, Limited, Cutler, being:—  
Tug "W. H. Seymour," valued at ... \$2,500.00  
Tug "Alert," valued at ... 800.00  
Tug "Lighter Hampey," valued at ... 1,000.00  
Booms and Chains, valued at ... 2,500.00

Total ... \$6,800.00

This lot will be offered subject to prior sale.

All the Lots will be offered separately and subject to a reserve bid.

With respect to Lots 1 to 8, the same shall be accepted subject to the terms and conditions of the Licenses under which they are held and the restrictions in respect of lands withdrawn for settlement or other purposes by the Province of Ontario.

In event of no satisfactory offer being received for Lot 1, the Vendor reserves the right to offer it for sale in either two or three parcels.

#### Terms of Payment:

**For Lot 1**—One-third cash and the balance upon approved security in one and two years, with interest at seven per cent. satisfactorily secured.

**For Lots 2, 3, 4, 5, 6, 7 and 8**—One-third cash and the balance in six, twelve and eighteen months, with interest at seven per cent. per annum, satisfactorily secured.

**For Lot 9**—One-third cash and the balance in one and two years with interest at six per cent. per annum, satisfactorily secured.

**For Lot 10**—One-quarter cash and the balance in two, four and six months, with interest at seven per cent. per annum, satisfactorily secured.

**For Lot 11**—One-half cash and the balance in three months, with interest at seven per cent. per annum, satisfactorily secured.

**For Lot 12**—One-half cash and the balance in six months, with interest at seven per cent. per annum, satisfactorily secured.

With respect to Lots 1 to 9, further particular conditions of sale will be read at the time of the sale.

With respect to Lot 10, the purchaser must accept it as it stands, offering a lump sum for the same, accepting the benefit of the sales since the assignment and paying expenses in regard thereto, including the rental for the use of the premises.

With respect to Lot 11, the purchaser must accept the same as it stands, offering a lump sum therefor.

With respect to Lot 12, the purchaser must take the same as it stands, accepting the title of the North Channel Towing Company, Limited, thereto.

Further particulars as to the properties, together with estimates as to the timber, inventories and conditions of sale, may be had upon application to—

## Solid and Inserted Tooth Circular Saws

*We make a specialty of these lines*

**We remake old Solid Tooth Saws  
into new Inserted Tooth Saws**

*Write to us for quotations*

Our saws have been before the public of Canada since 1855, and have won a reputation far excelling any other make of saws, combining as they do so many points of marked superiority.

By the old method the tempering of circular saws was to a great extent a matter of chance.

By our Patent Process that uncertainty is entirely avoided.

Being tempered and straightened by heat and pressure in air-tight ovens at a uniform heat between heavy revolving plates, we produce a perfectly even temper throughout the plate, and being free from that uneven strain or tension caused by so much unequal hammering they are not so liable to buckle, which was a great source of trouble and expense in the old style of saw.

These saws will stand up to their work better under all circumstances, and being made of a higher quality steel than it is practical to use by the old method, they hold an edge longer and will do more work than any other saw on the market.

We are prepared to make prompt deliveries of all Saw Orders—Rush Orders by mail or wire receive immediate attention.

# Dominion Timber Regulations

---

Licenses to cut timber on Dominion Lands in the Provinces of Manitoba, Saskatchewan, and Alberta, the Northwest Territories, within twenty miles on either side of the main line of the Canadian Pacific Railway in the Province of British Columbia, and in the tract of three and one-half million acres to be located by the Government in the Dominion in the Peace River district in the Province of British Columbia, lying east of the Rocky Mountains and adjoining the Province of Alberta, shall be disposed of by public auction at the office of the Dominion Timber Agent for the districts in which the berths are situated.

Before any parcel of timber is offered for sale it shall be surveyed by a duly qualified Dominion Land Surveyor into berths of an area not exceeding twenty-five square miles, and each of such berths shall then be thoroughly cruised by a duly qualified timber cruiser in the employ of the Dominion Government. The Minister shall then fix an upset price at which the berth shall be disposed of, and no berth shall be sold at less than the price so fixed.

Purchases to the amount of one thousand dollars or under shall be paid in cash at the time of sale. Purchases over one thousand dollars and not exceeding five thousand dollars shall be paid, one-half in cash at the time of sale, and a note or notes shall be given for the remaining half of the purchase price, payable in three months, with interest at the rate of five per cent. per annum. Purchases over five thousand dollars and not exceeding ten thousand dollars shall be paid one-third in cash at the time of sale, and notes shall be given for the remaining two-thirds of the purchase price, payable in three and six months, with interest at the rate of five per cent. per annum. Purchases exceeding ten thousand dollars shall be paid one-fourth in cash at time of sale, and notes shall be given for the remaining three-fourths of the purchase price, payable within three, six and nine months, with interest at the rate of five per cent. per annum. Notes shall be made payable at a bank in the city or town in which the sale is held or at a bank in the city of Ottawa. Cash payments must be made at the time of sale in legal tender or by an accepted cheque on a chartered bank, or by a draft issued by a chartered bank, payable to the order of the Deputy Minister of the Interior. If default is made in any payment required by this section the sale shall be forfeited and void.

The purchaser must also pay the cost or the estimated cost of the survey of the berth before a license is issued.

The licensee shall pay an annual ground rent of five dollars per square mile except for lands situated to the west of Yale, in the Province of British Columbia, in which case the yearly ground rent shall be five cents per acre.

The licensee shall pay the following dues on timber cut on his berth :—

Sawn lumber, 50 cents per thousand feet, board measure.

Railway ties, eight feet long,  $1\frac{1}{2}$  cents each.

Railway ties, nine feet long,  $1\frac{3}{4}$  cents each.

Shingle bolts, 25 cents per cord.

And 5 per cent. on the sale of all other products of the berth.

## Timber Permits

Yearly permits are granted to settlers, mine operators and others on application to the Dominion Timber Agents, from whom further information can be obtained.

"The Canada Lumberman and Woodworker" is published in the interest of, and reaches regularly, persons engaged in the lumber, woodworking and allied industries in every part of Canada. It aims at giving full and timely information on all subjects touching these interests, and invites free discussion by its readers.

Special care is taken to secure for publication the latest and most trustworthy market quotations throughout the world, so as to afford to the trade at home and abroad information on which it can rely in its operations.

Advertisers will receive careful attention and liberal treatment. For manufacturing and supply firms wishing to bring their goods to the attention of owners and operators of saw and planing mills, woodworking factories, pulp mills, etc., "The Canada Lumberman and Woodworker" is undoubtedly the most direct and profitable advertising medium. Special attention is directed to the "Wanted" and "For Sale" advertisements.

Vol. 33

Toronto, April 15, 1913

No. 8

## Free Lumber For United States

The proposed new tariff act which has been introduced by the United States government at Washington, contains provisions which are of much interest to the manufacturers and wholesalers of lumber in Canada. Ever since the defeat of the reciprocity agreement in Canada and the success of the Democratic party in the United States it has been generally believed that the duty upon lumber entering the United States would be removed as soon as a new tariff act could be enacted. It would never do, of course, to conclude that because the proposed act includes free lumber, the duty will certainly be removed. There is many a slip in connection with tariff measures, between their proposal and enactment. Unquestionably a determined fight will be put up by all who are interested in the protection of lumber in the United States. The indications are very favorable however, for the enactment of the act in much the same form as that in which it has been submitted to Congress. The Democratic party have an overwhelming majority in the House of Representatives and also control the senate. Under these conditions, unless they can be persuaded that they have made a mistake in providing for free lumber, it appears certain that the duty will be removed.

The effect of the removal of the duty upon lumber in the United States is problematical. Various opinions are expressed by those who are closely in touch with the trade. Under present conditions the demand for lumber in Canada is so strong that it is not considered likely that our exports to the United States will be very much increased. When Canadian markets are quieter it is quite possible that free entry into the United States will have an important influence upon trade. It will have a tendency to improve the market for the low end of Canadian stocks. Just at present the low end is enjoying a record demand in Canada and there is not much of it left for export to the United States. A few years ago however, when the low end had ac-

cumulated, on account of poor demand, free entry into the United States would have been an important factor and would have assisted Canadian mills in getting rid of stocks which they were obliged to accumulate. Such conditions may develop again in the future and the free entry of Canadian lumber in the United States would then be of considerable importance.

The most satisfactory feature of the present situation is that Canadians may in future obtain some compensation for the ready access which United States lumber manufacturers have secured of late years to Canadian markets.

Frequent reference to this situation has been made in the Canada Lumberman and statistics have frequently been published showing how rapidly the invasion of United States lumber into Canadian markets has increased. During 1912 the imports of sawn boards, etc., into the prairie markets increased by 53 per cent. over those of 1911. The imports of shingles into the same markets increased by 381 per cent.

The present duty upon lumber, lath, shingles, etc., and the situation as it will be under the proposed new tariff is shown in the following table:—

| Article                                                                                                      | Present Duty       | Proposed Duty |
|--------------------------------------------------------------------------------------------------------------|--------------------|---------------|
| Rough lumber . . . . .                                                                                       | \$1.25 per M. feet | Free          |

Canadian exports of wood and manufacturers of wood to the United States during the month of December, 1912, were valued at \$2,892,146. During December, 1911, the total was \$2,331,963. During the nine months ending December the exports were as follows:—1912, \$28,728,191; 1911, \$25,131,365; 1910, \$28,924,613.

During the month of January, 1912, the United States imported from Canada printing paper for books and newspapers valued at not above 2½c a pound, to the amount of 6,031,202 pounds valued at \$108,904. The act throwing open the United States market to Canadian paper had become law in July, 1911. In January, 1913, similar exports to the United States from Canada aggregated 21,372,940 pounds valued at \$406,672. During the seven months ending January, the exports were as follows: 1912, 30,489,044 pounds, valued at \$575,855; 1913, 106,930,521 pounds, valued at \$2,026,000. In addition to this Canada exported to the United States during the seven months ending January, 1913, "other paper and board valued at not over 4c a pound" 1,255,079 pounds, valued at \$41,936. These exports were all duty free.

The exports of mechanical pulp for the period ending January, 1913, to the United States amounted to 244,604,633 pounds, valued at \$2,033,496. The exports of chemical pulp during the same period to the United States amounted to 37,453,282 pounds, valued at \$722,503. These also entered the United States free of duty. During the same period the United States exported to Canada 4,909,775 pounds of newsprint paper, valued at \$99,487. This was subject to duty when entering Canada.

From the United States manufacturer's point of view the above figures may not be satisfactory. From the Canadian point of view they show that Canada sent to the United States paper and pulp to the value of \$4,823,935 which entered that country free of duty, and purchased from the United States paper and pulp to the value of \$99,487, on all of which a duty was collected. Some of the United States trade journals complain bitterly of this situation, failing apparently to realize that it is the natural result of economic conditions. Free entry of Canadian pulp and paper into the United States will unquestionably cause still greater increases in Canadian exports to that country.

## Free Lumber—A Question of Markets

The fact that the United States Government has decided among other things to remove the duty upon pulp and paper and also the duty upon lumber entering that country puts into the background all the discussion which has taken place of late regarding the prohibition of the export of logs grown upon Crown Lands in several of the provinces of Canada. Likewise it renders unimportant for the time being, the requests of the lumber industry in Canada for a duty upon rough lumber entering this country from the United States, a request which is based upon a desire to counteract the duty which, up to the present, has been charged upon Canadian lumber entering the United States. Lumber manufacturers and exporters in Canada are content to watch the situation silently and are prepared for any result that may develop. The same may be said of the pulp and paper industry. Each however, is hoping that the duty will be removed so that its markets may be enlarged. Behind the whole question lies the problem of markets. Many of the manufacturers and dealers in the United States are opposed to the removal of the duty, while others who can make a profit out of handling Canadian products are anxious to have them enter the United States free of duty. In Canada much the same situation prevails in regard to the prohibition of the export of raw material in log form. We desire to build up great industries in this country and we are not to be blamed for adopting any reasonable means to this end, even though it may bear a little severely upon the people of the United States.

The question is entirely one of business. Some of the trade journals in the United States have been criticising Canadians for their objections to permitting the export of logs but the criticism is without foundation. The course which we have adopted in several of our provinces is exactly the course which has helped to establish the in-

dustrial prominence of the United States. Protective tariffs have encouraged the development of great industries in that country. For the same reason we have prohibited the export of our raw materials because we want to build up industries in this country. With a country like the United States adjoining us, whose appetite for manufacturing is ravenous and almost uncontrolled, we would be open to genuine criticism if we left the way clear for the export of our raw materials. We would soon have nothing left, either raw materials or great industries to use them. Business principals alone must dictate the policy of Canada in this regard. The people of the United States would be the first to ridicule us for our simplicity, if we permitted them to exhaust our raw material for the development of their industries, instead of inducing them to bring over their brains and their money and develop the resources of Canada for the benefit of the people of Canada.

In connection with the proposed reduction of the tariff on lumber entering the United States it is interesting to note the course of lumber tariff legislation in that country. The Act of July 4th, 1789, placed a duty of 5 per cent. upon lumber. Later, this was increased to 7½ per cent. and in 1832 to 25 per cent. ad valorem. The Act of 1841 put lumber on the free list, but that condition lasted only one year, after which a duty of 20 per cent. was imposed. In 1854 the Canadian reciprocity bill put lumber from Canada on the free list. This continued until 1866, when a 20 per cent. duty was again imposed on rough lumber. The duty remained at this figure until 1872, when the rate was made \$2 a thousand feet. In 1890 the Dingley bill reduced the rate to \$1, and in 1894 the Wilson-Gorman bill put rough lumber on the free list. In 1897 the Dingley bill restored the duty of \$2 and it remained at this figure until the Payne-Aldrich bill reduced the rate to \$1.25, at which figure it remains to-day.

## May Lower St. Lawrence Insurance Rates

An interesting despatch from London, England, was recently published in the Canadian newspapers, stating that there is a possibility of an improvement being made in connection with the heavy insurance rates charged upon vessels trading with British North America. An agitation has been in progress along this line for some years. Vessel owners and Canadian business men have long felt that they were subject to unfair discrimination in this matter. The St. Lawrence route obtained a bad name in its early days, and the high rates of insurance have continued down to the present, in spite of the fact that large sums of money have been spent by Canada in making navigation on the St. Lawrence safe. A number of representatives of leading London insurance companies held a meeting on April 1st when the matter was discussed with one of the foremost representatives of Canadian insurance. The result was that it was decided to appoint a small committee to consider whether any improvement could be made in the clauses governing the situation. At present, vessels on which additional rates are paid are permitted to trade with British North America between May 1st and September 1st. It is now suggested that this period could be altered so as to include the months of April and September. This alteration would enable shippers to ex-

port a large quantity of the crops which are available in September. A proposal was made that the Canadian Government might agree to encourage owners to send their vessels to Canadian ports by compensating them for any additional premiums charged, or that it might assume responsibility for 50 per cent. of the claims for damage due to negligence by pilots. It was proposed also to call the attention of the Government of Canada to the defects of the pilotage system as disclosed by the findings of recent courts of enquiry.

The proposals to have the Canadian Government reimburse vessel owners for the extra premiums might give the desired result of encouraging additional vessels to enter the Canadian trade, but after all, this is not what Canadian exporters and importers desire. Those who have studied the situation closely declare emphatically that the insurance charges for vessels coming to Canadian ports are now decidedly unfair. If this is the case, neither the Canadian Government nor merchants engaged in the Canadian trade should be required to pay an additional tax for insurance. It is encouraging however, to note that the question is being taken up seriously by insurance authorities in the old country and Canadians will hope that this step will, in the end, result in a more satisfactory condition of affairs.

## Deterioration of Fire-Killed Timber

In the announcement which the British Columbia Forest Branch is making regarding timber for sale along the G. T. P. between Yellowhead Pass and Fort George, there appears an item of "5,000,000 feet of timber killed in 1912." The Government is anxious in the interest of the country to have the timber taken out and used before decay and insects get a firm hold. As is well known, dead timber is not able to resist either of these enemies and it is only a matter of time before what was perfectly healthy wood is filled with a net-work of insects' borings and fungus growths. Damages to the extent of over \$5,000,000 annually are estimated to take place in Eastern Canada and the United States, in this manner. These losses may not be paralleled

in the west, but there is undoubtedly vast depreciation going on at all times and it will become more and more noticeable as time goes on and timber values increase.

The rate of deterioration of fire-killed timber depends a great deal on the size of the timber and proportion of sapwood. Trees under 3 feet in diameter, if killed outright by a crown fire, are usually unmerchantable in 8 or 10 years. Larger trees, with thin sapwood, may remain merchantable for 15 or 20 years.

Logging fire-killed timber involves losses in many ways, particularly in bringing useless parts of the tree to the mill, and in the danger of breaking when the trees are being felled. There are difficul-

ties in milling, in that the soft punky outside layer of decayed logs take up gravel which is bad for the saw.

The average results of tests of small specimens free from defects indicate that the wood of fire-killed Douglas fir, after a considerable number of years, is slightly weaker than that cut from green timber. The difference, however, is not great, and in structural sizes containing the defects ordinarily found in timber, very largely disappears. In tests which have been conducted bridge stringers of fire-killed wood proved to be somewhat less strong than the green stringers with which they were compared; while the floor joists (of both kinds of

wood) were about equal in strength. In stiffness, the fire-killed wood was fully equal to the green wood for all sizes tested.

In general, tests indicate that the sound wood from fire-killed Douglas fir of the Pacific Coast may safely be used for general construction purposes and that its merits are nearly if not quite equal to those of material from green, growing trees. It should be emphasized, however, that these results apply only to sound wood. Pieces showing indications of decay, whether cut from green or from dead trees, should be rigidly excluded where the strength or durability is important.

## The Camper Causes Many Forest Fires

In the past year, according to the statement of the Chief Forester of British Columbia, over twenty per cent. of the fires which the forest rangers had to fight were caused by campers. The list which appears in the annual report of the Forest Branch shows that fires originated as follows:—

|                           |    |
|---------------------------|----|
| Campers                   | 38 |
| Railway locomotives       | 34 |
| Lightning                 | 23 |
| Donkey engines            | 11 |
| Railway construction      | 11 |
| Public road construction  | 9  |
| Uncontrolled permit fires | 8  |
| Smokers                   | 7  |
| Accidents                 | 6  |
| Logging railways          | 6  |
| Prospectors               | 3  |
| Indians                   | 3  |

How many of the 188 fires of which the causes are still unknown were the result of an untended camp fire is open to surmise, but as in most of the other risks such as railway and road construction, and logging operations, the existence of fire is at once known, the camper may be justly held to account for a very large proportion of the season's conflagrations.

Stringent regulations have been passed by the Board of Railway Commissioners of Canada to cover the risk of new railroads under construction in the province. The patrol has been doubled on the rights of way, and every possible precaution urged upon logging operations. The Forest Branch is endeavoring to co-operate in every way with those who have work to perform which is attended with danger to the forest. But the greatest danger of all—that of the man who is

careless with his camp fire, still remains open, and it can be removed only by increased watchfulness on the part of every individual who uses the woods for pleasure or profit.

This year the officers of the Forest Branch expect a harder season than ever before. The very conditions of dampness and consequent heavy growth of grass and weeds which made the year 1912 one of the best in the history of the Province from the standpoint of fire protection, will combine to make a great fire hazard this spring.

The rangers now appointed by the Branch are being given particular instructions with regard to warning campers and securing their co-operation in keeping down the danger to the forest.

The six simple rules which the rangers will impress upon all those they meet in the woods, are:—

- (1) Be sure your match is out before you throw it away.
- (2) Knock out your pipe ashes or throw your cigar or cigarette stump where there is nothing to catch fire.
- (3) Don't build a camp-fire any larger than is absolutely necessary. Never leave it, even for a short time, without putting it out with water or earth.
- (4) Don't build a camp-fire against a tree or log. Build a small one where you can scrape away the needles, leaves or grass from all sides of it.
- (5) Don't build bonfires. The wind may come up at any time and start a fire which you cannot control.
- (6) If you discover a fire, put it out if possible; if you can't, get word of it to the nearest forest ranger or fire warden as quickly as you possibly can.

## Editorial Short Lengths for Busy Readers

At the suggestion of the transportation committee of the Chambre de Commerce, Montreal, a resolution has been passed authorizing the sending of a request to Mr. Tiffin, president of the Commission of the Intercolonial Railway, for a better car service for the lumber trade. Complaints have been made by members of the Chambre engaged in the lumber trade that the defective service on several of the railways, and especially on the Intercolonial, is injurious to their business, the lack of cars and engines often resulting in inability on the part of the trade to fill orders. It was decided that similar complaints should be lodged with other railways at a later date.

A special report affirming the efficiency of the top lopping law in the prevention of forest fires has been transmitted to the New York State Legislature by the Conservation Commission. The efficacy of top lopping was questioned by opponents of the law, so the commission ordered a thorough investigation by the State Superintendent of Forests. In substance, the State foresters report: That the top lopping law does very materially increase fire protection, because the period of danger after lumbering is greatly shortened; that the thoroughness with which top lopping is done has much to do with future results; that a limitation may be made beyond which it is not necessary to lop, namely, limbs of tops less than 3 inches in diameter; that on account of bark peeling operations, which must be done within a limited time, this commission should be given power to grant reasonable extension of time in order that the operators may accom-

plish their work at the minimum expense. In accordance with this report amendments to the top lopping law are recommended, and these have been embodied in a bill already introduced in the Legislature.

United States imports of boards, planks, deals, etc., for the month of February, 1913, totalled 49,307,000 feet, as compared with 29,683,000 feet during February, 1912. For the eight months ending February the figures were as follows: 1913, 774,047,000 feet; 1912, 610,214,000 feet. Imports of pulpwood for February were as follows: 1913, 66,370 cords; 1912, 49,630 cords; eight months during February, 1913, 674,172 cords; eight months ending February, 1912, 614,452 cords. The imports of woodpulp for the month of February were as follows: 1913, 101,831,909 lbs.; 1912, 67,484,140 lbs.; eight months ending February, 1913, 811,721,206 lbs.; 1912, 776,146,308 lbs.

The exports of timber sawed and hewn, from the United States, during February, 1913, amounted to 35,371,000 feet, as compared with 33,103,000 feet during February, 1912. For the eight months ending February the exports were as follows: 1913, 332,580,000 feet; 1912, 245,603,000 feet. Exports of boards, planks and deals for February were as follows: 1913, 202,712,000 feet; 1912, 150,223,000 feet. During the eight months ending with February the exports were as follows: 1913, 1,642,140,000 feet; 1912, 1,451,755,000 feet.

Exports of staves were as follows: February, 1913, 9,027,427; February, 1912, 4,503,792; eight months ending February, 1913, 58,948,959; eight months ending February, 1912, 41,600,533.

# Lumber Transportation by Sluiceway

Unique Method Adopted by Nova Scotia Firm for Shipping Product of Mill to Railway—Natural Obstacles Cleverly Overcome

If one undertook to write anything in the form of history of the lumbering industry in Nova Scotia he would have to tell a very long story. There are, however, certain features of it which can be described in a brief manner and at the same time furnish an interesting bird's eye view, as it were, of the lumbering industry today and the operations of the early days which led up to the present. No one in the lumbering industry needs to be told what an important part the manufacturing and selling of lumber occupies in the business life of Nova Scotia. From the earliest days, its splendid forest products have been known in many parts of the commercial world and have been especially popular on account of their excellent quality.

The first settlers who came to Nova Scotia found the uplands covered with a growth of tall timber, which they naturally com-

tions to such an extent that hauling along the roads is now a very expensive undertaking as they quickly break up and become practically impassable for logging loads.

Under these conditions it was natural that those who owned timber in districts upon which it had become too expensive to operate, should put their heads together and seek out a plan for getting timber to the mill more cheaply. One of the most interesting solutions of this problem and perhaps the most successful of them has been developed by the River Philip Sluice and Lumber Company of Oxford Junction, N.S. The solution is so simple as to make one wonder why it has not become more general. In order to transport their timber from the mill to the railway, a distance of eleven miles, the company have built a giant sluiceway from the north side of the mountains in Cumberland County to the Intercolonial Railway. They have built their mill in the forest and send the lumber to the railroad in this manner, instead of having their mill on the railroad and transporting the heavy logs over the old difficult roads.

The sluiceway, of which illustrations are published herewith, is built of lumber on trestlework and fed with water from a reservoir up in the mountains and by leaders throughout its course. The plan has proved not only workable, but simple and profitable. It permits quick despatch of the lumber from the saw to the railroad. Lumber leaving the mills goes direct into the sluice, travels the entire distance of eleven miles and is piled up alongside of the railway ready to be shipped, in four hours from the time when it leaves the saw. At the mill, the lumber is sawn into pieces of various dimensions; deals for the European market and boards and scantling for the American market. These are all put into the sluice one after another and are tacked together by small strips of leather from the end of one deal to the next. In this way it is arranged that a steady procession of lumber floats down the sluice in an orderly manner without any pieces passing others and binding in the sluice. When the lumber reaches Oxford Junction the tacks are withdrawn and it is piled ready for shipment to Pugwash or to Halifax, a distance of thirteen miles and one hundred and eight miles respectively.

The construction of this sluiceway solves the problem of transportation so successfully that one is led to wonder whether it will not bring about another change of much greater importance. When the lumber reaches Oxford Junction the railway takes charge of it and it is shipped to foreign countries to be manufactured into finished articles. It seems more than likely that those who have overcome great natural difficulties in so effective a manner will not be content

Lumber Transport by Sluiceway in Nova Scotia—Where the Deals are Tacked Together.

menced to cut and hew, so as to obtain material from which to erect their houses. As the country became more thickly settled, those who had already learned to fell and hew the forest trees found that there was a market for more timber than they could use for their own purposes. They naturally commenced to make a business of timber manufacturing. Ships were built and the timber carried to other countries, becoming quite an important source of income to the people of the province. Once the timber manufacturing business had commenced, its growth was rapid. The two chief problems which had to be faced were those of transportation and power. To facilitate the driving of logs and the production of power, dams were built across the swift running brooks and rivers. Water mills were then erected and the power from the streams was used to operate the old up-and-down saws which subsequently gave place to the rotary.

These conditions continued for some time until an era of invention in machinery arrived. Then the water wheels were replaced by steam portable mills and the old rather sleepy lumbering industry took on new life. The growth of this industry and of many others made necessary the building of the Intercolonial Railway, which passes through Nova Scotia, running north of the Cobequid range of mountains. The railway crosses the mountains at Folleigh, then runs along the side to Truro. All along this range of mountains the lumbering industry has been carried on for many years. The timber consists of birch, beech, pine, hemlock and fir, all of excellent quality, growing tall and straight and impressing lumbermen with an immediate appreciation of its high grade and value. Timber growing in the forests, however, is a very different thing from lumber on a railroad car on its way to market.

In the part of Nova Scotia under discussion the land is of a rough and broken nature intermingled with swamps and ravines. In some cases the timber is as much as fifteen miles distant from the railway. In the earlier days this was not a serious drawback. The timber was felled in the winter and hauled to the main highway when the swamps were frozen and the ground was covered with snow. In summer the logs were hauled along the roadway to the mill. These roadways for the most part are built of mud and clay and when the winters were hard the roads remained pretty firm even in the summer time. The clearing of the forests, however, has altered the climatic condi-

Lumber Transport by Sluiceway in Nova Scotia—Typical View of Sluice.

with this measure of success but will naturally desire to manufacture the lumber into finished products and make an additional profit. Why should this lumber be shipped to the markets of the world as raw material? It could be manufactured at Oxford Junction and furnish employment to many men. Power is cheap at that point. Coal mines are located within thirteen miles and natural materials are at hand for the construction of factories. Skilled carpenters and mechanics are available and in fact all the conditions point logically to the creation of a large woodworking plant at that point. Oxford Junction, which is little more than a railroad crossing point is apparently a

natural location for such an industry. There is raw material at hand sufficient to last for generations. Exceptional facilities are available for shipment both by rail and water. Only thirteen miles away, lies Pugwash with its splendid harbor, capable of handling large ocean-going steamers.

Those who have been instrumental in the development of the sluiceway proposition are deserving of great credit. The River Philip Sluice & Lumber Company is comprised of young men, men of forethought and business ability and with energy and confidence sufficient for dealing with just such difficulties as they are confronted with today. They should unquestionably carry on their work to its natural conclusion and make Oxford Junction a busy manufacturing centre.

A good concrete conception of the results which have been secured by the construction of this sluiceway can be obtained from considering its capacity. In a day of twelve hours the sluiceway will handle seventy thousand feet of lumber. To transport the same quantity of lumber in the old-fashioned manner would require the combined efforts of seventy men and one hundred and forty horses.

### Tobique Drive About 31,000,000 Feet

The annual meeting of the Tobique Log Driving Company was held on April 2nd at the Queens Hotel, Fredericton, N.B. The contract for the corporation drive on the river was sold to J. D. McLaughlin, of Red Rapids, Victoria Co. Mr. McLaughlin has held the

contract during the last three years and the new agreement is for three years more. The following officers were elected; President, Chas. Miller, St. John; secretary-treasurer, J. C. Hartley, Woodstock; directors, D. Fraser, Sr., D. Fraser, Jr., Fredericton; Chas. Miller and F. C. Beattay, St. John, and J. D. McLaughlin, Red Rapids. It is estimated that the Tobique Corporation will this year handle 31,000,000 feet, made up as follows: D. Fraser & Sons, 15,000,000; J. D. McLaughlin, 12,000,000; Chas. Miller, 4,000,000.

### Important Future for N. B. Pulp and Paper

Premier J. K. Flemming, New Brunswick, predicts that within five years, between \$10,000,000 and \$15,000,000 will be invested in pulp and paper mills in New Brunswick, employing thousands of men. The Bathurst Lumber Company is endeavoring to secure capital for an enterprise which would require about \$1,000,000 for the development of power on the Nepisiguit River, and the erection of pulp and paper mills at Bathurst requiring a capital of about \$5,000,000. There is also the projected development of pulp and paper mills at Grand Falls on the St. John River, in which Sir Wm. Van Horne is largely interested, and several other projects are under consideration. A representative of upper province pulp and paper interests has lately made a thorough examination of the plant of the Miramichi pulp and paper mill, and it is believed that this industry, which has been idle for a considerable time, will once more be set in operation.

# N. B. Stumpage Receipts Show Reduction

## Annual Report of Crown Land Department Indicates More Economical Methods of Cutting Timber—Total Absence of Forest Fires

The fifty-second annual report of the Crown Land Department of the Province of New Brunswick for the year ending October 31st, 1913, has just been published. It shows a falling off in revenue to the extent of \$6,000, as compared with the previous year. Honorable J. K. Fleming, Surveyor General, in his report says:

The principal shortage was in receipts from stumpage which was \$28,075 less than the year previous. I feel it a matter of congratulation as regards the lessening of the cut of lumber for the reasons contained in my last annual report, when it was pointed out that we were closely cutting up to the annual growth and in some sections exceeding it. A large area of our Crown Lands where hard cutting has been carried on for a great number of years would in the best interests of the Province be left to grow and rotate, or what is preferable be withdrawn altogether from lumbering operations, if such an arrangement could be carried out with the present lessees. It might be of interest to note there was a corresponding falling off during the past year of about 20 per cent. in the lumber cut on the lands belonging to the New Brunswick Railway Company. The collection of stumpage has been faithfully carried out under the new system inaugurated by my predecessor and supplemented by myself. We feel that there has been a just return of the lumber cut largely brought about by the complete system of the Department and as a result of the system I was called upon only in a very few instances to adjudicate on any claims for over-scaling. The stumpage dues were well met on the first of August and in this respect I think I am safe in saying payments were more promptly made than in any previous year, notwithstanding the dullness of the market, necessitating many operators on Crown Lands being compelled, owing to high freights, to hold over their lumber until these abnormal freight rates had subsided.

It will be observed from the comparative statement that a new source of revenue has been brought into effect by law, whereby a tax of \$4 per mile is exacted in the transfer of timber licenses. Over \$4,000 was received from that source alone.

### Total Absence of Forest Fires

I am glad to report that there was a total absence of fires during the year, owing to the extremely wet season. The absence of a calamity of this kind will not deter the Department from making all the provision we can, with the funds available, in preventing the dread enemy. I have now under consideration proposals from the Railway Commissioner to co-operate with them in the protection of forests from fires along lines of railways. A considerable portion of the regulations adopted by that Commission have already been enacted into law by this Province. It is felt however, that it would be a distinct advantage to work mutually with a body that is clothed with such large powers. Therefore it is essential to put into effect such regulations as will be the means of diminishing fires started along lines of railway. We are met, however, with a serious difficulty in the working out of any progressive policy in this regard as we find the Intercolonial and Transcontinental Railways are not amendable to the fire regulations of any

of the Provinces or of the Railway Commission. It is hoped that some change will be made in regard to the latter condition.

The receipts of various kinds from timber licenses, stumpage, etc., during the year and during the year previous were as follows:—

| Receipts                               | 1911                | 1912                |
|----------------------------------------|---------------------|---------------------|
| Sales of timber licenses . . . . .     | \$ 2,176.00         | \$ 3,145.00         |
| Renewal of timber licenses . . . . .   | 81,206.00           | 80,708.00           |
| Stumpage . . . . .                     | 376,679.14          | 339,604.18          |
| Transfers of timber licenses . . . . . | 644.00              | 4,037.00            |
|                                        | <u>\$460,705.14</u> | <u>\$427,494.18</u> |

The following table shows the quantities and kinds of lumber cut from Crown Lands, for which stumpage bills were rendered during the year ending October 31st, 1912, with the amount charged thereon:—

| Kinds of Lumber                 | Stumpage   | Quantity                  |
|---------------------------------|------------|---------------------------|
| Spruce and pine logs . . . . .  | 250,854.56 | 190,163,601 S. Ft.        |
| Fir logs . . . . .              | 47,827.12  | 59,783,902 "              |
| Cedar logs . . . . .            | 22,399.62  | 17,919,701 "              |
| Hardwood logs . . . . .         | 4,159.29   | 5,199,114 "               |
| Hemlock logs . . . . .          | 2,503.77   | 6,259,437 "               |
| Hemlock logs (peeled) . . . . . |            | 2,993,646 "               |
| Poplar logs . . . . .           | 458.99     | 573,740 "                 |
|                                 |            | <u>282,893,141 S. Ft.</u> |
| Hardwood timber . . . . .       | 226.09     | 240 29-40 Tons            |
| Hemlock bark . . . . .          | 428.40     | 535½ Cords                |
| Wood (fire and pulp) . . . . .  | 258.16     | 610 Cords                 |
| Sleepers . . . . .              | 9,539.72   | 381,589 Pieces            |
| Posts . . . . .                 | 93.75      | 6,250 "                   |
| Telegraph poles . . . . .       | 551.05     | 2,418 "                   |
| Boom Poles . . . . .            | 92.46      | 4,623 "                   |
| Brackets . . . . .              | 25.32      | 2,532 "                   |
| Barrel wood . . . . .           | 102.88     | 11 Cars                   |

|                                           |                     |
|-------------------------------------------|---------------------|
|                                           | \$339,521.18        |
| Add old accounts . . . . .                | 5,871.63            |
| Less allowances and overcharges . . . . . | 2,382.83            |
|                                           | <u>3,488.80</u>     |
|                                           | \$343,009.98        |
| Deduct unpaid accounts . . . . .          | 3,405.80            |
|                                           | <u>\$339,604.18</u> |

I had the pleasure during the past summer of attending the meeting of the Forestry Association at Vancouver, B.C., and was greatly impressed with all I saw and heard respecting the great Forest problems particularly referring to forest fires. The Province of British

Columbia, largely through the influence of this association has embarked on the most progressive forest policy of any Province or State in America. I am more than ever convinced that a careful expenditure of money in the protection of our great forest domain, is a pressing necessity. Having that feeling I am going to ask the Legislature for a special appropriation to erect a few fire signal stations on some of our highest lands to be connected by telephone; together with a vote for fire fighting tools, as has been previously recommended by me in the annual report.

#### Forestry Department, University of New Brunswick

I have the feeling that the services of those graduating from this department of the University might be used with great advantage in the survey of our public domain. A practical test of their work has been made during the past summer by the Deputy Surveyor General, who, I am informed, is thoroughly satisfied with the character and scope of the work undertaken. The work referred to included a topographical survey, estimating the timber on a 3,000 acre block by means of the strip system; the different varieties of the stand, barometer heights and contours, together with a concise report of the total quantities of merchantable and smaller growths, accompanied by the necessary plans. I take this means of drawing the attention of lumbermen, timber land owners and others to the fact that we have within our borders a class of young men well qualified to undertake work of this nature and as I am informed at a reasonable rate.

## Much Maple Made into Last Blocks

An Interesting Quebec Province Industry which is Commencing to Feel the Shortage of Raw Material

The special uses to which woods of various descriptions are put in the production of manufactured articles are so numerous that no one ever could appreciate them without making a special study of the subject. One of the interesting facts in this connection is that an almost infinite number of small, but extremely useful articles are manufactured out of the various hardwoods which are native to Canada. As a single instance of this, the following article, dealing with the manufacture of last blocks for the boot and shoe industry is published.

Lasts, up to the present, have been almost entirely of maple. Of late years the diminishing supply of maple has compelled manufacturers to look around for a substitute wood. One of the largest firms manufacturing maple last blocks in Canada is that of Geo. Willard & Son, McNeil's Crossing, Que. This firm now has on order five car loads of birch last blocks which are being used as an experiment to find out if they can take the place of maple.

Last blocks, as most people know, are the forms upon which shoes are manufactured. The great demand for them is the result of the continual increase and alteration in the styles of shoes. Dur-

last season no less than 125,000 feet of maple, all of which was converted into last blocks. The mill operated by the company has a capacity at present of 4,000 blocks every ten hours. It is run night and day whenever the company can secure sufficient hands for the purpose.

A maple log is rolled on to a saw carriage and cut into cart wheels by a sixty-inch circular saw. The log is fed to the saw by steam feed, in the same manner as in an ordinary sawmill. The splitting operation is done with a fifty-six inch circular saw, the wheel of maple being placed on a platform running upon trucks which are placed on

Where Last Blocks are Produced—Geo. Willard & Son's Mill  
McNeil's Crossing, P. Q.

a V-shape track. The platform is pushed to the saw by the operator's knee. The pieces of maple after being split are next trimmed or shaped for the roughing lathes, of which the equipment includes four, and one bench saw.

The lathes have a capacity of from 1,000 to 1,200 blocks every ten hours, depending upon the ability of the operator. After this operation the block is in shape roughly conforming to the outline of the finished last. It is then placed in a car and carried to the storage sheds to be piled up "cobhouse" style for drying.

Seven years ago Mr. Geo. Willard found that the demand for last blocks in the Canadian market was not sufficient to keep his mill running to its full capacity. He made a trip to England, therefore, to see if stock could be disposed of in that country. The trip was very successful and Mr. Willard has been able to contract every year since that time for the sale of all the blocks that he can manufacture, his contracts being with the most reliable last makers in England.

During the winter which has just passed the firm was fortunate in having sufficient snow to haul in their complete stock of logs, some of which came a distance of eight miles.

#### Laurentide Company Going After More U. S. Business

The Laurentide Company have decided upon a more energetic policy with regard to United States business, and with this end in view have secured offices in the new Aeolian building, New York, in which city they have been represented for some time. Mr. J. F. Patten, who has been appointed manager, was formerly in Montreal with the firm of McFarlane, Austin & Robertson, subsequently he was agent for a number of paper concerns, and went later to London, Eng., as manager for J. R. Booth. At a later date he was New York manager for the American paper firm of S. D. Warren & Co. The Laurentide Company have also decided to establish a traffic department in Montreal, which will necessitate further office accommodation in the Canada Life Building. The traffic department will be concerned with matters of rates and routing, and the appointment of an experienced railroad man to the office of manager is to be made.

#### Price Brothers and Company's Output

The following table gives a comparison of the sales of Price Brothers & Company for the past two years:—

|                                 | 1911       | 1912       |
|---------------------------------|------------|------------|
| Lumber—feet . . . . .           | 84,682,116 | 87,623,317 |
| Shingles—pieces . . . . .       | 81,308,000 | 33,827,000 |
| Ties " . . . . .                | 48,966     | 52,326     |
| Lath " . . . . .                | 14,232,000 | 14,921,000 |
| Rossed pulpwood—Cords . . . . . | 5,595      | 4,260      |
| Peeled " " . . . . .            | 6,125      | 9,366      |
| Cardboard—tons . . . . .        | 4,569      | 5,673      |
| Paper " . . . . .               | 3,675      | 4,633      |

Raw Material for Last Blocks—Geo. Willard & Son's Mill,  
McNeil's Crossing, P. Q.

ing the past fifteen years these increases and alterations have been going on at an almost incredible rate. Methods of manufacture have necessarily been changed to keep pace with the increased demand. Fifteen years ago, methods were rather primitive, compared with those of today. In those days a camp outfit was got together, consisting of bedding, sundry cooking utensils, eatables, axes and manufactured the season's cut. This was done by cutting down the large maples and sawing them into wheels or cross sections which were then split up with a broad axe and maul, the bark being peeled off by striking it with the back of the axe. Geo. Willard & Son, who operated in this manner fifteen years ago, took out and manufactured

# Lumber Consumption in Toronto

**HIGH GRADE WOODS  
USED IN MAKING BIL-  
LIARD TABLES, ETC.**

Lumber plays a large part in the manufacture of sporting goods and the growing popularity of sports and pastimes among the people of Canada, especially during the last decade, has materially increased the consumption of lumber of every variety.

Probably the most widely patronized indoor games are billiards, pool, bagatelle and bowling. Billiards especially has taken a firm hold as a favorite with Canadian people and this is emphasized by the fact that to-day twenty billiard tables are supplied to private houses where one was installed six years ago. This involves a great increase in the amount of lumber consumed by manufacturing of billiard tables.

A good idea of the consumption of lumber in billiard tables may be secured at the plant of Samuel May & Company, of Toronto, who manufacture billiard, pool and bagatelle tables, billiard cues, bowling alleys and ten pins. Mr. Samuel May founded this company in 1864. He was at that time engaged in the building business, but one of his favorite recreations was a game of billiards. He was an expert amateur player and had in consequence a thorough knowledge of what a billiard table and its accessories should be. This led him to go into the business of building billiard tables and the firm which he founded in 1864 is still carrying on business under the same name.

The factories of the company are situated on Pelham avenue, West Toronto and Adelaide street west, Toronto. The preliminary work of manufacture is carried on at the former factory while the finishing work and assembling is done at Adelaide street west.

A great variety of lumber is consumed in the manufacture of these products. It is essential that the lumber should be of first-rate quality, without flaw, and thoroughly seasoned. It is, of course, apparent that the hard usage to which ten pins, for instance, are subjected would in a very short time render them perfectly worthless if any but the very best lumber were used in their manufacture. This is equally true of their other products. All the lumber used with the exception of that which is made into billiard cues and ten pins, is kiln dried. Prior to this it is seasoned for from one to two years before it is considered in a fit state to be manufactured.

The total quantity of lumber consumed by the firm annually exceeds 300,000 feet, the majority of which is put into billiard tables. This amount however, does not include about 100 tons of rare wood which is imported only for special billiard tables. These latter woods, which comprise ebony, rosewood and mahogany are very costly.

Some of the different kinds of lumber used are maple, basswood, birch, oak, chestnut and whitewood. 5-in. x 5-in. maple is used for ten pins, 2-in. for billiard, bagatelle and pool tables, 1-in. x 1¼-in. for bowling alleys, 1-in. x 1⅝-in. for billiard cues. Soft maple 4-in. x 8-in. is also used in billiard tables. The slate frames of the billiard tables are manufactured of 1-in. wood, 2-in. 1½-in. and 1-in. birch and oak, 2-in. and 1¼-in. chestnut and 2-in. No. 1 whitewood are also used for billiard tables. Bowling alleys are also made in pine of the following sizes: 1¼-in. and 1½-in., 2-in. x 6-in. and 4-in. x 4-in. Over and above these 300,000 feet of lumber used in actual manufacturing, about 60,000 feet of 1 inch pine is made up into boxes, and 120,000 feet of various veneers are used, the greater part of this amount being quarter cut oak.

Messrs. Samuel May and Company confine their business to high grade production and the tests to which all their goods are subjected are very severe. All the cues which they manufacture are entirely hand-made at the Adelaide street factory. They make a specialty of manufacturing high class billiard tables to a customer's own design, one which has been specially admired was lately manufactured by them for Mr. J. C. Eaton, of Toronto. This table was built of circassian walnut.

The manufacture of billiard cues is a long process. The shafts, which are made of maple, have to be planned by hand in order to obtain the fine balance which is so much appreciated by players of ability. All the wood put into cues has to be air dried for a period of from 3 to 6 years, as kiln drying would remove the resiliency which is absolutely necessary in a faultless cue. After the drying out is completed, the lumber is sawn into pieces of 1 in. to 1½ in. in size, and the rough turned on a specially designed lathe. It is placed in racks for a period of from six months to a year so that, should there be any warping, it can be detected. The butts and shafts are then joined, rough turned and spliced.

The Dominion Forestry Branch of the Department of the Interior is preparing a report upon the wood using industries of Ontario. Under the head of sporting goods it will contain the following, which is of interest in connection with the above article:—

The varieties of material used in making bowling, billiard and pool tables, baseball bats, hockey and lacrosse sticks, billiard cues, toboggans, bicycle rims and gun stocks in the Province of Ontario are shown in the accompanying table under the name of sporting goods.

Elm and maple form two-thirds of the wood used and head the list of fourteen species. Rock elm is the best hockey stick material, and over half a million feet of rock and white elm are used annually for

| Hemlock.....   | 0.8       | 15        | 270    | 18 00          | 15                |                 |          |          |

Wood Materials used in Sporting Goods in Ontario

this purpose. Maple is used chiefly for billiard cues and some toy baseball bats. Billiard tables are built like any other heavy table with a frame of oak, maple, hard pine or rock elm, finished in quartered oak, black ash, mahogany or walnut, with inside work of birch, tulip or basswood and chestnut and tulip for core-stock.

Bowling alleys are built of maple, hard pine and hemlock. Second growth white ash and hickory are supposed to be the best material for baseball bats and 20,000 feet of hickory are used annually for this purpose and for lacrosse sticks. Yellow birch for toboggans, maple for bicycle rims and walnut for gun stocks complete the list.

Nearly two million feet of material is used annually for this class of goods, and the prices on the whole are above the general average. The material is purchased in all forms, grades and sizes and in many respects closely resembles the handle-making industry, purchasing squares or billets for bats, hockey and lacrosse sticks and billiard cues. Billiard table and bowling alley material is purchased in the form of dimension stock, lumber or veneer. Maple, hard pine, tulip, mahogany, white pine and chestnut are imported to the extent of a quarter of the total consumption.

Hockey and lacrosse sticks are exported to all parts of the Empire, but the heavier articles are made for home consumption and are sold in Canada only.

## Quarterly Report of Glasgow Trade

Messrs. Calder, Henderson & Livingston, Glasgow, in their quarterly timber market report under date of March 31st, say: It was generally expected that the active conditions prevailing towards the close of the year would continue in evidence for some time. Instead, the demand has been quiet. High prices, a weakening in freights, and the serious dislocation of trade caused by a strike of carters contributed to the lack of animation. The drop in freights chiefly affected c.i.f. transactions in pitch pine, and the uncertainty of a further fall added to the hesitation in fixing for new requirements. Contracts for Canadian timber and deals have been fixed at prices that show an advance on last season's high figures, but the total quantity ordered was smaller than usual. The import has been moderate, and stocks in the aggregate are not heavy, although some items appear to be much in excess of probable demands. Values on the whole have been maintained on a high level and are at present steady, and their future course will, to some extent, be determined by the trend of freights. Shipbuilders continue to be busy, and the tonnage launched for the past three months amounted to 118,458 tons, compared with 136,340 tons for the corresponding quarter last year. Other wood consuming industries, apart from housebuilding, are fairly well employed.

## Death of Widely Known Lumber Writer

Met L. Saley the widely known writer of "Realm of the Retailer" in the American Lumberman, died on March 30th at his home at Hampton, Iowa, after a brief illness of pneumonia. Mr. Saley's loss will be greatly felt by all who knew him or his writings. He had been a member of the staff of the American Lumberman and its predecessor for thirty-four years and his work was admired by all readers of that journal.

## Important Georgian Bay Mill Sold

Waldie Brothers Dispose of Spragge Plant—Will be Operated this Season—J. J. McFadden the New Owner

J. J. McFadden, Renfrew, Ont., has purchased from Waldie Bros. the mill at Spragge, Ont., on the North Shore of Georgian Bay. Mr. McFadden will operate the mill this year and will commence sawing early in May. A number of the old staff of Waldie Bros. will be taken on to run the mill. The mill will be operated upon logs belonging to J. J. McFadden and also upon contract work. A sufficient supply of

Purchased by J. J. McFadden.—Waldie Bros. Mill at Spragge, Ont.

logs for the present year has already been ensured. Mr. McFadden also reports that the future supply is guaranteed.

The mill at Spragge is one of most modern and thoroughly equipped on the Georgian Bay, and, under the management of Waldie Brothers, had the reputation of producing a class of lumber unexcelled by any other in Ontario. The equipment is thoroughly up-to-date and is capable of turning out 150,000 feet of lumber in a ten-hour day. It includes two double-cutting Waterous band saws and a Wm. Hamilton

View of Shipping Dock at Spragge, Ont.

gang saw in addition to a gang edger. The gang edger is an extremely useful machine with Simonds inserted teeth and is used for cutting with Simonds inserted teeth and is used for cutting the 4 in and 5 in. cants. The equipment also includes two lath machines furnished by P. Payette and Company, of Penetanguishene, Ont. The power for the mill is furnished by six Waterous boilers of the latest improved type with Dutch ovens. The equipment includes one of P. Payette and Company's latest patent mill dogs, which dogs equally well in frozen or wet timber.

The mill at Spragge was purchased some years ago by Waldie

Bros., Limited, from Cook & Bros. Lumber Company. The machinery in the original mill was all built by the Wm. Hamilton Company, Limited, of Peterboro, Ont., who have also supplied much of the machinery which has been installed since its erection. Before the plant was purchased by Waldie's the Cook estate remodelled it and put in a new outfit of boilers of the most expensive kind. After the sale to Waldie's the latter put in new engines and remodelled the mill to a great extent, making it more modern. It was then considered to be at least the equal of the very fine mills operated by the Waldie's at Victoria Harbor, Ont.

The facilities for water shipment at Spragge are splendid. The large lumber carrying vessels plying on the Great Lakes can load at the company's dock. The harbor is one of the finest on the Georgian Bay for storing and safe holding of logs. For securing stocks of logs the mill is also splendidly situated, being at about a half way point on the North Channel. From the Spanish river or from the Mississauga and Blind rivers to Spragge is only a short tow. Spragge is also conveniently located in connection with the C. P. R. Soo line.

### A Relic of Early Hoo-Hoo Days in Canada

One used to hear occasionally and also to read in the papers, criticisms of the Concatenated Order of Hoo-Hoo, based upon the supposition that whenever a group of lumbermen got together for any purpose whatever, they must be combining to raise the prices of lumber. Even in these enlightened days when Hoo-Hoo has established itself throughout the lumber industry in many parts of the world, a few outsiders are occasionally rash enough to make a fuss and try to create the impression that Hoo-Hoo is a secret society formed practically for the purpose of maintaining lumber prices. Fortunately such unfounded reports cannot have any ill effect today, because the truth is so widely known that Hoo-Hoo is respected by all who know anything whatever about it.

An interesting instance of the reception which Hoo-Hoo secured when it invaded Canada some eleven years ago is afforded by a clipping from an old Toronto newspaper, which announces the formation of the first branch of the great order in Canada. The Toronto paper in question was not expressing its own views but reproducing those of another newspaper, the Bobcaygeon Independent. Without further comment we reproduce the article, knowing that it will be read with a great deal of interest by Hoo-Hoo both in Canada and in the United States. The article commences under the heading, "What is the Hoo-Hoo? and the sub-heading "Bobcaygeon Independent pretends to see a combine in it." The balance of the article with most of its inaccuracies reproduced in their original form is as follows:—

"Bobcaygeon Independent: Thruout this district of Ontario one of the most important sources of wealth and industry is lumbering, therefore anything connected with the lumber business is interesting. For this reason just a passing notice is due to the establishment in Toronto of a lumberman's fraternity of a social idea, but tho nominally for social purposes it will exert more or less influence on lumbering engagements and business. The organization is practically a secret society and calls itself the Hoo-Hoos. The order has existed for some time in the United States and is there a strong organization and it was a Buffalo contingent of the order which last week came over to Toronto to do the installation of the members of the new branch. Twelve members were initiated, all leading members of large lumber firms, and the indications are that the order will rapidly increase in strength and members thruout Ontario. The effort is being made to pass the order off as merely a joke, and absurd names are given to the officers, but joke or no joke the fact remains that the lumbermen of the United States are united in a fraternal organization, and the lumbermen of Canada are about to unite and co-operate with them. Among the members who are said to have been initiated in the new organization in Toronto, were Messrs. D. L. White, of Playfair & White, Midland; W. D. Lummis, president of the Lumber Manufacturers' Association of Ontario; Ald. J. Oliver, of the Oliver Lumber Co.; H. Munro, of the Oliver Lumber Co.; G. Nicholis, of Regan & Nicholls; A. R. Riches, of the S. C. Kanady Lumber Co.; H. K. McIntosh, of the Hardwood Lumber Co.; W. J. Hetherington, of the Wm. Laking Co., Hamilton; W. P. Bull, of the Mississauga Lumber Co.; R. Locke, of the Rathbun Co., Deseronto; W. J. MacBeth, of the J. D. Shien Lumber Co., Bracebridge. These gentlemen are all well known in the lumber business and such a combination, tho it represents itself to be merely for fun, may exercise a very important influence in the lumber business.

The Forest Commissioner of the State of Maine, Mr. Frank E. Mace, has issued an excellent bound volume containing his report for the year 1912, and also a report of the wood using industries of the State of Maine prepared by J. C. Nellis of the United States Forest Service. The report is amply illustrated and contains a great deal of exceptionally valuable information for all lumbermen and foresters who are interested in the forest products of that State.

### Wm. Milne and Son's Operations—Autocratic Railways

Martin Kehoe, of William Milne & Son, Limited, North Bay, Ont., was in Toronto on a business trip during the second week of April. He reports that the company have only taken out about one-third of their usual cut. They will have about 17,000,000 feet for their Spanish mills, about 3,000,000 feet for the mill at Sellwood Junction and about the same quantity for the North Bay mill. Although the company will only have about one-third of their regular cut of their own logs they expect to take on sufficient contract work to make their output this year about three-quarters of the usual quantities.

Mr. Kehoe reported a slight falling off in the trade activity during the early part of April, partly on account of the disagreeable weather. Prices, however, were well maintained in all respects. There was not quite so much activity in "cuts" on account of the large quantity of doors which are being imported into Canada from the United States.

Mr. Kehoe recently had an experience in connection with lumber shipments which makes one wonder whether the railroads are conducted for the convenience of shippers or for the benefit of the companies alone. The C. N. R. took a car load of lumber from Sellwood Junction for Toronto on a rate of 11½ cents. This car was to be placed upon the G. T. R. Woodrow siding at Toronto. The C. N. R. undertook to make delivery in this manner. The car arrived at Toronto and the G. T. R., for reasons best known to themselves, refused to have it placed on the Woodrow siding by a foreign company. The result was that the shippers of the car were obliged to hunt up some other destination for it, and the purchaser of the lumber had to go without it. Naturally there was a good deal of indignation developed among the parties concerned and some pretty hot correspondence was interchanged.

### A Sample Case of Demurrage Trouble

Editor Canada Lumberman: Utterson, Ont., April 7th, 1912.

We shipped from here on January 6th, 1913, a car of slabs, containing eighteen cords and we sent an invoice to the party to whom the car was consigned in Oshawa, on the same date. They advised us to the effect that they would not require the car. We turned the car over to another party and gave them authority to receive it from the G. T. R. This dealer advised the G. T. R. that he would look after the car when it arrived and asked them to notify him. We heard no more of this until February 15th. Our agent at Utterson then gave us notice that there was \$35 demurrage on the car in Oshawa. We let them sell the car and are seeking redress from the G. T. R. which is very hard to recover.

Utterson Lumber Company.

### Reciprocal Demurrage Case Postponed

Montreal, April 7th.—The reciprocal demurrage case, which was down for hearing for April 15th, before the Dominion Board of Railway Commissioners at Ottawa, has been postponed. Some of the Boards of Trade who are supporting the demand for reciprocal demurrage are not ready with their figures, and the railway companies' data is also incomplete. The Railway Commissioners have requested that the railway companies and the Boards of Trade complete their data and forward it as early as possible. When this has been received the Board will fix a special date for the hearing.

### Reduction of Cut on the North Shore

One of the large manufacturers upon the North Shore of Lake Huron, in a recent letter to the Canada Lumberman reports that the prospects for getting all this season's logs to the mill are as good as during any average year. It is very rarely, he says, that any logs are stuck in the streams tributary to Georgian Bay. The cost of operating during the past winter has been about the same as during the previous winter. The same writer estimates that the output of logs for the season of 1912-13 between River and the Soo will, be about 35 per cent. less than during the previous season, which was about 30 per cent. less than during the season before. Several mills on the Georgian Bay did not run last year, for various reasons, and he reports that this year there will be still less. "This is not for the reason that there is not a good market for lumber at good prices, but because in most cases, the operators are going out of business owing to the high prices of stumpage and to the extreme cost of logging, which is not in proportion to the prices obtained for the output in lumber, and is therefore, very discouraging.

The Ontario Government is understood to be considering the advisability of repairing Dollar's Dam on the Pickering River. This would be a great advantage to the lumbermen in that district as it would afford twenty-eight miles of navigable water upon the dam.

The first cook of pulp at the new mills at Dryden, Ont., was made recently with entire satisfaction.

### J. R. Booth Celebrates 86th Birthday at Work

Ottawa, April 7th; (Special to the Canada Lumberman):—On Saturday, April 5th, J. R. Booth, millionaire lumberman, manufacturer and owner of railways, celebrated his 86th birthday in the same way as he has spent the anniversary of his birth since he was a boy, that is, at work, in his mills. In spite of his advanced age, Mr. Booth is enjoying as good health as he did sixty years ago. On Saturday his staff presented him with 86 magnificent roses.

"No, Mr. Booth is not celebrating his birthday. He has gone down to his work as usual," was the laconic statement given out to the correspondent of the Canada Lumberman when an inquiry was made at his home.

No man in America has contributed more to the common good than J. R. Booth. He was born in Shefford County, Que., on April 5th, 1826, of poor parents, and has in turn been successively river driver, lumberman, railway builder and owner. Messages from all parts of the world flooded in on Mr. Booth on Saturday wishing him many more years of good health and happiness.

Guy H. Long, of the Long Lumber Company, Hamilton, Ont., gave a complimentary banquet to a number of local contractors and builders at the Commercial Hotel on March 25th. An enjoyable evening was spent and a number of interesting speeches were delivered after the banquet. Most of the speakers referred enthusiastically to the splendid outlook for Hamilton's building trade during the coming season.

### Some Splendid Elm Logs

The accompanying illustration shows a load of elm logs recently taken out by J. P. Newman, Wiarton, Ont., from the township of Keppel. The load was made up of five elm logs and contained 2,987

A fine load of Elm Logs at Wiarton, Ont.—2987 feet from one tree

feet. The smallest log on the load measured 31 inches in diameter and the largest 33 inches. They were cut from one tree. Every log was perfect as may be seen from the illustration. A number of other loads were brought out at the same time. One of these was made up of three elm logs containing 1,708 feet, the logs being 31 inches and 32 inches in diameter. The timber will be cut up into the standard thicknesses from 1 inch to 2 inches.

### Firm Prices at New York

Chase, Talbot & Company report under date of April 1st as follows:—

Spruce, both Eastern and West Virginia, as well as hemlock from the same sections, hold firm at highest prices quoted, with the supply very limited. White pine and cypress hold their own with a firm grip. Long leaf and short leaf yellow pine salesmen continue to dictate to the buyers. Eastern spruce laths have advanced rather violently in price, the market being variously quoted \$4.50 to \$5.00 per M. with excessively light supply.

The tonnage market must again be given consideration, and as the season approaches, when sailing vessels return to the East from the Southern winter cruising, it is noted that maximum rates are still demanded. As to the action of Congress in June on the tariff issue, we venture the prediction that possible legislation can affect the prices of Eastern spruce, pine, and hemlock, little if any.

The annual drift of the St. John River Log Driving Company was commenced on April 3rd in charge of Mr. Murray Glasier, of D. D. Glasier & Sons.

# The Veneer Industry at Montreal West

A Complete Illustrated Description of the Factory and Equipment of the  
Dominion Mahogany and Veneer Company, Limited

Among the new industries which have arisen in the district of Montreal is the Dominion Mahogany & Veneer Company, Limited, of Montreal West. There are other concerns making veneer in Canada, but the Dominion Company is the only one manufacturing mahogany veneers in addition to other varieties. The president is Senator N. Curry, the vice-president and managing director Mr. Arthur Rushforth, the assistant general manager Mr. Geo. Kersley, and the superintendent Mr. W. Stadden.

The company, which employs seventy men, have one of the finest factories, if not the best factory, on the North American continent, both for the manufacture of lumber and for making veneers. It is a concrete building 220 x 75 with three floors on one side and two on the other. The offices are ample and nicely fitted up. Everything is substantially built, and the equipment is of the best. Shipping facilities are excellent, both the Grand Trunk and C. P. R. serving the factory. The chief trade catered for are the piano and furniture makers, contractors and railway car establishments.

Mahogany, circassian walnut, English brown oak sawed and sliced, rotary cut birch, maple, elm and beech for drawer bottoms, panels and centres for furniture manufacturers, are the chief woods used. Some of the veneers are magnificent in their figuring, and are utilized for the highest class of work.

Although the company have been manufacturing only since November, 1912, the factory has been running to its capacity and the output is booked up for the next four months. The company's customers extend from the Atlantic to the Pacific. Mahogany is shipped from Liverpool, the centre of the world's trade in this wood, and the company gets logs from various parts of the world, including South Africa, South America, Cuba, etc. The company have also timber limits in the province of Quebec for birch and maple, and manufacture these logs into veneers for drawer bottoms; panel stock and centres for the furniture trade; and pin block stock for the piano trade. The logs are cut into thickness of veneer from 1-24 to  $\frac{1}{4}$  of an inch, both sawed and sliced. All mahogany logs are quartered, and all lumber is piled on sticks. The refuse is taken by a blower system to the boilers and burned. As an indication of the solid type of construction it may be mentioned that the foundations for the machinery go down fourteen feet.

The logs, on arrival, are placed in the yard, where they are cut

Front View of Plant—Dominion Mahogany & Veneer Co., Montreal West.

into lengths by a drag-saw lifted by derrick to the mill room, and then moved on a truck, which runs on rails to the saw carriage. This takes the logs to the big band sawmill, where they are cut into whatever thickness of plank is desired. That dust drops down and is carried away by suction. The boards are conveyed on rollers and then by means of conveyors to the edgers; they are fed through these after having the edges removed, and go to the trimming saw. Afterwards, still by means of rollers, they are sent to a sorting table in the yard below, where they are sorted. The saws in the edgers are movable and thus adjustable to the sizes required.

The logs which are required for veneers come into the mill by the same means, and are cut by the same process. The flitches are then conveyed to the sawmill, where they are manufactured into the different thicknesses of veneer and are afterwards rack-dried.

On the ground floor logs are brought in the round from the yard and put into a tank, where they are boiled for twenty-four hours. The logs are then placed in a rotary lathe and the veneers made by the rotary process. The veneers are taken to the clipper and cut to size,

hence into the automatic dryer and after being crated are ready for shipment.

Mahogany, after being steamed, is taken to a slicer, where it is cut into veneer. The machine is very substantially built, the logs being held by dogs, and the knife automatically brought into contact with the lumber. The veneers then go to the dryer, which consists of a series of layers made of chain, and the veneer is fed through this until it comes out at the other end, meanwhile receiving treatment by hot air fanned into the machine. The filing room is on the top floor and very well equipped with the most modern machinery by experts.

There are two sample rooms, where are kept over one million feet of veneer in stock. Each log is carefully tagged and tallied. From every log three samples are furnished to the traveller, each sample being hinged into lengths, and these are so arranged as to fold into trunks.

The company supply a special filtration system for drinking water and also a luncheon room. There is a telephone system right through the building.

The Watrous Engine Works Company, Limited, Brantford, Ont., supplied the sawmill machinery; band saw, edgers, engine of 250 horse-power and boilers of the Dutch oven type; the Capital Machinery Company, of Indianapolis, the slicer, rotary, and veneer saws; the Simonds Canada Saw Company, Limited, the other saws; the Canadian Fairbanks-Morse Company, Limited, Montreal, the trucks; and the Philadelphia Textile Company, the dryer.

Building and specifications were designed by E. & W. S. Maxwell, architects, Montreal; while F. J. Jago & Company were the contractors for the reinforced concrete; McGregor, Reed & McGregor, the brick work; Hickey & Aubut, the steam fitting.

### Canada's Lumber Production

The Forestry Branch of the Department of the Interior has issued a report on the manufacture of lumber for 1911. Statistics compiled from reports received from 2,871 firms operating sawmills give the total production as follows: Lumber, 4,918,202,000 feet, valued at \$75,830,954; square timber, 34,847 tons exported, valued at \$766,406; shingles, 1,838,474,000, valued at \$3,512,078, and lath, 965,235,000, valued at \$2,212,226. The total lumber output is an increase of 466,550,000 feet, or 10.48 per cent. over the cut of 1910. The Province of Ontario still maintains the lead in lumber production, with a cut of 1,716,849,000 feet, but British Columbia is advancing towards the head of the list, the production of that Province being 1,341,942,000 feet, an increase of 14.7 per cent. over 1910. The increase in the cut of Ontario was only 4.5 per cent. Quebec is the only Province showing a decrease, which amounted to 4.3 per cent. Saskatchewan showed the greatest increase in annual cut, with 77.5 per cent., and the production of Nova Scotia increased by 48.8 per cent.

As regards the species of woods, spruce, white pine, Douglas fir, hemlock and cedar retained their relative positions in the order given, at the head of the list of 26 kinds of wood sawn. Spruce, with a production of 1,600,054,000 feet, made up nearly one-third of the total cut,

increasing by 27.5 per cent. from 1910. The output of white pine was 1,038,542,000 feet, the increase being 3.8 per cent. The production of Douglas fir was 845,936,00 feet, an increase of 32.9 per cent., and hemlock was produced to the amount of 476,239,000 feet, or 16.5 per cent. of an increase. Among the hard woods the most noteworthy change was the increase in the cut of birch, the output being 98,811,000 feet, an increase of 38.8 per cent., giving it the seventh place on the list. Maple, basswood, elm, ash, beech and oak show decreases.

The figures for square timber exported were supplied by the Department of Trade and Commerce. Of the total quantity of 37,962 tons, 21,500 tons were white pine, 8,390 tons birch and 6,095 tons elm.

The cut of shingles showed a decrease of 7 per cent., being most apparent in the Provinces of British Columbia and Ontario, which together supply nearly 70 per cent. of the total production. Though 10 kinds of wood are used in this industry cedar is still by far the most important, forming over 95 per cent. of the output. The production of lath increased by 13 per cent., owing to the greater output in British Columbia and Ontario.

### Why are Houses Costing More to Build?

The newspapers of Canada have published a good deal of material of late, referring to the increased cost of house building. With remarkable unanimity they put all the blame upon the lumbermen and the other manufacturers of building material. A little further enquiry would show them that they must go a step further still if they want to be logical. Unquestionably the increased cost of building is largely due to the increased cost of lumber and other materials. But the lumbermen are not getting any greater profits than they used to get. The higher prices of lumber, as everyone in the business knows, have been accompanied by equal increases in the cost of manufacturing. It would be interesting to the reading public if the daily press, having now put all of the blame upon the lumbermen, would go a little further and publish a series of articles showing how the expenses of getting out logs, manufacturing them into lumber and delivering the product on the job have increased. They would find that the lumberman had been very modest in the increased prices which he has asked, and that the cause of the increased cost of building is that our standards of living have advanced, and that the cost of everything which the poor consumer requires has gone up in a most remarkable manner of late years, so that the man who is engaged in manufacturing is obliged to raise the price of his product in order that he may buy the more expensive products of other companies, all of which are being consumed today in far greater quantities than ever before.

British Columbia timber and lumber alone are to be used in the construction of the Forestry building to be erected in Hastings Park for the Vancouver Exhibition Association. As much as possible will be used in the natural state. It is expected that the material will be donated to the Exhibition Association by the lumbermen of Vancouver. The interior of the building will be given over to one large room will be used for the display of every known wood found within the borders of the province. The building is to cost about \$22,000.

# Wholesale Lumber Prices in 1912

Average Level Reached Equal to That of 1907—Advance of Nine Per Cent—Government's Report on Course of Prices

... The Department of Labor of the Dominion of Canada has issued its report upon wholesale prices during the year 1912, prepared by Mr. R. H. Coats, editor of the Labor Gazette. The report contains statistics giving most valuable information relating to the cost of living. It is shown that wholesale prices advanced over nine per cent. during 1912 and that retail prices did not advance so rapidly. Since 1897, the report says, prices have advanced by nearly sixty per cent. in Canada.

The lumber market, according to this report was firm, generally speaking, throughout 1912, prices showing on the whole an increasing tendency. The department index number, which takes the average price prevailing during the decade of 1890 to 1899 as its basis, is used to afford a comparison with the prices of 1912. Placing prices during this decade at 100, the index number for fourteen different varieties of lumber rose from 165 in January, 1912, to 170.9 in December, 1912. During the year 1911 it was 165.5. This brings the level of prices up to that of the phenomenally high year of 1907. "The demand for lumber for construction purposes" says the report, "was probably never so large as in the year just passed. British markets were partially closed in the early part of the year by the coal strike, and later in the year scarcity of space in vessels and advancing freight rates hampered exports from Canada. Prices, however, strengthened in Britain toward the end of the year. The United States demand was good. The cut of Ottawa Valley mills was reported to have exceeded all records."

## The Course of Wholesale Prices

"New Brunswick lumber products went up rapidly in 1912. A line of spruce deals at St. John, quoted at \$13.25 in January, reached \$15.75 in December. The highest prices previously quoted were \$16.00 in 1910, \$15.50 in 1909, and \$15.25 in 1906. There was some overstock-

(Prices 1890-1899=100.)

ing in this line early in the year, and the British coal strike interfered with shipments, but the year closed with trade conditions very buoyant and stocks reduced. N. B. shingles advanced from \$2.25-2.60 to \$2.50-3.00, averaging \$2.645 for the year, as compared with \$2.46 in 1911, on active demand in the United States market and limited supplies; tendencies at the end of the year were very firm and advances were promised, mills having closed down with low stocks and reports from the woods not being altogether favourable.

"In the Ontario and Quebec product, the year appears to have been one of steady prices for medium qualities, but low grade material advanced as did certain high grades. As illustrating the general tendency of prices of Ontario lumber the Department has obtained information from year to year as to the average price at which the cut of certain mills in the Ottawa Valley was sold. In 1910 this approximated to \$20.50, but in 1911 the level was down to \$20.00. The effect of the 1912 price movement was to bring the level back to that of 1910, namely, \$20.50. A feature of the year was the scarcity which developed in hemlock and the high percentage of stained stock caused by the wet weather of June and July. Spruce was in exceptionally good demand.

"The hardwoods were very firm, and oak and birch advanced. Basswood and elm also were higher. Furniture manufacturers reported supplies scarce and prices advancing. Car building materially increased the demand.

"B. C. fir quoted at Winnipeg remained steady, but B. C. shingles went up. Consumption in the prairie provinces has been very heavy, and the car shortage impeded deliveries. Though B. C. supplies at the beginning of the year were ample, the building season absorbed them without difficulty."

## Details of Lumber Prices

The course of prices in various lumber products is shown in separate tables. Spruce deals per thousand feet at St. John, N.B., merchantable, 3 x 7, 9 and 11 in. and up are shown to have opened the

year at \$13.25, to have advanced to \$14 in April, \$14.50 in May, \$15 in June, to have fallen off a little during July and August, returning to \$15 in October, and finishing the year at \$15.75. The average for the year being \$14.45, compared with \$9.93 during the decade from 1890 to 1899.

New Brunswick cedar shingles, "clear" and "extra" per thousand on the wharf at St. John are shown to have been quoted at \$2.25 to \$2.60 in January, and to have advanced to \$2.50 to \$3 by June at which figure they remained for the balance of the year. The average for the year was \$2.64, as against \$1.81 during the decade from 1890 to 1899.

Pine, good sidings 1 x 7 in. and up per thousand feet at Ottawa are shown to have been quoted at the beginning of the year at \$54 to \$58 and to have eased off to \$53 to \$55 by the month of April, at which figure they stood during the balance of the year. The average for the year was \$54.50, as against \$34.84 during the decade from 1890 to 1899.

Pine shipping culls, sidings, 1½ in. and 2 in. are shown to have commenced the year at \$26 to \$30 per thousand feet at Ottawa and to have remained at that figure until September when a gradual advance commenced. In December the figure was \$29 to \$32. The average for the year was \$28.41, as compared with \$13.91 during the decade from 1890 to 1899.

Pine box boards 1 x 4 in. and up to 6 feet to 11 feet per thousand feet at Ottawa, commenced the year at \$13.00 to \$14.00, at which figure they remained until December, when the price was \$15 to \$17. The average price was \$13.70, as against \$12.50 for the decade from 1890 to 1899.

No. 1 white pine lath 1¾ in. x 4 ft., per thousand at Ottawa, commenced the year at \$4 and varied between \$3.75 and \$4 throughout the year, the average being \$3.90, as against \$1.47 during the decade from 1890 to 1899.

Hemlock, 1 in. culls, per thousand feet at Ottawa, commenced the season at \$10 to \$12 and continued at that price throughout the rest of the year. During the decade from 1890 to 1899 the average price was \$8.74.

Spruce 1 x 4 in. and up 6 feet to 11 feet, mill run, at Ottawa, opened the season at \$14 to \$16.50. In April the price was \$14 to \$15 at which it remained until November when \$15 to \$16 was the market price and in December a further advance occurred to \$16 to \$17. The average for the year was \$14.93.

Pine, No. 1, cuts and better, at Toronto, were quoted at \$60 to \$65 in January and remained at that price throughout the year, the average being \$62.50. The average for the decade from 1890 to 1899 was \$33.15.

Red oak, plain, first and seconds, 1 in. was quoted at \$54 in January, \$52 from February to June and \$55 for the balance of the year, the average being \$53. During the decade from 1890 to 1899 the average was \$27.07.

Birch, common and better, 1 in., opened the season at Toronto at \$29 per thousand feet, and advanced to \$30 in May, at which figure it remained for the balance of the year. The average was \$29.66. During the decade from 1890 to 1899 the average was \$19.34.

Common and better soft maple, 1 in., went through the year at \$25 per thousand feet, at Toronto, from 1890 to 1899 the average price was \$16.49.

British Columbia fir 2 x 4 in. and up, 8 to 16 feet, S. 1 S. and E., commenced the year at Winnipeg at \$21.50 per thousand feet and remained at that price. The average for the decade from 1890 to 1899 was \$14.90.

British Columbia cedar shingles, XXX, at Winnipeg, commenced the year at \$2.90 per thousand and remained at that figure until November when they advanced to \$3. The average for the year was \$2.91. The average for the decade from 1890 to 1899 was \$1.66.

## Pulp and Paper

"Newsprint opened the year high, but almost immediately declined, recovering somewhat in June. Contracts over considerable periods were made mostly at the same figures as in 1911, in which year prices for odd lots advanced materially during the summer on account of drought, but were slightly lower than in 1909 and 1910. Wrapping paper, Manila No. 1, was characterized by strength in the autumn. Pulp, ground wood, was strong in the summer, but weakened somewhat in November. Bleached sulphite was weaker until August when there was a pronounced upward movement, but it declined thereafter. Unbleached sulphite, on the other hand, was stronger at the end of the year than at the beginning.

# Forest Areas and Problems of Canada

About 600 Billion Feet B. M. of Available Coniferous Saw Timber—Ownership and Disposal Conditions Far From Ideal

An interesting publication dealing with the forest resources and problems of Canada, written by Dr. B. E. Fernow, Dean of the Faculty of Forestry at the University of Toronto, has just been published. The publication is a reproduction from the report of the proceedings of the Society of American Foresters, November, 1912. The address having been delivered by Dr. Fernow before that society. Some of the interesting facts brought out in the address are as follows:—

"Anything like statistical knowledge regarding Canadian forest areas is lacking, but by subdividing the country into types, measuring the areas occupied such types, and estimating their probable production, the writer has come to the conclusion that as to area capable of producing commercial timber (not merely woodland) Canada may not claim much more than half that of the United States, say 250,000,000 acres, and as to quantities of available saw timber, not more than one-quarter now still to be found in the States, say 600,000,000,000 feet B.M. of coniferous material.

"Half of this timber may be accredited to the Pacific; the other half to the Atlantic side. In addition, a large amount in the aggregate of pulpwood and of inferior saw material, needful for local development, is found scattered through the middle portion.

"While an enumeration of species occurring in Canada would develop the respectable number of 150, less than one-third are of commercial value, and, indeed, if frequency and quantity of occurrence are kept in mind as factors in determining economic importance, the number of important species will be found within 30, namely, 18 conifers and 12 broad-leaf species."

## Distribution of the Forests

Discussing the distribution of the forests of Canada Dr. Fernow says in part:—

"On the southern slope of the 'Laurentian Shield' south of the Height of Land is located the true commercial forest area of eastern Canada, a country fit mainly for forest use. If we take the white pine as the most important timber, this area is still further confined in its eastern portion, for while in the western portion the northern limit of this pine very nearly coincides with the Height of Land, in the east the limit of its occurrence is climatically still further limited, and lies far south of the Height, namely, on a line from the headwaters of the Gatineau to Seven Islands, in the Gulf of St. Lawrence.

"This is a country of lakes and swamps alternating with low hills and plateaus, most variably forested, although the flora is limited to few species. It would be difficult to pick the leading species in this territory of approximately 150,000 square miles extent. There is still a hardwood basis, in which maple, elm, basswood, and paper birch, with beech, red oak, yellow birch, ash, balm of gilead, besides the ever-present aspen on burnt areas, play a part. Of the conifers, balsam fir is probably numerically the most frequent, with white spruce a close second, and in the swamps the almost useless black spruce is prominent, with the more valuable white cedar and tamarac according to the character of the swamp. White pine and hemlock, the two most valuable species, and the red pine occur much more localized, mainly along the water and on the better drained sandy hills. A century of logging has removed the accessible pine very nearly, and while it is impossible to make even a guess of the amount still standing, the fact that hemlock is cut in ever-increasing amounts sheds light on the situation. The Ontario portion of this area has always been reputed to be better stocked with this class of timber than the Quebec portion. Yet the government officials, claiming on the unlicensed territory—which, by the way, in Ontario comprises still 140,000 square miles—10 to 12 billion feet of standing white pine (or one-third of the annual consumption of coniferous material in the United States), seem to think this a large amount.

"Those who realize that the commercially available and accessible saw timber is near exhaustion point to the enormous amount of pulpwood material as the value of the future. There are undoubtedly large and for the present unmeasured amounts, but it should also be realized that a large portion of this, perhaps more than fifty per cent., is balsam fir, which, although according to the writer's contention superior to spruce for pulp, is not advantageously floated, and since the rivers are the only means for getting it out at present, and probably for a long time to come, it will remain unavailable until other values invite railroad development.

"The cut-over lands are treated no better or worse than in the States. Fire sooner or later ravages them, and on the thin siliceous soil destroys not only the young growth, but the mould; the waters

soon wash the soil, and the bare rock comes to view. Thousands of square miles have been and are being burned over repeatedly, and while the aspen and the banksian pine struggle to keep a forest cover, in many places the value is gone. The characteristic attitude of the authorities to this spoliation policy is exhibited in the declaration of a high official in charge of timberlands, that the extensive fires of the last season did not do much damage, since they occurred mostly on cut-over lands, i.e., destroying only young growth."

"Looking at the economic value of the northern woodlands, beyond the height of land, everybody must agree that their timber, although of inferior character, is of utmost value for home use by the prospective settler and miner, and of no commercial value to our eastern civilization, especially as the direction of down grades is away from markets. Nevertheless, that vast area of these woodlands, probably 50 per cent., are destroyed by fire and are annually burned over must be considered an incalculable loss for the future."

In reference to the timber of British Columbia, Dr. Fernow says:

"A rough estimate of the acreage and stand of merchantable timber made by the writer a few years ago brings it to between 30 and 50 million acres (estimated as 15 million acres, besides the railway belt, by the B. C. Forest Commission based on present standards of merchantableness) and between 200 and 300 billion feet (192 billion feet and 40 to 50 billion feet in the railway belt, according to the Commission report). Of this, one-quarter may be assigned to the Rocky Mountain types, leaving the bulk of the magnificent southern coast types. It may be broadly stated that British Columbia now contains about half the merchantable timber of the Dominion."

## Ownership Conditions in Different Provinces

In conclusion Dr. Fernow devotes considerable space to a discussion of the political advantages connected with economic development of the forest resources of Canada. Upon this he writes as follows:—

"The ownership and methods of disposal of public timberlands need explanation. Ownership of timberlands, except in Nova Scotia, is still for the most part in the Crown, i.e., they are State property, either under provincial or federal control, and hence, apparently, a rational forest management could be inaugurated at any time, if the owner so wished. Actually, however, this ownership is a snare and a delusion, at least for the largest part of the more valuable portions of the State property, for these portions are rented away for the cutting of timber under conditions which make the ownership of doubtful value.

"The conditions vary somewhat from province to province, but are similar in principle; the timberlands are managed under a license system.

"In New Brunswick, for instance, licenses or permits to cut the timber on certain tracts, called limits, are given for a series of years, renewable for 25 years. In Quebec and Ontario the license runs nominally for only one year, when it can be renewed, and is, in fact, regularly renewed as long as the licensee pays the ground rent—a certain sum annually per square mile—and the timber dues, a certain amount per M. feet, etc., for all the wood actually cut. So far the license system seems unimpeachable; the government retains ownership, and leaves it to private enterprise to secure for it a revenue from its property. But there are three features added which vitiate the beauty of the plan.

"It would, of course, be proper to prescribe certain regulations as to the manner of cutting the timber, with a view to preserving the productive value of the State's resources. It is, therefore, a commendable condition, practiced in Quebec, to restrict the cut to a diameter limit, differing for different species. But it must be considered an entirely immoral contract, when conditions are imposed which cannot possibly be carried out by any one who is not with certainty in continuous possession, as, for instance, the erection of mills of given size; and still more immoral, if the one contracting party, the government, reserves, as it does, the right at any time to change the conditions of the contract without timely warning. The lessee then is placing himself in the condition of being in the hands and good will of the lessor—a dangerous proceeding!

## Increased Government Regulations

"It is no argument against this charge of immorality that the government of Ontario, e.g., has, as a rule, not taken advantage of its right, except to slightly increase ground rents and dues and to impose the duty of protecting the property against fire in a certain man-

ner. Another not less immoral feature in the handling of the timber limits has been the practice of allowing pseudo-settlers to locate on portions of the limits, and thereby curtail the timber of the licensee. Even so, the license being only an annual one, there would appear little hardship in imposing these conditions; but there was introduced a worse feature, which practically forced the government to renew licenses as a matter of fairness, and thereby curtail morally its ownership rights. After 1867 the limits were placed on the market at auctions, and the so-called "bonus" paid by the highest bidder represented, as nearly as could be ascertained by cruising, the difference between timber dues and actual stumpage value, so that practically the owner of a one-year license to cut timber had paid full stumpage value for all the timber on the limit, which it would take years to remove, and thereby had a moral claim on the government to leave him undisturbed in possession, to renew his license.

"This would still have been a condition with which the government could have dealt fairly, because the amount of the bonus paid was known, and could have been taken into consideration if any change of conditions had been contemplated. But the third and worst feature is still to be related. It became not only the practice to renew the annual license, but also to permit transfer of licenses to others. In this way timber limits became quasi private property and objects of speculation. Banks advanced money on the limits to the leaseholder for the bonus or otherwise, as if they were his property, and not the State's; and not licenses, but limits, were handled and changed hands in the market as if they were property, at prices paid by the purchaser, which would fairly represent full stumpage value.

"In this way the hands of the government were tied by the equity which the license holders and banks had acquired in its property. The licensees claim, so to speak, property rights in limits which actually they had acquired only a right to cut for one year. It would take an unusually strong Minister of Crown Lands who could recover in an equitable manner possession of the State's property with a view to introducing a conservative management.

"These worst conditions refer to licenses issued in Ontario from 1867, when the bonus was introduced, to 1904. The licenses issued before that time, still held sometimes by original lessees, are at least minus the "wages of sin" represented in the bonus, and it should be easier to adjust them and remove the claimed ownership to the second and third growth. Since 1904 the bonus bid is made not as formerly in a lump sum, but by the M. feet, in addition to the ordinary dues, the timber to be removed within a given time—not much of an improvement on older methods.

"The government has lost its power to regulate the proper use of its property, except on the unlicensed lands and forest reservations. This condition of things, which refers more particularly to Ontario, is repeated in somewhat different detail in other provinces.

"In British Columbia, where the limits have been handed over to

speculators mostly without a bonus payment for 21-year licenses, lately the licenses have been made perpetual and the stumpage dues fixed at 50 cents, under the idea that owners will therein find an inducement for conservative use—a perfectly hopeless expectation and a perfectly unfair deal for the people. This year, however, a vigorous attempt has been made to organize a strong forestry department, which may be able to work out a scheme by which the damage may be undone.

"The Crown Lands of the Dominion, located in the new middle provinces and unorganized territories, are in a more hopeful condition as regards the possibility of applying management, for they are mostly not yet under license and the Forestry Branch has really possession of them.

"There is, however, a move on foot to hand over the public lands to the provinces in which they are situated. Indeed, within a few weeks it was decided to transfer the so-called railway belt to the province of British Columbia. The same reasons which are against handing the National Forests over to the States are valid against such transfer to the provinces. The Federal government in both cases can better afford financially the difficult task of starting a forest management, while either States or Provinces would surely resort to the policy of exploitation.

"There is still to be added to these inherited and natural ones the third difficulty, which hampers the speedier progress in forest reforms wherever they have been begun. It is baneful influence of personal politics, the blight from which all public business suffers, wherever there is a lack of a standard for the appointment of civil servants.

"The influence of the Civil Service Commission does not reach the so-called "outside service," the field force, which is appointed, as a rule, for political reasons, or is at least under political influence. The U. S. Forest Service has been lucky in having from the start been able to avoid this influence, and to divorce appointments, at least to a large extent, from political considerations. The Forestry Branch of the Dominion has had to steer through political waters, and while it has been allowed to employ technical men without reference to their politics, the politics of other appointees rather than their fitness had to be considered, with the inevitable result of leading to inefficiency rather than to efficiency.

"So far, technically educated Canadian foresters have been few, and, with the sudden development of the British Columbia Forestry Branch, the market is indeed for the time undersupplied. With the increase in the number of professional foresters, however, it is to be anticipated that reform in organizing the forest service will grow apace, and that Ministers of Crown Lands will be forced by public opinion to divorce technical administration from political influence.

"Only a radical change in attitude, a realization that forest conservation is a present necessity, and that existing methods are destructive of the future, will bring forward the needed reform."

Abitibi Pulp and Paper Company's Plant, Iroquois Falls, Ont., as it will appear when completed next December

# Modern Door Manufacturing Methods

Importance of Organization and Good Machinery in Producing High Quality Goods—The Paine Company's Plant Oshkosh, Wis.

Everyone in the business of making or selling doors has heard of the wonderful and enormous plant of the Paine Lumber Company at Oshkosh, Wis. One of the most interesting departments of this plant is the one which is devoted to the making of veneers for use in veneered doors. The employees of the veneer mill number three hundred. Altogether the Paine Lumber Company has in its employ, in its various departments, three thousand people. In the old and new sash and door plant and planing mill two thousand three hundred of this total are employed. The executive office of the company gives employment to sixty-five people. We might go on at considerable length giving statistics of this nature in order to tell our readers of the ability of the company who turn out products in great quantities. This is not the object of the present article, however. The principal

Cutting out sheets of veneer at Paine Door Plant

idea is to tell the readers of the Canada Lumberman some of the interesting points in connection with the veneer plant and the door making plant.

When it comes to doors, this company stands pre-eminent among all the manufacturers of doors in the world. This truth is readily appreciated when one considers that, according to statistics gathered by the company, it makes two-thirds of all the standard veneer doors in the world. It has a capacity for turning out the surprising quantity of one million five hundred thousand doors in the course of a year. A Globe-Trotter would probably open and close quite a number of Paine doors during the course of his travels. Canadians may not realize it but they handle a great many Paine doors during the course of their ordinary business affairs. In many of the prominent hotels throughout North America these doors are to be found, and also in public buildings of various descriptions, a notable instance being the Parliament Buildings of Canada at Ottawa.

## The Making of Veneers

In the making of veneers the company uses birch, oak, mahogany and basswood. Each wood gives its own distinct class of veneer. The logs which are to be manufactured into veneer are re-sorted at the plant, after a preliminary sorting which has divided the veneer logs from the sawmill logs. An electric railway carries the veneer logs to a cross-cut saw which cuts them into the proper sizes for the veneer machines. Then the logs are rolled into the boiling vats, which are arranged in a series. Each vat holds a number of logs and the water in it is kept continually at boiling point by a series of steam pipes down in the water. The logs remain in this for twenty-four hours and come out steaming hot, boiling water having reached every nook and corner in the wood, clear to the heart. The logs have actually been "cooked tender," and are ready for the hungry veneer machine with its one sharp tooth, a long knife of steel.

An electric hoist lifts the logs from the vat and they are then stripped of their bark and rolled along and hoisted into position for the veneer machine. The heart of the log is marked on each end so as to determine its exact centre. Then the log is lowered into the machine the ends being fastened into a heavy chuck. Lengthwise of the machine is a knife one hundred inches long. The chuck is revolved after the manner of an ordinary turning lathe. As the log

turns around on the chuck it is pressed against the long knife and a sheet of veneer of the standard thickness of an eighth of an inch is peeled off like paring an apple. The sheets of veneer appearing like a huge sheet of leather, one hundred inches wide, and some times one hundred feet or more in length, is moved along smoothly over a long table by travelling steel chains. As the veneer sheet leaves the machine it passes beneath a row of huge lead pencils which mark black lines lengthwise of the sheet. These are necessary to indicate the outside face of the veneer, so that when the veneer pieces are glued up, this outside surface will be on the outside to prevent checking. As the sheets of veneer move along, big knives descend at intervals and cut them into large sections. Other knives again cut these sections into smaller portions of suitable size for the panels, stiles and rails of doors.

The core of each log is transported to a miniature sawmill to be cut into lumber. Nothing is wasted. The bark and other trimmings are sent to the "hog," a machine that cuts and grinds the pieces into smaller bits which are then fed into the furnaces.

After they are cut into the proper sizes, the veneers are carried in conveyors to the drier, where the pieces move slowly along between innumerable iron rollers that are heated. The atmosphere in the dryer remains at a temperature of 240 degrees. It is like a great oven, with asbestos lined walls, and is of such size that it takes just forty-five minutes for each piece of veneer to pass through. When the veneers come out they are dry and baking hot. The heat warps the eighth of an inch veneers somewhat, but not enough to retard handling. Steps are being taken to add a quick cooling arrangement to the dryer, so that the pieces will keep perfectly flat, the absence of any warping facilitating the handling of the pieces.

## Assembling the Veneers

Next in its adventurous journey from log to door, the veneers upon leaving the drier, get a free ride on conveyors to the gluing department. Here men and women, in making the panels, run the veneers through a machine that spreads a glue upon the surfaces to be

Section of veneer showing grain of the wood

glued together, and three pieces are assembled to make each panel. Each piece being an eighth of an inch thick, the resulting panel is three-eighths of an inch in thickness. The grain of the middle piece extends in a direction opposite the grain of the two outside pieces, and this crossing of the grain is the secret of the non-warping quality of veneer doors. The glue used is secured in South America. As fast as the employees place the three layers of veneer for each panel, these three thicknesses are laid upon large sheets of metal, and piles of these sheets are squeezed in hydraulic presses that exert a pressure of 800 pounds to the square inch. The panels remain in these for several hours, until the glue has become thoroughly dry. Finally, the panels, which come out of the presses perfectly flat, are trimmed at sawing machines and are then ready for the door department. For any one piece of veneer to pass through the evolution from log to panel requires in all only about eight or ten hours. There is no wasted energy, no pronounced interruptions in the various steps of the process. Everything moves along at a certain steady rate of speed, and not a hitch occurs all day long, except on rare occasions,

when some certain machine balks or needs repairs. Clock-work precision is maintained and the result is a constant stream of panels turned out each working day.

### Making the Doors

No less interesting is the door-making department to which the panels are taken from the veneer mill. In making the stiles and rails for the doors, small pieces of soft wood are glued up in strips and dovetailed together by eleven Linderman Dovetailing Machines and the veneers then glued upon these fillers, as in making the panels. The outside edges of the stiles are strips of the same wood as the veneers, so that the soft wood filler does not show at all. Cull portions of logs are used for the filler, thus utilizing what would have been unavailable years ago when a carpenter spent days making a single door of the old style.

Machines bore holes in the rails for the dowels, which are little round sticks of hard wood that are turned out by other machines, and also glue the dowels in to the rails. Other machines place glue in the holes in the side lengths or stiles and all the parts—panels, stiles and rails—are properly assembled and a power clamp, or "squeezer" presses all the parts together tightly. The door is now ready for finishing. The surfaces are sanded smooth by powerful machines that sand both sides at once. Some doors have six panels, others have two. Some have one large one, and still others have none, depending upon the styles catalogued or specially ordered. The no-panel door is used considerably in hospitals, on account of being without surfaces that would catch dust, and are therefore more sanitary. Some veneered doors have handsome inlays put in. Others have openings of various shapes for glass. When finished, the doors present a most beautiful appearance on account of the rich effect in the grain of the veneer. A popular door turned out by the company has veneered panels, with the stiles and rails of solid spruce. Not a few birch doors are stained to represent mahogany, the resemblance being striking. Wisconsin birch is called the American mahogany, and it deserves the term applied.

The Paine plant at Oshkosh is one of the wonders of modern manufacturing skill. The greatest wonder is how one firm can have worked up so widespread and good a reputation that can sell such a large output.

### E. C. Atkins & Company Not Interrupted by Flood

E. C. Atkins & Company, Indianapolis, Ind., U.S.A., write us under date of March 28th, as follows: "The reports that have gone out from this city in regard to the situation caused by the recent floods in this district, may have caused some of our customers and friends to think that we would not be able to fill their orders promptly, but we are pleased to state that, fortunately, our plant was not affected by the high waters and as we have our own water supply and lighting system we have been able to run along without any interruption. Traffic is now fast resuming its normal condition and all orders and inquiries will have prompt attention."

### A Valuable Hardwood Consumers' Register

The National Hardwood Lumber Association have published Volume I. of the "Consumers' Register" of the Association. The register consists of a tabulation of the annual hardwood requirements of consumers in the United States and Canada, secured through the reporting department up to March, 1913. The book is one which speaks for itself. Its distribution will be confined exclusively to members of the Association. The arrangement of the register is such that one can obtain from it in a few minutes, information of great importance as to where he can either buy or sell the stocks in which he deals. Volume I. occupies no less than twenty pages all of which is devoted to the presentation of information regarding stocks wanted and for sale, in a practical and condensed form.

### Metal Insurance

The importance of using good paint for the protection of metal surfaces is discussed in a brief article by L. M. Stocking, in a recent issue of the Dixon "Crucible" published by The Joseph Dixon Crucible Company, at Ticonderoga, N.Y. "Metal insurance" may be an unfamiliar term, says the writer, yet it is of great importance to all owners of property. If the rate for fire or life insurance is too low, one thinks twice before giving risks to a company, because its ability to carry out its contracts is doubtful. If the rate is too high, one shuns such a company on account of the expense. A fair price for the best protection in the company with a reputation, is the ideal one should follow in insurance matters. In the same way one should consider the question of insuring metal surfaces by the use of protective paint. Structures should not be painted spasmodically. Metal surfaces should be inspected regularly and a paint applied which will give the longest service, thereby saving expense in repainting. A structure

well painted is insured against decay and depreciation. In this way the value of property is maintained and the profit and loss account shows more on the credit side. Painting should be done regularly so that a structure will not depreciate and involve a fruitless effort to bring it up to efficiency. This is waste of money and bears hardest upon the owner at his weakest time. The best paint should be used and regular inspection should be made. Dixon's Silica-Graphite paint has a splendid reputation for the qualities which enable it to fulfil the requirements of effective metal insurance. It is made in four colors, but one quality only. It is equally suitable for metal or wood. As an endurance paint it is highly commended by all who have used it, especially by leading railroads and manufactories which have adopted it after exhaustive tests, as their maintenance paint.

### Sees Prosperity Ahead

Alexander Maclaren, the well-known lumberman, of Buckingham, P.Q., is visiting Vancouver on one of his annual business trips. In a recent interview he spoke of the tight money situation in eastern Canada but said that he looked for improvement during the next few months. So far as he could learn, collections in the east were better than to the west of Lake Superior. He looked for marked improvement on the prairies after the opening of navigation. Speaking of the lumber situation he said that eastern lumbermen were enjoying exceptional prosperity, as prices had advanced \$3 per thousand over those of a year ago. Most of the mills in the Ottawa Valley have already disposed of the coming season's cut at the prevailing prices. The Pacific Coast lumber industry looked promising to him, although there was no increased demand from the prairies at present. Immigration, however, promised to be large.

### United States competition in the Prairies

The following table shows for 1911 and 1912 the United States lumber and shingles shipped into the market upon which British Columbia manufacturers depend:—

|                                                           | 1912.              |             |                | 1911.              |             |                | Percent Increase 1912 over 1911 |
|-----------------------------------------------------------|--------------------|-------------|----------------|--------------------|-------------|----------------|---------------------------------|
|                                                           | Feet B.M.          | Value.      | Average per M. | Feet B.M.          | Value       | Average per M. |                                 |
| Planks, boards, etc., dressed one side, not dutiable..... | 207,762,000        | \$2,377,262 | \$11.44        | 190,768,000        | \$2,324,994 | \$12.13        | 9                               |
| Sawn boards, etc., dutiable.....                          | 49,291,000         | 645,670     | 11.07          | 31,348,000         | 390,866     | 12.11          | 53                              |
|                                                           | 257,053,000        | \$3,022,932 |                | 222,116,000        | \$2,715,860 |                |                                 |

### A Good Cut in Saskatchewan

Reports from Prince Albert, Sask., state that the logging operations of the Prince Albert Lumber Company were favored with the best logging weather that they have ever had during the past winter. The cut was about two-thirds as large as last year, the company having curtailed its operations as it had a quantity of logs held over from the previous season. The logs taken out last winter will amount to 30,000,000 feet. The production of the mill during 1913 will be about 50,000,000 feet. It is intended to commence sawing operations about April 20th. The mill will employ about five hundred men.

### Is Your Fire Risk Serious?

The Ontario Fire Prevention Association has taken steps to draw to the attention of the public the great importance of proper inspection of premises, in order to prevent fire loss. A red card has been distributed broadcast throughout the province, containing the following notices:

"On April 19th, 1904, Toronto was visited by a conflagration in which \$10,350,000 of property was destroyed. We urge you on or before the anniversary of that day to see that your premises are clean and in proper conditions as regards fire hazard.

"Remove all inflammable litter, giving special attention to the basement and cellars.

"Inspect your lighting, heating and power equipment. Also your fire escapes and fire protective appliances."

The Secretary of the Association is Mr. W. Walker, 706 Lumsden Building, Toronto.

Mr. Allan McPherson, of Longford Mills, Ont., who was shot in the leg by a burglar on March 23rd, is reported to be making favorable progress towards recovery.

# WANTED & FOR SALE DEPARTMENT

## PUBLISHER'S NOTICE

Advertisements other than "Employment Wanted" or "Employees Wanted" will be inserted in this department at the rate of 15 cents per agate line (\$2.10 per inch) each insertion, payable in advance. Space measured from rule to rule. When four or more consecutive insertions of the same advertisement are ordered a discount of 25 per cent. will be allowed.

Advertisements of "Wanted Employment" will be inserted at the rate of one cent a word, net. Cash must accompany order. If Canada Lumberman box number is used, enclose ten cents extra for postage in forwarding replies. Minimum charge 25 cents.

Advertisements of "Wanted Employees" will be inserted at the rate of two cents a word net. Cash must accompany the order. Minimum charge 50 cents.

Advertisement must be received not later than the 10th and 26th of each month to insure insertion in the subsequent issue.

## Wanted—Lumber

### Basswood Wanted

No. 2 Common and Mill Cull. Winter cut preferred. Apply Firstbrook Box Co., Ltd., Toronto, Ont. 7-tf

### Wanted

A stock of 1-in. and 2-in. Hemlock. M. Brennen & Sons, Hamilton, Ont. 8-11

### Wanted

Cedar Posts, 4½-in. and up at top, 8 ft. long. M. Brennen & Sons, Hamilton, Ont. 8-11

### Spruce Wanted

A stock of 1-in. and 2-in. cull and common. Apply M. Brennen & Sons, Hamilton, Ont. 8-11

### Wanted to Buy

Stock of Pine, Spruce and Hemlock logs, G. T. R. points preferred. Canada Pine Lumber Company, Hamilton, Ont. 8-11

### Wanted to Buy

1-in. and 2-in. Hardwood, common and better and cull. Apply M. Brennen & Sons, Hamilton, Ont. 8-11

### Basswood Wanted

No. 2 common and mill cull, winter cut preferred. Apply M. Brennen & Sons, Hamilton, Ont. 8-11

### Wanted

First Quality Rock Maple Logs, 23-in. and up, and 30-in. and up, diameter at small end. Quote delivered Montreal. Box 760, Canada Lumberman, Toronto, Ont. 8-9

### Wanted to Buy

Pine, spruce, hemlock, railway ties, common and better, and cull basswood and birch. M. Brennen & Sons Mfg. Co., Limited, Hamilton, Ont. 8-13

### Wanted

Three hundred thousand feet of good Canadian Oak, all cut 4/4 in. Shipment any time within ten months. Address Box 698, Canada Lumberman, Toronto, Ont. 7-10

### Wanted

Twenty car loads white winter cut Basswood, No. 1 common and better, grade plump, inch thick when dry. For further particulars apply to Box 730, Canada Lumberman and Woodworker, Toronto, Ont. 6-11

### Cull Maple, Beech, Birch

100 cars 1-in. Mill Cull Maple, Beech or Birch. Highest cash prices paid for entire output of mill in Hardwood, Pine or Hemlock. Great Lakes Lumber Co., Ltd., Owen Sound, Ont. 5-T.F.

## Wanted

One-inch cull elm, deads out and dry. Write P. O. Box 892, Smiths Falls, Ont. 5-8

## LUMBER

When you have any kind of lumber and lath to offer or logs for sale, send us a description and prices. The Turner Lumber Company, Limited, 25 Toronto Street, Toronto. 8-11

## Wanted

One million feet 1-in. and 1½-in. Elm. Will pay \$26.00 per M. at shipping point for good stocks, log run. Box 746, Canada Lumberman, Toronto, Ont. 7-8

## Wanted

One million to two million feet of Hemlock or Pine Logs, on the shore of the Georgian Bay. Advise, stating particulars and locality. Keenan Bros., Limited, Owen Sound, Ont. 6-T.F.

We want to purchase a quantity of dry maple, elm, basswood and birch, and also contract for the present winter and coming spring cuts of hardwood lumber. Address The London Lumber Company, Limited, London, Ont. 6-9 6-7

Wanted, White and Red Pine, 2-in. and 3-in. tank stock. Communicate with the Ontario Wind Engine & Pump Company, Toronto, Ont. 6-T.F.

## Do You Want to Buy or Sell?

If you wish to purchase or dispose of a particular stock of lumber or logs, a mill property or timber limit, or some second-hand machinery, the CANADA LUMBERMAN AND WOODWORKER will bring quick returns. Use our "Wanted and For Sale Department."

We use yearly five hundred thousand to one million feet of Birch, Basswood and Ash in our business and are open to contract with responsible mill men for same. We would be willing to advance money on the logs and also on lumber as sawn. Write us, Manufacturer, Box 619, Canada Lumberman, Toronto, Ont. 20-37 T.F.

## Birch Wanted

Want 200 M. ft. 10/4 1st and 2nds and No. 1 Common Birch. Give average widths and lengths and percentage of 14 and 16 ft. lengths. Want price delivered Philadelphia, Pa. and New York City.

Want 200 M. ft. 6/4 No. 1 Common Birch delivered Boston, Mass.

Want 5 cars 4½ in. and 5 in. 1sts and 2nds. Birch delivered New York City and Philadelphia, Pa. Reply Box 526 Canada Lumberman, Toronto, Ont. 14 T.F.

## Wanted — Cedar Telegraph Poles

1000 poles, 25 ft. x 6-in. tops.  
500 poles, 25 ft. x 7-in. tops.  
1000 poles, 30 ft. x 7-in. tops.  
1000 poles, 35 ft. x 7-in. tops.  
400 poles, 40 ft. x 7-in. tops.  
Quote price and quantity for sale, also delivery date.

HORACE HARTLEY,  
Wholesale Lumber,  
19 Mayor Street, Montreal.  
7-10

## Hardwood Pickets Wanted

Beech, Birch and Hard Maple.  
1 x 1 x 42.  
1 x 1 x 48.  
1 x 1½ x 42.  
1 x 1½ x 48.  
1 x 1¾ x 42.  
1 x 1¾ x 48.  
Require Thickness, 1/16-in. Plump.  
Quality—Free from all defects.  
Can take delivery of green or dry stock.  
Apply to The Canada Wood Specialty Co., Ltd., Orillia, for full particulars, price, etc. 24-1-TF

## For Sale—Lumber

### Lumber For Sale

400,000 ft. 3 x 7 and up Merchantable White Pine.  
200,000 ft. 2 in. Merchantable White Pine.  
200,000 ft. 1½ in. Basswood, Log Run.  
500,000 ft. Hard Maple, 1 in. to 4 in.  
Apply to

GEO. C. GOODFELLOW,  
Montreal, Que.

### For Sale

60 M. 2-in. Birch, No. 1 com. and better.  
60 M. 1-in. Birch, L.R. M/C out.  
25 M. 3-in. Birch, L.R. M/C out.  
50 M. 2-in. White Pine, L.R. M/C out.  
All good dry stock.  
Apply Box 755, Canada Lumberman, Toronto, Ont. 7-tf.

### Saw Mill For Sale

Huntsville Lumber Company, Limited, will in the future only run one of their two double cutting Band Mills, which is now cutting fifty thousand feet per day.

They will sell the same with engine, boilers and all other machinery along with building. Also will sell blacksmith's tools and a number of saw-log sleighs and chains.

Huntsville Lumber Company, Ltd.,  
22-42 T.F. Huntsville, Ont.

### Spruce Box Lumber

100,000 ft. 2x4 and up 6/16 ft. Quebec "C" Culls.  
100,000 ft. 3x4 and up 6/16 ft. Quebec "C" Culls.  
For quick shipment from mill. Good average widths. Ask prices.

THE A. SHERMAN LUMBER CO.,  
8 Potsdam, N.Y.

## For Sale—Machinery

### For Sale

One "Hamilton" Circular Resaw with two 44-in. inserted tooth saws. New; never used. Address Papineauville Lumber Co., Ltd., Papineauville, Que. 7-11

### For Sale

One second-hand fifty-eight inch Leffel Water Wheel, made by Paxton and Tate; in good repair. Apply to I. C. Prescott, Albert, Albert County, New Brunswick. 8

## Wanted—Employment

Advertisements under this heading one cent a word per insertion. Box No. 10 cents extra. Minimum charge 25 cents

Double cut band or circular sawyer open for engagement coming season. Best of references. J. Mercer, Parry Sound, Ont. 4-9

As band saw filer, double or single cut, or in a factory where there are band resaws. A1 references. Box 715, Canada Lumberman, Toronto, Ont. 8-10

Position or partnership by manager of woods and mill operations of 20,000,000 feet annually. Ten years' experience in manufacture, wholesale and retail lumber business. Excellent references. Apply Box 763, Canada Lumberman, Toronto, Ont. 8-9

WANTED—Position in saw or planing mill, office and mill experience, could take charge of sales or act as mill foreman or yard foreman. Excellent references. Apply Box 743, Canada Lumberman, Toronto, Ont. 6-9

## Wanted—Employees

Advertisements under this heading two cents a word per insertion. Minimum charge 50 cents

Wanted, one first class sawmill millwright, experienced with care of steam feed niggers, loaders and steam set works, also circular sawyers for steam feed and Kendall nigger. Two setters for Prescott steam set works, two doggers and one first class edgerman. Mill starts May 1st, closes December 1st. Nothing but first class sober men need apply. The Quebec and St. Maurice Industrial Co., La Tuque, P.Q. 6-8

## Business Chances

### For Sale

Must be sold—\$2000 off—planing, saw and chop mill. Full particulars apply to John McCormick, Lawrence Station, Ont. 3-8

### Wanted

To contract for stocks of birch, maple, elm, ash and basswood, dry or green, for cash. Correspondence solicited. Box 268, North Bay. 6-9

### For Sale

An up-to-date planing mill and sash and door factory; 150 horse power; in a large town, Western Ontario, Box 721, Canada Lumberman, Toronto, Ont. 5-8

### For Sale

Saw Mill and fifty-three miles timber limits in County of Bonaventure, Quebec Province. For further particulars apply to J. D. Sowerby & Co., Oak Bay Mills, P.Q. 22-71tf

### For Sale

Rare bargain. Band mill located in best lumber and log center on Puget Sound. Rail and cargo shipping facilities. Excellent log pond. Ten and a half acres of land. Price one-fourth of appraised valuation. Must sell quick. Box 765, Canada Lumberman, Toronto, Ont. 8-tf.

## The Town of Thessalon

Offers opening for woodworking plants of any kind. Lake and rail shipments. A.1. hardwood timber in close proximity. Address, R. C. Dobie, President Board of Trade, Thessalon, Ont. 8

## Wanted — To Buy a Good Timber Tract

Of White and Norway Pine, Hemlock and Spruce. Would consider buying first-class running operation. In replying, give full details of what you have to offer and your lowest price and terms. Address Box 615, Canada Lumberman and Woodworker, Toronto, Ontario. 3-8

### For Sale

On easy terms, sawmill, new; just installed 50 h.p. Water Power, with electric plant. Good location for pulp mill. Good quantity of pulpwood close to C. N. R. and station; on river. Two million feet timber and 600 acres of good land. Townsite laid out. Sawmill and power or land sold separately if desired. For further information write J. H. Latremouille, Mount Olie Power Co., Box 48, Kamloops, B.C. 8-13

## Rebuilt Band Resaws

Mershon, New England Ideal Resaw, 46-in. Mershon Horizontal Sawmill Resaw, 66-in. Connell & Dengler Resaw, 60-in. Berlin Band Resaw, 44-in. Mershon Standard Perfected Resaw, 54-in. American Band Ripsaw, 42-in.

WM. B. MERSHON & CO.,  
8-11 Saginaw, Michigan.

**Timber Limits For Sale**

Can be quickly and profitably disposed of by advertising them on this page. This is where buyers of timber property look for opportunities to invest. If your "ad" is here the investor will see it. Canada Lumberman, Toronto, Ont. tf

**Sawmill For Sale**

On Georgian Bay, near Little Current, close to north shore; practically new, well built and equipped with shingle machinery; over one mile of water front, loading dock and sheltered booming ground; plenty of timber available locally or can be rafted in from north shore or Georgian Bay. Good opening for retail store in connection. This is a splendid chance for millman with small capital; price right. Good reason for selling. Great Lakes Lumber Co., Ltd., Owen Sound, Ont. 5-T.F.

**For Sale—On Georgian Bay Eighty Miles East of Soo**

Mill site, railroad, locomotives, cars, docks, trams, camps, equipment with 125 million feet White Pine, Hemlock, Hardwood. Large piling capacity, low taxes, employees' cottages, etc. This operation is first class in every respect, and ready to start any time. Box 727, Canada Lumberman, Toronto, Ont. 6-T.F.

**Miscellaneous****Do You Need Help?**

If so let us know. We can furnish any amount of skilled and unskilled labor at shortest notice.

O'Donnell's Employment Bureau,  
116 Wellington St. West,

Toronto, Ont. 7-10  
Phone Adelaide 3919.

**Mail Contract**

Sealed tenders addressed to the Postmaster General, will be received at Ottawa until noon, on Friday, the 2nd of May, 1913, for the conveyance of His Majesty's Mails on a proposed contract for four years, six times per week over Rural Mail Route from Severn Bridge (via Hamlet) Ontario, from the Postmaster General's pleasure.

Printed notices containing further information as to conditions of proposed contract may be seen and blank forms of tender may be obtained at the Post Office of Severn Bridge, Hamlet, and at the office of the Post Office Inspector at Toronto.

G. C. ANDERSON,

Superintendent.

Post Office Department,  
Mail Service Branch,  
Ottawa, March 15th, 1913. 7-8

**Artificial Ebony from Oak**

A process for converting oak into artificial ebony, which prevails in France, is as follows: The blocks of wood are immersed 48 hours in a warm saturated solution of alum and sprinkled several times with a decoction of logwood. Smaller pieces may be steeped for some time in the decoction, which is prepared in the following manner: One part of logwood of best quality is boiled with 10 parts of water. It is then filtered through linen and the liquid evaporated at low temperature until its volume is reduced by one-half. To every quart of this bath is added 10 to 15 drops of a saturated solution of soluble indigo. After having watered the block several times with this solution, the wood is rubbed with a saturated and filtered solution of verdigris in warmed concentrated acetic acid. This operation is repeated until a black color of the desired intensity is obtained.

**A New Timber World**

Away up in the northern part of Canada, somewhere around what is known as Spirit Lake, the Canadian Government reports an area of 2,400 square miles on which timber three to four inches in diameter is growing. The rangers report that this area has been covered several times with forests which have been burned off. The present stand of timber has grown up since the last fire. If this area can be protected from flames a large population and an immense lumber industry will spring up in that country after the forests now growing have become large enough for manufacturing. Some of the area has merchantable timber growing in protected places, the soil is deep and can always be counted upon to grow another crop of trees if the fires are kept out.

While this area is not extensive, it shows what the possibilities of what is known as the Hudson Bay region are. If the theory of German geologists is correct, that the world is starting towards one of the long summers, estimated to be about 25,000 years, the timber belt of the United States will gradually move north, and in a few thousand years Alaska will be covered with the dense growth of trees now found in the warm climates, the icebergs gone, the Polar bear extinct, and all the unpleasant features of hot weather to be found as far north as the North Pole. If the prophesies of the German scientists turn out to be correct, it is going to be most too hot.

**Beetles in Lumber**

The same kind of beetle that has cost the builders of the Panama Canal thousands of dollars was responsible for an unusual suit begun in the Queen's County Supreme Court. The beetle laid its eggs in a boat-load of lumber brought here from Panama last June, and when the eggs hatched out the insects began to bore. To protect the rest of its lumber yard the Astoria Lumber Company, which was storing the original shipment, was forced to burn it up. Now the Astoria Company is suing J. A. Horsey & Company, with whom it had storage contracts, for \$1,500,000 damages and further relief. The Horsey Company asserts it was not responsible for the beetles and seeks to hold the Astoria Company liable for the loss of the lumber.

**America Uses Many Barrels**

Upwards of 150,000,000 barrels and circular packages are manufactured in the United States annually. Few people, except those whose business it is to know, realize the extensiveness of the cooperage industry in this country.

The heaviest demand comes

from the cement business. The flour business ranks next, closely followed by sugar. Containers for fence staples, bolts, nuts, nails, and packages for roasted coffee, spices, crockery, fruits and vegetables, follow in the order named, while glass manufacturers, baking powder companies, liquor distillers, and candy, tobacco, and cheese packers are big users of barrels. The demand for barrels for molasses, oil, lard, and pork, is also enormous, while dry paint, glue, snuff, oatmeal, screws, castings, and general hardware articles annually increase the demand on the cooperage supply.

While the amount of expenditure for barrels can be quite closely estimated for a given year, it is not possible to say how many barrels are in actual use. The life of a barrel is put down at one year by the trade, but this is far from true. A majority of barrels are used many times. They begin as sugar or flour barrels, and are then sold to the farmer for shipping his produce to the market. It may be that they are returned to him several times, carrying potatoes to the market on the first trip, and tobacco or lettuce on the next, each cargo being lighter in weight than the previous one, owing to the weakened condition of the barrel. Finally the barrel may serve out its life work as a refuse receptacle, and in the end can be used for fuel. Thus, it may be said, that a barrel fills as useful a career as almost any other manufactured article, and its life is much longer than a season.

The demand for barrels is steadily growing because modern machinery has made it possible to make them for the trade cheaper than almost any other form of durable package. That it is the most convenient form of package has long been acknowledged. The timber used in tight barrels has to be selected with care, as it must not only be water-tight, but barrels for the oil, whiskey and paint trades in addition must be capable of resisting high internal pressure. The lumber used for this work must be carefully selected, that cured by slow air-drying under shelter being the most satisfactory.

**Driving Centres of Shafts**

A factor of immense importance in the transmission of power by means of belts and driving pulleys is the driving centres or distance apart the shafts are placed. Driving centres either too short or too long are both bad, although short centres are the worst, as they mean slipping belts and greatly increased wear on both belts and bearings. In arranging a drive for high-speed machinery—such as woodworking—a number of points should be carefully considered. In the first place, the main should be run at a good

speed, say 250 to 350 revolutions per minute, as this in some cases will allow of direct driving, and do away with countershafts altogether, and the size and weight—and consequently the tension on the belts and wear on the bearings and shafting—of the pulleys and shafting necessary will be reduced in proportion. Again, pulleys of largely varying diameter should never be used for getting up speed, and in any case the ratio should never exceed 4 to 1, and less than this is the better practice.

The driven pulleys on the machines are sometimes too much stinted in diameter, consequently belt-slip and other troubles arise from the belt contact being insufficient for the work, and the writer, during a lengthened experience, has increased the size of many of these with very satisfactory results.

Another point that must not be lost sight of is the rounding on the pulley faces, and some rounding is, I think, necessary with high-speed machines to keep the belt in the centre of the pulley. This rounding, however, should be as small as possible, and be exactly alike on both driving and driven pulleys. A flat-faced pulley should never be used in conjunction with a rounded one, as this means injury to the belt and a reduction of its driving power.

I need hardly say that it is absolutely necessary that the driving and driven shafts and pulleys are fixed parallel and dead true with each other in every direction.

As regards the distance apart or driving centres at which shafts should be placed, no arbitrary rule can be made, as it will depend in a measure on the power to be conveyed and the nature and speed of the machinery. The writer has, however used the following rule for many years, which he has modified according to circumstances: Take the circumference of both the driving and driven pulleys and add them together, and place the shafts not less than this distance apart. This rule will be found suitable under ordinary conditions for most classes of machinery, but for heavy powers or very high speeds the driving centres may sometimes be increased with advantage, but each case must be judged on its merits.

# Review of Current Trade Conditions

## Ontario

The heavy rain and bad weather which was prevalent a week or so ago left the roads in an almost impassable condition throughout Ontario, so that the yards were unable to team any of their stocks. The result was that business was practically at a standstill, although a good number of orders were waiting to be delivered. Under these circumstances wholesalers were unable to take fresh orders and consequently no appreciable change has taken place in the market.

The money situation has improved somewhat but reports seem to indicate that collections are still rather slow. One of the causes of this is possibly that dealers, being uncertain as to what conditions will be a little later on, are taking longer credit so as to have a surplus to fall back upon in case of emergency.

The great wind storms which prevailed in many parts of Canada during the third week of March caused wide-spread damage to roofs. The result was an abnormal demand for shingles. It is an ill wind that blows nobody good.

Lumbermen from the northern woods of Ontario reported that practically all of the snow had disappeared by the second week of this month. Early in the month a very heavy snowfall took place which isolated many of lumber camps for the time being.

A prominent lumber manufacturer in the Bruce Peninsula reports that the past winter was a bad one for taking out timber, as there was very little snow until February and after that there was snow and wind every few days. This kept the roads full and made it impossible to use the tank for icing the roads. Most of the roads in the Bruce Peninsula are open or through burns, so that storms blockade them worse than if they were protected by green timber. The cutting and skidding operations in the Bruce Peninsula were carried on under ideal conditions. The lack of snow in December and January was a great help in this work. The cost of woods operations on the whole was therefore less than usual. No logs were left in the bush, but the quantity of timber taken out on the Peninsula by most of the mills was less than during the winter previous.

Quiet trade continues at Ottawa. Good grades of white pine are a little easier, but culls are moving rapidly. Export trade with South America is quiet, largely on account of scarcity of vessels.

## Eastern Canada

The lumber trade at Montreal has shown little or no change during the past fortnight, although a few wholesalers report less activity in the local market. Other firms report that they could sell all the lumber they wanted but that they are not pushing the trade, as collections are bad. The tightness of the money market is the chief factor in this connection. Prices continue strong and dry stocks are scarce. Stocks of lath in particular are scarce. The same applies to the common ends of lumber. Building activity in Montreal is more extensive than ever. The market for ground wood shows much improvement.

The milling season at St. John, N.B., commenced on April 1st. Messrs. Stetson, Cutler & Company and Warner & Company are sawing entirely for the American market. Randolph and Baker and Murray and Gregory are sawing for the English market. Labor for the mills is rather scarce and as usual, of a poorer quality than in former years. There are indications of labor unrest which may extend to the sawmill hands. Under present conditions, mills would have to stop operating if wages were to be increased. All cuts of English deals have been sold for the coming season at prices quoted in the Canada Lumberman a fortnight ago. Other stocks continue in a strong position and scarce. In the course of a few days all old stocks of English deals will have been shipped on the liners. American sizes are being shipped as fast as vessels can be secured.

It is thought that about 10 per cent. of the logs taken out in the New Brunswick woods during the past winter will be left on the yards. Freight rates to the English market show a little easier tendency, but to the United States ports they are stiffening. It is not unlikely that \$4 will be the standard rate for New York freights from St. John this summer. The drive on the St. John this year will be about seventy millions if it all comes out. Last year it was about one hundred and five millions. On the Tobique River about thirty-three will be driven.

Prices of eastern spruce at New York continue firm although the demand for general yard stock is quiet. The yards, however, are showing a tendency towards a little more activity. The general situation is satisfactory and the indications are that there will be a firm market in the spring. Hemlock continues strong at New York with the yards taking whatever stock is offered. The mills are holding out for top prices. Boards are practically out of the market. Hardwood stocks at New York continue strong, stocks are limited and enquiries

are plentiful. Birch and maple are in good demand and some sizes are very scarce. The manufacturing trade is very active.

At Boston, some improvement is reported in the spruce market. There is a firmer tone for frames and retailers are obliged to buy at a \$27 base. There is a fair demand for random at steady prices. Boards are very high and firm. The demand for eastern hemlock at Boston is good and stocks are extremely scarce. Prices are firm at \$24.50 for eastern clipped boards. Some people are quoting \$25. White cedar shingles at Boston are rather quiet although a more active demand is expected shortly. Prices are at \$4.25 for extras and \$4 for clears. Red cedars are firm. An encouraging demand is reported for 1 3/8-in. lath. A little improvement is also noted for 1 5/8-in. Hardwoods at Boston are not quite so active, but prices are firm. Plain oak is moving well.

## United States

More favorable conditions are reported in the lumber business in the United States than was the case a fortnight ago. There is practically no important weakness in any branch of the trade. Yellow pine dimension is about the only stock that is long in manufacturers' hands. The recent heavy loss on account of floods and tornadoes will probably eat up the surplus in this stock. Milder weather during the past week has improved the outlook for building operations, so that the construction demand is making itself felt. Yard buying has been for current demand up to date. With the opening of the spring demand the yards will probably be obliged to replenish their low stocks. Railway material is selling actively and all kinds of railroad and car stuff are scarce and firm.

The heavy rains in most of the southern pine producing territory have checked the output of lumber. This will interfere with current business activities but will also prevent the accumulation of mill stocks, so that the result in the long run will be to strengthen the situation.

In connection with northern pine, the logging season in the northern States has come to an end and estimates indicate that the input this year in Minnesota, Wisconsin and upper Michigan will be heavier than a year ago. The lumber fleet at the Tonawandas and Buffalo commenced to stir, about the first week of the present month. It was not expected, however, that navigation from Lake Superior would be open before May 1st. There is still an excellent demand for low grade northern pine and stocks are very scarce. Number 5 boards are bringing \$16.50 at Chicago. Reports from the producing district of Georgian Bay indicate that prices will be increased 10 per cent. this spring on account of the unfavorable logging conditions of last winter.

## Great Britain

The Easter holidays interfered greatly with trade conditions in Great Britain and business was only commencing to become active again at the date of latest reports. Quite a cheerful tone however, prevails in the chief lumber markets. In London the holders of stock are not worrying about the rather slow demand at Liverpool, the c.i.f. spruce market is very firm and a good deal of business is being done for forward delivery. Prices are well maintained and no indications of reduction are noticeable. Recent liner parcels have brought full values according to specification. Spot prices are well maintained, although arrivals are easily keeping up with the demand. Stocks of special sizes and lengths are the only exception. Generally speaking, stocks are not being reduced as quickly as was expected. The demand continues fair and steady, consumers purchasing mostly for immediate requirements. Those who have been expecting a decline in spruce values are likely to be disappointed, as most of the importers have purchased cargoes at prices which will not yield any profit if sold at less than present spot prices. The freight market is, of course, an important factor at present. Indications are that freights will remain firm, as tonnage is not offering freely. Stocks of 3 x 8 spruce deals are not plentiful. The same applies to 3 x 6. Improvement in the demand would quickly use up the available stocks. Moderate consumption however, up to date, has prevented any shortage from developing. Imported boards are scarce and are quickly disposed of on arrival. Birch c.i.f. values at Liverpool continue firm but business for future delivery is quiet. Stocks are ample for the present rate of consumption. At Manchester parcels of spruce are being pushed, but the specifications are very mixed and awkward to handle.

At Glasgow, the lumber trade continues along steady but quiet lines. Local merchants are buying cautiously, being under the impression that prices have reached the top. A few shipments of spruce have recently arrived and have been disposed of ex-quay. Some difficulty however, has been experienced in realizing shippers' ideas of values. In some cases concessions have had to be made.

SPECIAL REPORTS  
ON CONDITIONS AT  
HOME AND ABROAD

## Firm Market Conditions at Quebec

Quebec, April 4th; (Special to the Canada Lumberman):—While there is little doing in the lumber and timber market, prices are strong with a tendency to go higher. The market is pretty bare of stock at present. No deliveries of any consequence are being made nor are there likely to be for some time to come. Parties who have stocks are holding on to it looking for better prices in the near future. It is the general opinion that rates for all sorts of wood goods will break the record during the coming summer. There are those who are of the opinion, but they are few, that when the "drives" commence, rates will drop. This is hardly likely, for if there is any inclination that way, holders would likely curtail their outputs, and thus protect themselves by keeping up rates.

The market for both timber and deals in the United Kingdom is very firm, owing to the steady demand, and Quebecers who have just returned from the other side say that all kinds of business is booming there, with the prospects of continuing so for a long time into the future. In fact the demand for ships of all classes and dimensions is so great that many of the leading builders have to decline new orders for at least a year. As there are no signs at present of any serious labor troubles, the outlook for a continuation of prosperous times is most bright.

Prices for pulpwood continue firm here, and any transactions which will take place in the near future will have to be at considerably higher rates. Holders of stock show no disposition to sell, as they feel that rates must go up, and that very soon. Buyers will evidently have to pay more money for their requirements before they can supply their wants.

The rates for freight to and from Europe are high, and contracts closed show a considerable advance on last year. The appearances are that they will go still higher.

## Sawing Season Opened at St. John

St. John, N.B., April 7th; (Special to the Canada Lumberman):—The milling season at the port of St. John practically opened April 1st. At the present time the following mills are in operation: Messrs. Stetson Cutler & Company, Randolph & Baker, Warner & Company, and Murray & Gregory. Messrs. Stetson Cutler & Company are sawing extensively for the American market, as are Messrs. Warner & Co.; the other two mills manufacturing entirely for the English market.

Labor is not as plentiful as usual, but this is largely owing to the early opening of navigation, which has allowed the mills to start before the winter liners ceased running. Many of the mill operatives being employed during the winter season on these liners, and not returning to mills until later. The class of mill men at St. John is fast deteriorating, and practically all the mills tell of the daily average of turnout being much smaller than heretofore, which, with the higher price being paid for labor and the higher cost of logs, tends to make the sawmill business much more hazardous for the investor than ever before. All kinds of labor are in a great state of unrest in this section, the carpenters are agitating for an eight-hour day and many of the other unions are said to be affiliated with them. Also, many of the unions are asking for an increase in wages of from 15 to 20 per cent. and in many cases their demands are very unjust and without any foundation. It is felt that the matter, unless definitely settled at once, will be brought to a head on or about May 1st. Practically all the sawmills and allied interests know that they are paying all the wages they can afford and should any demands be made upon them, further than they are now paying, they would be forced to close their plants and wait such time as the matter is adjusted to the satisfaction of the mills. It is to be hoped that the men will not demand anything further from the mills for some time to come.

## English Deals All Sold

Practically all cuts of English deals have been sold for the coming season, at prices quoted in our April 1st number, all other stocks remain in the same strong position with very little to offer, as nearly all old stocks have been shipped from the yards and docks. The next ten days will see about all the old stock of English deals which have been wintered over, shipped on liners. The stocks of American sizes which were wintered over are being shipped as fast as tonnage can be secured.

The quality of logs left on the yards all over the Province of New Brunswick will be about 10 per cent. of the cut. On the River St. John it will run much higher, because of the short hauling season. Especially is this true of the lower sections of the country, nearer the coast line, where the snow did not come until late and the hauling broke

up about March 15, giving no time to get the work done. Also, at the present writing, the outlook for driving is none too good. On the head of the river, practically all the snow has been washed out and it depends entirely on rains whether the cuts will come out. The drives have not been started on the Upper St. John or in northern New Brunswick. In the lower sections of river the drives, in many cases, had been started about two weeks ago, but have not got very far as the weather has again turned cold and waters have fallen in the streams. Therefore the outlook as a whole is that a good deal of the stocks of logs which were hauled to banks of rivers will not reach the rafting grounds unless very heavy rains come soon. The weather has been moist but quite cold.

## English Freight Rates Much Easier

Freights to English market are not as high as at last reports, and tonnage is said to be more plentiful for ocean trade. To American ports, however, freights are again advancing, having opened at \$3.00 to New York and quotations today being at \$3.50 to \$3.75 New York, with tonnage scarce. One cause for the high freights to American ports from St. John is that many of the lumber vessels have gone south in the hard pine trade where freights are exceedingly high. It is felt that \$4.00 will be the standard for New York freights from this port for the coming season.

The St. John River Log Driving Company held its annual meeting at the Queens Hotel, Fredericton, on April 2. There were present at the meeting W. E. Gunter, J. A. Morrison, A. H. FitzRandolph, Donald Fraser, Jr., Mr. Johnston, and A. V. Rowan, Secretary of the company. The general report of the company was read, showing it to be in a good financial condition, and although last year was a hard year for the caretaking of their logs, the company were able to write off a good round sum from their plant.

During the coming season the company will do their own driving from Grand Falls, which has always heretofore been sub-let by tender. The last drivers being Messrs Aiken Bros., of Fredericton. It is felt that by so doing the company will get better satisfaction. The following directors were elected: Mr. J. Fraser Gregory, Mr. Chas. Miller, Mr. F. C. Beatty, Mr. J. A. Morrison, Mr. A. H. FitzRandolph, Mr. J. Fraser Gregory was again elected president and Mr. A. V. Rowan secretary and manager. All the logs held over for winter in booms and at Government Island amount to about three million feet, this with the amount rafted out last season of 102,000,000, meant that the company drove last year 105,000,000 feet. This year, the drive, if it all gets in, will not be over 70,000,000. On the Tobique River, on which about 33,000,000 of logs are to be driven, Messrs. McLaughlin Bros., of Perth, will do the driving at a slight advance over last year.

## Steady Market at Montreal

Montreal, April 9th: (Special to the Canada Lumberman):—Conditions show very little change, although some wholesalers report that the local demand is not quite as active as it was. On the other hand, some firms state that they can sell all the lumber they desire, but as collections are bad, they are not pushing business. The tightness of the money market is an important factor in this connection, and some wholesalers are inclined to take a conservative attitude under existing conditions. Generally speaking, trade may be said to be satisfactory. Prices keep very strong, and with the scarcity of dry stock the tendency is decidedly towards a higher level. Lath, in particular, is in short supply, and the stock of common ends of lumber is also small.

Judging from the permits of last month, building promises to be more extensive than last year. For the month of March the total was \$761,550, as compared with \$681,449 in the corresponding period, while the total for the first quarter of the year was \$1,867,847 as against \$1,421,159 in 1912.

There is a decided improvement in the ground wood market, one firm, which had the largest stock on hand, reporting that they have disposed of their entire stock and are getting \$18.50 at the mill for shipment to the Western States. There are other signs of a more active demand. The floods in the Hudson district, in New York State, have stopped quite a large production of ground wood. In some cases, the mill dams have been swept away, which naturally will require some time to restore, and this of itself will entail a heavy demand for Canadian ground wood. The floods are a pretty sure indication that the water will be low this summer, as a large volume has gone very quickly and not, as is usually the case, come down gradually, it is believed that unless there is an extremely heavy rainfall later, ground wood will be scarce during the early summer months.

# DRY SPRUCE BOARDS

**W**E wish to inform our customers and friends that we have on hand in our Sayabec yard about 22 million feet of our 1912 late summer and autumn sawing. This stock is now drying rapidly and we figure should be in good condition to dress about May 1st,—perhaps earlier.

¶ We have our usual full assortment of widths, thicknesses and grades and are now prepared to accept orders for May, June and July shipments.

¶ Our Sayabec Dressing Mills are of large capacity and produce Fenderson's "Silk Finish."

Yours truly,

**John Fenderson & Co.**

MILLS AT

Sayabec, Que. Cedar Hall, Que.  
Salmon Lake, Que. St. Moise, Que.  
Jacquet River, N. B.

**WE CARRY THE LARGEST AND BEST ASSORTMENT  
OF DRY SPRUCE IN CANADA**

The rainfall in the month of February, in the districts where most of the Canadian and United States mills are situated, was 1.81 as against 3.67 during the last 42 years.

In reference to news print the Canadian mills have been very busy. In fact there has been some curtailment of production owing to the shortage of sulphite in Canada. There is absolutely no stock of paper on hand. On the contrary, the mills are behind in getting out their contract orders. It is reported that the paper mills in the flood districts in Ohio have had their stocks destroyed, and these will have to be replenished.

Pulp and paper firms in Montreal are showing interest in the new pulp and paper association, which should ultimately prove a useful organization for this rapidly growing industry.

A study of the forest areas between Lake Superior and the C. P. R. eastern terminals is about to be commenced by the Company's forestry experts.

### Quiet Trade Conditions at Ottawa

Ottawa, April 7th; (Special to the Canada Lumberman):—Business during the past two weeks has not been particularly active. The reason for this is that outside buyers are holding back orders until the summer freight rates go into effect on the 15th inst. After the 15th an exceptionally busy time is anticipated. There has been little call lately for good grades of pine owing to high prices. One inch pine strips have fallen from \$45 and \$47 to \$42 and \$45, and pine, good shorts, 1-in. x 4-in. to 6-in., from \$34 and \$36 to \$32 and \$35. The demand for all grades of culls has been exceptionally heavy and the supply has been none to good.

Considerable dullness has been felt by those interested in the South American trade. Mr. P. C. Walker, manager for Shepard & Morse, says that the difficulty to get ships is one of the chief causes for the dullness. In the last fifteen months the rates for lumber on steamships have doubled, while on sailing vessels there has been an increase of \$6 per thousand. The Balkan war and the revolution in Mexico took steamships off the South American trade and sent them on other routes, consequently giving the sailing vessels extra work.

It is probable that Messrs. McAuliffe and Davis will not rebuild their woodworking factory on Chamberlain avenue, which was burned a few weeks ago. Both members of the firm left on Saturday for a trip to Detroit, Grand Rapids and other cities in the Western States to look over some up-to-date woodworking factories and see if manufactured lumber can be imported as cheaply as it can be manufactured here. If it is found that this is possible a large warehouse will be built on the site where the woodworking factory stood and McAuliffe & Davis will likely go out of the manufacturing business and go in for importing what they formerly made. They will be away for about ten days.

### Reduced Cut in the Woods

The cut in the woods during the past winter has been considerably less than in the past few years with the majority of firms, but the cut in the sawmills this season will be greatly in excess of last. Though the cut in the wood was smaller on the average the river is well filled with logs left over from other years. The lack of snow and ice in the early part of last winter is given as the reason for the poor cut in the woods. Shepard & Morse and the W. C. Edwards Company say their cut was greater than last year, while J. R. Booth says the opposite about his cut. River driving will be in progress in about two weeks' time.

The news that the United States Government is likely to remove the duty on paper has caused a decided flutter among lumbermen and paper manufacturers in Ottawa and district. There have been lurid reports in the local papers that large manufacturers of paper would remove to Canada from the United States if the free print paper clause is included in the United States revised tariff list. One report stated that the International Paper Company had obtained a lease on certain waterpowers at Chelsea, Que., a suburb of Hull, and would erect a large paper making plant there. Mr. W. C. Hughson, one of the owners of the waterpowers in question, informed your correspondent that no rights have been disposed of and the report about the International Paper Company was news to him.

### Demurrage Hearing Prostrated

A postponement of the hearing of the reciprocal demurrage case has been made from April 15th by the Railway Commission to allow both sides more time to prepare their material for presentation to the Commission.

Mr. C. Jackson Booth, who has invested thousands of dollars lately in modern buildings in Ottawa, has decided to erect a seven-storey store and office building to cost \$150,000, on the corner of Rideau and Sussex streets, one of the principal corners in the city.

Mr. E. R. Bremner, manager for the firm of Watson & Todd, and Mrs. Bremner, returned last week after a month's visit to Atlantic City.

### Tonawanda Spring Trade Opening Actively

North Tonawanda, N.Y., April 8th (Special to the Canada Lumberman): The local lumber market is having its usual spring awakening as the opening of navigation draws nearer. The year promises to be one of the largest in volume of lumber business that the Tonawandas have experienced in the last decade. The expected removal of the duty on Canadian lumber will mean that stock from across the border will come in more extensively than ever before. The immense boom in building which the Niagara frontier and the whole territory supplied from the local market is experiencing will have its effect on lumber and particularly the local wood-working branch of that industry. Buffalo is already started on what cannot fail to be a record year in house and other building. Practically all of this building will be residences in which wood will figure as the principal material. The Tonawandas are bound to outstrip all records in the building line. The scarcity of homes in both Tonawanda and North Tonawanda has become acute through the influx of employees connected with new plants or factories already established, which find it necessary to enlarge. Meanwhile lumber prices are as firm and there is little prospect of a break of any serious consequence. Local dealers are hoping that the opening of navigation will not be later than April 15th, when insurance risks go into effect. Many of the lumber carriers will leave the Tonawandas before that date and will be well on their way to upper Canadian and American ports by another week.

The severe wind storm that closely approached a hurricane in velocity on Tuesday, March 25th, caused a loss of more than 100,000 feet of lumber in local yards. The yards were practically closed all day and the greater part of another day was occupied in clearing up the debris that filled alleys and other open spaces, straightening up stocks and otherwise putting yards in order again. The wind reached a higher velocity than at any time since the cyclone of 12 years ago. Several houses in various stages of construction were blown down. There were no serious injuries or deaths, as lumbermen suspended operations as soon as the wind became severe.

### Ship Canal Opening Will Help Trade

One of the most important events of the current month will be the opening of the \$3,000,000 Federal ship canal around the rapids at the head of Niagara River. The United States engineer says the canal will surely be ready for the first boat on April 15th, after which date there will be an eighteen foot channel from Lake Erie to the Tonawandas. This will give two feet more draught than at present when lake craft drawing sixteen feet find it difficult to navigate some parts of the river. With the obstacle of the rapids at the head of Niagara River removed by the ship canal it will be possible for lake craft of much larger capacity to discharge cargoes at the Tonawandas. A survey has already been authorized for further deepening of the local harbor to 23 feet which will make the harbor at the Tonawandas accessible to the largest boats on the Great Lakes since the depth of the new ship canal and the natural channel between Black Rock and Tonawanda Island permit a draught of 23 feet.

A pioneer lumberman of the Tonawandas died yesterday at his home on Clinton street, Tonawanda, when Augustus H. Crown passed away after an operation for appendicitis. The deceased came to the Tonawandas in 1866 and entered a lumber office as clerk. He rose rapidly in the business and was at one time one of the largest retail lumbermen and woodworking plant owners in western New York. He was a veteran of the civil war and being a natural leader was called upon to fill various positions of a public and semi-public nature. He was at one time mayor of Tonawanda and was president of the Tonawanda Board of Education for many years.

### Higher Freight Rates on Erie Canal

Shippers of lumber from the Tonawandas and Buffalo via the Erie Canal are not pleased at the prospect of being compelled to pay a higher rate on lumber cargoes east to tidewater. Last year the rate was \$2 to Albany and \$2.50 to New York per thousand feet. Boat owners propose to add from 15 to 25 cents to last year's rates which will make freight charges the highest in the history of the Erie Canal on through shipments. Lumber carriers on the canal insist that they must increase rates to make a profit. They claim that operating expenses are so much higher that the proposed increase is absolutely necessary. Another cause that enters into the demand for higher rates is the scarcity of canal tonnage. Boat builders are waiting for the enlargement of the canal to the 1,000-ton barge capacity and have not been building boats of the present 250-ton capacity. The result is a dearth in canal tonnage that amounts to almost a famine at a rush season of the year.

Local lumbermen face another demand for increased rates in the attitude of the local longshoresmen's organization which controls all unloading of lumber cargoes at the Tonawandas. A meeting will be held this week at which the claims of the lumber handlers will be considered. It is understood that the lumbermen are willing to grant an increase but that they are not prepared to meet the request of the stevedores entirely. It is not expected that much difficulty will be encountered in arriving at an amicable agreement before the first lumber cargoes arrive.

## John Harrison & Sons Company, Limited

Owen Sound, - Ontario

Offer the following specials for  
March and April shipments:

**10 Cars 1912 Cut Red Pine Lath**

**20 Cars 2 inch Red Pine,**

**Separate Widths, 10, 16 and 18 ft. Lengths**

Stock of Hemlock is being rapidly  
reduced and we are now out of some sizes.

We have well equipped saw and  
planing mills, operating the year round  
and will attend to your enquiries promptly.

**Not altogether what we  
say but what users say**

"We have used the Alligator or Warping Tug manufactured by you for the last 7 or 8 years, and consider them indispensable to lumbermen on waters of French River or similar streams."

Will move a bag containing 60,000 logs,  
in calm weather, 30,000 in a head wind.

**West & Peachey - Simcoe, Ont.**

# Jenckes Boilers

**WE** make a specialty of large Tubular  
Boilers for regular or Dutch oven setting  
for saw mill service. Our Boilers are built to  
conform with the various Provincial Inspection  
Acts and each is rigidly inspected and tested  
under high pressure before shipment.

## Ontario

J. W. Fisher, lumber dealer, Atwood, Ont., has sold out his business.

The Goderich Lumber & Milling Company, Goderich, Ont., is reported to have dissolved.

Reitzel Bros., Waterloo, Ont., are building a one-storey reinforced concrete planing mill, 70 x 126 feet.

The Riordon Pulp & Paper Company announce that their Merriton sulphite plant will be rebuilt and in operation by the first of June. The company will also have their eighth digester—a new one—cooking pulp at Hawkesburg about the 1st of May.

Industrial Planing Mills, Limited, have been incorporated with a capital of \$40,000 to manufacture and deal in lumber, wood and builders supplies, with head office at Toronto, the provisional directors are D. Sweetman, John Monkhouse, and Emerson Tiers, all of Toronto.

R. Laidlaw Lumber Company, Traders Bank Building, Toronto, have purchased a site for a retail lumber yard at Guelph, Ont., and will open business there at once. The yard is to be on the site of the old rolling mills property which have been purchased from the city for \$5,000.

The American Creosoting Company, 401 West Main street, Louisville, Ky., are calling for tenders for the construction of a creosoting plant at Trenton, Ont. The building is to be concrete foundation and brick and concrete construction. Tenders are being received by the owners at the above address. Plans are to be seen at the office of Geo. Kelly, Trenton, Ont.

Reports were recently published in the daily press to the effect that Mr. M. J. O'Brien, the well known railway contractor, was considering the erection of a paper mill at Haileybury, Ont. Mr. O'Brien advises the Canada Lumberman that he is not either directly or indirectly interested in the construction of any paper mill at Haileybury and is at a loss to understand where this rumor arose.

The Canadian Pulp and Lumber Company, Limited, has been incorporated with a capital of \$25,000 to carry on business as manufacturers and dealers in wood, pulp and paper of all kinds, to construct and operate pulp and paper mills, to manufacture, timber, logs and lumber, etc., with head office at Latchford, Ont., the provisional directors are J. S. Lovell, Wm. Bain, and Robt. Gowans, all of Toronto.

The death occurred recently at Welland, Ont., of Mr. W. L. Rice, who was for many years conducted a successful retail coal and lumber business at that point. The business has been taken over by Mr. O. W. Rice, of Toronto, a nephew of the late Mr. W. L. Rice, who will continue it and intends to make a number of alterations and additions. The sash and door and interior finish plant will be improved considerably and will be one of the most up-to-date in the country.

R. Truax & Son, Walkerton, Ont., are drawing up plans for a one-storey sash and door factory. The building will be 300 feet long x 60 feet wide with cement foundations and a cement floor 10 inches thick. The walls will be of brick 12 feet high, with a row of roof windows in the centre above and at each end. This factory will provide a little more room than the company have in their present plan and will enable them to place all their machinery and workmen on one floor.

The planing mill which is being erected at Bridgeburg, Ont., by O. C. Teal will probably be completed by the middle of April. The mill is thoroughly up-to-date in every respect and is situated just to the east of the Fort Erie race track. The building is a two-storey structure of concrete, 48 x 80 feet, equipped with the latest machinery, furnished by Cowan & Company, Galt, Ont., and electric power for which the equipment was installed by the Canadian General Electric Company.

Quance Bros., Delhi, Ont., report that the recent fire at their plant destroyed the sawmill and interfered with the operation of their planing mill as the boiler fittings and stacks were destroyed. The boilers and stacks have been overhauled and refitted and operations were commenced again on April 2nd. They also report that as the timber supply in their vicinity is nearly exhausted they will rebuild their sawmill on a smaller scale, to cut from 10,000 to 12,000 feet per day. The mill will be rebuilt in the near future. Their loss amounted to \$5,000.

Lauder, Spears and Howland, Kent Building, Toronto, are putting up a new mill on the Pickerel River about six miles distant from the crossing of the Canadian Northern and the Canadian Pacific Railways. The mill will have a capacity of about 20,000 feet per day. The firm have taken out about 50,000 pine logs at the Pickerel mill and also at the mill in Mowat, which is manufacturing for them under contract. The Mowat mill is already operating upon pine-bill timber and the Pickerel mill will commence operations early in the month of May.

Another dispute has arisen between the City of Ottawa and lumber companies in regard to water matters. This time it is in regard to the annual high water in the Rideau River, which runs on the outskirts of the city. Where it flows into the Ottawa the W. C. Edwards Company has built a dam to supply power for its lumber industry. Every year the river floods its banks and houses in the neighbouring suburbs of Eastview, Billings, Bridge and others are inundated, their inhabitants being forced to take to the upper floors. This year the floods were even worse than usual and have resulted in a complaint on the part of residents of these suburbs and villages against the damming of the river by the Edwards Company. Sen. Edwards, head of the firm, however, has issued a statement stating that if there were no dam such as that which he owns on the Rideau it would be impossible to live along its banks. It is probable that the Government will be asked to settle the difficulty.

## Eastern Canada

The St. Maurice Lumber Company, Gaspé Bay Harbor, Que., are erecting a rossing mill with an equipment of eighteen barkers for rossing pulp-

wood, at Gaspé Bay. Reports were recently published to the effect that the company intended to build a sulphite mill at Gaspé Bay. They advise the Canada Lumberman however, that they have no intention of building a sulphite mill at that point.

The woodworking plant of Rhodes, Curry & Company, Halifax, N.S., was recently destroyed by fire. The estimated loss is \$40,000.

The sawmill owned by T. Harvey, Chicoutimi, Que., was recently destroyed by fire. The estimated loss is \$6,000. There was no insurance on the plant.

Tremblay and Brother, Montreal, P.Q., have been registered to carry on a sash and door manufacturing business. The members are J. W. Tremblay and A. Tremblay.

The Laurentide Company, one of the largest paper concerns in Canada, has just opened an office in New York, in order to take care of its increased business in the United States.

The auction sale at Montreal of the Manouan Lumber, Power & Pulp Company's water power and timber limits, resulted in only one bid of \$100,000. As the reserve price was more than double that figure the property was withdrawn, and will be sold privately.

Chappel Bros. & Company, Limited, Sydney, C.B., are making arrangements for the erection of new offices and other improvements to their business at Sydney. Their new stationary sawmill on the Mira River will be erected either during the present month or during the month of May.

The J. C. Wilson Company, Limited, Montreal, have offered an issue of \$600,000 first mortgage bonds. The company have paper mills at Lachute, P.Q., pulp and ground wood mills at St. Jerome, and a water power at that point capable of developing three times the amount of power now required.

### Western Canada

The National Lumber Company, Limited, has been incorporated in British Columbia with capital stock of \$75,000 and head office at Vancouver.

Nelson & Foster, 1398 Erin street, Winnipeg, Man., are having plans prepared for a sash and door factory on William avenue, near Arlington street.

The Fraser Lake Lumber Company, Limited, has been incorporated in British Columbia with capital stock of \$25,000 and head office at Vancouver.

The Lexington Logging Company, Limited, has been incorporated in British Columbia with capital stock of \$10,000 and head office at Vancouver.

The Pacific Lumber Agency has been registered in British Columbia as an extra provincial company with head office for the province at Vancouver, B.C. The United States head office is at Aberdeen, Wash. The capital stock is placed at \$10,000. D. S. Wallbridge, Vancouver, is attorney for the company.

The Rat Portage Lumber Company, Limited, St. Boniface, Man., has secured an extra provincial license for the province of British Columbia with its British Columbia's head quarters at Vancouver. The capital stock of the company is \$2,000,000, and its attorney is Wm. Robertson, lumberman, Vancouver, B.C.

The Howe Sound Mills & Logging Company, Limited, has been incorporated with head office at Vancouver, B.C., and capital stock of \$150,000, to purchase certain timber licenses, shingle mill and equipment from B. A. Lewis C. S. Roray, Jr., and H. D. Bewbury and to carry on business as timber merchants, sawmill, shingle mill and pulp mill owners, loggers, lumbermen, and lumber merchants.

The Stevenson-Scarff interests, which have large timber holdings on the Pacific Coast, recently incorporated a company at Seattle, Wash., and purchased a large tract of timber in British Columbia. This company is known as the Seaboard Logging Company, with offices in the White Building, Seattle, and the Dominion Trust Building, Vancouver. The company is incorporated for \$250,000 and has about 350,000,000 feet of timber, which it expects to begin logging during the coming summer. The officers of the new company are: Renfrew Stevenson, president; C. F. Pretty, vice-president; G. W. Scarff, secretary and treasurer, and T. T. Dauphinee, auditor.

### Trade Enquiries

The Dominion Government Trade and Commerce reports contain the following trade enquiries. Readers of the "Canada Lumberman" may obtain the names of enquirers by writing to the Department of Trade and Commerce and stating the number of the enquiry.

205. **Red flooring and white pine ceiling boards.**—A South African commission agent wishes to communicate with manufacturers and exporters of red flooring, size 6-inch x 7/8-inch and 6-inch x 1 1/8-inch, also white pine ceiling boards 6-inch x 1/2-inch. Quotations should be f.o.b. seaboard.

206. **Doors, windows, mouldings, etc.**—A South African commission agent desires to get into communication with manufacturers and exporters of doors, windows, mouldings, etc. Quotations should be f.o.b. seaboard.

215. **Fir and pine woods.**—A firm in Leeds is desirous of hearing from firms in Canada able to ship fir and pine woods of the hardest and best qualities. They state that if prices are acceptable they will place orders to the value of upwards of £10,000; delivery to be made at intervals extending over a period of some months. Specifications will be furnished on application to the Department of Trade and Commerce.

216. **Pulp.**—A large Japanese firm in Osaka, wishes to be put in communication with exporters of wood pulp from Canada.

Owing to flood conditions, the International Paper Company have 28 machines out of operation at several of their mills, including those at Palmer's Falls, Fort Edward, Glen's Falls, and Montague. The dam at Glen's Falls has given way, and put eight machines out of business.

## INDUSTRIAL LOCOMOTIVES

The day has come when only the very best locomotives will meet the needs of logging roads and switching around industrial plants. It is now necessary to produce special designs to meet special needs. For years we have been busy studying the conditions in all fields where locomotives are used and have designed our locomotives to meet those conditions.

Proper designs insure efficiency, reduce the coal bills, lessen repairs, and give maximum work for a minimum of expense.

Our locomotives embody the best construction and are sturdily built. They are simply in design, and all wearing parts are accessible for easy repairs.

Interchangeable repair parts, sure to fit, are kept in stock for prompt shipment.

## Are Your Bearings Insured?

There is no insurance company, so far as we know, that will issue a policy protecting you against bearing troubles, but

## DIXON'S Flake Graphite and Graphite Grease

give you full assurance of bearing safety because, when once introduced into a bearing, the graphite remains there as a practically frictionless coating over the surfaces, providing a reserve of lubrication ample in emergencies until the regular supply can be resumed. You'll find the explanation in our booklet "Graphite as a Lubricant," No. 238, which we will send, with a sample, on request.

# Baldwin Logging Locomotives

Mikado Type Locomotive, Polson Logging Co.

The geared locomotive illustrated is a well-designed, practical engine, suitable for heavy service on steep grades, sharp curves, and light, poorly constructed tracks. Investigate the merits of the design. Further particulars will be gladly furnished on application.

The Mikado is a good type for heavy hauling, where runs are fairly long and high steaming capacity is needed. The locomotive illustrated traverses 30 degree curves and can be used on rails weighing 45-50 pounds per yard. It is simple in construction, strongly built, and rides well on uneven tracks.

Baldwin Geared Locomotive

## The Truck That Saves It's Cost Several Times Over in The Year

This truck is designed for lumber yards and planing mills and will be found invaluable for loading and unloading cars.

The front gearing is detachable and may be used with eight or twelve hind gearings. It is a double-header, nuts on axles being kept tight with Steel Cotter Keys.

Oil cups on the wheels and the fact that there is no resetting of tires saves any amount of trouble.

The old wooden-wheeled truck is a back number in comparison with this. It will pay you to write for our general catalogue which describes these trucks in detail, and pick out the style you want now.

## Tools You Can Rely Upon

### Cutter Heads for Jointing

For jointing the edge of a board or plank the Shimer Jointer Heads will be found to be superior tools. The Bits begin cutting at the top and shear downward, leaving the corner of the plank or board full, with a clean cut finish across the edge. They will be found very complete tools for the purpose and are shipped out under our guarantee to give satisfaction.

Price complete to joint 15-16 to 1½ in. lumber \$31.20. Extra Bits to joint 1½ to 2 in. lumber \$1.56 each.

### Heads for making Ship Lap

The Shimer Cutter Heads for Ship Lap are so proportioned in the Bits and their seats that a perfect draw cut is made. They work interchangeably with our Matcher Heads and always produce good work.

Price, per set, complete, \$33.64 to \$38.48 according to thickness of cut. Extra Bits for making Wainscoting on these Heads, \$1.95 each.

These tools will keep your work up to the standard and save you all the fitting and trying. For particulars address

## Do you ever use Conveyors for conveying shavings or other material?

We have a special Scandinavia belt for this purpose, which is proving extremely satisfactory for this kind of work.

Write for Information and Prices. We can make you an attractive proposition.

# Federal Engineering Company, Limited

TORONTO, 90 Sherbourne St.

MONTREAL, Unity Building

# A Good Belt Saves Money

THE money wasted in keeping a stretching belt taut amounts to a surprising figure. If you use "Goodhue Belts" in your mill or factory you can save most of this money because "Goodhue Belts" stretch less by 15 to 25 per cent than any other belt. They are made from skillfully selected hides with the stretch taken out of each section before it is made up into the belt.

According to the conditions under which the belt is to run, we recommend "Extra," "Standard" or "Acme Waterproof" belts.

The Pearl City Veneer Company, Jamestown, N.Y., report prices of veneers as follows: 1/30-in. maple, \$3.50 per M. feet; 1/24-in. maple, \$3.75 per M. feet; 1/20-in. maple, \$4.00 per M. feet; 3/16-in. 3-ply maple, sanded one side, 3 1/2c per ft.; 1/4-in. 3-ply maple, sanded one side, 4c per ft. All F.O.B. Jamestown, New York.

### Make this friction test yourself

**H**ERE is an easy way to compare the pulling qualities of a Cling-Surface-treated belt with those of an untreated belt. Select some good clean surface, take belts that have seen equal service, load slightly as shown and with contact side down. Be sure that the surface of the weight in contact with belt is perfectly flat. You will find an astonishing difference in pull required to make the treated and untreated belts slip.

After this test has convinced that there must be something in the claims for Cling-Surface, and that Cling-Surface makes belts pull without making them sticky, select just one troublesome belt for Cling-Surface treatment, and if you don't find on comparison with the other belts that the service has been greatly and lastingly improved, we won't charge you a cent for the Cling-Surface used.

Cling-Surface waterproofs preserves and enlivens leather, cotton and camel hair belts, etc., and is an excellent rope treatment.

Send in a trial order TO-DAY.  
Our quotations are f.o.b. Toronto.

### "Black Diamond"

will do more work and easier than any other belt made. Give it a trial. Unequalled for Dynamos, Fans or any high speed machinery with small Pulleys. Does not require to be kept as tight as the regular Oak Belt.

## No high duty Planer and Matcher has met with such success as the **FAY-EGAN "LIGHTNING" No. 333**

We have made them just plain four-side Matchers—the "333"—

We have made them with Profiler, the most convenient ever put on a Matcher—the "333-288"—

We have made them with the Horizontal Band Resaw and it's a great machine—the "333-335".

**Each type has met with wonderful success wherever introduced**

### —THE WHY—

Frame cast in one piece  
 Countershaft frame cast in one piece separate from machine.  
 Six 12-in. feed rolls with spring pressures.  
 All adjustments made from the outside.  
 Nuts for adjusting screws are brass, inserted and removable.  
 Patented circular cylinders with thin, air-hardened steel knives.  
 Both cylinders double belted and driven direct from the countershaft.  
 Independent or simultaneous vertical adjustment of cylinders.  
 Top cylinder housing double locked on both ends.  
 Top cylinder raises on a perpendicular line.  
 Lower cylinder draws out at the side.  
 Sight feed lubricators on cylinder bearings and compression grease cups on gear cases.  
 Pressure bar after top cylinder adjusts by handwheel from outside and can not be raised into the head.  
 Table before lower cylinder adjusts on long wedge and has micrometer index.  
 Spring pressure to chip breaker.  
 Side wing angle clamp bearings for cylinders, side heads and countershaft.  
 All side head spindle adjustments made from operating side.  
 Side head spindles carry straight bored, plain self-centering or internal sleeve self-centering heads.  
 Micrometer adjustment to side head shoes.  
 All gears cut from solid with rolling contacts.  
 Gears completely cased in and run in grease.  
 Feed rolls directly over each other, center to center at all times.  
 Feed lever at in-feed end and side head.  
 Automatic Gravity Tighteners on all belts.  
 Table under top cylinder adjustable and interchangeable.  
 Bed plates after lower cylinder reversible.  
 Jointing and setting attachments for both cylinders always on and ready for use.

P. O. Box 1384 - CALGARY, ALTA.

# THE RECORD

When northern pine forests ceased to yield lumber sufficient to supply commercial needs production of northern hemlock and southern pine and the value of both kinds of timber increased rapidly. A broader demand was created for it.

The crest of southern pine production has been passed. From the top record of 16,277,185,000 feet in 1909 the cut dropped to 12,896,706,000 feet in 1911. A further decrease of at least 25 per cent will be shown in the next ten years.

To make good this deficit in the supply production of western lumber will have to be increased at least 60 per cent. That will bring about a rapid increase in the demand for and value of western timber.

This is an inevitable FACT. Are you preparing to profit by it?

**Buy Western Timber NOW**  
**before the Big Advance sets in**

We are offering some tracts that will make excellent investments and will be glad to give complete information about them.

# Tenders For Purchase of Machinery and Timber

The undersigned offer for sale in large or small blocks all their remaining timber lands, mills and town property situated in the Town of Parry Sound, Ont.; Tug Scow and other Lumber Equipment, including boom chains, plows, sleighs, etc.

We have sold quite a number of timber parcels but still have some good bargains left in Townships of McDougall, Foley, McKellar, Monteith, Carling, Christie, Shawanaga, Burpee, McConkey, Mills, Allen, Secord, Falconbridge and Street.

**We have the following Sawmill Machinery for sale:**

- |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |                                                                                                                                                                                                                                                                                                          |

**A  
Message  
to You**

(Please read)

DOES it mean anything to you to know that **you** can get prompt shipments of the highest quality Lumber and Shingles at the same prices you are paying for inferior service and goods?

IS there anything more unsatisfactory to **you** than being held up by delays in receiving the stock you are in urgent need of—maybe it is only a few pieces of lumber or bundles of shingles out of a car?

HOW do **you** feel when stock for which you have been waiting arrives and is poor quality—unfit for the use you require it?

WHY don't **you** place your orders with a Company who can, in shipping you, obviate the worries and dissatisfaction mentioned above.

**OUR MESSAGE TO YOU — DEAL WITH US.**

**Imperial Timber and Trading Co., Limited** HEAD OFFICE : 530-1-2-3 Rogers Bldg., VANCOUVER, B.C.

# "10" Good Points To Consider

The good features of Acadian Pride Homespun Pants will appeal to Lumbermen.

Your men require only reliable clothes and A.P.H. is particularly adapted for the hard usage incident to this occupation.

A.P.H. Pants are sold in all parts of Canada from Cape Breton to the Yukon.

**ACADIAN PRIDE HOMESPUN PANTS**

If you conduct a Clothing Department your men will appreciate A.P.H. Pants, and we shall be pleased to furnish particulars.

This is the time to place orders for winter, and the early spring trade of 1914.

Write for Special Prices

**International Stock Food Co., Limited**  
 Toronto, Ont.

## Dr. Stewart's Pure Condition Powders

### LUMBERMEN AND CONTRACTORS:

You can save yourself unnecessary expense and worry by feeding Dr. J. M. Stewart's Pure Condition Powders this Spring.

After horses being highly fed for their heavy winter's work, they are apt to be in bad condition and need a "SPRING TONIC" and nothing corrects it as quickly and thoroughly as Stewart's Condition Powders.

These powders should not be confused with stock foods. They are composed entirely of roots, herbs and barks, free from all injurious dope, such as arsenic, resin or antimony, and are guaranteed to be the greatest disease Preventing Powders on the market.

### CURES

**Coughs, Distemper, Scratches,  
 Pink Eye, Worms, Blind  
 Staggers, Hide  
 Bound, Etc.**

Two cans guaranteed to put your horse in first-class condition, 2 lb. cans, \$4.50 per dozen.

**Palmer Medical Company, Limited**  
 Windsor, Ont.

## Are Your Horses in Good Condition?

Horses for all lumber work are subjected to the hardest hauling under the most severe conditions. They should therefore be as fit as all possible care and attention can make them.

**In the Lumber Camp,  
 Around the Mill, In the Yard**

and wherever lumber has to be hauled the horses are always liable to a multitude of small injuries which if not attended to promptly may develop into lameness or disfigurement, thus reducing the working capacity of the horse and impairing its value from a sale standpoint.

You should always have handy and ready for use

### Good Liniment

to reduce bruises, strains, soreness; allay pain and inflammation quickly, be an antiseptic dressing to a cut or burn, or to heal a wire cut, wound or laceration.

### ABSORBINE

is an antiseptic healing preparation as well as a resolvent and a discutient. It will assist nature in bringing about a dissolution of the bunch, restore the circulation, gradually restoring the part to its normal condition.

It will produce permanent and complete results without blistering or removing the hair, and will leave no blemish. You can work the horse at the same time.

All enquiries on special cases answered without delay—full information and instruction on request. Absorbine \$2.00 per bottle at dealers or express prepaid. Manufactured only by

# Dominion Timber Regulations

---

Licenses to cut timber on Dominion Lands in the Provinces of Manitoba, Saskatchewan, and Alberta, the Northwest Territories, within twenty miles on either side of the main line of the Canadian Pacific Railway in the Province of British Columbia, and in the tract of three and one-half million acres to be located by the Government in the Dominion in the Peace River district in the Province of British Columbia, lying east of the Rocky Mountains and adjoining the Province of Alberta, shall be disposed of by public auction at the office of the Dominion Timber Agent for the districts in which the berths are situated.

Before any parcel of timber is offered for sale it shall be surveyed by a duly qualified Dominion Land Surveyor into berths of an area not exceeding twenty-five square miles, and each of such berths shall then be thoroughly cruised by a duly qualified timber cruiser in the employ of the Dominion Government. The Minister shall then fix an upset price at which the berth shall be disposed of, and no berth shall be sold at less than the price so fixed.

Purchases to the amount of one thousand dollars or under shall be paid in cash at the time of sale. Purchases over one thousand dollars and not exceeding five thousand dollars shall be paid, one-half in cash at the time of sale, and a note or notes shall be given for the remaining half of the purchase price, payable in three months, with interest at the rate of five per cent. per annum. Purchases over five thousand dollars and not exceeding ten thousand dollars shall be paid one-third in cash at the time of sale, and notes shall be given for the remaining two-thirds of the purchase price, payable in three and six months, with interest at the rate of five per cent. per annum. Purchases exceeding ten thousand dollars shall be paid one-fourth in cash at time of sale, and notes shall be given for the remaining three-fourths of the purchase price, payable within three, six and nine months, with interest at the rate of five per cent. per annum. Notes shall be made payable at a bank in the city or town in which the sale is held or at a bank in the city of Ottawa. Cash payments must be made at the time of sale in legal tender or by an accepted cheque on a chartered bank, or by a draft issued by a chartered bank, payable to the order of the Deputy Minister of the Interior. If default is made in any payment required by this section the sale shall be forfeited and void.

The purchaser must also pay the cost or the estimated cost of the survey of the berth before a license is issued.

The licensee shall pay an annual ground rent of five dollars per square mile except for lands situated to the west of Yale, in the Province of British Columbia, in which case the yearly ground rent shall be five cents per acre.

The licensee shall pay the following dues on timber cut on his berth :—

Sawn lumber, 50 cents per thousand feet, board measure.

Railway ties, eight feet long,  $1\frac{1}{2}$  cents each.

Railway ties, nine feet long,  $1\frac{3}{4}$  cents each.

Shingle bolts, 25 cents per cord.

And 5 per cent. on the sale of all other products of the berth.

## Timber Permits

Yearly permits are granted to settlers, mine operators and others on application to the Dominion Timber Agents, from whom further information can be obtained.

**W. W. Cory,**

Deputy Minister.

Department of the Interior, Ottawa,

 Suction Hose..... *Goodyear*  
 Steam Hose..... *"*

*"Write Goodyear after  
 every item on that list."*

**D**ON'T take a chance on these items. Your factory cannot give high efficiency with inferior equipment.

A valve leaking—a belt stretching—a hose bursting. These may not seem very serious in themselves, but from the standpoint of "lost time" and "disorganization" they are serious.

And they are *avoidable*. Install reliable equipment—goods that have a trouble-saving reputation among factory superintendents and practical men.

You will save money by using *Goodyear* lines.

**GOODYEAR RUBBER BELTS**

Goodyear Belting saves power by its close, non-slipping grip of the pulleys. It is a non-stretching Belt—therefore avoids loss of time for "taking up." Its "long life" is a positive economy.

*Goodyear Conveyor Belts* are in use from one end of the Dominion to the other. The surface is made to stand the hardest usage. We make Conveyor Belts for every purpose, and guarantee satisfactory service under the most strenuous conditions.

**GOODYEAR HOSE**

So diverse are the conditions surrounding the use of *Steam Hose*, that these should be specially stated when ordering. We make Steam Hose to meet every condition of service, and Goodyear Steam Hose will give the highest satisfaction.

*Goodyear Suction Hose*—smooth or rough bore. Steel wire wound internally to prevent collapse. Built for every conceivable purpose; oil, gasoline, acids, etc.—made in all sizes up to 16 inches.

**GOODYEAR VALVES AND PACKING**

Save time and annoyance; save power and efficiency; by packing valves, glands and steam joints with Goodyear material.

**MAGNET RED SHEET PACKING** for the special requirements of machine shops and boiler rooms. It is particularly adapted for high-pressure service, because made of special heat-resisting composition. Makes a tight joint against pressure from air, or hot water. It is unaffected by oil and settles into a close, impenetrable joint under heat.

**MAGNET GASKET TUBING**—makes a tight joint against high pressure. Can't blow out. Can be cut to suit the job. Supplied with rubber core and tape.

**ROUND DUCK PACKING.** To use only against lower pressures, made of good quality cotton duck with round core.

**HYDRAULIC PACKING.** Unexcelled as a packing for pump cylinders, hot or cold water plungers, hydraulic elevators, etc. A good packing for high pressure hydraulic work, and also for boiling water.

**CLOTH-BOTH-SIDES AND CLOTH INSERTION PACKING.** A pliable cold-water packing which gives good service.

**SQUARE DUCK PACKING.** Usually supplied in twelve foot lengths. Made of good quality duck and friction. Excellent for cold water service.

**SQUARE DUCK PACKING WITH RUBBER BACK.** This is a superior cotton packing with gum back. It practically cuts out friction, and gives long and good service.

**GOODYEAR VALVES** are used in hundreds of industrial plants. They are specially made to meet special conditions.

Send for our catalogue. Practical men find it of great interest. Write our nearest branch. They will mail you one free.

Canada, United States and Great Britain, \$2.00 per year in advance; other foreign countries embraced in the General Postal Union, \$3.00.

Single copies 15 cents.

"The Canada Lumberman and Woodworker" is published in the interest of, and reaches regularly, persons engaged in the lumber, woodworking and allied industries in every part of Canada. It aims at giving full and timely information on all subjects touching these interests, and invites free discussion by its readers.

Special care is taken to secure for publication the latest and most trustworthy market quotations throughout the world, so as to afford to the trade at home and abroad information on which it can rely in its operations.

Advertisers will receive careful attention and liberal treatment. For manufacturing and supply firms wishing to bring their goods to the attention of owners and operators of saw and planing mills, woodworking factories, pulp mills, etc., "The Canada Lumberman and Woodworker" is undoubtedly the most direct and profitable advertising medium. Special attention is directed to the "Wanted" and "For Sale" advertisements.

## Timber Licence Difficulties

Remarkable developments have been taking place during the last year or two in Canada in connection with the regulations made by Dominion and Provincial Governments for the management of their Crown timber lands. The public have not perhaps, grasped the full significance of the movement but lumbermen and pulp and paper manufacturers, together with those who are in charge of the various governmental departments concerned with the management of Crown lands, have been face to face with the situation and have given it much study. The situation is both encouraging and full of possibilities of trouble. The circumstances existing to-day have been brought about over a long period of time, during which matters have been allowed to look after themselves to a great extent. The exigencies of the time being have been the most important factor in deciding upon the policy of the government of the day. Several of the Provincial governments have made genuine attempts of late to solve the problems which are presented. The results will only be shown by time. In British Columbia the most serious attempt of all is being made, to bring order out of the chaos which has been allowed to develop in years past. The most encouraging feature of the situation in that province is the fact that the views of the lumbermen are being sought and studied by trained foresters who are able to bring to the solution of the problems presented, a scientific and accurate knowledge of the requirements of the case.

\* \* \*

In New Brunswick regulations have recently been drawn up by the government which also show a most commendable desire to simplify the situation and which go part of the way towards making matters more satisfactory for all concerned. There are many shortcomings however, in the regulations as drawn up in New Brunswick

of late, and it is tolerably certain that some of them will not stand the test of practical application.

One of the most apparent shortcomings involved in the new regulations of New Brunswick, is the requirement in connection with pulp and paper licenses, that the licensee must acquire or erect and operate a paper mill within five years of the date of taking the license. There may be one or two places in New Brunswick where this will be possible, but in others it will not, on account of the absence of water power to make the manufacture of ground wood commercially possible. Moreover, in some of the localities where a paper mill would have to be erected to comply with the new regulations, there is not sufficient fresh water to make paper. The paper mill part of the regulations should have been left out entirely and unless this is altered, some of the large developments at present under consideration are likely to be prevented.

Probably the most serious fault in the New Brunswick regulations is, that the amount of the bonus to be paid under the different licenses is left for the government to decide from time to time. The bonus has always been a pitfall in connection with timber licenses of all kinds. Leaving it in the hands of the government to regulate, without specifying in detail the amount of the bonus, creates a situation which is fraught with serious danger. The financial condition of the exchequer may govern, and in fact is certain to govern to some extent, the size of the bonus required, irrespective of the conditions of the industry which is dependent upon timber for its raw material. Unquestionably, the present government desires to be fair and will be fair in this connection, but the responsibility is a great tax upon the judgment of the government and it would be best for all concerned that the element of doubt should be removed, the amount of the bonus stipulated in advance and the government relieved of this duty as far as possible.

\* \* \*

Similar objection applies to the situation in connection with stumpage and mileage. After the bonus has been paid, lumbermen should be entitled to feel that they are definitely under way in their operations and that all elements of uncertainty have been reasonably removed. But the new regulations leave in the hands of the government the power to increase stumpage and mileage charges from time to time. If the government felt that they needed a little more money than usual, they would be at liberty to extract it in this way from license holders. At a time when the government might be in the control of people of socialistic temperment, the industry might be ruined. This could be overcome if the government would state at the time of declaring the bonus that the rate of stumpage and mileage would be at a certain figure, and that it would be established at that figure for a fixed period, say fifteen years. The lumber industry would then know just where it stood.

A further important objection to the regulations is connected with the clause requiring that one-half of the bonus must be paid on August 1st, 1913. There is a feeling abroad in New Brunswick, and in many other parts of Canada in fact, that all lumbermen are wealthy and can afford to pay more than they do at present towards the expenses of government. Nothing could be less near the truth. The lumbermen of New Brunswick have passed through five or six years of extremely bad business. The year 1912 was no exception and they have a lot of leeway to make up. The present leases do not expire until August 1st, 1918, and license holders should not be required to make payments under the new regulations until that date. The new regulations however, require that they must notify the government by July 15th next whether they will continue under their present licenses until their expiration in 1918 or come in under the new arrangements. If they do the latter they must pay one-half of the bonus which the government decides upon, by August 1st, 1913. It would have been fairer if the payment had been required between August 1st, 1913, and August 1st, 1918, at which date the old license expires.

\* \* \*

The problems connected with bonus, stumpage, and mileage, present the greatest difficulties probably of all which governments have to face in dealing with the development of timber resources. Theoretically, the governments retain complete ownership of the timber lands

when they sell the right to cut the timber, but when the limits are sold at auction and a bonus is paid by the purchaser of a license, the government's ownership of the timber lands is restricted in a manner which involves many difficulties. The man who has paid a bonus acquires something more than the right to cut the timber under a license renewable at certain stated periods. He has paid a lump sum which is based upon the difference between the required charges and the general opinion as to the value of the timber. He acquires an actual interest in the standing timber, a fact which is borne out by the other fact, that this right itself becomes the subject in many cases of purchase and sale and is accepted by banks as security for advances of money. Under these conditions the government's ownership is restricted and the problem of making alterations in the charges upon lumbering operations becomes increasingly difficult.

\* \* \*

Dr. B. E. Fernow, Dean of the Faculty of Forestry of the University of Toronto, who has made a detailed study of these problems, recently discussed them at considerable length in an address delivered before the Society of American Foresters. Parts of this address have already appeared in the *Canada Lumberman*. A few of his conclusions, which bear definitely upon the points brought out in the preceding paragraphs of this article are reproduced herewith on account of the fact that, in many particulars, Dr. Fernow takes the view which has been taken in most cases by the operators themselves, namely, that the governments of the past are responsible for the situations which have been created and are in existence today, that they have permitted and encouraged the acquirement of certain rights by license holders, and that these rights must be taken fully into consideration under any scheme of re-arrangement in connection with the management of timber resources. These difficulties must be dealt with sooner or later in a logical manner in every province of Canada, and also by the Dominion Government, in connection with its timber resources. The longer the delay permitted in bringing about a solution in each case, the greater will be the difficulty in harmonizing the interests of the public and of the license holders, which unfortunately are much too far apart already. Dealing with the regulations in Eastern Canada, Dr. Fernow writes as follows:

\* \* \*

"In New Brunswick, for instance, licenses or permits to cut the timber on certain tracts, called limits, are given for a series of years, renewable for 25 years. In Quebec and Ontario the license runs nominally for only one year, when it can be renewed, and is, in fact, regularly renewed so long as the licensee pays the ground rent—a certain sum annually per square mile—and the timber dues, a certain amount per M. feet, etc., for all the wood actually cut. So far the license system seems unimpeachable; the government retains ownership, and leaves it to private enterprise to secure for it a revenue from its property. But there are three features added which vitiate the beauty of the plan.

"It would, of course, be proper to prescribe certain regulations as to the

manner of cutting the timber, with a view to preserving the productive value of the State's resources. It is, therefore, a commendable condition, practiced in Quebec, to restrict the cut to a diameter limit, differing for different species. But it must be considered an entirely immoral contract, when conditions are imposed which cannot possibly be carried out by any one who is not with certainty in continuous possession, as, for instance, the erection of mills of given size; and still more immoral, if the one contracting party, the government, reserves, as it does, the right at any time to change the conditions of the contract without timely warning. The lessee then is placing himself in the condition of being in the hands and good will of the lessor—a dangerous proceeding!

"It is no argument against this charge of immorality that the Government of Ontario, e.g., has, as a rule, not taken advantage of its right, except to slightly increase ground rents and dues and to impose the duty of protecting the property against fire in a certain manner. Another not less immoral feature in the handling of the timber limits has been the practice of allowing pseudo-settlers to locate on portions of the limits, and thereby curtail the timber of the licensee. Even so, the license being only an annual one, there would appear little hardship in imposing these conditions; but there was introduced a worse feature, which practically forced the government to renew licenses as a matter of fairness, and thereby curtail morally its ownership rights. After 1867 the limits were placed on the market at auctions, and the so-called "bonus" paid by the highest bidder represented, as nearly as could be ascertained by cruising, the difference between timber dues and actual stumpage value, so that practically the owner of a one-year license to cut timber had paid full stumpage value for all the timber on the limit, which it would take years to remove, and thereby had a moral claim on the government to leave him undisturbed in possession, to renew his license.

"This would still have been a condition with which the government could have dealt fairly, because the amount of the bonus paid was known, and could have been taken into consideration if any change of conditions had been contemplated. But the third and worst feature is still to be related. It became not only the practice to renew the annual license, but also to permit transfer of licenses to others. In this way timber limits became quasi-private property and objects of speculation. Banks advanced money on the limits to the lease-holder for the bonus or otherwise, as if they were his property, and not the State's; and not licenses, but limits were handled and changed hands in the market as if they were property, at prices paid by the purchaser, which would fairly represent full stumpage value.

"In this way the hands of the government were tied by the equity which the license holders and banks had acquired in its property. The licensees claim, so to speak, property rights in limits which actually they had acquired only a right to cut for one year. It would take an unusually strong Minister of Crown Lands who could recover in an equitable manner possession of the State's property with a view to introducing a constructive management.

"These worst conditions refer to licenses issued in Ontario from 1867, when the bonus was introduced, to 1904. The licenses issued before that time, still held sometimes by original lessees, are at least minus the "wages of sin" represented in the bonus, and it should be easier to adjust them and remove the claimed ownership to the second and third growth. Since 1904 the bonus bid is made not as formerly in a lump sum, but by the M. feet, in addition to the ordinary dues, the timber to be removed within a given time—not much of an improvement on older methods.

"The government has lost its power to regulate the proper use of its property, except on the unlicensed lands and forest reservations. This condition of things, which refers more particularly to Ontario, is repeated in somewhat different detail in other provinces."

## Pulp and Pulpwood Consumption in Canada

A total of 1,846,910 cords of pulpwood were cut in Canada during 1912; of this 866,042 cords were manufactured into pulp in Canadian mills while 980,868 cords were exported in the raw or unmanufactured state. This is an increase of 21.5 per cent. over the total cut of 1911—an increase of 28.8 per cent. in manufacture of pulp and an increase of 16.6 per cent. in export of raw pulpwood.

The average value per cord of pulpwood consumed by Canada's pulp mills decreased from \$6.45 to \$6.02. The total value of pulpwood used in the industry in 1912 was \$5,215,582.

Quebec, Ontario and New Brunswick still head the list of provinces in consumption of pulpwood. British Columbia, however, has increased its consumption by some thirty-four thousand cords bringing it up to fourth place, ahead of Nova Scotia. A decrease of 18.6 per cent. in consumption is noticed in Ontario during 1912; all other provinces being increased during the year.

The use of balsam fir for pulp manufacture has increased from 17.5 per cent. in 1911 to 19 per cent. in 1912 and with this there is a

decrease in the proportion of spruce from 81.6 per cent. to 78.2 per cent. The increase in the proportion of hemlock used is due to the consumption of this material in British Columbia, where, over seventeen thousand cords of this material were used in 1912. Western larch was reported for the first time from this province.

The mechanical and sulphite processes still head the list but the sulphate process used practically for the first time in 1912, was employed in manufacturing over 66 thousand cords of pulpwood putting this process third on the list. This replaces the soda process, the use of which decreased by 72.9 per cent.

The export of the finished product, wood-pulp, has increased by 34.1 per cent. The proportions of ground wood and chemical pulp remained practically stationary at about 85 and 15 per cent. respectively. In 1911, over 99 per cent. of the export went to the United States. In 1912 only about 63 per cent. was exported to that country, while Great Britain imported almost 37 per cent. and Japan entered the market purchasing 1,046 tons of pulp mostly chemically prepared.

China and New Zealand also imported small quantities of Canadian wood-pulp.

Wood-pulp was imported into Canada from the United States, Sweden, Great Britain, Germany and Austria-Hungary in 1912 indicating that in some cases these countries can manufacture pulp cheaper than Canada or that they produce some special grade of material desired by Canadian paper makers. The total value of imports of pulp increased by 83.7 per cent. in 1912.

Canada still exports over half the pulpwood produced in the country. In fact the proportion of wood exported in the raw state increased from 55.8 per cent. in 1911 to 56.1 per cent. in 1912, a fact which is not to the advantage of Canada.

New Brunswick and Nova Scotia manufactured less of their pulpwood than in 1911. While the proportions in Ontario remained the same. British Columbia was the only province which reported having manufactured all its pulpwood into pulp in the province.

## May Lower St. Lawrence Insurance Rates

An important development has taken place in connection with the recent conferences upon St. Lawrence insurance rates, between the Institute of London Underwriters and Mr. R. J. Dale, who visited England a short time ago on behalf of Canadian shipping interests. In his interviews Mr. Dale laid before the London Underwriters the following chief requests for their consideration:—That vessels might be allowed to trade to Halifax and St. John without additional premium, that the period of navigation for a fixed additional premium might be extended to the 15th if not to the end of October, instead of as at present to the 1st of September; that a smaller additional premium should be charged for vessels chartered for one voyage to the St. Lawrence than is at present charged for cancelling the Baltic and British North American warranties.

After Mr. Dale's interview with the London underwriters, an informal meeting was held to discuss the matter, which was referred to a joint meeting of "Lloyds," and the marine insurance companies, the result of which is not yet known. The following letter, however, showing the sympathetic attitude of underwriters on the other side, was addressed to Mr. Dale by Mr. Herbert S. Hines, chairman of the committee, on behalf of that body:—"Dear Sir,—Following on your meeting with the committee of this institute and some of the members, more especially interested in the British North American Insurance question, I have the pleasure to inform you that, as a result of your address and the discussion which followed it, a special sub-committee of this institute has been appointed in order to confer

with the joint Hull committee of Lloyd's and the marine insurance companies, and, if possible, some other leading members of Lloyd's who are interested in British North American cargo risks so that the views and suggestions which you have been good enough to put before us may be further considered.

"I would also take this opportunity of asking you on your return to be kind enough to convey to those members of the Canadian Government more directly connected with this question that the extensive works undertaken by the government of the Dominion of Canada for the improvement and safer navigation of the St. Lawrence River are fully recognized and appreciated here, and that so far from the underwriters of the marine insurance companies on this side being inimical to the interests of Canadian producers and Canadian shippers, it is their earnest desire, so far as the exigencies of their business permit, to fully consider the interests of both, and so far as possible, to give effect to any alteration or amelioration in the terms of insurance which may tend to the advantage of Canada and of all those who are engaged in promoting and fostering her great industries and natural resources.

"I feel confident that I may also add that all the members of Lloyd's are entirely actuated by the same feelings and the same wishes."

If these conferences result in an improvement being made in the present insurance situation, the effect will be of most importance to Canadian shipping interests.

## Developing the Dominion Forests

The Dominion Forest Service has progressed farther than any other service in Canada in the laying out of forest reserves and providing for their proper administration. Sixteen million acres have been definitely set apart by Act of Parliament to be administered as forest reserves. Additional areas are being examined each year, and some six million acres additional are now under temporary reservation and will shortly be added to the reserves set apart by statute. The mere setting apart of reserves, though an important step, is only a preliminary one. Although, unfortunately, in some cases it has not been realized that anything further is necessary, this mistake has not been made in the federal administration.

The reserves have been organized by appointing an inspector in charge for each of the western provinces. The inspectors selected are men who have had a thorough technical training in forestry and who have shown good administrative ability. In each of the inspection districts the reserved areas are laid out in units or forests each under charge of a technically trained man or a man experienced in timber administration. Twelve such divisions have already been established, and others are being organized and manned with forest

rangers as the development of the reserves and the fire danger may render necessary. These divisions do not include patrol outside of forest reserves on the large area of forest not included therein. In such areas there are in addition twelve patrol divisions each under charge of a chief fire ranger.

On each of the forests, houses have been erected for the forest rangers so that they may be close to their work and give it careful supervision. At different points throughout the forest, huts have been erected as headquarters for summer patrols and in some of the more inaccessible districts. 470 miles of trails and roads have been constructed so as to make the reserves more accessible. 10 bridges have been constructed, and 100 miles of telephone have been put in operation. A much enlarged programme of such improvement work has been laid out for the coming year.

A conference of the Inspectors was recently held at Ottawa to plan the work for the coming season and the construction work on the reserves will be pushed as rapidly as possible so as to have the reserves made immune from fire, as they are in Europe, in the shortest possible time.

## Forestry School Students in Demand

The Forestry School of Laval University, Quebec, have completed the programme for students' work during the summer. A party have been at work making a topographical study of the townships of Rawdon and Chertzy. They will go on to Lachute to study the reforestation of the quicksands at that place. Another party will leave for the forest about the 23rd of June. They will take an inventory of some limits belonging to the Quebec Seminary, and will at the same time busy themselves with road work, telegraph lines, etc. They will also

visit some of the more important pulp and paper and saw mills of the province.

Six second-year pupils leave in June to work in British Columbia where they will make an inventory of the limits possessed by the C. P. R. in that province. They will work with pupils from the forestry schools of Fredericton and Toronto. When these students, who finish their course this year, have obtained their diplomas, some of them will work for the C. P. R. and others for private companies.

# Red Pine Percentage Volume Increase

Striking Information Secured by Calculation of Contents During Logging Operations—  
Results for Twenty and Forty Year Period

By A. H. D. Ross.

A veteran Red Pine 355 years old.

being felled, for the purpose of determining its rate of growth in height, diameter, volume, etc., so that it was an easy matter to secure from their stem analysis sheets the information necessary to answer the foreman's question.

The stand in question is situated on a sand plain composed of a fine to medium coarse sand of rather poor quality between 25 and 30 feet above the level of the lake, which itself was an average height of 641 feet above sea level.

Three forest types occur on the limit, namely:—the Sand Plain, the Swamp, and the Ridge Types, and in each, a number of associations were noted.

In the Sand Plain type there were (1) the red pine association with two site classes, the second being situated on the coarser sands towards the bases of the ridges; (2) the red pine, white pine, beech and maple mixture on medium to fine sand; (3) conifers and mixed hardwoods on fine sandy soil; (4) the hemlock, yellow birch and maple association where the underlying silt had raised the water table; (5) pure hardwoods on medium to fine sand underlain by a small percentage of silt; (6) white pine and hardwoods on coarse to medium sands.

In the swamp type three associations were noted:—(1) spruce and balsam fir on sand underlain by clay; (2) hemlock and birch on soils with a substratum of clay; (3) cedar on heavy clay soils.

The Ridge type included two associations: (1) white pine, red pine and red oak; (2) white pine, red pine and jack pine—the sandy soils being coarser throughout than in the Sand Plain type, particularly at the bases of the ridges forming beach lines when the lake stood at a higher level.

The age of the stand in which most of the measurements were made was between 150 and 160 years, and it appears to have come in on a burn, as is shown by the fire scars on the older trees that survived. One of these burns occurred approximately 165 years ago and another 355 years ago. The number of merchantable stems per acre was 153 for the red pine and 31 for the white pine, making a total of 184. The accompanying photographs show the appearance and density of this timber and one of the veteran red pines which began life on the old burn of approximately 355 years ago.

From the complete stem analysis of 45 trees ranging in size from 7.2 to 18.1 inches in diameter, 4½ feet from the ground, it was found that the total present volume of wood inside the bark is 1,213.28 cubic feet for all the trees. Twenty years ago it was found to be 782.30 cubic feet and forty years ago 564.44 cubic feet. The trees were chosen so as to represent properly the different sized trees in the stand, and the results of our calculations should be very close to the average for the whole stand during the last twenty and forty years, respectively.

Calculating on a simple interest basis, our figures show that during the last twenty years the wood capital increased 55.1 per cent., which averages 2.75 per cent. per annum; and that during the last

forty years it increased 115.07 per cent., which averages 2.87 per cent. per annum. For such long periods as twenty and forty years, however, it would be fairer to compute the rate of interest on a compound interest basis. If, therefore, we let  $p$  represent the required rate per cent., then  $.0p$  will be the yearly interest on each unit of wood capital, and we have the following equation:  $1,213.28 = 782.30 \times (1.0p)^{20}$ ; whence  $(1.0p)^{20} = 1.550811$ , whence by logarithmic computation we find that  $1.0p = 1.02218$ . Hence during the last twenty years the volume of wood inside the bark has been increasing at the rate of 2.218 per cent., compound interest. Similarly for the last forty years we have  $1,213.28 = 564.44 \times (1.0p)^{40}$ , whence  $(1.0p)^{40} = 2.149529$ , whence, as in the above example, we find that  $p = 1.930$  per cent. compound interest. From these figures it will be seen that this particular stand of red pine is over mature and has long since passed its period of financial ripeness. If taken in hand at forty years of age and again at seventy years, by making the necessary thinnings its earning power could have been easily doubled by the time it was a hundred years old. At this age it would probably be cleared off to make room for another crop, because its rate of earning interest on wood capital would then have begun to decline.

Another way of computing the percentage rate of growth during the last twenty and forty years would be to figure out the board contents of the trees at the present time and what it was twenty and forty years ago. This was done for the 45 trees on which the calculations already given were based, and with the following results. The logs were being taken down to five inch tops, and as they were unusually sound and straight and had an average taper of only 2.1 inches for each 16 foot log, the board measure was computed by the International Log Rule, which is probably very close to the mill tally. On this basis the present contents of the logs from the 45 trees is 7,640 board feet; 5,775 feet twenty years ago; and 3,990 feet forty years ago. On a simple interest basis this would show an increase of 32.3 per cent., or a yearly average of 1.615 per cent. for the last twenty years; and an increase of 91.4 per cent. for the last forty years, or a yearly average of 2.285 per cent. It will be noticed that these rates of interest are much lower than the 2.75 per cent. and 2.87 per cent. for the same periods, when we took into account all the wood of the stems. The difference is, of course, due to the wood left in the tops and stumps in the operation incident to logging.

Basing our calculation on a compound interest basis from the board contents of our 45 trees now and twenty years ago, we get the following equation:— $5,775 \times (1.0p)^{20} = 7,640$ , whence we find the average yearly rate to be 1.41 per cent., compound interest. Similarly for the forty year period the rate of interest earned is found to be 1.636 per cent., compound yearly.

## Last Year's Percentage Increase

The following method of determining the last year's percentage increase in the volume of a tree or stand nearing maturity will be of interest to all who own timber and wish to know at what rate it is growing. The development of the formula will also be of interest to readers with a mathematical turn of mind.

For most kinds of timber grown in fairly close stands it has been found by repeated measurements that the shape of the greater portion of the stems is approximately that of a paraboloid, when the timber is mature or nearly so. In the case of our red pine stand it is long past the period of financial ripeness, but an example worked out for trees in this stand will serve to illustrate the method, which may be applied very easily to stands which are within ten or twenty years of financial ripeness. By geometrical methods it may be shown that the volume of a paraboloid is exactly one-half its height multiplied by its basal area; hence if the stand has practically attained

Interior of Red Pine Stand.

its height growth it follows that its volume varies as its basal area. This applies to either individual trees or stands in which the heights of the trees are practically the same.

If we represent the diameter ( $4\frac{1}{2}$  feet from the ground) of the wood inside the bark a year ago by D, then if the cross-section at that point is fairly circular it follows that its area is  $\frac{1}{4} \times 22/7 \times D^2$ . If the stem is sawn off or chopped into at the  $4\frac{1}{2}$ -foot point and we find that there are N annual rings of growth in the last inch of wood, it is evident that the average width of the rings in this last inch of growth is  $1/N$  of an inch and the area of the ring grown during the last year is almost exactly equal to  $1/N \times 22/7 \times D$ . Hence the ratio of the area of the ring added is to the cross-sectional area of wood present last year as  $1/N \times 22/7 \times D$  is to  $1/4 \times 22/7 \times D^2$ , which reduces to the simpler ratio of 4 to ND. Hence, if p is the rate per cent. of wood added to the stem during the last year, we have p is to 100 as 4 is to ND, or p equals 400 divided by ND. This is Schneider's well known formula for calculating the current percentage volume increment of trees which are mature or nearly so, and is applied in the case of representative trees from six different diameter classes in our red pine stand, as shown in the following table:—

| D                                       | N                                             | N D                                            | $\frac{400}{N D}$                                          | $\frac{D}{N}$                                                    | $\frac{D^2}{N}$                           |        |
|-----------------------------------------|-----------------------------------------------|------------------------------------------------|------------------------------------------------------------|------------------------------------------------------------------|-------------------------------------------|--------|
| Diameter<br>In Inches<br>Inside<br>Bark | Number of<br>Rings in<br>Last Inch<br>of Wood | Product of<br>Numbers<br>in columns<br>1 and 2 | Percent-<br>age Vol-<br>ume In-<br>crease for<br>Last Year | Quotients ob-<br>tained from<br>Numbers in<br>Columns<br>1 and 2 | Square of<br>Numbers<br>in<br>Column<br>1 |        |
| 6.0                                     | 50                                            | 300.0                                          | 1.33                                                       | .120                                                             | 36.00                                     |        |
| 8.6                                     | 52                                            | 447.2                                          | .89                                                        | .165                                                             | 73.96                                     |        |
| 9.2                                     | 45                                            | 414.0                                          | .97                                                        | .204                                                             | 84.64                                     |        |
| 11.5                                    | 32                                            | 368.0                                          | 1.09                                                       | .359                                                             | 132.25                                    |        |
| 13.0                                    | 38                                            | 494.0                                          | .81                                                        | .342                                                             | 169.00                                    |        |
| 14.8                                    | 35                                            | 518.0                                          | .77                                                        | .421                                                             | 219.04                                    |        |
| Averages                                | 10.5                                          | 42                                             | 423.5                                                      | .98                                                              | .269                                      | 119.15 |

This table shows that the average of the percentages for the six representative trees in the stand is only .98, and Borggreve claims that even this is too high for the current annual percentage volume increase of the stand.

If we use the arithmetic averages of the values ND in the above table and apply the formula 400 divided by ND we get p equal to 400 divided by 423.5, equals 0.944 per cent.

If we use the averages for D and for N we get p equal to 400 divided by  $10.5 \times 42$ , equals 400 divided by 441, equals 0.907 per cent.

Finally if we use the formula  
 $400 \times \frac{\text{the average of } D^2}{\text{the average of } D \times N}$   
 we get  $400 \times 0.269$   
 119.15

which equals 0.903 per cent. and is closer to the real percentage volume increase of wood in this stand during the last year than any of the other results.

From these figures it will be seen that the growth of the stand has practically ceased and that only a rise in market prices would justify leaving it to increase in volume.

### Welcomes U. S. Lumber

Thos. Gibson, of the Hastings Shingle Manufacturing Company, Vancouver, B.C., during a recent visit to Saskatoon, expressed his opinions regarding the lumber tariff, in an interview which was published in the daily press. Taking a broad national point of view, he said, Canada should welcome United States lumber shipments as freely as fresh air and water. On account of fire, costly methods of manufacturing, etc., timber was being consumed in both countries faster than the natural growth. In the United States twenty-five years had been predicted as the commercial limit for the existence of standing timber. The policy of United States manufacturers was really assisting Canada in securing a monopoly of standing timber. In British Columbia, however, the large mills were pursuing a conservative policy. Instead of working their own limits they were buying as much as possible from loggers who procured timber permits from the local government wherever available. These loggers were cutting off logs and floating them to market, thereby securing high grade logs and a good price. In the meanwhile the big mills were reserving their own timber and benefiting by its rapidly increasing value. In the same manner, the Dominion and Provincial governments could prolong the life of their forest reserves.

Mr. Gibson has little or no sympathy for the farmers of the prairie provinces whom he considers to be the most extravagant people on the face of the earth, so far as the utilization of the resources of the country are concerned. The farmer, he says, is getting "exactly what is coming to him." It is not the high price of lumber, the tight money situation, or any of the other factors so frequently complained of, that is handicapping the farmer. He has allowed himself to forget the habits of thrift and has developed the credit habit.

### Old Days on the St. John River

Mr. J. Fraser Gregory, St. John, N.B., delivered an address recently before the members of the Natural History Society of the St. John River. The address was exceptionally interesting and Mr. Gregory held the attention of his audience for nearly two hours. He reviewed the history of lumbering in New Brunswick from its earliest days and described the rise and decline of the industry in the vicinity of St. John, saying that it was improbable that any saw mill at St. John would be rebuilt if it were destroyed by fire. It would be more likely to be removed and erected on a line of railway close to the timber limits. Today the total yearly capacity of the St. John mills was 111,000,000 feet, while thirty years ago the mill capacity was twice this amount.

In opening his talk Mr. Gregory described the work connected with lumber manufacturing, from the cutting of the logs in the forest to the time they were shipped from the mouth of the river as manufactured lumber. His story of lumbering was especially attractive and his vivid description of lumber camp life almost made those present wish for olden times again.

Mr. Gregory gave a detailed account of the lumbering, stream driving, lumber sawing and other operations. Up to 1844 the logs were looked after by individual owners and no united effort was made to have the logs rafted, but in April, 1844, the Fredericton Boom Company was incorporated with a capital stock of £2,000. The members of the company were John Glasier, Stephen Glasier, James Taylor, W. J. Bedell, Jacob McKean, Isaac Kilburn, Dinean Glasier and Stafford Barker. This company took contracts for driving and rafting.

The coming of the shear boom revolutionized stream driving in the river and reduced the cost by 75 per cent. Levi H. Pond, the inventor of the boom, came to New Brunswick from Michigan and introduced his patent boom to the lumbermen. The new contrivance did all that was claimed for it and has been generally adopted in the river. By this means the logs are kept in the stream, jams are avoided and the logs are brought down faster than ever before. The St. John Log Driving Company was incorporated in 1886 and since that time many smaller driving companies have been organized.

Among the first lumber scalers to be licensed in New Brunswick were James Reynolds, Moses Tuck, Joseph Lingley, David Tapley, James Holly, Charles Eagles, John Coleman, J. E. Lingley and John Tapley.

The first steam saw mill in New Brunswick was built on the Strait Shore on the site of the Miller Bros. present mill. Allan Otty and R. W. Crookshank were the owners and the mill was erected in 1822. It was opened in the presence of Jarvis Knight, Governor of Nova Scotia, and General Smith. Before this time there were several tide mills. One of these was at the outlet to the Carleton mill pond back of Sand Point.

Between 1850 and 1860 there were 29 saw mills in St. John which was the fourth largest ship owning port of the world. Up to 1880, sugar shooks were a great source of revenue to the mill and were mostly sawn during the winter months from pine that was not considered fit for other purposes. These shooks were shipped to the West Indies, where they were used for boxes for sugar. The introduction of sacks for the purpose killed the trade.

### Forestry Convention at Winnipeg, July 7th to 10th

The date of the Canadian Forestry Convention to be held in Winnipeg has been definitely fixed within the days July 7th to 10th. The main business of the Convention will be on Tuesday and Wednesday, July 8th and 9th. The subjects discussed will include the care of the reserves in the prairies and the general subjects of the protection and development of the timber in other parts of Canada. The Government of Manitoba, the City of Winnipeg and other public bodies have promised to co-operate in the Convention, and already the Dominion Forestry Branch and a number of the provinces have signified their intention of being represented at the meeting.

The program will be of a thoroughly practical character with the object of promoting active work in regard to the handling of the timber resources of the central part of Canada. The farming, lumbering, grazing, administrative, commercial and financial interests, all of which are directly or indirectly related to forestry, will be represented in the program.

As the Convention will be held during the opening days of the Winnipeg Exhibition those attending from within the district covered by the Winnipeg Fair arrangements can take advantage of the special rates for the Winnipeg Exhibition. These cover the district from Fort William to Calgary and Edmonton. For delegates attending from other parts of Canada it is expected that special rates will be granted under the convention certificate plan. Particulars of these can be secured by applying to the Secretary, Mr. James Lawler, Canadian Building, Ottawa.

# The Wood-using Industries of Ontario

## Analytical Study of Consumption of Lumber—Statistics of Industrial Uses to Which Various Lumber Products are Put

A valuable report upon the wood-using industries of Ontario has been published by the Forestry Branch of the Department of the Interior. The report is compiled by R. G. Lewis, B.Sc.F., assisted by W. Guy H. Boyce. The principal object in compiling the report has been to show the numerous way in which wood is used in the various manufacturing industries of the province. There is practically no industry that does not use wood in some shape or form. In many cases other materials, such as steel, concrete, brick or stone, can be substituted to advantage where wood is now used, but in other cases the use of wood, and perhaps of one particular kind of wood alone, is imperative.

As the supply of wood is being rapidly exhausted, new uses are found for woods hitherto considered as inferior species. Manufacturers demand certain kinds of wood for certain commodities. In many cases this demand is merely the result of habit, or accustomed use of that material, or of mere prejudice in its favor. It is very often the case that some other cheaper and more abundant material will serve the purpose just as well. The bulletin may show some manufacturers that their commodities are being made by other manufacturers from cheaper materials and in just as satisfactory a way.

A firm may be in the habit of purchasing its material from one certain district, thinking that it cannot be obtained elsewhere. The bulletin shows where material for different industries is purchased, what quantities are used annually and what they cost the manufacturer at his factory.

One of the most important parts of forestry is the closer utilization of raw material and the prevention of waste. Scores of examples can be cited where one manufacturer is actually throwing away exactly what another manufacturer needs. An attempt has been made in the bulletin to show how waste is utilized from various industries, in the hope that this information may be of use in saving some of the valuable so-called waste that is annually burned under the boilers of woodworking establishments or sold as kindling wood.

### Ontario's Forestry Situation

Reports were received from over twelve Ontario firms using wood in their business. Some of these produced commodities made entirely of wood. Others made articles partly of wood and partly of metal, and others used wood only as a means of manufacturing their commodities, as in the case of foundry men, who used wood for patterns and moulding boxes, or manufacturers who made boxes and crates in which to pack their products.

A forestry policy for the province, which has as its aim the management of forest lands in such a manner as to produce a steady supply of wood in continuity, is the only solution of the problem of how to perpetuate the wood-using industries of Ontario. Canadians cannot count on foreign countries to supply them forever, although there are certain species of trees that will not grow in the climate of this country and whose wood must be imported. The economic balance of exports and imports must be insured by the growing of trees adapted to this climate in sufficient quantities to supply the local demand and to provide a surplus for exportation to other countries. In this way the loss entailed to Canadian manufacturers by the necessary importation of certain kinds of wood from other countries can better be afforded. There are millions of acres of land in Ontario that are unfit for agriculture and still are suitable for growing forests. Such lands should be withheld from homestead entry and managed as forests. In some parts of the province, large areas of deserted farm lands are found, and lands that are not suitable for growing crops, but which are being held by farmers who are too poor to move to more fertile regions and who lack the ambition to learn new trades. This land should be managed as forest land, and the owners encouraged to take up more fertile farms in the newer parts of the province. There is enough potential forest land unfit for agriculture in Ontario to supply the future needs of wood-using industries, were the population of the province ten times as great as it is now—provided the land were properly managed under a rational forestry policy.

The scarcity of wood and its rapidly increasing price is being felt by every industry using wood. In the case of some of the hardwoods, such as white oak and hickory, the native supply is practically exhausted, with the exception of odd trees and groups of trees in farmers' woodlots. The prices of these two species have increased in late years at an alarming rate, and even in the United States, where the bulk of the supply comes from, a shortage is being felt and the centre of production is constantly shifting to new regions.

It is probable that the price of each kind of wood will continue to increase until it equals or exceeds the cost of growing that particular wood in the forest.

Thirty-four different kinds of wood were reported as having been used by the industries of Ontario. The following table gives a summary of the kinds of wood used in the province, together with the quantity used annually, average cost, total cost, and the proportion purchased in and outside of the province.

SUMMARY STATEMENT OF WOODS USED IN ONTARIO.

| Kind of Wood.      | Rank. | Quantity used Annually. | Per Cent. | Average Value. | Total Value. | SOURCE OF SUPPLY.               |                                      |
|--------------------|-------|-------------------------|-----------|----------------|--------------|---------------------------------|--------------------------------------|

It is probable that less of this material is actually grown in Ontario than the figures would indicate. Many manufacturers report wood as having been purchased in Ontario when it is imported from outside by a dealer who sold it to the Ontario manufacturer. The following table gives details of the consumption in Ontario of wood purchased outside of the province, the quantities purchased annually and the percentage of each kind purchased in the different regions of supply.

Referring to the consumption of pine in Ontario the report says:—"It is probable that the use of this material is decreasing relatively, on account of the substitution of cheaper woods like spruce, hemlock and balsam fir. Spruce especially is being used in place of white pine wherever possible. Clear white pine is now almost impossible to obtain even in Ontario, Canada's premier white pine province. It might safely be stated that the bulk of the white pine of the province has been cut and that the few remaining forests of this material will not last many more years at the present rate of consumption and destruction by fire. The grade of material now being sold grows poorer each year, and the standards of grading are being constantly lowered because first-class material can no longer be obtained. The price of \$25.60 per thousand feet board measure is fairly high for native-grown wood and is highest among the coniferous woods of the province.

"This material is used by twenty-seven of Ontario's industries, and used in greatest quantities by builders, factories, and manufacturers of boxes and box shooks. Pine heads the list in nine of the industries. The bulk is bought outside of the province. The eastern provinces supply two-thirds and the United States one-third of the material purchased outside Ontario, which amounts to almost 6,000,000 feet. Only five other woods are imported in greater quantities."

### Extensive Spruce Resources

Spruce is used in Ontario to almost as great an extent as pine, forming 19.1 per cent. of the total. These two woods together, make up two-fifths of the total and stand well above the other materials

on the list. There is probably more spruce of commercial size in Ontario than any other species and the supply, while being rapidly depleted by axe and fire is still very considerable. Its use for pulp is in a sense a wasteful one, as balsam fir, poplar, white birch and jack pine can be made into pulp, while they are of little value as lumber. Spruce is used in twenty-one industries in Ontario, but is the chief wood only in pulp manufacture. Pulp mills and planing mills use the greatest quantities, seven-tenths of the material going into

pulp. Spruce comes third on the list of woods purchased outside of the province. Twelve per cent. of the spruce used is brought in from outside. Of this, the bulk comes from Quebec and the Maritime Provinces, with small quantities from British Columbia and the United States.

#### Birch Replacing Maple

The most important hardwood used in Ontario is maple, of which the consumption is over 750,000,000 feet per year. This amounts to 11 per cent. of the total consumption in the province. It is used by twenty-eight industries, heading the list in six of them. The greatest quantities are used for hardwood flooring, wood distillation and furniture. For these purposes and for all others where strength and stiffness are not of paramount importance, birch can be substituted in many cases and is being substituted more and more each year as the supply of maple decreases. Fifteen per cent. of the maple is purchased outside of Ontario, mostly from the United States and a small quantity from Quebec.

Hemlock is the third most important native conifer used in Ontario. It forms 9.2 per cent. of the total. Ninety per cent. of the hemlock used in building construction for frame work or rough sheeting. Ten other industries use small amounts for rough purposes.

More oak is imported into Ontario than any other hardwood or softwood. Almost 60 per cent. of the oak consumed is imported from the United States. The cut of oak is steadily decreasing and prices are advancing. Oak is used by twenty-six out of the thirty-seven classes of industries and heads the list in five of them. Manufacturers reported having purchased 59.9 per cent. of their oak outside of the province. Of these purchases 98 per cent. were made in the United States, the other two per cent. in Eastern Canada.

Elm is used for almost every purpose for which a hardwood can be used. It enters into thirty-one of the industries. Over 500,000,000 feet of elm is used annually in Ontario, and 96 per cent. of this is purchased in the province. About 2,000,000 feet is purchased outside of the province, three-quarters of which comes from eastern Canada.

Basswood is used in thirty-one industries in Ontario and is the chief material in four of them. The greatest quantities are used for slack-cooperage and box factories, it is specially useful as a food-container on account of its lack of taste and odor. Over 96 per cent. of it is bought in the province.

Birch is Canada's most abundant hardwood. About nine-tenths of the supply is bought in Ontario. Two-thirds of the remainder comes from the United States.

Beech is used by eighteen industries. Over 4,000,000 feet are used annually for hardwood flooring. It makes an excellent floor and takes a high polish. About 98 per cent. of it comes from Ontario.

Ash is used chiefly for framework of all sorts in vehicles, cars and agricultural implements and for long handles of agricultural tools. More ash is used for interior finish of houses than for any other purpose and this is mostly black ash. About 30 per cent. is purchased outside of the province, one-quarter of this coming from Quebec and three-quarters from the United States. The Ontario supply has dwindled down to a few restricted districts.

Hickory is Ontario's most valuable structural hardwood, and the supply in the province is now commercially exhausted.

#### An Important Neglected Supply

The most important species of poplar in Ontario are the Balm of Gilead and Aspen. These are used chiefly for pulp. Balm of Gilead if properly seasoned can be substituted in many cases for the rapidly disappearing basswood and the expensive exported tulip or white wood. The supply of poplar in Canada and in Ontario is enormous. It is highly probable that new uses will be found for this wood when the prejudices against it are overcome.

Three-quarters of the cedar used in Ontario is purchased in the province and nearly one-quarter is brought from British Columbia. Small quantities come from Eastern Canada and none from the United States.

Black walnut is the most expensive hardwood native to Ontario and is more or less of a curiosity at the present time. A few years ago walnut for furniture was in fashion, as oak and mahogany are now, and what little supply the province had was quickly exhausted. The wood is mostly from the United States.

#### Consumption of the Various Industries

The bulletin contains a number of interesting tables showing the consumption of wood by species and by industries. The figures in the tables do not include ties, poles, piles, bridge-timbers, mine-props, shingles or lath, nor do they include rough lumber purchased from sawmills and used in building and other structural work without further manufacture. They do include, however, the products of planing mills and builders' factories. The following tables give a summary of the wood consumed by the different industries, with the total amount consumed annually, the percentage distribution of each industry, the average value per thousand feet, the total value and the percentage supplied by each region.

Nineteen kinds of wood were used in the manufacture of agricultural implements. Maple, oak, elm, ash and hickory have been

SUMMARY STATEMENT OF WOOD USED IN ONTARIO BY SPECIES AND INDUSTRIES.\*

| Industry.                   | Quantity used Annually. | Per Cent. | Average Value. | Total Value. | SUPPLY BY REGIONS. |                 |                   |           |

<sup>1</sup> Less than one tenth of one per cent.

the most popular in the past, but imported hard pine is being rapidly substituted for these native hardwoods in many instances. Pine and basswood are used largely for box working and parts of implements where ease of working is more important than strength. Of the pine and basswood 52. per cent. is purchased in Ontario, 46.4 per cent. in the United States and 1.5 per cent. in Eastern Canada. The industry uses 29 per cent. of the hard pine consumed in Ontario; more than any other industry except the manufacturers of sash and doors. The implement makers also bought the most expensive hemlock. The following table gives details in connection with wood consumption in the manufacture of agricultural implements:—

Boat manufacturers and repairers consumed 3,469,000 feet of lumber during 1911. The chief species of lumber used were pine, 677,000 feet; oak 556,000 feet; Douglas fir 427,000 feet; basswood 425,000 feet; cedar 420,000 feet; elm 224,000 feet; cypress 209,000 feet; maple 164,000 feet; spruce 118,000 feet. The industry paid on the average \$45.60 per thousand feet for its material.

In the manufacture of boxes and box shooks the quantity of lumber consumed was 76,412,000 feet, pine leading with 61.3 per cent. of the total. Spruce comes next with 18.6 per cent. of the total. This industry used 9.5 per cent. of all wood used in Ontario annually and comes third on the list. It pays \$18.53 per thousand for its material. The following table gives details of the consumption of wood in boxes and box shooks in Ontario during the year 1911.

<sup>1</sup> Less than one tenth of one per cent.

## Railway Car Consumption

Nineteen kinds of wood were used by manufacturers of passenger coaches, baggage, express and freight cars for steam railways, cars for electric lines and wooden parts of locomotives, such as running boards, cab seats, pilots, etc. Imported hard pine headed the list, forming almost one-quarter of the total. Douglas fir which is now used only to the extent of 5 per cent. could be used more extensively. as innumerable tests have proved that there is practically no difference in the strength value of these two woods, and Douglas fir is

probably the lighter. The manufacturers under this heading buy good grades and pay an average price of \$35.12 per thousand feet. The following table gives details of the wood consumed in the manufacture of cars.

| Kind of Wood.    | Per cent. | Quantity. | Value.  | Average Value. | SUPPLY BY REGIONS. |                 |           |           |

<sup>1</sup> Less than one tenth of one per cent.

Ten kinds of wood were used in the chair industry, the total being 9,597,000 feet. The chief of these was elm, the total of which was 3,208,000 feet. Following this come beech, 2,722,000 feet; oak, 1,886,000 feet; maple, 1,037,000 feet. Approximately 71 per cent. is purchased in Ontario, 70 per cent. in Quebec and 21 per cent. is imported. Almost 90 per cent. of the oak is purchased in the United States.

In the manufacture of coffins, caskets, and shells, no less than 6,514,000 feet of lumber was used in Ontario during 1911. Pine led with 1,890,000 feet. Spruce was second with 1,856,000 feet, and basswood was third with 1,594,000 feet.

Twelve kinds of wood were used in the making of slack cooperage, the total consumption being 42,946,000 feet. Elm and poplar formed 86 per cent. of the hoops. The material is largely purchased in Ontario. The following table gives details of the consumption of wood used in slack cooperage in Ontario during the year 1911.

<sup>1</sup> Less than one tenth of one per cent.

Oak formed 87.6 per cent. of the wood used in tight cooperage. Eighty per cent. of this is imported from the United States. In 1911 Canada imported over 100,000 barrels and over 7,000,000 oak staves which clearly indicates that the local cooperages cannot begin to supply the demand. The following table gives details of the wood used in tight cooperage in Ontario during 1911.

Fruit baskets and crates consumed 5,489,000 feet of lumber during 1911. Elm led with 2,688,000 feet and basswood was second with 1,419,000 feet.

An interesting item is the consumption of wood in half-tone blocks. Only the best selected stock is used for these purposes and four kinds of wood are used, viz.: birch, mahogany, cherry and a little boxwood. The total consumption is very small, amounting only to 21,000 feet.

Maple is the favorite material for the longer handles of hay-forks, brooms, cant-hooks and pike-poles. The total consumption of all woods for handles in 1911 was 6,907,000 feet, of which maple made

up 2,722,000 feet. Handle factories consume all of the apple wood used by Ontario's industries. The average price for handle woods was \$29.99.

## Hardwood Flooring

Hardwood flooring in Ontario consumed 52,547,000 feet of lumber in 1911. Maple was the most popular wood, making up 31,941,000 feet of this total. Over 70 per cent. of the lumber used in hardwood flooring was sold almost exclusively in Canada. The following table gives details of the consumption of wood in hardwood flooring in Ontario in 1911.

## HARDWOOD FLOORING.

<sup>1</sup> Less than one tenth of one per cent.

The largest and most important class of wood consuming industries in Ontario is that engaged in the manufacture of sash, doors and interior trim. These practically include all the planing mills and builders' factory products. The industry consumes over 250,000,000 feet of lumber annually costing over \$6,000,000. Ontario exports large quantities of planing mill and builders' factory products to all parts of the world in addition to supplying a large local demand. The following table gives details regarding the wood consumed in sash, door and interior trim factories in Ontario during the year 1911:—

## SASH, DOORS AND INTERIOR TRIM.

The furniture industry consumed 37,070,000 feet of lumber in Ontario during 1911. Maple was by far the most popular of woods in this industry, the total consumed being 13,202,000 feet.

Pulp manufacturers in Ontario consumed 119,496,000 feet of wood during 1911 or 14.8 per cent. of the total consumed by industries. They used practically all the balsam fir, the greater part of the spruce and 13.8 per cent. of the poplar. All the material was purchased in Canada, 90.8 per cent. coming from Ontario and 9.2 per cent. from Eastern Canada. Ontario exported to the United States in 1911, 89,050 cords of pulpwood or approximately 49,333,700 feet board measure. All this material was cut on private lands. The following table shows the consumption of wood in making wood pulp in Ontario during 1911:—

## WOOD-PULP.

| Kind of Wood.   | Per Cent. | Quantity. | Value.    | Average value. | SUPPLY BY REGIONS. |                 |          |          |
|-----------------|-----------|-----------|-----------|----------------|--------------------|-----------------|----------|----------|
|                 |           |           |           |                | Ont.               | Eastern Canada. | B.C.     | Foreign. |

| Basswood.....   | 0.1       | 167       | 1,366     | 8.18           | 167                |                 |          |          |
| Elm.....        | 0.1       | 165       | 1,350     | 8.18           | 165                |                 |          |          |

Vehicles, sleighs and automobiles consumed 15,579,000 feet of lumber in Ontario during 1911.

## Good Trade Conditions in England

Private information received by the Canada Lumberman states that general trade conditions in England today are surprisingly good. The writer, in a letter to the Canada Lumberman, says:—"We have heard a great deal about England going behind and losing trade, and about other countries getting ahead of her, and that England is slow, but any person visiting her as often as I do, comes to an entirely different conclusion. In all the lines I have found that the factories are working to their full capacity and that prices have very materially advanced. I had a good chance of judging, as I came in contact with buyers from this country, who were over there buying for their wholesale houses. They all told me that they found prices materially advanced over those of last year, and that factories were rushed with orders, making it very difficult to get deliveries. This, of course, made a good general trade.

"The iron business was particularly good, and it is one of the thermometers by which we judge the lumber trade. I found that a great deal more of Rigas had come into the case-making trade, but I did not find any person who would say that Riga would take the place of spruce, where strength was needed.

"The market was stronger and the prices were higher than I have ever seen in England, but I understand there was a time, a good many years since, when they had higher prices than to-day. My impression, is that if the lumber shippers on this side are judicious in manipulating their stocks, and work off in Montreal and Ontario and the Eastern States markets as much as they can, and do not force the English market too hard, we can maintain a steady market for lumber for some years, and I have not met a person who has stuck to the lumber business as a business, who would not be pleased with this result. The only men I have come across who have made money, are those who have sold out."

## Fire Protection on New Brunswick Railway Lines

A conference was held at Fredericton, April 8th, to consider the matter of railway fire protection in the Province of New Brunswick under Order 16570 of the Railway Commission. At this conference, Colonel T. G. Loggie, Deputy Minister of Lands and Mines; John McGibbon, Chief Fire Ranger; A. E. O'Leary, Chief Game Warden; Wm. Downie, General Superintendent C. P. R., and Clyde Leavitt, Chief Fire Inspector for the Board of Railway Commissioners, were present. The question of fire protection along the C. P. R. lines in New Brunswick was discussed fully and an agreement was reached for the establishment of a system of special patrols along portions of the C. P. R. lines in New Brunswick, when the fire danger is especially severe. The efforts of the special patrols will be supplemented by the regular employees of the company, including sectionmen, track-walkers, bridge watchmen, conductors, engineers, agents, etc.

Following the conference a recommendation was submitted by the Provincial Government to the Board, for the appointment by the Board of John McGibbon as Provincial Fire Inspector, and A. E. O'Leary, as Assistant Provincial Fire Inspector. These appointments have now been made and fire protection plants are in process of preparation for the other railway lines in New Brunswick which are subject to the jurisdiction of the Board.

# Statistics of Canadian Forest Output

Value of 1911 Production Reached \$82,321,664—Nearly Five Billion Feet of Lumber Valued at Over \$75,000,000—Comparisons of Provinces and Species

The Forestry Branch of the Department of the Interior have published their annual report upon the forest production of Canada, covering lumber, square timber, lath and shingles. Reports were received from 2,871 firms operating sawmills in Canada during the year 1911. This is an increase of 108 firms as compared with 1910. An increase was apparent in every province except in Quebec and Alberta. The greatest increase was in Nova Scotia, where 169 more mills reported in 1911 than in 1910.

The total value of lumber, square timber, lath and shingles produced in Canada in 1911 was \$82,321,664, the items being:—lumber, 4,918,202,000 feet, valued at \$75,830,954; square timber, 34,847 tons exported, valued at \$766,406; shingles, 1,838,474,000, valued at \$3,512,078, and lath, 965,235,000, valued at \$2,212,226.

The quantity and value of lumber cut in each province during 1911, compared with 1910, and the per cent. distribution of the total cut to each province with the number of firms reporting in each case are shown in the following table:—

**TOTAL LUMBER CUT, 1911, BY PROVINCES: Number of Mills reporting, Total Quantity of Lumber Cut, Total Value, Per Cent of Increase and Per Cent Distribution.**

| Province.              | Rank. |       | Number of Firms Reporting. |       | Quantity.   |             | Value of Lumber. | Per cent. of Increase in Cut over 1910. |       | Per cent Distribution of Cut. |       |
|------------------------|-------|-------|----------------------------|-------|-------------|-------------|------------------|-----------------------------------------|-------|-------------------------------|-------|

| Manitoba .....         | 7     | 7     | 54                         | 103   | 42,922      | 53,745      | 769,806          | 25.2                                    | 0.9   | 1.1                           |       |
| Alberta .....          | 8     | 8     | 53                         | 51    | 45,127      | 51,084      | 801,153          | 13.2                                    | 1.0   | 1.0                           |       |
| P. E. I. ....          | 9     | 9     | 45                         | 52    | 5,273       | 7,715       | 102,278          | 46.3                                    | 0.1   | 1.5                           |       |

<sup>1</sup>Owing to an error, through duplicating certain of the 1910 returns sent in from British Columbia, the actual total cut of the province is somewhat less than that given in Bulletin No. 25, though not so much as to affect the relative rank of the province in the table, where it easily holds its rank as the second of Canada's lumber-producing provinces.

<sup>2</sup>Decrease.

## The Output of Lumber

The total output of lumber, 4,918,202,000 feet, is an increase of 466,550,000 feet or 10.48 per cent. as compared with 1910. The average mill cut in 1911 was 1,713,000 feet as compared with 1,611,000 feet in 1910.

In the United States in 1910 the total lumber cut was reported as 40,018,282,000 feet, being a decrease of ten per cent. from 1909. Canada's production for the same year was about one-eighth of this amount.

In 1910 Ontario cut almost 37 per cent. of the total and only about 35 per cent. in 1911. British Columbia has increased from 26.3 to 27.3 per cent., cutting 14 per cent. more lumber than in 1910. Quebec is the only province reporting a decrease in production. In 1911 this province cut 4.3 per cent. less lumber than in 1910 and dropped from 17.7 per cent. to 15.4 per cent. of the total. New Brunswick yielded about the same part of the total cut, but increased its production over 1910 by 11.5 per cent. The production in Nova Scotia increased by 48.8 per cent. over 1910. Saskatchewan showed the greatest increase in annual cut with 77.5 per cent. Manitoba increased its cut by one-quarter and now stands ahead of Alberta on the list, although Alberta has also increased its production by 13.2 per cent. Prince Edward Island has very greatly increased its cut and now forms one and a half per cent. of the total Canadian production.

The following table shows the average mill price in the various provinces of Canada during 1910 and 1911:—

|                            | 1910. | 1911. |
|----------------------------|-------|-------|
| Canada .....               | 15.81 | 15.42 |
| Nova Scotia .....          | 12.66 | 12.97 |
| Prince Edward Island ..... | 13.48 | 13.26 |
| New Brunswick .....        | 13.26 | 13.49 |
| Quebec .....               | 14.22 | 14.20 |
| Manitoba .....             | 14.33 | 14.32 |
| British Columbia .....     | 15.32 | 14.33 |
| Alberta .....              | 14.28 | 15.68 |
| Saskatchewan .....         | 14.38 | 16.82 |
| Ontario .....              | 18.28 | 17.81 |

The average price of lumber throughout Canada was 39 cents less than in 1910.

The reduction was evident in Prince Edward Island, Quebec, Manitoba, British Columbia and Ontario, being greatest in the case of British Columbia where a reduction of 99 cents is noted. It is evident that this reduction applied to the large cut of the province would have a considerable effect on the average price in Canada.

The relative production of lumber by kinds of wood in 1910 and 1911, together with the percent. of increase or decrease, the total value of each kind of wood, the percentage each formed in the total cut and the average price per thousand in the two years are shown in the following table:—

**LUMBER CUT, 1911, BY SPECIES: Quantity Cut, Total Value and Average Value per M feet, B.M., with Per Cent of Increase over 1910 and Per Cent Distribution, 1911.**

| Kind of Wood.     | Rank. |       | Quantity.   |             | Per cent of Increase or Decrease over 1910. | Total Value of Lumber. | Per cent Distribution of Total Cut. |       | Average Value Per M Ft. B. M. |         |
|-------------------|-------|-------|-------------|-------------|---------------------------------------------|------------------------|-------------------------------------|-------|-------------------------------|---------|
|                   | 1910. | 1911. | 1910.       | 1911.       |                                             | 1911.                  | 1910.                               | 1911. | 1910.                         | 1911.   |
|                   |       |       | M Ft. B. M. | M Ft. B. M. |                                             |                        |                                     |       | \$ cts.                       | \$ cts. |
| Total .....       |       |       | 4,451,652   | 4,918,202   | 10.5                                        | 75,830,954             | 100.0                               | 100.0 | 15.81                         | 15.42   |

<sup>1</sup> 1910 total contains quantity not identified by species.

<sup>2</sup> Decrease.

<sup>3</sup> Less than one tenth of one per cent.

Twenty-six kinds of wood are reported as having been sawn into lumber in Canada during 1911, the list being practically identical with that of 1910. Spruce, white pine, Douglas fir, hemlock and cedar retained their relative positions at the head of the list. The spruce made up almost one-third of the total cut, increasing by 27.5 per cent. from 1910. Spruce and white pine together formed over one-half of the total. The cut of white pine and Douglas fir remained at practically the same figures as in 1910. Hemlock did not increase in cut as rapidly as it did from 1909 to 1910. Birch now forms 2 per cent. of the total cut, a large proportion for a hardwood. It has moved up on the list from 10th to 7th place and its cut has increased by 38.8 per cent.

A decrease in cut was shown by cedar, red pine, tamarack, yellow pine, balsam fir, maple, basswood, elm, ash, beech and oak. The greatest decrease is with basswood, beech and balsam fir, in each of which the cut was less than one-half of what it was in 1910.

The cut of hickory, walnut and cherry showed increases, the latter fifty per cent.

The average price of lumber has decreased by 39 cents per thousand, on account of the decrease in the average price of white pine and Douglas fir, which together form 38.3 per cent. of the total. Spruce increased by 10 cents a thousand from \$13.55 to \$13.65. White pine decreased by 40 cents and Douglas fir by \$1.51. Among the other decreases in price are the following:—cedar, 51 cents; birch, 15 cents; tamarack, \$1.26; yellow pine, 73 cents; balsam fir, 91 cents; jackpine, 88 cents; ash, 4 cents; oak, \$1.15; hickory, \$10.31; walnut, \$18.81;

tulip, \$10.57. The only woods used in quantity that showed an increase in price were the following:—spruce, 10 cents; hemlock, 20 cents; red pine, 93 cents; maple, \$1.98; basswood, \$1.35; elm, \$1.29; beech, \$2.00; poplar, 53 cents; chestnut, 89 cents; butternut, \$2.19; cherry, \$1.88, and sycamore, \$1.03.

The following diagram shows the comparative production of different kinds of wood in Canada during 1911:—

The United States cut of spruce in 1910 was, 1,449,912,000 feet, being only 194,881,000 feet greater than that of Canada. Canada's cut of balsam fir, 123,920,000 feet, exceeded that of the United States by 49,340,000 feet. In the other kinds of wood Canada's production was a mere fraction of that of the United States. They cut three times as much white pine, although their cut decreased 14 per cent. They cut six times as much Douglas fir, with a cut increase of 7 per cent.; six times as much hemlock with a cut decreasing 7 per cent. One and a half times as much cedar with an increased cut of 20 per cent. and five times as much birch with a cut decreasing 7 per cent. These figures are for the year 1910 in the United States.

#### Hardwoods and Softwoods

The quantities of hardwoods and soft woods purchased in Canada during 1911 totalled 4,627,684,000 feet and the production of hardwoods totalled 290,518,000 feet. The softwoods thus formed 94.1 per cent. of the production and the hardwoods 5.9 per cent. This shows practically no change since 1910.

The following table shows the production of spruce lumber during 1911 and 1910 by provinces:

**SPRUCE LUMBER, 1911, BY PROVINCES: Quantity, Per Cent Distribution, Total Value and Average Value per M Ft., B.M.**

| Province.                   | No. of Active Mills Reporting. | Quantity.   |             | Per Cent Distribution. | Total Value. | Average Value per M Ft. B. M. |         |
|-----------------------------|--------------------------------|-------------|-------------|------------------------|--------------|-------------------------------|---------|

#### Spruce Showing Rapid Increase

A total of 1,722 mills, or sixty per cent. of all the mills in Canada, produced spruce lumber in 1911. Nearly a quarter of these mills were situated in Quebec. Spruce was reported for every province in Canada.

Quebec produced 29.0 per cent. of Canada's spruce cut in 1911, increasing its production by some 41,000,000 feet.

Every province shows an increase in spruce cut. The production in Ontario increase by 92 per cent., and in Prince Edward Island by over 100 per cent.

The price of spruce increased by 10 cents per thousand feet, increasing in New Brunswick, Saskatchewan, British Columbia and Alberta and decreasing in the other provinces.

Spruce was most expensive in Saskatchewan at \$16.81, and cheapest in Prince Edward Island at \$11.94.

Quebec in 1910 cut 58,870,000 feet more of spruce than Maine, which was the chief spruce state of the United States. The average price in Maine in 1910 was \$17.94, as compared to \$12.88 in Quebec in that year.

The following table shows the production of white pine by provinces during 1911 and 1910:—

**WHITE PINE LUMBER, 1911, BY PROVINCES: Quantity, Per Cent Distribution, Total Value and Average Value per M Ft., B.M.**

| Province.                      | No. of Active Mills Reporting. | Quantity.   |             | Per cent Distribution. | Total Value. | Average Value per M Ft. B. M. |         |
|--------------------------------|--------------------------------|-------------|-------------|------------------------|--------------|-------------------------------|---------|

| Prince Edward Island . . . . . | 5                              | 58          | 222         | 0.0                    | 6,009        | 26 02                         | 27 07   |

White pine was cut in seven provinces in Canada in 1911 by 968 mills. Almost three-quarters of these mills were situated in Ontario and Quebec. Ontario's 420 mills cut 84.1 per cent. of the total, increasing their cut by 2.6 per cent. The cut in Quebec was reduced by 5.1 per cent. New Brunswick increased its production by 14,689,000 feet, board measure, Nova Scotia by 6,610,000 feet, British Columbia by 428,000 feet, and Prince Edward Island by 164,000 feet. Manitoba showed a decrease of 1,403,000 feet, or 57 per cent., from 1910. The white pine sawn in Manitoba mills is mostly shipped in the log from western Ontario, as very little of this species grows in Manitoba.

The average price of white pine throughout Canada was \$20.01 per thousand in 1911, as compared to \$20.41 in 1910, a decrease of 40 cents per thousand. The cause of the decrease is the fall of 57 cents in the Ontario price, as Ontario cuts the bulk of this kind of wood. White pine is becoming very scarce, and material is sawn to-day that would not have been felled ten years ago on account of defects. A much larger proportion of the lower grades are produced at the present time, and it is now almost impossible to obtain perfectly clear white pine in any quantity. The prices were reduced in Quebec by 3 cents and increased in all the other provinces. As in 1910 the highest price was in Prince Edward Island and the lowest in British Columbia.

In the United States, Minnesota cut 1,280,239,000 feet of white pine in 1910, exceeding the Ontario cut of that year by 428,482,000 feet, and in all the other states the cut was less than Ontario. The average price in Minnesota in 1910 was \$18.40, as compared to \$20.83 in Ontario in the same year.

The provinces manufacturing the largest quantity of lumber from each of the twenty-six principal kinds of wood in 1911, together with the percentage of each kind that is manufactured in its leading province, are shown in the following table.

Ontario.—White pine, 84.1 per cent.; hemlock, 55.8 per cent.; red pine, 91.8 per cent.; maple, 81.8 per cent.; basswood, 59.1 per cent.; jack pine, 65 per cent.; elm, 87.3 per cent.; ash, 57.5 per cent.; beech, 72.6 per cent.; oak, 82.5 per cent.; chestnut, 99.6 per cent.; hickory, 98.7 per cent.; walnut, 99.6 per cent.; cherry, 52.7 per cent.; tulip, 100 per cent.; sycamore, 100 per cent.; sassafras, 100 per cent.

British Columbia.—Douglas fir, 99.9 per cent.; cedar, 77.9 per cent.; tamarack, 75.2 per cent.; yellow pine, 100 per cent.; poplar, 26.5 per cent.

Quebec.—Spruce, 29.0 per cent.; birch, 51.5 per cent.; balsam fir, 51.3 per cent.; butternut, 59.2 per cent.

Quebec leads in the production of spruce, which is Canada's most important softwood, and birch, which is the most important hardwood. Square timber is sold by the ton (approximately 40 cubic feet) and is either hewn or sawn.

Ever since 1877 the square timber trade has been declining on account of the increasing scarcity of clear timber of large enough dimensions for squaring. The export of 34,847 tons in 1911 is a decrease of 9 per cent. from 1910, due to the great decrease in white pine.

Ever since 1868, when the maximum quantity of white pine was exported, the amount has steadily decreased, but this material has always headed the list.

In 1911 the quantity of birch exported increased by 5,562 tons and exceeded the quantity of white pine, putting birch at the head of the list. The quantity of oak and red pine also increased, while elm and ash decreased. Maple was not exported in this form in 1911.

The average price of square timber was reduced from \$25.95 to \$21.99, the three leading kinds of wood decreasing in price.

Out of the total of 34,847 tons exported, about 33,716 tons (almost 97 per cent.) were shipped to Great Britain and 632 tons (about 2 per cent.) to the United States.

The quantity of square timber exported from Canada during 1911, its total value and average value per ton are shown in the following table:—

SQUARE TIMBER EXPORTED, 1911: Quantity, Total Value and Average Value per Ton.<sup>1</sup>

| Kind of Wood.    | 1910.              |                        | 1911.              |              |                                     |

The following table shows the shingle cut during 1911 and 1910 by species, the per cent. of distribution, total value and average value per thousand by species.

SHINGLE CUT, 1911, BY SPECIES: Quantity, Per Cent Distribution, Total Value and Average Value per M.

| Kind of Wood.    | Quantity. |           | Per Cent Distribution. |       | Total Value. | Average Value per M. |         |
|------------------|-----------|-----------|------------------------|-------|--------------|----------------------|---------|
|                  | 1910.     | 1911.     | 1910.                  | 1911. | 1911.        | 1910.                | 1911.   |
|                  | M         | M         |                        |       | \$           | \$ cts.              | \$ cts. |
| Total.....       | 1,976,640 | 1,838,474 | 100 0                  | 100 0 | 3,512,078    | 1 80                 | 1 91    |
| Cedar.....       | 1,817,995 | 1,748,048 | 93 5                   | 95 1  | 3,348,835    | 1 79                 | 1 92    |
| Spruce.....      | 55,234    | 52,263    | 2 8                    | 2 9   | 87,098       | 1 81                 | 1 66    |
| White Pine.....  | 26,373    | 22,795    | 1 4                    | 1 2   | 50,933       | 2 00                 | 2 23    |
| Balsam Fir.....  | 10,514    | 8,679     | 0 6                    | 0 5   | 13,848       | 1 48                 | 1 59    |
| Hemlock.....     | 14,886    | 4,940     | 0 7                    | 0 2   | 7,691        | 1 94                 | 1 56    |
| Jack Pine.....   | 5,207     | 1,044     | 0 3                    | 0 1   | 2,302        | 2 40                 | 2 20    |
| Poplar.....      | 697       | 566       | 2                      | 2     | 1,039        | 2 33                 | 1 84    |
| Basswood.....    |           | 114       |                        | 2     | 274          |                      | 2 40    |
| Tamarack.....    | 3,455     | 14        | 0 2                    | 2     | 35           | 2 49                 | 2 50    |
| Birch.....       |           | 11        |                        | 2     | 23           |                      | 2 09    |
| Douglas Fir..... | 8,873     |           | 0 5                    |       |              | 1 83                 |         |
| Red Pine.....    | 40        |           | 2                      |       |              | 1 50                 |         |

<sup>1</sup> This total for 1910 includes a quantity of shingles of unspecified species. <sup>2</sup> Less than one-tenth of one per cent.

The shingle cut in Canada in 1911 showed a decrease of 7 per cent. from 1910. This decrease is evident in the two leading provinces, British Columbia and Quebec, which together cut almost 70 per cent. of the total production. British Columbia cut almost half of the total, as it did in 1910. The decrease in cut in this province amounted to 7 per cent. Quebec, cutting one-fifth of the total, decreased its production by 32 per cent. New Brunswick's cut in-

creased by 60 per cent., exceeding Ontario's production, and putting New Brunswick third on the list. Ontario's shingle cut decreased by about 14 per cent.

The cut increased in Nova Scotia and the increase in Prince Edward Island and Manitoba moved each of these provinces up one place on the list.

The general price of shingles increased by 11 cents a thousand in 1911, following slight decreases in 1910 and 1909. The most expensive shingles were made in Saskatchewan at \$2.25 per thousand and the cheapest in Prince Edward Island at \$1.25.

The United States in 1910 manufactured over 12,000,000,000 shingles, or six and a half times as many as Canada in that year.

Ten kinds of wood were used in this industry in Canada in 1911, basswood and birch being added to the list of 1910. Cedar was still by far the most important material, forming over 95 per cent. of the total. Probably over half of the cedar was of the Western species from British Columbia. The production of cedar shingles decreased by about 4 per cent. Douglas fir and red pine were not reported in 1911. Tamarack shingles were the most expensive at \$2.50. The cheapest shingles were made of hemlock. In the United States cedar shingles also headed the list in 1910, forming 78 per cent. of the total.

### Lath Production

The lath production in Canada in 1911 increased by 13 per cent. from 1910. This increase was caused by the increase in Ontario and British Columbia, which cut over half the total amount.

The production of lath in Canada during 1911 and 1910 is shown in the following table:—

LATH CUT, 1911, BY PROVINCES: Quantity, Per Cent Distribution, Total Value and Average Value per M.

| Province.                 | Quantity. |         | Per Cent Distribution. |       | Total Value. | Average Value per M. |         |
|---------------------------|-----------|---------|------------------------|-------|--------------|----------------------|---------|
|                           | 1910.     | 1911.   | 1910.                  | 1911. | 1911.        | 1910.                | 1911.   |
|                           | M         | M       |                        |       | \$           | \$ cts.              | \$ cts. |

| Ontario.....              | 344,207   | 368,985 | 40 6                   | 38 2  | 945,784      | 2 57                 | 2 56    |
| New Brunswick.....        | 227,732   | 226,224 | 26 2                   | 23 4  | 498,874      | 2 14                 | 2 20    |
| British Columbia.....     | 94,226    | 136,461 | 11 2                   | 14 1  | 251,411      | 1 66                 | 1 84    |
| Quebec.....               | 134,099   | 120,011 | 15 9                   | 12 4  | 242,324      | 2 15                 | 2 02    |
| Nova Scotia.....          | 47,712    | 83,151  | 5 6                    | 8 6   | 187,060      | 2 35                 | 2 25    |
| Saskatchewan.....         |           | 22,971  |                        | 2 4   | 61,780       |                      | 2 69    |
| Alberta.....              | 3,519     | 6,534   | 0 4                    | 0 7   | 22,670       | 2 66                 | 3 47    |
| Prince Edward Island..... | 783       | 898     | 0 1                    | 0 1   | 2,323        | 2 67                 | 2 59    |
| Manitoba.....             | 175       |         | 1                      |       |              | 2 57                 |         |

<sup>1</sup> Less than one-tenth of one per cent. <sup>2</sup> No report from this province in 1910.

The lath cut in Ontario increased by 7 per cent. over 1910, Ontario thus retaining her place at the head of the list for Canada. New Brunswick's production decreased by less than one-tenth of one per cent., and this province retained second place. British Columbia increased by 45 per cent. and Quebec decreased by 11 per cent.; consequently these two provinces exchanged places on the list. The cut in Nova Scotia and Alberta almost doubled during the year and Prince Edward Island also increased its production, Saskatchewan reporting for the first time since 1909, took sixth place on the list. Manitoba did not report any lath produced in 1911.

The following table shows the lath cut during 1911 by species.

LATH CUT, 1911, BY SPECIES: Quantity, Per Cent Distribution, Total Value and Average Value per M.

| Kind of Wood.    | Quantity. |         | Per cent Distribution. |       | Total Value. | Average Value per M. |         |

<sup>1</sup> Less than one-tenth of one per cent.

The average price of lath remained the same as in 1910, changing but little in any province. Laths were most expensive in Alberta at \$3.47, and cheapest in British Columbia at \$1.84.

In 1910 the United States manufactured over 3,000,000,000 lath, or four times as many as Canada in the same year.

As laths are almost invariably made from sawmill waste, the importance of the different kinds of wood is approximately the same as in lumber production, spruce and white pine leading the list.

Five new kinds of wood have been added to the list and one dropped since 1910, making a total of sixteen different kinds of wood used for lath in Canada in 1911.

Spruce and white pine, which together form 67.6 per cent. of the total, have both increased in quantity. In fact there is an increase in the six leading woods with the exception of hemlock. Poplar laths were not reported in 1911. The most expensive laths were made of beech at \$7.50, and the cheapest of Douglas fir at \$1.83.

## Rocky Mountain Forest Conditions

### Brush Disposal and Timber Sale Problems Discussed By Dominion Forestry Service

An excellent report upon the forest conditions in the Rocky Mountain forest reserve has been published as bulletin No. 33 by the Forestry Branch of the Department of the Interior. The report was prepared by T. W. Dwight, M.F., and is based upon his investigations of last season. The work which has been done by Mr. Dwight will be of great assistance in determining the methods which are to be followed in the cutting of timber so as to ensure the natural reproduction of the best species.

An interesting section of the bulletin is devoted to the question of brush disposal. "It has already been pointed out," the bulletin says, "that in this region the brush left after logging decays very slowly, and that, even if the branches were lopped from the tops so that they would be close to the surface of the ground, the brush would remain in an inflammable condition for almost as long a time as though nothing had been done to it. Piling the brush without burning it would aid considerably in fighting fires; but the stands are usually so dense and the amount of debris left after logging so large, that this method would not afford sufficient protection.

"It is, therefore, recommended that wherever practicable, the brush be burnt. Least labor would be involved in following a method of broadcast burning, but that is dangerous under most conditions and involves practical difficulties, not only in controlling the fire, but also in getting the brush completely consumed. Until greater experience has been gained in the actual operations of brush-burning, it would seem advisable to use some surer method. The best way is to pile the brush. The piles may take any form, such as windrows, long rectangular piles, or round piles. They must, however, be of a form that will allow the piling of brush compactly and to a height of at least four feet. Otherwise difficulty will be experienced in burning the brush. For these reasons, round piles will probably be found the best. The best pile is about eight feet in diameter and six feet in height. Such piles may be burnt when covered with snow up to two feet in depth, and the brush will be practically all consumed. The piles may be lighted most conveniently with coal-oil torches. The burning should be done when there is snow on the ground, the most favorable conditions being found after early snow-storms in the fall. Snow-storms occurring in the spring, after most of the winter's snow has thawed away, give other opportunities for brush-burning. Only under special circumstances should burning be done when there is no snow on the ground, though it may be practicable when the ground is very damp and the piles partially dried out.

Brush may also be burnt while logging proceeds, in which case the swampers start fires and throw the brush on them as soon as it is removed from the logs and tops. This method should prove to be the cheapest and is especially advantageous as the burning is independent of weather conditions and the brush is gotten completely out of the way of the skidding teams. It cannot, however, be practised when the logging is being done at a season, when there is no snow, nor on areas where a heavy stand of timber is being removed, because it would be difficult to find places to build the fires on account of the large number of logs lying on the ground.

#### Cost of Brush Burning

The cost of brush-burning should be kept between 20c and 30c per thousand feet, board measure, and in favorable circumstances can be reduced below that amount. Early attempts in the Rocky Mountains will in all probability run in excess of these figures until the men become familiarized with the actual carrying of the operations. An expenditure of at least 40c should be allowed for at the start."

In regard to the sales of timber, the bulletin says:—"A sale of timber may be for a definite area or for a certain quantity of timber. If the area be bounded by rectangular survey lines it may include exactly a natural logging unit, but usually will leave out part of one

or take in part of some other logging unit. Thus it is better, especially from the point of view of administration in the woods, to use natural topographic features for boundaries. When the quantity of timber to be cut, and not the area, governs the limit of the sale, the general boundaries may be stated in the contract, and the detailed location left to the forest officer as the operation proceeds. The amount of timber may be stated in feet, board measure, if the major portion of it is to be saw-logs, and an average board-foot content laid down for other classes of material that are not readily scaled in board measure. A time limit should be set for the complete removal of the sold timber, but provision may be made for extension of the period for valid reasons. Many sales are made for a year only, with provision made for annual renewal on the same terms in case the regulations have been observed. The removal of all improvements and equipment should be required within a prescribed period, say six months from the termination of the contract, subject to the ownership passing over to the government in case of non-removal.

"A contract should usually state that only the green timber designated by the forest officer to be cut may be removed. It may then fix a definite percentage of the total volume as a maximum to be reserved, but the selection of this amount should be left to the forest officer to meet in his judgment the silvicultural requirements of the stand. Reservation of a portion of the stand may be made by fixing a diameter limit, which is the simplest in operation, but not as effective from a silvicultural standpoint. When a conservative silvicultural system is to be followed, the buyer must be made to understand in advance, the general nature of it, so that he can form a judgment as to the extra cost involved in marketing the timber under these conditions. It is usually impossible to lay down in advance, in the contract, the exact details of the method of cutting to be followed. When dead timber has a market value, it should usually be required that it be utilized just as far as it is merchantable, and a diameter limit that may be set for green timber should not be applied to the dead.

#### Timber Cutting Regulations

"Regulations as to the cutting of individual trees should specify the maximum height of stumps, and, for lodgepole pine and spruce, may be very satisfactorily stated as not greater than the diameter of the tree, and in no case over 18 in. This rule is at the present time voluntarily followed by some operators. The maximum diameter at which utilization of material in the top of the tree is to cease must be set. This will vary with market conditions and will be largest where only saw-logs can be taken and smallest where there is a demand for cordwood.

"The price will usually be fixed according to standard units—board feet, pieces, cords, etc. The scale to be used in determining board-foot contents must be stated. A severe penalty should be imposed for removal of timber previous to measurement. In case of large scales extending over a number of years, provision may be made for adjusting the prices at stated intervals. The basis would probably be the average prices obtained in a specified region in a certain period previous to the time of adjustment.

"A penalty, usually the payment of double stumpage, should be imposed for the cutting of unmarketed trees. When the latter are damaged during logging, the forest officer may be given authority to require their removal and double stumpage be charged for them. In large operations, a provision that different parts of the work must keep pace with one another is important, especially in relation to protective measures, such as brush-piling.

#### Agreements For Brush Disposal

"Of protective measures, the disposal of brush is the most important. Provision should usually be made for either lopping or piling, as the forest officer in his judgment may direct. In practice, scaling is sometimes kept back until the brush is satisfactorily disposed of. The brush-burning may be done independently by the government, but it is better to have an agreement with the buyer by which he will furnish men engaged on the logging operation to assist, even if remuneration for those services has to be allowed.

"It is advantageous also to have an agreement with the operator by which his men will be available to fight fires. No remuneration should be allowed when the fire occurs on the area of the sale, or endangers the area directly, but in case the agreement covers assistance in fighting fires not directly connected with the area but within convenient distance, remuneration should be allowed. For fires due to carelessness of the operator's employees, a provision may be inserted in the contract for uniform damages per acre, e.g., \$10 per acre, to avoid disputes in appraising damages, which would be a difficult thing to do, especially if destruction of young growth were an important factor.

"The vesting of authority as to supervision of the sale, final settlement of disputes and interpretation of provisions of the contract should be definitely included in the contract.

The method of payment depends mainly on existing administrative regulations. Other legal provisions, not directly affecting the management of the cutting of the timber, form a necessary part of the contract.

## 3 in.-4 in. COMMON LUMBER 10 in. and 12 in.

The Latest and Most Modern Method  
Price for Comparison

A Cost of 75 Cents per Thousand Feet Board Measure

In many sections of the country, East and West, in spite of the utmost care in sawing there accumulates a vast amount of common lumber, 3", 4" and even 6" wide, which at times is almost impossible to move without cutting the price several dollars per thousand. Most lumber manufacturers would be satisfied were it possible to obtain from their narrow width common lumber the actual cost and, in most instances, in order to move the accumulated stock quickly they are compelled to sacrifice.

By the Linderman method two 4" strips can be joined to make 8" shiplap at a cost which will not exceed 75c. per thousand feet, and a comparison of the figures between 8" shiplap and 4" common lumber at what it is sold for, adding to it the cost of joining it together by the Linderman method and the cost of milling it, leaves a net increase in price of from \$2.50 to \$4.00 per thousand. 10", 12" or even wider widths can be built up in the same manner and at the same cost per thousand, no matter whether the lumber being worked is spruce, hemlock, fir, cedar or pine.

Narrow lumber can also be joined together for rough sheathing, partition work, barn or subflooring and other purposes.

There are Eight Different Lengths of Linderman Machines  
Ten, Twelve, Fourteen and Sixteen

# CANADIAN LINDERMAN COMPANY

## ER Converted into 8-in., SHIPLAP

or Obtaining a Greatly Increased  
n Lumber

is a Return of From \$4.00 to \$5.00 per Thousand

Shorts and odd lengths can be joined to narrow widths, making a composite board of any length desired up to 16'. This is accomplished by running a binding strip on the outside the full length desired and joining to it two or more pieces of miscellaneous lengths that will equal the length of the binding strip. To this can also be joined another series of short lengths so arranged that the butt end joints will not come opposite one another and to this then can be joined the second outside binding strip. Such a composite board will show tight joints not only where they are joined together on the edges but the butt ends of the boards will be tight, making a board as strong and stronger than the natural wood. Such a product, while it may not bring a price equal to a wide board of the same dimensions, will yet yield a profit of several dollars per thousand over the cost of manufacture. In this way the cuttings from the flooring machines or from the sawmill can be converted into a marketable product instead of as now being sold as kindling or sent to the burner.

Full information and particulars in detail will be gladly given and we will arrange to work samples of your own stock if you so desire.

WORKS AT:

# Preserving Timber With Zinc Chloride

A Process Which Greatly Increases the Life of Wood and Renders it Inflammable  
—Description of Works at Fort Frances, Ont.

The artificial treatment of timber of all kinds in order to preserve it against decay has made rapid strides of late years. The growing scarcity of timber is a direct cause of this development. From an economic point of view, however, the time arrived many years ago when preservative treatment was advisable. Today, in Canada, there are a few successful plants engaged in this work and others are being promoted which will be in operation in the near future. One of the most interesting of the Canadian plants is that of Messrs. Alex. Bruce & Company, Fort Frances, Ont. This company being connected with the well-known firm of the same name in Great Britain, has had the benefit of their long experience in wood preserving. They were able, therefore, to build a plant and commence operations at Fort Frances, with the certainty that, from the very first, the business would be successful. The plant at Fort Frances was commenced about one year ago. The process in use consists principally of forcing into the timber zinc chloride solution with sulphate of alumina added. The value of zinc chloride as a preservative has long been known, but its drawback has been that the zinc chloride would leach out of the wood in a comparatively short time. The addition of sulphate of alumina is made, to overcome this difficulty, and the company state that it prevents the leaching out of the zinc chloride entirely.

Since the completion of the plant it has been in operation day and night, treating railway ties for the Canadian Northern Railway, a company which early saw the great advantage of having its ties preserved against decay. The Canadian Northern are now using preserved ties over the greater part of their system. The ties are barked and seasoned for three months before treatment. The best class of seasoning is air-drying in stacks, which is done after the timber has been barked. The company find that seasoning timber by steam is not advisable as it does not give the process a proper opportunity to permeate the timber and is liable to injure the timber seriously. Most of the ties upon which the company have been operating during the past year are of jack pine, a small percentage being tamarac and spruce.

## The Preserving Process

After the timber has been thoroughly seasoned it is taken by electric conveyors from the cars to steel bogies. A train of eight bogies, after being loaded, is pulled into the steel cylinder which is 100 feet long by 7 feet in diameter. The pulling is done by a powerful steam winch. First of all the timber is subjected to a high vacuum, which commences immediately the doors have been closed and is continued for three-quarters of an hour, the average being 26 degrees. Preserving solution is then admitted to the cylinder and forced at high pressure into the lumber. The solution is at the temperature of 140 degrees Fah. The pressure is raised to 130 lbs. per square inch and the temperature is then raised to 150 degrees Fah. The pressure is maintained for one hour after which the process is complete. At no time during the process is the lumber heated above 160 degrees Fah., so that the strength of the timber is in no way affected.

The steam for the plant is produced by a Babcock & Wilcox boiler of 1,750 feet of heating surface. All the pipes are placed 8 feet below the ground so that even in the most severe weather the work goes on as usual. The plant is completely self contained. The

company generate their own electric power by means of a steam plant furnished by Mavor & Coulson, Glasgow, Scotland. A first class repair shop is maintained and all the men employed at the plant (who never number more than seventy) are boarded on the spot.

Direct siding connection with the main line of the Canadian Northern Railway gives the company excellent shipping facilities by rail. They are located on the shores of Rainy Lake and therefore take delivery of lumber by water.

## A Rapidly Growing Business

Mr. Robert Bruce, one of the principals of the company, who has been in charge of the Canadian end of the business, reports that its prospects for the future are exceptionally bright. Speaking of the process itself he explained that, as the preserving solution was aqueous it mixed readily with any slight moisture that might be left in the inner pores of the wood. This is considered a distinct advantage over an oil-preserving process, as, in the latter, any moisture in the timber is liable to become permanently located there and to cause rapid decay. Another advantage he points out for the process is that it is colorless and odorless and that wood treated by this method may be painted or polished. Experiments which had been made upon treated wood, showed that after it had been reduced to sawdust and washed for over an hour it still contained a large proportion of zinc chloride.

One of the important features of the process is its cheapness which gives it a decided advantage in comparison with creosote, the latter is gradually advancing in cost. Another important advantage of the zinc chloride process is that it renders the wood practically fireproof and very clean to handle. The process of preserving timber once it has been seasoned occupies only two hours. The treated timbers can then be loaded at once into box cars.

Alex. Bruce & Company are the sole owners of the "B. M." process, as it is known. The plant at Fort Frances occupies 28 acres. The accompanying illustrations give an excellent idea of its compactness and its excellent facilities for carrying out the work of wood preserving. One illustration shows the plant and boarding house on the shore of Rainy Lake. In the foreground are to be seen piles of ties ready for treatment. Alongside is also shown the method of bundling ties upon the small trucks on which they are carried into the preserving cylinder. A track leads to the cylinder and when the trucks emerge from the other end they are moved along until they are at a convenient place for loading into the box cars upon the Canadian Northern track near by. Then the trucks are taken back by a small loop line running around the cylinder house to the point of loading alongside of the untreated ties. Another illustration shows a cylinder-load of ties which have been treated and are about to be loaded into the box cars.

The Forest Branch of the Department of the Interior in its latest report on production of cross-ties in Canada deals with the matter of preservative treatment as follows:—"In Canada during 1911 only 206,209 ties received preservative treatment, or about 1.5 per cent. of the total number purchased. This is nevertheless an indication of the growing interest taken in the subject of tie-users. In 1910 practically no treated ties were used, but since that time two plants have

Bundling Ties for Treatment in Cylinder

Ties after Treatment, Ready to be shipped

been established and are now treating ties for some of the larger railway companies.

An estimate of the saving that could be accomplished by a more universal use of treated material is of great interest. The average life of an untreated tie is seven years, and with the increasing use of perishable woods like jack pine, hemlock and spruce, this figure will be greatly reduced in time.

Assuming that there are about 70,000,000 ties placed in road-beds on well established lines in Canada, and that one seventh of these are replaced each year one can safely estimate the annual replacements at 10,000,000. The average life of a treated tie is seventeen years, and if the ties in use in Canada were treated the annual replacements would be one seventeenth of the 70,000,000, or only a little over 4,000,000. To make this estimate conservative we can call the saving 5,000,000 ties a year. The average tie is cut from a log containing 70 feet, board measure, of material, so the result would be an annual saving to the country of at least 350,000,000 feet, board measure, of raw material every year.

The saving in dollars and cents to the tie purchasers is also worth considering. The average tie purchased in 1911 cost 38 cents at the point of purchase and 20 cents to put in place; this brings the initial cost to 58 cents. In an untreated state this tie would last 7 years, and if the initial cost is divided by the number of years' service and a rate of interest of 5 per cent. on the investment allowed, the annual cost of such a tie is found. This would amount to a trifle over 10 cents a year. If the same tie were treated with creosote at a cost of 35 cents, it would last seventeen years. Its initial cost would be 93 cents, and its annual cost through its lifetime only about 8 cents. This would result in a saving of two cents a tie and applied to the 70,000,000 ties in use would amount to a saving of \$1,400,000 annually.

In considering the advisability of applying preservative treatment to railway ties the question of mechanical wear cannot be neglected. In the case of the softer woods it frequently occurs that the tie is actually worn out long before it decays. The constant sawing and cutting of the rail and the pulling and redriving of the spikes cannot be prevented by preservative treatment. A thorough impregnation with creosote reduces the moisture content in the tie and prevents further absorption of moisture. The result of this is an actual increase in the strength of the tie, but its amount can hardly be measured.

If, however, precautions are taken to prevent this excessive mechanical wear and preservative treatment is applied to prevent decay, the average life of the tie can be greatly increased. In addition to this, inferior species can be used for ties at a further saving. Jack pine, spruce, hemlock, lodgepole pine, Western yellow pine and many other species cannot be used economically for ties at present on account of rapid decay or mechanical wear, but were they treated and protected they would make excellent tie material.

The number of ties destroyed annually by various causes has been estimated as follows:—

|                                        |              |
|----------------------------------------|--------------|
| Destroyed by decay . . . . .           | 87 per cent. |
| Destroyed by insects . . . . .         | 0.5 "        |
| Destroyed by mechanical wear . . . . . | 12.5 "       |

The total number of ties destroyed annually in Canada and requiring replacement is approximately 10,000,000 and 12.5 per cent. of these, or 1,250,000 ties, are annually destroyed by mechanical wear before they are decayed.

Under present conditions it would be of little use to treat this material with preservatives, but several new mechanical devices have been developed that tend to reduce the factor of mechanical wear to a considerable extent.

The screw spike used extensively on European railways holds the rail more firmly to the tie and reduces the wear due to spike pulling. Flat tie-plates of either metal or hardwood reduce the cutting of the rail-base. These two devices are not used to any great extent in Canada at present, but would materially reduce the loss of ties annually and permit the greater use of many species of wood now considered as inferior.

### B. C. Log Markets Quiet

The log situation in British Columbia is very little changed from what it was a month ago, except that a slightly weaker tone prevails, on account of the increasing supply of logs being apparent, while saw mill men are only carrying a from hand to mouth supply, feeling that logs will be cheaper as the new season's supply begins to come in freely. It is expected that the logging business will be overdone this year, as it invariably has been after a few months' log scarcity causing very high prices. In fact, it may be said that all logging camps are being operated at high pressure in order to make the most out of the present opportunity, while almost everyone having anything to log with or log on, is doing what they can in the way of "making hay while the sun shines." Prices for fir logs may be quoted at \$6.50, \$10 and \$13; cedar, from \$8.50 to \$11.50; spruce about the same as cedar.

### A New Toronto Lumber Salesman

J. M. Donovan, Toronto

Mr. J. M. Donovan, formerly with Yates, Daley Company of New York, is the latest addition to the ranks of the lumber salesmen in Toronto. Mr. Donovan has joined the force of the Long Lumber Company, Hamilton, and is in charge of their Toronto business, with office at 1221 Traders Bank Bldg. Mr. Donovan takes the place of Mr. D. C. Johnson who was formerly Toronto representative for the Long Lumber Company. He has had a long experience in the lumber business, having started in the year 1899 with the firm of Shepard & Morse, as office boy, and remained with them until five years ago, occupying various positions such as stenographer, bookkeeper and general office man. Then he entered the service of a firm in a little town called Ellijay in Georgia, where he learned the inspecting end of the business at a sawmill. After this experience Mr. Donovan entered the service of Russe and Burgess, incorporated, Memphis, Tenn. With this firm he got an excellent training in the hardwood business. He had experience both in buying and selling of hardwoods and in the inside office work. After this Mr. Donovan returned to New York and went with the Yates Daley Company with whom he remained until recently when he made an arrangement with the Long Lumber Company of Hamilton.

Mr. Donovan is a young man with a good practical training in the lumber business. He is energetic and resourceful and will unquestionably make a creditable record for himself with the Long Lumber Company.

### Stone-Grant Auction Sale Ineffectual

The auction sale of the timber limits and sawmill of the Stone-Grant Lumber Company which was advertised to take place at the Queen's Hotel, Toronto, on April 24th attracted a large number of prominent lumber manufacturers and merchants from different parts of Canada and the United States. Mr. Peter Ryan, the well-known auctioneer, was in charge and in spite of his persuasive powers, none of those in attendance made bids which were considered at all seriously by Messrs. E. R. C. Clarkson & Sons, the assignees for the Stone-Grant Lumber Company. A number of different parcels were put up at the sale. The most important was lot No. 1, being a timber berth, having an area of 27 square miles, more or less, being the west half and the north-east quarter of the township of Ermatinger. This berth is estimated to contain 50,000,000 ft. B. M. of white pine of good quality. It is held under one of the old licenses which are practically in perpetuity and which cover all the standing timber thereon. None of the lumbermen in attendance at the sale made any bid whatever upon this lot. Other lots were put up containing various quantities from 1,000,000 to 3,000,000 feet of white pine. Only on one or two of the lots were any bids made, and they were considered so greatly beneath the value of the timber that the lots were withdrawn from sale.

A similar effect met the efforts to dispose of the sawmill, general stock at the company's store, logging equipment, etc. The sawmill is valued in the company's books at \$147,000 and the mill supplies at \$3,290. These were offered in one lot and the highest bid was \$10,000, they were accordingly withdrawn.

The general stock and merchandise in the company's store at Cutler are entered in the company's inventory at \$9,522. The only bid made for this lot was \$2,500. It was also withdrawn.

No bid at all was made for the camp equipment, in the township of Hutton, valued in the company's inventory at \$6,603.

A tug, lighter and booms and chains, valued at \$4,300 were put up separately, but the offers were so small that they were withdrawn.

### New Secretary for Hardwood Manufacturers

Mr. Wm. H. Weller, Buffalo, N.Y., has been appointed secretary of the Hardwood Manufacturers' Association of the United States to fill the vacancy, caused by the retirement of Mr. Lewis Doster. Mr. Weller, who is a member of the White-Weller Lumber Company, Buffalo, N.Y., assumes his duties on May 1st, on which date Mr. Doster will enter actively into the saw business as general representative of the Joshea Oldham & Sons Saw Works.

# Poles Purchased in Canada During 1911

Decrease Shown as Compared with Previous Year—Average Price Advanced from \$1.33 to \$1.80 per Pole—Preservative Treatment Needed

Statistics for wooden poles purchased in Canada during 1911 were obtained by the Forest Branch of the Department of the Interior from 282 companies. Of these 129 were electric light and power concerns; 102 were telephone companies; 28 were electric roads; 19 were steam railways and 4 were telegraph companies. The 102 telephone companies reporting included the three provincial telephone departments which buy poles in large quantities for the rural lines connecting with their systems. The 19 steam railway companies reporting included in their report poles purchased for a large number of subsidiary companies. Taking this into consideration it is felt that the reports received represent at least 95 per cent. of the poles purchased by Canadian companies.

The total number of poles purchased in Canada in 1911 was 585,703, being a decrease of 197,138 from the figures for 1910. In all the different classes of pole-users there was a decided decrease in the number of firms reporting purchases, as compared with 1910. It is probable that many of these firms were sufficiently stocked to meet their requirements for 1911. There was also a decrease in the construction of new pole lines.

The total value of the poles was \$1,056,277, an increase over 1910 of \$12,403, which is explained by the advance in the average price per pole from \$1.33 to \$1.80.

Cedar was still the most important pole wood, probably on ac-

count of its form, durability and comparative cheapness. A total of 535,588 poles was reported for the two kinds of cedar, comprising over ninety per cent. of all poles purchased. Of these 463,234 were Eastern cedar at \$1.61 and 72,354 were Western red cedar at \$2.99. On the whole there was a decrease of about 30 per cent. in the number of cedar poles purchased, and an increase in price of almost 36 per cent.

Larch poles are used extensively in the Western Provinces for rural telephone lines. Out of the 28,226 larch poles reported, 25,000 were used by the Alberta Government. These poles were cut in Alberta. Larch is the only tree native to Alberta which can be used, untreated, for poles.

The use of spruce poles has increased steadily in the last three years. In 1909, 2,070 poles were used. In 1910, 5,524, and in 1911, 8,764. During that time the average price remained practically the same.

Chestnut poles were used only locally and in small quantities.

Altogether eleven different kinds of wood were reported as having been used for poles. Of these, six were reported and classed separately for the first time in 1911. These were Western cedar, jack pine, hemlock, Norway or red pine, white pine, and Georgia or yellow pine.

Steam railways, telephone and telegraph companies purchased 521,572 poles in 1911 at an average cost of \$1.46. This was a decrease in number of thirty per cent from 1910, but this class still included about ninety per cent. of all poles used. These companies also purchased nearly ninety per cent. of all the cedar poles of both species—a total of 480,185, at a price of \$1.47. They also used all the poles reported for white pine, red pine, jack pine and hemlock.

Electric railways, power and light companies purchased 64,131 poles in 1911 at an average cost of \$4.55. This was an increase of 69

per cent. over 1910 in quantity, and an increase of 14 per cent. in price. These companies purchased all the Douglas fir and yellow pine poles reported. The high average price paid by the electric companies was probably due to the fact that they purchased the largest and the best class of poles in comparatively small quantities and usually could not obtain their poles locally.

The high price paid for white pine, yellow pine and chestnut cannot be compared with the others as these poles were purchased in very small quantities for special uses. The activity of hydro-electric power companies in 1911 was largely responsible for the increase in this class.

In the above table the poles are classified according to length-classes, which permits of a close comparison of the relative values of the different kinds of wood.

Over 68 per cent. of the poles purchased were 25 feet long, or less, this being the length most used by telephone and telegraph companies. In this length-class, Douglas fir was the most expensive wood used at \$1.74, although the quantity was comparatively small. Larch came next in average value, at \$1.43, and, as practically all the larch poles are in this class, the price is a fair indication of the relative value of the wood. Spruce poles at 87 cents and jack pine at 89 cents were the cheapest reported. Cedar poles, of which there were altogether 361,335 at a price of \$1.10, were still the most important in number and below the average in price. Cedar poles at \$1.10 each would appear to be much better than larch poles at \$1.43 each.

A small difference in the length of a pole makes a great difference to its price. In the 26-to-30-foot class, the average price was nearly double that in the 20-to-25-foot class. Seventeen per cent. of all the poles used were of this length. Cedar (Eastern) made the cheapest pole at \$2.14. The quantities of fir and hemlock used were too small to be considered in a comparison.

The 31-to-35-foot poles formed only eight per cent. of the total and had an average value of \$3.65. Douglas fir became more important in this class and formed about four per cent. of the poles of this length, at a price below the average. Spruce was the cheapest wood used at \$3.02, but formed a very small per cent. of the total. Chestnut and yellow pine poles were confined to this class.

Douglas fir became still more important in the 36-to-40-foot class and increased in quantity to over 13 per cent. and was also the cheapest wood used in any quantity in the class.

In the highest length-class, that of poles 41 feet long or over, fir still formed over 15 per cent. and was the cheapest wood in any quantity. Red and white pine poles were confined to this class, the red pine poles being all over 50 feet.

In all length-classes cedar formed the greatest part of the purchases, and its price was below the average in every case. As cedar is the most durable Canadian wood as well as being one of the lightest, it will continue to be the most popular species for poles so long as it can be secured in large enough quantities.

When one considers that a purchase of nearly 800,000 poles a year means the destruction of even a greater number of whole trees, he realizes the extent of this particular drain on the forests. While the greater number of these trees are small, under thirty feet in length and eight inches in diameter, each one represents a potential timber tree. In cutting timber for poles there are several sources of waste, including damage to remaining timber, cutting to specifications and long butting to avoid flares and hollow butts. While this waste is partly necessary, careful and scientific utilization would effect a considerable saving before the poles were set in place.

Cedar poles in 1911 formed over ninety per cent. of all poles purchased in Canada. Cedar grows only in southeastern Canada and British Columbia, being entirely absent from our great stretch of northern woodland.

Cedar poles are now imported into Canada in fairly large quantities from the United States.

The average cedar pole is cut from a tree about 190 years old, and if put in place, untreated by any chemical preservative, it will decay and become useless within 14 years. It is evident from these facts that the supply of cedar poles is doomed to speedy destruction.

A telephone pole is not subjected to mechanical wear or excessive strain of any sort, and practically never wears out. It invariably decays long before the end of its mechanical life. Under these conditions some sort of preservative treatment is a self-evident necessity. Up to the present time in Canada the cheapness of poles and the cost of the treatment have prevented pole-line builders from using any preservatives.

Table No. 3, from Bulletin 98 of the U. S. Forest Service, shows the actual financial saving per annum in the maintenance of a pole line by using different preservative treatments. Interest is figured at five per cent.

In this table the two Canadian cedar species were chosen because poles of these woods formed the majority of the poles purchased in 1911. Western yellow pine and lodge pole pine were included to show the great increase in life that can be effected by pre-

servative treatment of those so-called "inferior species." It is seen that the financial saving is greatest in the case of those woods which are perishable in contact with the soil if used untreated. In this state

ESTIMATED financial saving due to creosote treatment of poles.

| Species.                 | Size of Pole. |         | Character of Treatment.  | Amount of preservatives applied per pole. | Estimated cost of treatment. | Estimated cost of pole in place. | Estimated length of life. | Annual cost. | Annual saving due to treatment. |

their annual cost is high on account of the frequent replacements necessary. When treated, however, they last from four to six times as long, and their annual cost is greatly reduced.

Considering Eastern cedar alone, the table shows that the brush treatment effects a saving of 7 cents a pole every year, while the open-tank treatment saves 10 cents a pole. In 1911, Canada purchased 463,234 cedar poles. By applying the brush treatment an annual saving of \$32,426 would be made, and with the tank treatment the annual saving would be \$46,323.

One can estimate with reasonable accuracy the reduction in the annual cut of pole timber that would result from the use of preservative treatment. The average life of an untreated pole is 13 years, and of a treated pole 23 years. The life of the average pole would be increased ten years by preservative treatment. Practically all the poles set in Canada at the present time are untreated, and the annual replacements approximate 600,000.

If all the poles used in Canada were treated, a saving of 264,000 poles would be made each year, which is equivalent to a saving of 1,584,000 board feet of timber.

This estimate does not take into account the treatment of perishable woods. When these so-called inferior species are treated, their natural life is increased by much more than the general average of ten years used in the above estimate, and the corresponding annual saving is greatly increased.

Spruce, jack pine, lodgepole pine and Western yellow pine are all fairly good pole-timbers as far as taper, height, strength and weight are concerned, but they are not durable if used in the untreated state. There are two methods of creosote or tar-oil treatment that are specially adapted to poles and can be easily and cheaply applied.

While the brush treatment does not give the best results, it can be applied without the installation of expensive apparatus; a bucket of hot preservative and a brush complete the equipment. In seasoned timber a penetration of from one eighth to a quarter of an inch can be obtained. If two coats are applied to the surface, between the two foot and eight foot points on the butt, each pole will absorb about four pounds of the preservative.

The open-tank method requires a stationary equipment and is not adapted for use in remote districts. A tank of some sort to hold the preservative, in which the butts of the poles can be heated, is necessary. The method consists in immersing the poles in alternate hot and cold baths of preservative. The contraction and expansion of air in the wood cells causes an absorption of the liquid into the sapwood of most coniferous woods. Where a large number of poles are used annually, this method is applicable and is fairly inexpensive.

In the United States where poles are even more expensive, on the average, than in Canada, it evidently pays to apply preservative treatment. In 1910, there were 824,673 treated poles used in the United States, or over 21 per cent. of all poles used in that year.

"Even with the royalty raised to \$1 per thousand feet, British Columbia manufacturers of lumber will still have exceptionally cheap timber for increasing the sales of their product in the Dominion and abroad," says the St. Louis Lumberman. "The repeal of the United States duty of \$1.25 per thousand feet on rough lumber would much more than compensate for increased timber royalty, in so far as the export business along down the Pacific Coast section of this country is concerned; and it is quite likely that consideration of this fact, now that the dominant political party at Washington is committed to free lumber, was not overlooked by the framers of the new British Columbia timber taxation measure."

# WANTED & FOR SALE DEPARTMENT

## PUBLISHER'S NOTICE

Advertisements other than "Employment Wanted" or "Employees Wanted" will be inserted in this department at the rate of 15 cents per agate line (\$2.10 per inch) each insertion, payable in advance. Space measured from rule to rule. When four or more consecutive insertions of the same advertisement are ordered a discount of 25 per cent. will be allowed.

Advertisements of "Wanted Employment" will be inserted at the rate of one cent a word, net. Cash must accompany order. If Canada Lumberman box number is used, enclose ten cents extra for postage in forwarding replies. Minimum charge 25 cents.

Advertisements of "Wanted Employees" will be inserted at the rate of two cents a word net. Cash must accompany the order. Minimum charge 50 cents.

Advertisement must be received not later than the 10th and 26th of each month to insure insertion in the subsequent issue.

## Wanted—Lumber

### Basswood Wanted

No. 2 Common and Mill Cull. Winter cut preferred. Apply Firstbrook Box Co., Ltd., Toronto, Ont. 7-11

### Wanted

A stock of 1-in. and 2-in. Hemlock. M. Brennen & Sons, Hamilton, Ont. 8-11

### Wanted

Cedar Posts, 4½-in. and up at top, 8 ft. long. M. Brennen & Sons, Hamilton, Ont. 8-11

### Spruce W t

A stock of 1-in. and 2-in. cull and common. Apply M. Brennen & Sons, Hamilton, Ont. 8-11

### Wanted to Buy

Stock of Pine, Spruce and Hemlock logs, G. T. R. points preferred. Canada Pine Lumber Company, Hamilton, Ont. 8-11

### Wanted to Buy

1-in. and 2-in. Hardwood, common and better and cull. Apply M. Brennen & Sons, Hamilton, Ont. 8-11

### Basswood Wanted

No. 2 common and mill cull, winter cut preferred. Apply M. Brennen & Sons, Hamilton, Ont. 8-11

### Wanted

First Quality Rock Maple Logs, 23-in. and up, and 30-in. and up, diameter at small end. Quote delivered Montreal. Box 760, Canada Lumberman, Toronto, Ont. 8-9

### Wanted to Buy

Pine, spruce, hemlock, railway ties, common and better, and cull basswood and birch. M. Brennen & Sons Mfg. Co., Limited, Hamilton, Ont. 8-13

### Wanted

Three hundred thousand feet of good Canadian Oak, all cut 4/4 in. Shipment any time within ten months. Address Box 693, Canada Lumberman, Toronto, Ont. 7-10

### Wanted

Twenty car loads white winter cut Basswood, No. 1 common and better, grade plump, inch thick when dry. For further particulars apply to Box 730, Canada Lumberman and Woodworker, Toronto, Ont. 6-11

We want to purchase a quantity of dry maple, elm, basswood and birch, and also contract for the present winter and coming spring cuts of hardwood lumber. Address The London Lumber Company, Limited, London, Ont. 6-9

WANTED—Two Cars Birch, 1-inch. Must be dry. Stevens-Hepner Co., Ltd., Port Elgin, Ont. 9-10

### Wanted

Birch Stumpage in Ontario or Quebec, easy of access, favorably situated for shipment. New York State. Box 782, Canada Lumberman, Toronto, Ont. 9

### LUMBER

When you have any kind of lumber and lath to offer or logs for sale, send us a description and prices. The Turner Lumber Company, Limited, 25 Toronto Street, Toronto. 8-11

Wanted, White and Red Pine, 2-in. and 3-in. tank stock. Communicate with the Ontario Wind Engine & Pump Company, Toronto, Ont. 6-T.F.

### Do You Want to Buy or Sell?

If you wish to purchase or dispose of a particular stock of lumber or logs, a mill property or timber limit, or some second-hand machinery, the CANADA LUMBERMAN AND WOODWORKER will bring quick returns. Use our "Wanted and For Sale Department."

### Birch Wanted

Want 200 M. ft. 10/4 1st and 2nds and No. 1 Common Birch. Give average widths and lengths and percentage of 14 and 16 ft. lengths. Want price delivered Philadelphia, Pa. and New York City.

Want 200 M. ft. 6/4 No. 1 Common Birch delivered Boston, Mass.

Want 5 cars 4½ in. and 5 in. 1sts and 2nds. Birch delivered New York City and Philadelphia, Pa. Reply Box 526 Canada Lumberman, Toronto, Ont. 14 T.F.

## Wanted — Cedar Telegraph Poles

1000 poles, 25 ft. x 6-in. tops.  
500 poles, 25 ft. x 7-in. tops.  
1000 poles, 30 ft. x 7-in. tops.  
1000 poles, 35 ft. x 7-in. tops.  
400 poles, 40 ft. x 7-in. tops.

Quote price and quantity for sale, also delivery date.

HORACE HARTLEY,  
Wholesale Lumber,  
19 Mayor Street, Montreal.  
7-10

### Hardwood Pickets Wanted

Beech, Birch and Hard Maple.

1 x 1 x 42.  
1 x 1 x 48.  
1 x 1½ x 42.  
1 x 1½ x 48.  
1 x 1¾ x 42.  
1 x 1¾ x 48.

Require Thickness, 1/16-in. Plump.

Quality—Free from all defects.  
Can take delivery of green or dry stock.

Apply to The Canada Wood Specialty Co., Ltd., Orillia, for full particulars, price, etc. 24-1-TF

## For Sale—Lumber

### For Sale

Peeled cedar post 4½-in. to 7-in. top, 8 ft. long. Best of quality and made from green cedar. Chas. Pedwell, Lions Head, Ont. 9-t.f.

### For Sale

1 Car 1½-in. Hard Maple.  
5 Cars 2-in. Hard Maple.  
2 Cars 3-in. Hard Maple.  
1 Car 4-in. Hard Maple.  
Firsts and seconds, with a small percentage of No. 1 Common. Will be glad to quote price. Apply to Box 783, Canada Lumberman, Toronto, Ont. 9-10

Having been burnt out last Fall we offer all our timber for sale, some 2,000 acres. Easy terms. For particulars apply to Geo. Niebergall & Son, Parry Sound, Ont. 9-12

### Lumber For Sale

400,000 ft. 3 x 7 and up Merchantable White Pine.  
200,000 ft. 2 in. Merchantable White Pine.  
200,000 ft. 1¼ in. Basswood, Log Run.  
500,000 ft. Hard Maple, 1 in. to 4 in.  
Apply to  
GEO. C. GOODFELLOW,  
Montreal, Que. C

### For Sale

60 M. 2-in. Birch, No. 1 com. and better.  
60 M. 1-in. Birch, L.R. M/C out.  
25 M. 3-in. Birch, L.R. M/C out.  
50 M. 2-in. White Pine, L.R. M/C out.  
All good dry stock.  
Apply Box 755, Canada Lumberman, Toronto, Ont. 7-tf.

## For Sale—Machinery

### For Sale

One "Hamilton" Circular Resaw with two 44-in. inserted tooth saws. New; never used. Address Papineauville Lumber Co., Ltd., Papineauville, Que. 7-11

### For Sale

One second-hand fifty-eight inch Leffel Water Wheel, made by Paxton and Tate; in good repair. Apply to I. C. Prescott, Albert, Albert County, New Brunswick. 8-11

## Wanted—Employment

Advertisements under this heading one cent a word per insertion. Box No. 10 cents extra. Minimum charge 25 cents

Double cut band or circular sawyer open for engagement coming season. Best of references. J. Mercer, Parry Sound, Ont. 4-9

Position or partnership by manager of woods and mill operations of 20,000,000 feet annually. Ten years' experience in manufacture, wholesale and retail lumber business. Excellent references. Apply Box 763, Canada Lumberman, Toronto, Ont. 8-9

WANTED—Position in saw or planing mill, office and mill experience, could take charge of sales or act as mill foreman or yard foreman. Excellent references. Apply Box 743, Canada Lumberman, Toronto, Ont. 6-9

As engineer, total abstainer, long experience, Corliss and other engines and dynamos. First class references and 1913 certificate. Address John Bain, 180 Ontario Ave., St. Catharines, Ont. Tel. 980 R. 9-10

Experienced lumber office man, capable of superintending operations of saw and planing mills, seeks situation. Good references. Some capital to invest if required. Box 779, Canada Lumberman, Toronto, Ont. 9-10

Lumber clerk desires position, 12 years experience as clerk, salesman, used to contractors' requirements and specifications, measuring and stock keeping. W. L. 246 Guy street, Montreal. 9

Expert of the wood-house trade who has been engaged in building for a number of years in South America, Africa and Germany, for a very first world firm, seeks position. Advertiser is firm in building up, including transportable houses and, generally understands thoroughly the construction of these wood-building transports. Please apply, stating the district and salary, to J. W. 15384, c/o Rudolf Mosse, Berlin SW. 9-10

As band saw filer, double or single cut, or in a factory where there are band resaws. A1 references. Box 715, Canada Lumberman, Toronto, Ont. 8-1

### Wanted

A young man with about 15 years experience on buildings, architect offices, factory offices and as a salesman, seeks a position as assistant estimator, draughtsman, detailer or salesman. Box 773, Canada Lumberman, Toronto, Ont. 9

## Wanted—Employees

Advertisements under this heading two cents a word per insertion. Minimum charge 50 cents

WANTED—Good lumber pilers for large retail lumber and planing mill concern. Apply, stating experience, to Box 778, Canada Lumberman, Toronto. 9

### Log Jobber Wanted

Wanted—A responsible jobber to log 5,000,000 feet (log measure) of White, Red and Jack Pine in Township of Borden. Splendid opportunity. Apply Bartram Bros. Ltd., Ottawa, Ont. 9

## Business Chances

### For Sale

Saw Mill and fifty-three miles timber limits in County of Bonaventure, Quebec Province. For further particulars apply to J. D. Sowerby & Co., Oak Bay Mills, P.Q. 22-71tf

### For Sale

Timber limit on Georgian Bay, conveniently located 75 miles out of Soo. Well timbered with Hemlock, Pine and Hardwood. Can be logged cheap. Apply Box 781, Canada Lumberman, Toronto, Ont. 9-12

### To Let

A Woodworking Plant in New Glasgow, N.S., with railway siding and water communication. Good demand for all kinds of building material and lots of contract work to be done. Raymond Band, New Glasgow, N.S. 9

### For Sale

Rare bargain. Band mill located in best lumber and log center on Puget Sound. Rail and cargo shipping facilities. Excellent log pond. Ten and a half acres of land. Price one-fourth of appraised valuation. Must sell quick. Box 765, Canada Lumberman, Toronto, Ont. 8-t.f.

### For Sale

On reasonable terms a Portable Saw Mill, Waterous Co. make, all complete, in first class condition. Just finished winter sawing. Good location, large quantity of good hemlock and birch timber close to mill. For particulars apply P. O. Box 426, Parry Sound, Ont. 9-12

### For Sale

On easy terms, sawmill, new; just installed 50 h.p. Water Power, with electric plant. Good location for pulp mill. Good quantity of pulpwood close to C. N. R. and station; on river. Two million feet timber and 600 acres of good land. Townsite laid out. Sawmill and power or land sold separately if desired. For further information write J. H. Latremouille, Mount Olie Power Co., Box 48, Kamloops, B.C. 8-13

### Rebuilt Band Resaws

Mershon, New England Ideal Resaw, 46-in. Mershon Horizontal Sawmill Resaw, 66-in. Connell & Dengler Resaw, 60-in. Berlin Band Resaw, 44-in. Mershon Standard Perfected Resaw, 54-in. American Band Ripsaw, 42-in.

WM. B. MERSHON & CO.,  
8-11 Saginaw, Michigan.

**Wanted**

To contract for stocks of birch, maple, elm, ash and basswood, dry or green, for cash. Correspondence solicited. Box 268, North Bay. 6-9

**For Sale**

Canadian patent on a lumber specialty that has proven a big winner in U. S. Could be handled more profitably from Canadian side on account of duty. For particulars, address T. S. Holland, Fern Hill Station, Tacoma, Wash., U.S.A. 9-10

**Timber Limits For Sale**

Can be quickly and profitably disposed of by advertising them on this page. This is where buyers of timber property look for opportunities to invest. If your "ad" is here the investor will see it. Canada Lumberman, Toronto, Ont. 11

Cash for your business, factory or real estate. I bring buyers and sellers together. No matter where located if you want to buy, sell or exchange any kind of business or property address Frank P. Cleveland, 1479 Adams Express Building, Chicago, Illinois. Established 1881. 9-t.f.

**Sawmill For Sale**

On Georgian Bay, near Little Current, close to north shore; practically new, well built and equipped with shingle machinery; over one mile of water front, loading dock and sheltered booming ground; plenty of timber available locally or can be rafted in from north shore on Georgian Bay. Good opening for retail store in connection. This is a splendid chance for millman with small capital; price right. Good reason for selling. Great Lakes Lumber Co., Ltd., Owen Sound, Ont. 5-T.F.

FOR SALE—On Georgian Bay, saw mill in first class condition, with everything complete. Engine 75 h.p. Boiler 110 h.p. Sawing capacity 20,000 feet to 30,000 feet per day. Also including booms and chains. Good stable and office and everything complete. Shipping facilities by both rail and water. Size of mill site 40 rods by 5 acre water lot, with 4 acres of land. Owner retiring from business reason for selling. Address all enquiries to 210 Campbell Avenue, Toronto, Ont. 9-10

**Miscellaneous****Horses For Sale**

Lumber Company closing out Ontario operations has 50 pairs prime logging horses for sale at Webbwood, Ont. See page 55 of this issue. Wolverine Cedar & Lumber Co., Sault Ste. Marie, Mich., or Webbwood, Ont. 9

**Do You Need Help?**

If so let us know. We can furnish any amount of skilled and unskilled labor at shortest notice.

O'Donnell's Employment Bureau,  
116 Wellington St. West,

Phone Adelaide 3919. Toronto, Ont. 7-10

**Speed of Log Band Saw Blades**

The question of blade speed in log band saws is an important one, and should be regulated by the size of the saw wheels and the hardness of the wood being cut. Speaking generally, the smaller the diameter of the wheels and the harder the wood the less the speed should be in proportion. For ordinary sawing with 5-ft. wheels a very general speed in England is 7,000 ft. per minute, whilst in America, where larger saw wheels are usual, a speed of 10,000 ft. and upwards per minute is not unusual. Whether anything is gained in the long run by these high speeds is a moot point, as although high speed may facilitate rapid cutting, on

the other hand it necessitates exceptional skill in the sharpening and management of the saws, a much shorter life for the saws, and the consequent increase in their cost. In addition to this, with very high speeds increased vibration in working—with greater liability to heating and cracks in the blades and increased difficulty of keeping the saw to the line—is encountered; consequently the happy medium appears to be the best policy to pursue. An important factor in securing good work will be found in the spacing of the saw teeth and the size of their gullets. Speaking generally, the softer the wood the higher should be the speed, the length of the spacing and size of the gullets being increased in proportion to allow of an easy clearance for the sawdust. If the saw is run at a high speed, and the sawdust produced is fine, the probability is that the spacing of the teeth is too short.

To secure good cutting it is important also that all saw teeth are absolutely equal in length and set, and that the gauge of the saw should be in ratio to the size of the saw wheels, i.e., the smaller the wheels the thinner the gauge of the saw; thick saws should never be run on small wheels.

**The Turpentine Industry**

It is said in Victoria that one of the matters upon which the provincial labor commission will probably be asked to obtain information is the labor cost that would be involved in establishing in this province an industry for the extraction of turpentine resin from the native woods of the country. Experiments made in the laboratory of the United States forest service seem to indicate that the amount of resin obtainable from the pines growing in Arizona, California and other western states is about two-thirds of that which can be extracted from the pines in the southeastern states of the Union where turpentine production is one of the staple industries. It is believed that the yield from British Columbia pines would practically be the same as those from Arizona and California, and therefore if the labor cost is reasonable the industry can be established on the Pacific Coast of Canada.

It would not be necessary for the labor commission to waste very much time over the problem when it can receive the very fullest details as to the cost of extraction from a Vancouver industry that has been established for some time. Some years ago one of the prominent capitalists here paid a chemist to carefully analyze and find some means of extracting, not only all the turpentine, but other chemical products that could be manufactured from

British Columbia pines. Eventually it was deemed feasible to establish a factory on a commercial basis, and at this factory is now produced the very finest and purest turpentine in existence. Besides the turpentine, other valuable by-products are produced such as resin, acids, and a very pure carbon. It is obvious therefore, that the labor commission would only have to apply to the factory to receive the very fullest information on the subject:

**The Scientific Utilization of Pine Waste**

The scientific utilization of pine waste is a recent promising development. In a paper to the Society of Chemical Industry, T. W. Pritchard has pointed out that in the last forty years turpentine and pine oils have been obtained in the North Carolina forests by such processes as destructive distillation, steam extraction and the solvent action of naphtha, but these methods are very defective and uneconomical in results. He claims a great advance in a new plan of distillation with a perfect control of temperature. He has gained this control by means of a bath of very high fire-test petroleum oil, which when excluded from air endures, unchanged, a heat of about 700 degrees Fahrenheit, and which is used by placing in a steel storage tank and circulating by a rotary pump through a casing around the retort. The turpentine being distilled off at about 450 degrees and the last of the pine oil at a somewhat higher temperature, the wood is finally completely carbonized at 650 degrees. In a small retort taking a charge of twenty pounds of wood weighing about 4,000 pounds per cord, the average production of fifty charges was 36 gallons of water-white turpentine, 10 gallons of light oil and 125 gallons of heavy oil, with a supply of high-grade charcoal; and a new commercial plant has yielded similar results. Variation of the temperature can be made to produce excellent rosin in large quantities. Millions of cords of wood are rotting on the ground and thousands of cords are being burned daily at sawmills, and it is estimated that this should yield \$25 a cord in products of unlimited demand.—New Orleans Times-Democrat.

**Circassian Walnut**

The high cost of Circassian walnut is due to the scarcity of the beautifully figured variety demanded for furniture and interior finish, for the tree itself is more widely distributed than almost any other of commercial importance. The demand for the best wood, however, has always outrun the supply. Even in the eighteenth century, when wars in

Europe were frequent, so much Circassian walnut was used for gunstocks that the supply was seriously depleted. Early in the nineteenth century the wood of 12,000 trees was used for this purpose alone. Single trees, containing choice burls or fine bird's-eye figures, have sold for more than \$3,000.

The tree is native to the eastern slopes of the Caucasus and ranges eastward to the foothills of the Himalaya mountains, from which it extends southward to northern India and the mountains of upper Burma. It has been widely planted in Europe and the United States, in this country under the name of English walnut. The wood grown here, however, has not the qualities demanded by the cabinet and furniture maker. Much of the Circassian walnut now used comes from the Black Sea and from other parts of Asia.

The demand for Circassian walnut has resulted in the substitution of other woods. Red gum is often sold as Circassian walnut, and butternut is also similar in general appearance to the less highly figured grades. Many good African, Asian and South American woods resemble Circassian walnut, though none possess the magnificent figure, delicate tones and velvety texture of the latter.

**For Rent—Cottages**

If you want a real holiday, plan to spend your vacation this year in Muskoka where "the breezy, call of incense breathing morn" will put new life in mind and body. Muskoka offers more real healthful enjoyment for less money than any other resort in the world.

Four cottages to rent \$125 to \$200 on Bohemia Island, less than a mile from Royal Muskoka Hotel and good Golf Links. Box 771.

# Review of Current Trade Conditions

## Ontario

The uncertainty which exists at the present time in the United States on the tariff question has somewhat unsettled the lumber market and, until definite information is obtainable, purchasers are only buying for their immediate requirements.

Reports from Ontario show that many yards are well stocked. This is no doubt largely due to the fact that the wet weather has hindered building operations and also because the bad state of the roads has not allowed of much lumber being moved. There is undoubtedly however, plenty of legitimate building needed, residences being specially at a premium, and there seems no reason to doubt that as soon as the fine weather settles in building operations will be brisk. Owing to these conditions, no appreciable change of prices is noticeable.

Ottawa trade is on a quiet basis at present, although the local business is fairly extensive. Export trade is being hampered by further increases in transatlantic freight rates. Ten shillings per standard extra have been added by the steamship companies, to go into effect after the opening of navigation at Montreal, on May 3rd. Some compensation is afforded however, by the application of summer freight rates for railway shipments, and by the reversal of demurrage charges to the old rates. Prices at Ottawa show no change. High grade pine is firm at high prices, but the demand is light. Low grades are in strong demand and scarce.

Buffalo and the Tonawandas are enjoying an excellent local demand, resulting from the continued activity in house, factory and warehouse erection.

## Eastern Canada

The situation at Montreal is chiefly interesting on account of the difficulty in securing stocks, and the ease in obtaining orders. The U. S. tariff situation is not expected to have any important effect one way or the other until the changes are much nearer being put into effect than they are as yet. The increase in transatlantic freight rates is unfortunate, but seems to be inevitable. It is certain to reduce shipments to the Old Country to some extent.

Reports from Quebec, P.Q., state that the demand for lumber for local consumption is small but that stocks are exceptionally light. No new stock will arrive until some time after the drives have started. At present, lumber for building purposes is in good demand at high prices. A large number of building contracts are under way in the city of Quebec and some of them are held back because of the lack of lumber. This situation is expected to become more acute as the season advances. Some relief will probably be afforded by extensive imports of pitch pine from the Southern States.

The demand for eastern spruce at New York is a little easier, and occasional concessions are reported. Shipments are not difficult to secure promptly. Some wholesalers are looking for an increased supply during the early summer. On the other hand, mills are holding out for high prices as a general rule and wholesalers are obliged to move with caution. The demand for hardwoods has shown a little slackening off at New York during the past two weeks and a little better supply is available. Prices are unchanged and the market is stiff. Hemlock is moving rapidly at New York and wholesalers have more trouble getting stocks from the mill than in securing orders. Prices are strong and there is no possibility of weakness.

At Boston, the demand for eastern spruce dimension stock is rather quiet, probably on account of the wet weather. For prompt shipments, the prices continue firm, but for future deliveries some concessions have been reported in a few cases. Hardwoods at Boston are in fair demand and prices are very firm with an upward tendency. Green hemlock boards have sold lately in mixed cars at as high as \$26. Full carload lots of eastern clipped boards have brought \$25. One manufacturer is asking for 50c more. No one would be greatly surprised if the price advanced to \$25.50.

White cedar shingles at Boston are firm. No one seems to be bothering about the proposed removal of duty. Red cedars are rather irregular. For one and a half inch lath the market in New York is satisfactory and all manufacturers whose rates will permit them to do so are selling there.

## Great Britain

Reports from London indicate that timber market conditions there of late have been rather dull and that importers and merchants have not shown much desire to increase their holdings. There is

still an upward tendency of prices, and producers are quite firm in their ideas as to values. Buyers, however, are rather backward about doing business, as they are hoping for easier prices later on. Uncertainty as to freight rates for summer shipments is causing some of the quietness. At Foy Morgan & Company's recent auction sale 3-in. x 7-in. dry second Quebec spruce 9/13 feet sold at £10 15s. Some first, second and third St. John 3-in. x 7-in. 12/25 feet, brought £9 10s.

A quiet but steady business is reported from Liverpool in nearly all branches of the timber trade and prices are unchanged. No business in Canadian pine goods was reported during the week previous to latest advices, with the exception of the usual small orders from stocks in merchants' yards. The c.i.f. market for spruce deals has been fairly active and values have been well maintained. There are no indications of any decline for the later arrivals. Not much stock is offering at present and tonnage is rather scarce. The freight market also remains firm. Spot market values are about steady though a slight easing off is shown as the result of the heavy import of Baltic goods which consumers are substituting for spruce. Stocks are ample, although the demand is a little heavier than the import. 3 x 9 inch deals over 14 feet in length are quite scarce and cannot be imported in any other wood at a price to compare with current quotations of spruce. The birch c.i.f. market at Liverpool continues firm for logs and planks although the quantity of business in progress is small. The spot market is quiet and the demand for consumption is not very encouraging to importers. Accordingly there is not much buying ahead at present figures. Planks in particular, are quiet and stocks are ample for present requirements, although they consist of practically all 3 and 4 inch.

A quieter tone has prevailed in the market at Glasgow of late. Enquiries are fewer although there is a fairly active movement into consumption. Apparently, merchants are in doubt as to whether values will continue at their present high level, and some have an impression that the turning point has been reached. Some little weakness indeed, is reported in one or two cases, such as pitch pine and spruce. In the former easier freight rates have been the contributing factor. In regard to spruce a lighter demand is the apparent cause.

## United States

A fairly optimistic attitude is exhibited by the lumber trade as a whole in the United States although rather a gloomy view is taken in some localities. It seems reasonable to take a cheerful view of the situation, when one considers the general conditions prevailing in the trade today. A heavy business is in certain prospect in connection with the demand for lumber from the railroads. The car demand has not been met as yet, although perhaps there will be some slackening in new demand as the car shops are full up with orders, material for which has already been secured. Altogether, it is expected that the railroad demand during the present year will be a record breaker. The agricultural demand is also most encouraging. The crop outlook is excellent in most districts.

The demand for northern pine is satisfactory. Navigation on Lake Superior opened during the third week of April and it was then expected that the movement of northern pine from Michigan and Lake Superior ports would be a little heavier than usual, as stocks at the head of the lakes had been pretty well sold up. Eastern dealers are reported to be in need of additional stocks of northern pine. At Buffalo, the Tonawandas and Chicago, all high grade white pine is holding at strong prices. The demand for low grade material is also good and stocks are practically out of the market. The hemlock situation is characterized by an increasing scarcity of dry stocks and the new cut is being eagerly looked forward to. Prices continue very firm. Eastern hemlock is also scarce and high.

Various opinions prevail about the southern pine situation, this is not surprising, because of the great range over which southern pine is produced. During the last few weeks, however, trade has fallen off considerably and prices are showing a tendency to soften, especially for dimension stock on the yards. Some of the mills are reported to have a surplus of this stock. Lumbermen who have visited the middle west and eastern markets all report that stocks are comparatively light and that the demand for all grades of lumber is certain to be heavy as soon as spring weather has definitely set in.

The hardwood market shows no important change of late. Stocks are scarce and prices are well held at higher levels than for several years.

**SPECIAL REPORTS  
ON CONDITIONS AT  
HOME AND ABROAD**

## Uncertain Conditions at Ottawa

Ottawa, April 22nd (Special to the Canada Lumberman):—Though lumbermen, whose business does not extend beyond the local trade, are satisfied with the condition of things just now, exporters are not very well pleased. The latter say that business is poor and the outlook not very encouraging since the Atlantic steamship companies have seen fit to advance freight rates by 7s. 6d. per standard to go into effect with the opening of navigation from Montreal. Local exporters contend that there is no justification for the advance in the rates this year, because the demand for tonnage, or vessels, is not nearly so great as it was a year ago, and they evince a disposition to withhold their exports until steamship companies consider their objections.

Navigation on the St. Lawrence will open in a few days. The first transatlantic boat is due to sail from Montreal on May 3rd. The summer freight rates on lumber went into effect on April 15th, and this, combined with the lifting of the increased demurrage rates has obviously had a tendency to increase business.

McAuliffe, Davis and Company, have begun work on the rebuilding of a large warehouse and small factory on the site of the buildings which were burned down a few weeks ago. Both members of the firm returned recently from a visit to several American cities, whither they went to look into the question of whether it would be better to abandon manufacturing in favor of importing manufactured goods. They have decided to continue to operate a factory, but will also import a good deal of material.

There has been comparatively little alteration in prices during the past few weeks. High grade pine still remains at a lofty altitude, with little demand for it, either at home or abroad. The demand for low grade material is great and the supply is hardly sufficient to meet it.

The James MacLaren Company, of Buckingham, Que., are constructing a dam on the Lievre River, near Great Whitefish Lake, in the Gatineau district for the purpose of developing power for their plant. Complications in the matter are likely, since the City of Ottawa intends to obtain its water supply from the district, authority for which has been given by the Ontario legislature.

## Stocks Scarce and Prices High at Quebec

Quebec, April 27th, (Special to the Canada Lumberman):—Although there is a brisk demand for lumber for local consumption, very little is to be had, all holders having sold out. There is none expected to be on the market until some time after the "drives" have started. At the present time lumber for building purposes would find ready sale at advanced prices. There are a considerable number of large building contracts under way but some are retarded for the lack of material. This is likely to increase as the season advances, as the Harbor Commission have extensive works in operation which will require heavy quantities of both timber and lumber. Of course, there will be a quantity of pitch pine brought from the Southern States to meet a portion of the requirements.

From present indications prices are likely to remain very firm with an upward tendency throughout the season.

## Montreal Trade Conditions—Stocks Scarce

Montreal, April 26th (Special to the Canada Lumberman):—Prices still keep firm, with business very satisfactory. Wholesalers say that the difficulty is not to get orders, but to fill them, owing to the bare state of the market. The U. S. tariff has naturally been eagerly discussed, but the schedule may be greatly modified before passing and it is too early to express definite opinions as to effect of free lumber. If the duty should be abolished it will tend to advance prices still further, as Canadian lumber will have a wider market, and with a larger demand, quotations will harden. Here and there, retailers state that the demand is not so brisk as it might be, but this is regarded as only temporary.

Shippers to the United Kingdom will have to pay higher freights again—this time the steamship companies have given notice of an advance of 7s. 6d., which of course will have to go on to the price of lumber, and may affect the shipments of pine from this side. Canadian lumber has to meet the competition of the world in the British markets, and the higher values, coupled with the additional freight charges, will, it is feared, lead to the substitution of other lumber for Canadian pine.

Owing to tariff uncertainties the paper market is unsettled, and as the Tariff Bill will not be through until July 15th, the position will

not, it is expected, alter until after that date. The manufacture of news and book papers in the United States has been curtailed owing to the Ohio floods. News is maintaining its price in Canada.

Ground wood is a little more active, but prices have not improved. It is probable, however, that quotations will harden by mid-summer. The fact that the exports to the United States were small last year and are on a low scale this year so far, is accounted for, to some extent, by the increased shipment of news print from the new Canadian mills to the United States.

Chemical pulp is strong, the market being provided with sufficient pulp to carry the mills along, but there is no surplus.

## Tonawanda Trade Topics—Canal Opening Delayed

North Tonawanda, April 22; (Special to the Canada Lumberman).—Opening of navigation on the Great Lakes and Erie Canal is now of chief importance in the local lumber trade. Although navigation on the lakes opened officially on April 15th, only two lumber carriers have left port. The ice is heavy at the eastern end of Lake Erie and none but the largest freighters have ventured to make their way through it. There are fifty lumber carriers at the Tonawandas awaiting favorable winds that will break up the ice and carry it up the lake. Nearly half of these boats have clearance papers and crews ready to leave on an hour's notice that ice conditions are right. Shippers of lumber by canal also have troubles in prospect. It is practically certain that the canal cannot be opened before June 1 at the earliest. This will be two weeks later than usual. Barge canal contractors at Vischer's Ferry have been delayed by high water and they cannot possibly have their section ready before June 1. Local lumbermen entered a vigorous protest to Governor Sulzer, and if possible the canal will be opened earlier, but the most optimistic fear that the opening will be at least two weeks late. Governor Sulzer assures shippers that the season will not be curtailed because of a late opening. Whatever is taken off during the spring end will be added to the season in the fall, weather permitting.

## Longshoremen's Strike Threatens

Three conferences have been held without result between representatives of the longshoremen's union, which unloads all lumber craft at the Tonawandas, and local lumbermen, in an effort to agree upon a schedule of unloading rates for lumber vessels for the season of 1913. In the main there is no difference between the conferees. It is understood that only two items on which the lumber handlers insist that increases be granted, are the obstacles to speedy adjustment. The third conference in two weeks occurred yesterday, but it is said that the two sides were no nearer an agreement than when they first met. An agreement must soon be reached as lumber laden craft are on the way to the Tonawandas and the lumber handlers will not touch a piece of lumber until the entire schedule is fixed.

Captain Thomas McDermott, one of the oldest masters of lumber carrying vessels on the Great Lakes, died at his home in Tonawanda this week at the age of 84 years. Captain McDermott held the unique record of having brought more lumber to the Tonawandas than any other lake captain. For several years the deceased was a resident of Kingston, Ont. The deceased was well known in the Canadian lumber carrying trade. He is survived by a widow and two sons. Burial was in St. Francis cemetery, Tonawanda.

The United States engineer of this district has notified the Boards of Trade of the Tonawandas that a hearing will be held on May 14 at Buffalo on the proposed deepening of the harbor at Tonawanda and North Tonawanda to 23 feet. The ship canal around the rapids at the upper end of Niagara River is completed and gives a 23-foot channel from Lake Erie to the head of Tonawanda Island in the local harbor. This channel is deep enough to accommodate the deepest draught boats on the Great Lakes. With the remainder of the local harbor dredged to 23 feet, the entire lumber district with its miles of docks would be opened to the largest boats on the Great Lakes. As it is, only the smaller craft can come to the Tonawandas with entire safety and the result is that the Tonawandas see none of the larger lake craft. Assurances have been given that Congress stands ready to authorize an appropriation for the 23-foot local harbor, as soon as the resident engineer recommends it.

## Trade Events of Interest

William H. Crabb, whose box factory on Tonawanda Island was destroyed by fire, has leased the former King Construction Company plant on Thompson street and is rapidly installing a complete

# DRY SPRUCE BOARDS

**W**E wish to inform our customers and friends that we have on hand in our Sayabec yard about 22 million feet of our 1912 late summer and autumn sawing. This stock is now drying rapidly and we figure should be in good condition to dress about May 1st,—perhaps earlier.

¶ We have our usual full assortment of widths, thicknesses and grades and are now prepared to accept orders for May, June and July shipments.

¶ Our Sayabec Dressing Mills are of large capacity and produce Fenderson's "Silk Finish."

Yours truly,

line of box making machinery. The new plant will probably be in operation by June 1.

The Kelsey Hardwood Lumber Company has closed its yard at Charleston, South Carolina, and will transfer its southern office to Cincinnati: Mr. Raymond Taylor, who has been in charge at Charleston, is in the Tonawandas for a few days, preparing to leave for Cincinnati, where he will be the Kelsey Company's local manager. Mr. Frank King, of the Kelsey Hardwood Company, has returned from Charleston, where he wound up the company's business in that city.

Building is still brisk in the Tonawandas and vicinity. Representatives of ten factories, now located in eastern cities, but seeking new sites, were in the Tonawandas last week. The house famine that has existed for a year continues in spite of great efforts to meet the demand. Woodworking plants are working overtime in an effort to keep pace with orders.

### Baldwin Logging Locomotives

The requirements of logging railroads, so far as locomotives are concerned, are often as diversified as those of trunk lines. This is especially true where there is a comparatively long haul from the woods to the mill or point of shipment. While much of the heavy slow hauling in the woods can be economically done by geared locomotives, direct connected locomotives are preferable for long runs, because of their greater speed capacity. At the same time, such locomotives must usually be capable of operating on uneven tracks, steep grades and sharp curves, such as are encountered in logging operations.

The Baldwin Locomotive Works have developed a series of direct connected locomotives, which are specially designed to meet the conditions described above. These locomotives have a radial truck at each end, and the number of pairs of driving wheels varies from two to four according to the service requirements. The trucks are equalized with the driving wheels, the front truck being center bearing and the rear truck side bearing. The three-point suspension

Mikado Type Locomotive, Polson Logging Co.

system is thus retained, enabling the locomotive to ride easily when passing over rough tracks. Furthermore, with a truck at each end, the locomotive can enter sharp curves and switches without danger of derailment when running in either direction, and the driving tires are protected against excessive flange wear. A large part of the weight carried by the rear truck can be put into the boiler, so that ample steaming capacity can be provided. If desired the firebox can be placed entirely back of the driving wheels and over the rear truck, and can be made of sufficient size and volume to use inferior grade of fuel successfully.

The largest of these locomotives thus far built for logging service, have four pairs of driving wheels, and are of what is known as the Mikado type. The weight distribution in this type is such that engines of high capacity can be used on light rails. Thus, the locomotive illustrated exerts a tractive force of 27,000 pounds, and can be used on rails weighing 45 to 50 pounds per yard. This locomotive was built for the Polson Logging Company, and in common with many others in service in the north-west, it is equipped for burning oil. The cylinders are 18 x 24 inches and the driving wheels 44 inches in diameter. The tender carries 4,000 gallons of water and 2,000 gallons of fuel oil, and the locomotive and tender together weigh approximately 110 tons. The line has curves of 30 degrees. Locomotives of this type are suitable for operation on grades up to 6 per cent., and in some cases direct connected locomotives are working successfully on even steeper grades.

The Baldwin Locomotive Works have built locomotives for all classes of service, and with valuable experience as a guide, these works are specially prepared to build logging locomotives suitable for meeting difficult operating conditions, and for burning any kind of fuel that can be used in locomotive work.

Watson & Todd, Limited, Montreal, are removing from 205 Commissioners street to larger offices at 225 on the same street.

## The Pulp and Paper Tariff

A Correspondent's Views

Editor Canada Lumberman:—

Montreal, April 22nd.

Editor Canada Lumberman:—The first report in the press concerning the United States tariff proposal indicated that it had removed the duty from all wood pulp and from newspaper 2½c per lb. and under. This would have been acceptable if it applied to wood from private lands or from Crown lands, so far as it went. In studying the tariff, however, it is found that it places duties on all papers under 4c per lb (which formerly, when manufactured from private lands wood, were free) with the exception of newspaper at 2½c per lb. and under, and a penalty has been imposed upon chemical wood pulp from any country restricting the export of the wood, or ground wood, of chemical wood pulp, and of newspaper itself. Chemical wood pulp had previously been free when exported after manufactured from private lands wood. The mechanical wood pulp, or ground wood pulp is now to be free from either private or public lands wood, and why a penalty was imposed on one form of pulp and was not imposed on the other is a question that does not easily receive an answer. Canada imported from the United States in 1912 about six millions of dollars in manufactures of paper.

Canada is now the second customer of the United States, ranking next to Great Britain; that is, we import more goods, manufactured and unmanufactured, from the United States than we do from the Mother Country, or any other country. These, from the total, are larger figures than Germany or any other country purchased from the United States with the exception of Great Britain, and her purchases are very largely on account of the breadstuffs purchased from the United States. The United States procure from Canada about one million cords of free land wood per annum. This was found sufficient to supply the requirements for pulpwood for last year, when a larger production of paper was made than ever before in the United States. This private land wood enters the United States absolutely without any restriction whatever, and enables the pulp and paper mills over there to manufacture pulp and paper in competition with the Canadian mills, as their cost of production outside of the raw material is said to be considerably less than the cost of production in Canada, where the rigorous climate and the difficulty of obtaining skilled labor in these industries are handicaps. All the machinery, too, has to be imported from the United States and pay a duty of 27½ per cent., while the cost of building is said to be 25 per cent. greater than in the United States, that is, the mere erection of buildings, etc.

All this creates a greater cost of the manufactured article in Canada than if the same article were manufactured in the United States. Then the growth of the pulp and paper industries is a source of wealth to the United States. A large amount of United States capital is continually being invested in these companies and the good that these projects accomplish in Canada shared by the United States in the return supplies to the population involved in these industries.

With all this it is most peculiar that in the tariff just composed by a low tariff body the net results are as before mentioned, and in concrete form, as follows:

Canada obtains an advantage in duties of \$84,765, based on figures during the past twelve months, and is penalized under the new tariff by \$165,210, while Europe is given an advantage of \$1,361,015 in the removal of duty on chemical wood pulp. Where the United States have given Canada one dollar freedom in duty they have imposed \$2 penalty. Where they have given Canada \$1 in freedom of duty, they have given Europe \$17 in freedom of duty.

The paper manufacturers in the United States, however, are not satisfied with this harsh treatment of Canada, and are urging their friends in Congress to impose further penalties on Canadian newspaper entering the United States, and stricter regulations in regard to the chemical pulp.

Under this condition, where such a great discrimination has been made by the United States against Canada and in favor of Europe, what will Canada do if these proposals become law? Will she continue to allow one million cords of free lands wood to go across the border into the United States, to be made up into pulp and paper in that country, and compete against the Canadian product, chemical pulp, with these items, being subject to a duty of \$2.00 per ton while their mills get free wood with which to compete against Canadian pulp and paper?

The movement of lumber from Georgian Bay district to Bay City, Mich., will begin about May 1. The Mershon-Eddy-Parker Company will handle about 40,000,000 feet, E. B. Foss & Company nearly as much more, while Bradley Miller & Company and several other firms will import a large amount.

# WORK HORSES

As we are winding up our Georgian Bay logging operations, we shall sell off all our logging outfit, including **50 PAIRS OF HEAVY DRAUGHT HORSES** (with or without harness) which are now at WEBBWOOD, ONTARIO, and can be seen at any time.

These horses weigh from 31 cwt. to 36 cwt. per pair, are sound, tough, and strong, able to stand heavy work without "running down," and have had just enough rest and careful feeding after last winter's logging to put them in prime condition for work. We have bought every fall from two to four carloads of the best horses we could find, paying good stiff prices for horses that suited us, and buying no other kind, and have sold off every spring the horses that did not "make good." By this means, and by good care we think we have the best lot of horses on the Georgian Bay—and now somebody will get the benefit of it. **WHY NOT YOU?**

Why pay fancy prices for untried horses that may or may not be "doped" when at a fair price you can buy our horses which **HAVE BEEN TRIED** and **WILL STAND UP TO THE WORK.**

Our horses will be sold quickly, so write or wire us for an appointment to see them. **BETTER DO IT NOW.**

## Personal News of Interest to Lumbermen

Mr. A. D. Huff has been appointed manager of the new traffic department of the Laurentide Company, Montreal. Mr. Huff has left the position of Grand Trunk division freight agent at Ottawa to accept the position with the Laurentide Company.

Among the visitors to Toronto upon the occasion of the auction sale of the Stone-Grant sawmill and timber limits was Mr. Guy H. Mouthrop, of John's Island, Ont. Mr. Mouthrop commenced sawing operations about the 28th of April and reports that the indications are for a busy season.

Mr. C. A. Larkin, of the C. A. Larkin Lumber Company, Limited, Toronto, who has just returned from a trip to Western Canada, reports that all the shingle manufacturers are working full capacity and have many orders on hand. The recent storms in Ontario have greatly helped this trade and the manufacturers cannot ship shingles fast enough. Although money is tight, Mr. Larkin reports that lumber manufacturers are all busy and optimistic for future trade.

Mr. W. B. Snowball, Chatham, N.B., recently returned from his annual trip to England and reports that business conditions in the Old Country are most promising. Lumber buyers in some cases have made contracts ahead to 1914 in order to secure delivery of their goods. The present lumber markets are in good condition although the competition from Russia and Riga is becoming keener every year.

J. J. McFadden, who purchased the mill at Spragge, Ont., from Waldie Bros. visited Toronto recently and attended the auction sale of the Stone-Grant sawmill and timber limits. Mr. McFadden is hard at work in connection with the sawing operations for the present summer at his newly purchased mill. He reports that he has made satisfactory contracts which will keep his mill busy throughout the season.

Herman H. Hettler, head of the Herman H. Hettler Lumber Company, Chicago, and Midland, Ont., in a recent interview expressed the opinion that prices on Georgian Bay white pine will go up, for the reason that it had cost so much to produce lumber last winter. He said stocks as a general rule are scarce in the Georgian Bay district, but his company had about 15,000,000 feet on hand, which was possibly more than any other one manufacturer has. It was therefore in a strong position to care for its trade.

The annual meeting of the Dryden Timber and Power Company was held recently in Toronto. The shareholders approved of a new issue of half a million preferred stock. The following were elected as the board of directors for the ensuing year: Messrs. D. L. Mather, James Turnbull, and H. B. Shaw, of Winnipeg; T. Willes Chitty and Francis Gibbs, of London, England; F. Perry, Montreal; Sam Nesbitt, M.P.P., Brighton, Ont.; E. W. Bonfield, Dryden, Ont., and Geo. A. Kingston, Toronto. At a directors' meeting, subsequently held, Mr. Mather was elected president, and Mr. Bonfield vice-president, and managing director.

Guy Long of the Long Lumber Company, Hamilton, Ont., spent a couple of weeks in Toronto recently and was one of the visitors at the Stone-Grant auction sale at the Queen's Hotel. Mr. Long reports that the lumber trade in Hamilton is apparently in a much more satisfactory state than at other points in Ontario. Orders are plentiful and building activity is extensive. Permits in Hamilton for the month of March exceeded those of any previous month. The good demand for lumber, coupled with general trade activity continues to make it difficult for railway companies to deliver cars at Hamilton. Mr. Long reports an instance, typical of many others, in which the railway took two weeks and a half to lift a car from a siding.

W. J. Bell and B. W. Arnold of the Spanish River Lumber Company, were in Toronto recently to attend the auction sale of the Stone-Grant sawmill and timber limits. Mr. Bell reports that trade along the north shore of Georgian Bay is in a fairly satisfactory condition. A number of good sales of this year's cut, he says, have already been put through. The sawing season on the north shore opened on Monday, April 28th, on which day most of the important mills commences operations. The logs have come out well in most cases and the outlook is for a good season's operations. Most of the manufacturers on the north shore are pleased with the tariff situation in the United States. With the free admission of Canadian lumber in the United States, these firms will be in a position to dispose of their cuts to greater advantage than formerly, as they are in an excellent position for delivering stocks by water to United States points on the Great Lakes.

Mr. H. M. Price, of Quebec, died on April 26th, at the age of 66, after a long illness. Mr. Price was a director of the Sherbrooke Lumber Company.

## Spruce and Pine Grades in New Brunswick

The grading of lumber is a problem which necessarily varies throughout Canada, according to the variety of lumber dealt in most extensively in each particular district. Much has been written in the Canada Lumberman of late regarding the possibility of simplifying grading systems, and in this way making the purchase and sale of lumber a simpler and more satisfactory process. In this connection a number of articles and interviews have appeared regarding the grading of spruce, pine, hemlock and hardwoods in Eastern Canada. A prominent Maritime Province lumber manufacturer, in a letter to the Canada Lumberman, deals with this question in an interesting manner, writing as follows:—"I have thought this matter over a good deal and have talked it over with others, but grading from the point of view of this country is very difficult. We have spruce, pine, hemlock and hardwoods and in the grading of spruce we make 3rds and better to average 2nds, 4th quality and refuse. A pretty even standard so far as this is concerned, is maintained all through the province, except that in some cases the smaller mills allow stock that has too much waste to go into the merchantable.

"In grading pine the difficulties are becoming more numerous, owing to the quality of the pine being inferior to that which was got out some years ago. We grade 1st, 2nd, 3rd, 4th and refuse. Into our 4ths we put all the lumber with large knots, with rot showing on one side, if not too extensive, with a soft red streak, even if it does show through, and even grade down some of our coarse 3rds, if we find that our 3rds are running a little rougher than we would like. This is an open way of doing it, but it is passed in this section. 1sts and 2nds, of course, are graded very much the same as in Ottawa, and in all cases we consider that our 3rds are better than the Ottawa 4ths, and our 4ths inferior to theirs of the same grade. Refuse takes in everything that will hold together.

"In New Brunswick there seems to be a considerable uniformity in the grading of spruce and pine, except where it is being sawn into boards."

## How Good Lumbermen's Garments are Made

When it comes to the question of wear and tear upon clothes, lumbermen are probably better judges of what constitutes good material than any other class of men. Their rough life in the woods and mills causes clothing to wear out quicker than in almost any other business. They appreciate therefore, the efforts of manufacturers to furnish them with something that will not only give them value for their money, but relieve them of much of the worry about the lasting qualities of their clothing. One of the best known firms in Canada in the wholesale clothing business is that of Clayton and Sons, Halifax, N.S., who make a specialty of handling "Acadian Pride Homespun Pants." The good features of these homespun pants will appeal especially to lumbermen. They are particularly adapted for hard usage. They have a number of special features which add to their comfort and durability. A particular feature is the fact that the seams are sewn with four cord thread. They are designed with ample height at the waist and strong bar tacking to strengthen the pockets.

"Acadian Pride Homespun" is thoroughly mill shrunk before made up. This material is made at the St. Croix Woollen Mills, located in the beautiful St. Croix River valley of Nova Scotia. Some thirty-eight years ago a number of wealthy men living in the county of Hants, noting the favorable conditions for a mill site, organized the St. Croix Woollen Mill. The chief principle of management in connection with the mill from the outset has been that "no shoddy was to be used in the mill." During the thirty-eight years since its organization the company has maintained this standard of purity. From time to time, the latest machinery has been installed. The demand for the "Acadian Pride Homespun," known as the "A. P. H." has increased to such an extent that the full capacity of the mill has frequently been taxed to the utmost.

## Nova Scotia Outlook Promising

The Lumbermen's Association of Western Nova Scotia held its annual meeting in Halifax recently. The following officers were elected; president, A. W. Eakins, Yarmouth; vice-president, A. Davison, Bridgewater; secretary-treasurer, F. C. Whitman, Annapolis Royal. The association expressed its approval of the recommendation of the Conservation Commission. That the railways of the province be placed under a patrol in order to stop forest fires along their lines. An arrangement is being made by the association to hold a summer meeting at Bridgewater. Plans are also being made to induce the Canadian Forestry Association to hold a meeting at Halifax during 1914.

Interesting opinions were expressed by the members present regarding trade conditions. In the past, the export trade has been the important factor for Nova Scotia lumber. Present indications are that in the future the domestic demand will increase. Halifax is consuming a greater quantity of lumber than ever before.

# Jenckes Boilers

WE make a specialty of large Tubular Boilers for regular or Dutch oven setting for saw mill service. Our Boilers are built to conform with the various Provincial Inspection Acts and each is rigidly inspected and tested under high pressure before shipment.

Ask for quotation.

## The Jenckes Machine Co.

Limited

Sherbrooke - Montreal - St. Catharines - Cobalt - South Porcupine - Vancouver - Rossland  
 Works: Sherbrooke, Que., St. Catharines, Ont.

## The Porter Hand Jointer

is the highest style of jointer made. A machine built by Specialists who specialize in Hand Jointers. Our circulars thoroughly describe our machines and you should not place your order until you look us up. Column Base, Shaving Chute, Steel lipped and ground Tables and Safety Cylinders are a few features. Machines carried in stock by

A. R. Williams Machinery Co. of Toronto, Ont.

**C. O. Porter Machinery Co.**  
 Grand Rapids, Mich.

# Cross Tie Consumption in Canada-1911

Steam Railways Used 95 per cent of all Ties Purchased—Average cost 39 cents per Tie—Increase of 48.5 per cent in number used.

Reports on cross ties purchased in 1911 were received by the Government from 51 steam railways and 33 electric roads. The values given in the following tables are based on the cost at point of purchase. The greater part of these ties are cut in Canada, but some of the higher-priced material is imported from the United States. The totals also include a few mine ties. The following table gives the number of ties of different kinds of wood purchased in 1910 and 1911 with their total and average cost and the percentage each forms of the total.

CROSS-TIES PURCHASED, 1910 AND 1911, BY SPECIES: Number, Cost, Average Cost per Tie and Per Cent each Species forms of the Total.

| Kind of Wood.      | 1910.     |           |                    |                        | 1911.      |           |                    |                        |

<sup>1</sup> Less than one tenth of one per cent.

There were 13,683,770 ties purchased in Canada in 1911. This is an increase of 4,469,808, or 48.5 per cent., over the figure for 1910. The increase is due largely to railway construction, which was specially noticeable in the western provinces on the new transcontinental lines. The replacement of ties on existing lines amounted to about 10,000,000.

There were in all eighteen kinds of wood reported for cross-ties in 1911. Red pine, western cedar, birch, maple, beech, poplar, southern pine, elm and black ash were reported and classified separately for the first time.

The following table gives the total number of ties purchased in 1911 by species and method of manufacture.

CROSS-TIES PURCHASED, 1911, BY SPECIES AND METHOD OF MANUFACTURE: Number, Total Cost and Average Cost.

| Black Ash.....     |            |           |                    |                | 58         | 25        | 43                 | 100.0          |

Jack pine replaced cedar at the head of the list and formed about 40 per cent. of the total. The quantity of available jack pine and its wide distribution were probably responsible for its popularity. Tamarack moved up from fifth to second place and formed over 19 per

cent. of the total. Douglas fir increased from 9 per cent. in 1910 to 14 per cent. in 1911 and moved up from fourth to third on the list. Hemlock fell back and formed only 12 per cent. The new railway lines are building north of the northern range of this species. Spruce increased from 2.5 to 6.6 per cent. on account of the same activity of railway building in the northern regions of the country. Cedar took an abrupt fall from first place on the list in 1910 to sixth in 1911. Practically all the cedar reported is Eastern cedar, as the western species is too soft for satisfactory use for cross-ties. The supply of Eastern cedar of either tie or pole size is practically exhausted. These six species together form 97 per cent. of the total. The others in the list are used in small quantities only, and for particular uses.

The average price of ties in 1911 was 39 cents, one cent more than in 1910. Of the species used in quantity, oak ties at 81 cents were the most expensive, and spruce ties were the cheapest at 26 cents. Spruce, hemlock and cedar all show a decrease in average price while jack pine, tamarack, Douglas fir and oak all show an increase. The prices of other woods are not comparable as they are purchased in such small quantities.

About 63 per cent. of the ties purchased in 1911 were hewn. In 1910 about 70 per cent. were hewn, so the sawn tie is evidently increasing in favor. Douglas fir ties were 94 per cent. manufactured in this way. Oak, chestnut and Southern pine ties were more than 50 per cent. sawn.

Jack pine, tamarack, hemlock and spruce were mostly hewn, while cedar ties were about half and half. All the poplar and red pine ties were hewn.

Sawn ties cost on the average 41 cents, or 4 cents more than hewn ties, while in 1910 the hewn ties were the more expensive by 3 cents.

Of the sawn ties Southern pine ties were the most expensive at \$1.11, with oak next at 82 cents. The cheapest sawn ties were of birch, beech and maple at 23 cents. Of the hewn ties chestnut were the most expensive at 58 cents and birch, maple and beech the cheapest at 20 cents.

Steam railways in 1911 used 95 per cent. of all the ties purchased. They purchased, in 1911, 13,094,528 ties—an increase of 4,185,106, or 47 per cent. over 1910. This increase is due, as stated above, to the construction of the new transcontinental railways. The steam railways bought their ties at practically the same prices as given in Table 1. They used all the ties made from Western tamarack (*Larix occidentalis*), Western cedar (*Thuja plicata*), birch, maple, beech, poplar, Southern pine, elm and black ash.

Electric railways used only five per cent. of the total number of ties purchased in 1911. The total of 589,242 is an increase of 95 per cent. over 1910. This increase is greatest with Douglas fir, the use of which has increased over sixfold from 1910 to 1911, on account of the exclusive use of this material by some of the larger companies in Western Canada. Douglas fir was not used for ties by any of the electric railways of Eastern Canada. Fir ties formed over half of the total number purchased; this species replaced cedar at the head of the list. The cost of 20 cents is below the average for all kinds of wood.

Cedar ties, which had hitherto headed the list, fell back to second place with 28 per cent., and these ties increased in price from 37 to 41 cents, a price above the general average, demonstrating the increasing scarcity of this material.

Tamarack shows an increase in number but a reduction in price. Tamarack is found in small isolated stands and its prices and quantities vary with the accessibility of the material to the railway line.

The average price of 29 cents per tie in all species used by electric railways is a reduction of 12 cents from 1910 and is due to the great reduction in the cost of Douglas fir ties, which form over half of the total. Electric railways got their ties 10 cents cheaper than steam railways. No red or white pine ties were used by electric railways in 1911.

The ties purchased by electric roads were 81 per cent. sawn as opposed to 35 per cent. in the case of steam railways. All the Douglas fir ties were sawn and the majority of ties made from cedar, tamarack, jack pine, hemlock and oak were also sawn.

All the red pine and the majority of spruce, white pine and chestnut were hewn.

In 1910 the electric roads used only 38.6 per cent. of their ties sawn and 61.4 per cent. hewn, so with these companies, as well as with the steam railways, the sawn tie increased in popularity.

## Ontario

The Ontario Gazette contains notice of the incorporation of Cargill, Ltd., Cargill, Ont. The objects of the company are to carry on a general land and building business.

Springett, Brading & Company, Limited, Christina street, Fort William, Ont., have had plans prepared for the erection of a factory to cost \$6,000. They will be in the market for woodworking machinery.

The Canada Casket Company and the Lusty Lumber Company, Rodney, Ont., suffered loss by fire recently when the two plants were destroyed, together with a large amount of lumber. The loss is estimated at \$20,000, with \$9,000 insurance.

Detrich and Son, Goderich, Ont., are applying to the town for a grant to assist them in erecting a new factory for the making of excelsior packing and wood wool. The citizens of Goderich will vote upon a by-law for this purpose on May 3rd. The proposed factory is to cost \$25,000.

The Northern Ontario Lumber Company, Limited, has been incorporated with a capital of \$40,000 to carry on business as timber merchants, saw mill owners, etc., with head office at Toronto. The provisional directors are R. J. Hickson, F. W. Lowes and A. Wellwood, all of Toronto.

The Ontario Gazette contains notice of the incorporation of Benson & Bray, Limited, Midland, with capital stock of \$200,000, to carry on business as timber and lumber merchants, general contractors, etc. The provisional directors are J. A. Benson, M. J. Bray and F. W. Grant all of Midland.

Wm. Milne & Son, Ltd., North Bay, Ont., have closed their wholesale yard in North Tonawanda, as they found the Canadian trade more profitable for the kinds of lumber which they manufacture. Mr. Jas. Shaver, who was yard manager for the company at North Tonawanda, is now at Spanish, Ont., as head shipper for Wm. Milne & Son, Ltd.

Reitzel Bros., Waterloo, Ont., have commenced the erection of their new planing mill and expect that it will be completed by the 1st of October. The equipment will include a moulder, sizer, variety saw, swing saw, sander, two planers, sash sticker, sash tenoner, door clamp mortiser, boring machine, etc., which will all be driven by electric motor.

The corporate name of the Abitibi Pulp and Paper Mills, Limited, has been changed to that of Abitibi Lands and Forests, Limited. Superintendent William Whyte and two engineers from the office of Geor F. Hardy, New York, who has prepared the plans for the new 150-ton ground wood mill, left this week for Iroquois Falls, Ontario, where construction work on the new buildings is now in progress.

The Ontario Government has brought down a bill for granting 4,000 acres of land per mile at from 25c. to 50c. per acre, to the Lake Huron and Northern Ontario Railway, formerly known as the Bruce Mines and Algoma Railway. Part of agreement between the railway and the government is that the former shall not spend not less than \$3,500,000 on the erection of plants for the manufacture of lumber and its products, and bring in certain number of settlers annually. The grant does not include the pine timber.

Graves, Bigwood & Company, Traders Bank Building, Toronto, report that the foundations for their new mill at Byng Inlet, Ont., are all in and the timber is on the ground. The millwrights are now at work on the erection. They expect to have the mill operating early this summer. Some delays have been caused by the desire of the company to make certain that they are getting together a mill representing the very latest ideas and having the latest improvements in equipment. The mill will have a capacity of 200,000 feet per day on a ten hour run.

C. B. Janes & Company, Limited, Orillia, Ont., who were recently incorporated, intend to make important extensions to their business. For some years they have been operating only one veneer mill and hoop mill and have never been able to keep up with the demand. For a number of years they have been practically the only firm supplying the cheese box trade with veneers in Ontario. They will install at least three plants this fall, for the production of this material, which is made only from soft elm. They also intend to equip several small plants so as to get as near as possible to the raw material.

At their ground wood pulp mill now being constructed at Iroquois, Falls, Ont., the Abitibi Pulp and Paper Mills, Limited, will have in addition to 18 ten-ton grinders (which will require 17,500 horse-power to run), a wet machine room with a capacity of 200 tons. In the wood-preparing room the slashers will be capable of dealing with 600 cords every ten hours, and the barkers will have a capacity of 20 cords per hour. The daily output of the saw mill will be 25,000 feet, while the dry kilns will take care of 7,500 feet daily. A wood-working mill with planer, matchers, etc. and a machine shop fully equipped with lathes, planers, etc., have been erected. At present the contractors have a force of about 500 men constructing the dam, power house, etc. The buildings will be completed by December 31st.

## Eastern Canada

Chas. T. White & Son, Limited, manufacturers of spruce, hardwood, etc., formerly of St. John, N.B., have removed their St. John office to Sussex, N.B.

The sash and door factory owned by Landreville & Langevin, Longue Pointe, Que., was recently destroyed by fire. The estimated loss amounts to \$10,000.

Construction work upon the mills which are being erected for the Donacoma Paper Company at the mouth of the Jacques Cartier River in Quebec, is progressing satisfactorily.

Messrs. B. Grier, Limited, have removed their office to 602 Shaughnessy Building, Montreal, from the Eastern Townships Bank Building. Mr. J. Haslam, the secretary-treasurer, has set up on his own account as accountant and auditor.

A report from Campbellton, N.B., states that D. & J. Ritchie, Newcastle, N.B., have received an offer from a Swedish Company for the purchase of

their mills and timber limits. The report states that the deal is likely to be put through in the near future.

Connors Bros., Limited, Black's Harbor, N.B., will apply to the New Brunswick Legislature for an extension of their powers, to enable them to carry on a wider variety of business undertaking, including general lumbering and sawmilling in all its branches.

Ste. Monique Station Furniture Company, Limited, has been incorporated in the province of Quebec with capital stock of \$49,000 and head office at Grand Saint Esprit, Sainte Monique Station, P.Q., to manufacture furniture, boards, sash, moulding, etc., and to carry on a wholesale and retail lumber business.

An issue of 6 per cent. first mortgage gold bonds of the St. Lawrence Pulp & Lumber Corporation have been made by a Boston firm. The company owns lands, timber rights, mills, etc., in Gaspé and Bonaventure Counties, Quebec, the area of the tract being over 630 square miles. The standing timber and pulp wood on the property are valued at \$10,827,200.

The Blue River Lumber Company, Cabano, Que., are considering plans for the erection of a saw mill at Gully, Que., at a cost of \$50,000. The mill is to be equipped with the latest type of machinery, including band saw, gang saw, ten shingle machines, etc., and the intention is to complete the erection this summer. The company has been incorporated with capital stock of \$100,000, Mr. R. England being one of the incorporators.

Haley & Son, Limited, St. Stephen, N.B., are applying for incorporation in the province of New Brunswick, with power to take over and operate the woodworking, milling and lumber business of Henry E. Haley and J. L. Haley of St. Stephen. The proposed capital stock of the company is \$80,000. The applicants for incorporation include H. E. Haley, J. L. Haley, Julia A. Haley, J. M. Flewelling and J. W. Richardson, all of St. Stephen, N.B.

A London, Eng., despatch says:—The directors of the Dominion of Canada Trust Corporation, the main asset of which is the Maritime Lumber Company, frankly admitted to the shareholders at a meeting this week that the Canadian lumber business could not be managed from London. They were negotiating, they said, with three different groups in Canada to buy the concern. The shareholders approved of the report of the board.

An official announcement is made by the Wayagamack Pulp & Paper Company, Limited, of the sale of an additional \$500,000 first mortgage 6 per cent. bonds for the purpose of installing a plant to manufacture certain fine grades of paper. Contracts have been awarded for the machinery, etc., which are required for the extensions. The company are now turning out Kraft paper at the rate of 50 tons a day and operations at the mill are said to be proceeding smoothly.

The Dominion Department of Public Works will receive tenders until May 12th, at 4 p.m., for 125,700 feet of creosoted timber to be delivered as follows:—Chatham, N.B., 83,200 feet; Rexton, N.B., 52,000 feet; Buctouche, N.B., 18,500 feet. Specifications and form of contract may be seen at the offices of Geoffrey Stead, district engineer, Chatham, N.B.; F. G. Goodspeed, district engineer, St. John, N.B.; C. E. W. Dodwell, district engineer, Halifax, N.S.; G. A. Bernasconi, district engineer, North Sydney, N.S.; and at the Department of Public Works, Ottawa, and also at the office of MacLean Daily Reports, 220 King street west, Toronto.

A report from Fredericton, N.B., states that the Keswick Lumber Company of which Mr. W. P. Lowell, Bangor, Me., is the head, has completed a deal for the purchase of a large tract of timber land in York County, N.B. The purchase was made from Alexander Watson of St. John. The limits included are largely in the parish of Douglas and are those on which Mr. Moses Hanes has been carrying on operations in connection with his mill at the mouth of the Nashwaaksis River. About 1,200 acres are included. The Keswick Lumber Company have been operating a mill for some time past in the vicinity of Burt's Corner and have been shipping their lumber via the Gibson branch of the C. P. R. Their plant is a large portable one.

#### Western Canada

The planing mill of the Edgewood Lumber Company, Castlegar, B.C., was recently destroyed by fire. The loss was covered by insurance. They will build a new planing mill immediately which is to cost \$14,000.

The Green Lumber and Furniture Company, Limited, has been incorporated with head office at Victoria, B.C., and capital stock of \$25,000, to take over the business of R. A. Green & Company, as dealers in builders' supplies, sash, doors, shingles, etc.

The Pacific Lumber Agency, Aberdeen, Wash., has secured an extra-provincial charter to carry on business in the province of British Columbia, with a capital stock of \$10,000. Their provincial headquarters will be at Vancouver, B.C. Mr. D. S. Wallbridge is attorney for the company.

A report from Edmonton, Alta., states that J. W. Simpson, of Worcester, Mass., is looking into the feasibility of establishing a paper and strawboard plant there. The pulpwood resources of the Saskatchewan and Athabasca River districts would be of great importance in connection with such a plant.

It is reported that the Canadian Western Lumber Company in their annual statement for the year which has just passed will show a surplus of over \$400,000, as compared with \$183,000 in the previous year. Reports from the company indicate that trade conditions this spring are excellent and the outlook for business is most encouraging.

It is reported that within a few weeks, the large factory being erected at Sapperton, B.C., by the Dominion Match Company will be turning out matches. At the annual meeting of the shareholders recently held, directors of the company were elected as follows:—J. A. Lee, A. E. White and C. J. Tucker, of New Westminster, and Messrs. T. J. Baker and James Hopps, of Victoria.

The Empire Lumber Company, Winnipeg, Man., whose paid-up capital is \$300,000 is reported to have decided to establish headquarters for the province of Saskatchewan at Saskatoon. The company recently took over the business of the Galvin, Walston Company, which had 25 yards in Saskatchewan. Offices have been opened in the Central Chambers, Saskatoon. N. H. Northrop, vice-president, secretary and superintendent of branches for the company, is in charge of the Saskatoon office. Mr. N. C. Walston, Winnipeg, is president and general manager of the company.

# MAPLE LEAF SAWS

The Improved Racer Cross Cut Saw, by Actual Test, is the Fastest and Easiest Cutting Saw Made

The Maple Leaf saw is higher priced than the ordinary saw because it costs more to make it. It is made of the very highest quality of steel and tempered by a secret process which toughens and refines the steel. The Maple Leaf trade mark on the saw means that it is the equal, if not superior to any saw made. It also means that you are privileged to test it against any other make and if not found equal or superior in quality you can return it and have your money refunded.

The ambition of the manufacturers of the Maple Leaf Saws has always been to produce the best tempered saw in the world and they are constantly investigating and experimenting with this end in view. They have recently made some valuable discoveries in evenness of temper. It has always been difficult to get a perfectly even temper on long and thin sheets of steel, such as saws are made of. Our recent discoveries make this an absolute certainty. Every user of saws should bear in mind that the temper of the saw is its most valuable quality. High finish and attractive appearance amount to nothing if the temper is not right.

All Maple Leaf Saws are Guaranteed to be Perfect in Temper

# Non-Burning Slow-Wearing Quick-Acting

Machinery brakes are subjected to great strain and intense frictional heat, and it is necessary to line the brake with a material that will act instantly, will not burn, and will not wear out quickly.

## J-M Non-Burn Brake Lining for Machinery Brakes

is made of pure Asbestos (a non-burning, slow wearing mineral) and strong brass wires. It is far superior to wood blocks, fibre, cotton or hair webbing, rubber, etc. It can be relied on absolutely in an emergency—grips the drum as quickly or as gently as required. J-M Non-Burn Brake Lining is in almost universal use for automobile brakes and clutches.

Look for the name stamped on lining.

Do you ever use Conveyors for conveying shavings or other material?

We have a special Scandinavia belt for this purpose, which is proving extremely satisfactory for this kind of work.

Write for Information and Prices. We can make you an attractive proposition.

## Federal Engineering Company, Limited

TORONTO, 90 Sherbourne St.

MONTREAL, Unity Building

# A Good Belt Saves Money

**T**HE money wasted in keeping a stretching belt taut amounts to a surprising figure. If you use "Goodhue Belts" in your mill or factory you can save most of this money because "Goodhue Belts" stretch less by 15 to 25 per cent than any other belt. They are made from skillfully selected hides with the stretch taken out of each section before it is made up into the belt.

According to the conditions under which the belt is to run, we recommend "Extra," "Standard" or "Acme Waterproof" belts.

### by using our Patent Steel Band Mill and Carriage

This result was attained by different users of our mills during the season of 1912. We can prove to your satisfaction that this mill will cut more lumber and superior lumber than any other Band or Circular Mill on the market.

#### Special features of Mill

Concrete foundation not necessary. Frame constructed with brace bolted to same timbers which support base of mill. This prevents any movement of mill foundation throwing mill arbors out of cross line. Supporting timbers attached to track which prevents variation in cutting of boards.

#### Roller Bearing Carriage

designed to do away with lost side motion which is quite necessary for successful work in double cutting bands.

#### Double Action Friction Set Works

working on thin steel disc, which can be successfully used in place of usual foot friction in receding knees. This cuts down weight in pinion shaft, therefore reducing momentum, so that it is beyond speed of setter to over set by rapid work. Carriage can be changed from high to low speed instantly and can be operated without passing saw more than six inches either way. Knee opening to 44 inches. Guide prevents any binding motion to the gip and will automatically raise when coming in contact with knot in timber. Guides adjustable when mill is running.

A Canadian Built Mill of superior manufacture.

**BREEZE, DENISON & COMPANY**

Newburgh, Ontario

“Say, Ernest, how is it you’re using so many files now? There’s no more than the usual amount of work coming through. What’s the trouble?”

“Well, Boss, as I’ve told you before, we’ll have to go back to the old reliable **DISSTON FILES**.”

## By its deeds the **FAY-EGAN "LIGHTNING"** No. 275 has become known as the **Matcher** which meets all the requirements of the general planing mill:—

### Some Actual Results Obtained

J. A. FAY & EGAN CO.,  
Cincinnati, Ohio.

Gentlemen: We purchased one of your No. 275 Matchers, size 16 x 8, a little over a year ago, and have been running it continually ever since, working all sorts of material on it from ½-in. ceiling to sizing 16 x 8 timbers. In fact, most of the time it has been doing the work of a timber sizer, and I must confess in all my 25 years of experience I have never seen its equal for the amount of work it will turn out. It has the most wonderful feed for its size, and I have run all makes of machines.

No one need be afraid of buying one of these machines for general all around work, and I heartily recommend it to any wanting such a tool. We have not had a cent of repairs, and if we could not secure a duplicate of it, would not take twice the amount we paid for it.

We congratulate you on the development of such a machine and wish for you the hearty success you deserve. We are also well pleased with the other machines we purchased from you.

Yours very truly,  
SHAW BROS. COMPANY,  
By David Shaw, President.

Macon, Ga.

J. A. FAY & EGAN CO.,  
Cincinnati, Ohio.

Gentlemen: This is to certify that I did run through one of J. A. Fay & Egan Company's Planers and Matchers, namely the No. 275, 24-in. 6-roll P & M, the amount of 8,025,630 feet of roofers averaging 1-in. in thickness and 7-in. in width, during the year 1911. This record is actual figures on our books and does not count stock sold in local market, amounting to about 75,000 feet. The machine has proven very satisfactory and we take pleasure in recommending the same.

Zebulon, N.C.

W. B. GETTYS LUMBER CO.,  
By W. B. Gettys, Manager.

J. A. FAY & EGAN CO.,  
Cincinnati, Ohio.

Gentlemen: We are pleased to write you in regard to the No. 275 Planer and Matcher we purchased of you some time ago. We used this machine on a variety of work, ranging from ¼ x ½ in. soft wood to 3¾ x 10½ in. oak and also 4¼ x 6¾ in. hickory. We plane all this material on four sides, sometimes taking a ½-in. cut with the side heads on oak 3¾ in. thick. A large percentage of the work done on this machine is planing and matching semi-circular tank staves, 1¼ in. x 4 in. wide. We find we can feed all the various kinds of material as fast as a man can keep the machine full, and machine appears to have a capacity greater than this on nearly all kinds of stock, including the tank staves. We are entirely satisfied with this machine.

M. RUMLEY CO. ADVANCE THRESHER PLANT.  
Battle Creek, Mich.

—the actual, results both in quantity and variety, obtained by users in all parts of the country, are the strongest proofs of the value of this machine.

—note in letters herewith; the first, shows a variety of work from ½" ceiling of 16"x8" timbers; the second, large output on one kind of work; and third, some of the hardest work ever done on a Matcher.

—equally satisfactory results are obtained on other classes of work everywhere, in fact, we have never put out a No. 275 that has not more than met all expectations of the purchaser.

—if you use or need a general purpose matcher, let us tell you more about the No. 275, a Matcher, Double Surfacers, Floorer and Inside Moulder combined.

—write today for descriptive folder and price.

The Shimer "Limited" Cutter Heads, Figures 627 and 628 with Expansion.

Why You Should Use The

## Shimer Cutter Heads

For Flooring, Ceiling, Siding, Ship Lap, Jointing, Double  
Ceiling, Doors, Sash, Blinds, etc.

Made of Steel Forgings, they represent the greatest possible strength in compact and workmanlike manner, embodying the vital principals of clearness to all leading Bit Points. The alternate and shearing effect of the cut reduces to a minimum the tearing-out tendency of cross-grained lumber. Cutters have exact shape in their exterior circles, and uniform product is maintained indefinitely without extra trouble or expense.

All F.O.B. Jamestown, New York.

## Dirt, Snow and Water get on these Belts, But Cling-Surface Protects Them

Climatic changes, acid fumes, steam, moisture, oil and dust need not worry any power user who keeps his belting filled with Cling-Surface. Even on outdoor belting subjected to the hardest service and worst conditions, Cling-Surface can be depended upon as a protector and a sure means of making every belt do its maximum duty. You need no better evidence of this than nine years of satisfactory results for such a firm as Hoyt Bros., Lumbering Contractors, Ware, Mass. Mr. A. H. Hoyt, of this firm, sent us the above pictures as typical of their belts and comments as follows:

Your conditions are doubtless easy in comparison and Cling-Surface should do as well for you—possibly better. Cling-Surface must make good on all our claims, or you can have your money

back. This in itself should be sufficient assurance to justify getting a trial package.

Tell us about your belt troubles. Our advice and literature are free. We quote f.o.b. Toronto.

"Much dirt, snow and water get on these belts. Before using Cling-Surface, the cement would loosen in the laps, but we have no trouble with belts filled with Cling-Surface as they are moisture proof.

We find it saves belts and bearings a good deal, on account of being able to run belts slack. In fact, it has saved us belts, time and money as we do not have to stop and take up belts on account of slack. We always recommend Cling Surface."

# "JOHN BULL"

## LARRIGANS

Next time you need larrigans ask for "John Bull" brand. They are strongly made, absolutely waterproof and wear like iron when soled and heeled. A counter stiffener is sewn in the leg of "John Bull" larrigans which helps them to keep their shape.

Every pair is stamped with our trade mark "John Bull". Always find the trade mark and you will always get the best.

is devoted to the manufacture of  
one machine only—

## The Columbia Sander No. 2

The demand of the trade for this machine has never abated since the first Columbia announcement was made, and the first Columbia Sander catalogue printed.

The Columbia Sander has grown to be a better machine than our literature has represented it to be. Hence, we have issued a new book on the subject, showing in detail what the Columbia really is to-day; or, in other words, what the improvements consist of.

*Send us your name for a copy  
of the new book*

# Stumpage Prices

are always in evidence, always of interest. Here is the record of southern pine timber values for the last thirty-three years:

|                 |                |
|-----------------|----------------|
| 1880, per acre, | \$1.25         |
| 1890, per acre, | \$5.00 to 7.50 |
| 1895, per M,    | .25 to .75     |
| 1900, per M,    | .75 to 1.50    |
| 1905, per M,    | 2.00 to 3.00   |
| 1910, per M,    | 3.00 to 4.00   |
| 1913, per M,    | 3.50 to 5.00   |

## Here is another Record

In 1880, 5,000 to 7,500 feet of logs were cut from an acre of southern pine timber; in 1890, 7,500 to 10,000 feet from lands of the same character; in 1900 such lands produced 10,000 to 12,500 feet; in 1910 and today 12,500 to 15,000 feet are secured.

These are facts. Fix them in your consciousness, act on your mature conclusions and the continuous increase in timber values will benefit you.

HORSE DEPARTMENT

"The Place to Buy them Worth the Money"

## The Truck That Saves It's Cost Several Times Over in The Year

This truck is designed for lumber yards and planing mills and will be found invaluable for loading and unloading cars.

The front gearing is detachable and may be used with eight or twelve hind gearings. It is a double-header, nuts on axles being kept tight with Steel Cotter Keys.

Oil cups on the wheels and the fact that there is no resetting of tires saves any amount of trouble.

The old wooden-wheeled truck is a back number in comparison with this. It will pay you to write for our general catalogue which describes these trucks in detail, and pick out the style you want now.

## INDUSTRIAL LOCOMOTIVES

The day has come when only the very best locomotives will meet the needs of logging roads and switching around industrial plants. It is now necessary to produce special designs to meet special needs. For years we have been busy studying the conditions in all fields where locomotives are used and have designed our locomotives to meet those conditions.

Proper designs insure efficiency, reduce the coal bills, lessen repairs, and give maximum work for a minimum of expense.

Our locomotives embody the best construction and are sturdily built. They are simply in design, and all wearing parts are accessible for easy repairs.

Interchangeable repair parts, sure to fit, are kept in stock for prompt shipment.

**FLAT GANGS** Unexcelled in the manufacture of

Flooring Strips  
Silo Stock

Cedar Siding  
Door Stock  
Boards

Shi lap  
Box Lumber

from cants and flitches, from either  
hard or soft woods.

## ROUND LOG GANGS

JUST WHAT THE NAME IMPLIES  
—taking all your small logs just as  
they come from the pond and cutting  
them up into boards or dimensions,  
getting every board there is in the  
log, never over-slabbings (wish we  
could say this of all head sawyers.)  
Built to handle either one or two logs  
at once, up to 14 in. diameter.

KEEP THE SMALL LOGS AWAY  
FROM THE HEAD SAW and CAR-  
RIAGE entirely, raise your cutting  
capacity, and install economy by the  
same stroke.

Not an EXPERIMENT, but an  
ECONOMIC NECESSITY.

Think it Over Carefully, then Write  
us for Details.

"The Gang cannot  
Overslab."

# Wickes Brothers

410 White Building - - SEATTLE, WASH.  
Head Office, Saginaw, Michigan, U. S. A.

# Automatic Saw Sharpeners

Automatic Saw Sharpener. (House's Patent)

**T**HIS saw sharpener can be adjusted  
to give the saw teeth any shape de-  
sired. It is perfectly automatic and  
requires no attention after starting.

The circular saw size is specially designed  
for large saws but can readily be adopted  
for shingle saws if desired.

Quotations on the various styles and sizes  
of Mowry saw sharpeners cheerfully furnished.

*Have you our literature?*

"Everything for the saw mill from  
the motive power to the trimmer"

**MOWRY & SONS, Gravenhurst, Ontario**

The  
Markof  
Quality

### 3 Saw Improved Lath Bolter

#### Points Worthy of Notice

Main frame made in one piece.  
2 lower feed rollers 5" diameter  
and **power driven**.

2 upper pressure rollers both  
**power driven**.

Front pressure roller raises to-  
wards the saws, and being power  
driven prevents bolts from flying  
back out of the machine.

Bolts cannot stick.

At the price we sell this mach-  
ine it has no competitor.

## Long's Quality Lath Bolters

### 4 Saw Lath Bolter

A machine for mills of  
large cutting capacity

Please notice

this machine has—Three Mandrel bear-  
ings, the outer one being easily removed  
for taking off saws for filing.

Four lower feed rollers, all **power driven**.  
Two top pressure rollers, **power driven**.  
Bolts cannot stick or fly back.

# The First Bandmill In North Australia—A Waterous

**T**HIS photograph taken in the Thomas Griffith's Mill, Cairns, Queensland, shows the first Bandmill used in North Australia.

This Mill was installed in 1907. Since then it has been run steadily, cutting Kauri Pine, Silky Oak, Maple and Bean Tree—all hardwoods. The log in the picture, a north Queensland Pine weighs seven tons, measures 21 ft. 8 in. in circumference, and is a good specimen of the size of timber ordinarily handled.

The Griffiths Mill is equipped with an 8 ft. Bandmill, a Four-block 50" opening Carriage, and a Four-saw New Champion Edger—all Waterous make.

With a mill crew of eleven men it has made a record cut of 39,748 ft. in 11 $\frac{3}{4}$  hours, out of 24 logs sawn into 1 in., 1- $\frac{1}{4}$  in., and 1- $\frac{1}{2}$  in. boards.

In Peru, Chile, The Strait Settlements, New Zealand, India, Japan, Roumania, Syria, and other remote corners of the globe, similar Waterous installations are replacing antiquated sawmill machinery and blazing the trail for up-to-date timber cutting methods.

That we are keeping pace with Canadian sawmilling developments as well, a few recent Waterous-built Mills will show—

*Wayagamack Pulp & Paper Company, Three Rivers, Que., Capacity 120,000 ft. per day.*

*Tourville Lumber Mills, Louiseville, Que., Capacity 200,000 ft. per day.*

*Dominion Mahogany & Veneer Co., Montreal, West, Que., Capacity 500,000 ft. per day.*

*Riordan Pulp & Paper Co., Calumet, Que., Capacity 75,000 ft. per day.*

---

---

Our complete set of catalogues of up-to-date Sawmill Equipment is at your service. A post card will do.

### NO FRAYING AT THE EDGES

Dick's Balata Belting possesses perfect uniformity throughout, whereby true and steady running is ensured, fraying at the edges rendered impossible, and perfect success in fork driving guaranteed. The combination of strength and uniformity in Dick's Belts is due to the process of solutionizing to which the textile portion of the Belting is subjected, and which thoroughly solidifies and unites the whole material. You can get all the facts in our Catalog No. 17.

**A  
Message  
to You**

(Please read)

DOES it mean anything to you to know that **you** can get prompt shipments of the highest quality Lumber and Shingles at the same prices you are paying for inferior service and goods?

IS there anything more unsatisfactory to **you** than being held up by delays in receiving the stock you are in urgent need of—maybe it is only a few pieces of lumber or bundles of shingles out of a car?

HOW do **you** feel when stock for which you have been waiting arrives and is poor quality—unfit for the use you require it?

WHY don't **you** place your orders with a Company who can, in shipping you, obviate the worries and dissatisfaction mentioned above.

**OUR MESSAGE TO YOU — DEAL WITH US.**

No. 9  
Price \$6.75

This is the PATENT SHOEPACK manufactured by A. W. Yager, which is something distinctly new in the shoepack line. They are so constructed as to make them absolutely watertight. In the construction of these packs the strain on the sewing is relieved so that they will not rip, thus making them far superior to others that appear like them. We will ship to any address in Canada prepaid on receipt of price. Give us a trial and be convinced.

## ACCURACY IS THE BASIC PRINCIPLE of every one of the "DEFIANCE" WOODWORKING MACHINES

"The Imprint of Satisfaction"

Every machine is accurate. But this is not all. It enforces accuracy on those who use them. Likewise, it admonishes to accuracy all those who would turn out a dependable product.

Every workman operating a DEFIANCE machine of any kind knows that it will infallibly enforce the standard of high class workmanship necessary to enliven his employer's business.

If you are interested in the efficiency of DEFIANCE machines write us today for our catalog and prices.

### THE DEFIANCE MACHINE WORKS - Defiance, Ohio.

Representatives:—A.R. Williams Machinery Co., Toronto (Ontario), St. John (New Brunswick), Winnipeg (Manitoba), Vancouver (British Columbia), Reid-Newfoundland Co., St. John (Newfoundland), Williams & Wilson, Montreal (Que.), W.L. Blake Co., Portland, Me. (Maine, New Hampshire & Vermont).

No. 215 Automobile Spoke Throat and Barrel Polishing Machine

DOUGLAS & COMPANY, NAPANEE, ONT. CAN.  
SOLE PROPRIETORS MANUFACTURERS AND EXPORTERS.

## Douglas EGYPTIAN LINIMENT

**T**HIS liniment is a rapid cure for thrush, sprains, cuts, spavins, curbs, splits, carlouses, etc., etc. and is the only liniment on the market that *will stop bleeding immediately*.

Always keep a supply of Douglas Egyptian Liniment in your stable it will save you dollars and will often prevent serious troubles.

Send for our literature

Napanee - Ont.

## International

Preparations for Horses are all  
sold on a Spot Cash Guarantee

Let us figure on furnishing you the following supplies for the coming season.

### International Stock Food

We guarantee that your horses will do more work and keep in better order on less feed if they get International regularly.

### International Silver Pine Healing Oil

Especially recommended for Sores, Bruises, Kicks, Inflammation and all flesh wounds.

### International Worm Powder

Will quickly expel all kinds of worms.

### International Distemper Cure

For Coughs, Colds, and Distemper.

### International Colic Cure

Guaranteed to cure Colic in ten minutes.

### International Compound Absorbent

Greatest Curb cure on Earth.

### International Gall Cure

Cures while horses work or rest.

### International Foot Remedy

Cures Foot diseases, keeps the hoof soft, elastic and tough

### International Harness Soap

Gives new life to old harness.

All our goods are guaranteed to give satisfaction.

**The Thomas Pink Co.**  
Limited

PEMBROKE, Ont., Canada

Manufacturers of the best line of Lumbering Tools in Canada

## Solid and Inserted Tooth Circular Saws

*We make a specialty of these lines*

**We remake old Solid Tooth Saws  
into new Inserted Tooth Saws**

*Write to us for quotations*

Our saws have been before the public of Canada since 1855, and have won a reputation far excelling any other make of saws, combining as they do so many points of marked superiority.

By the old method the tempering of circular saws was to a great extent a matter of chance.

By our Patent Process that uncertainty is entirely avoided.

Being tempered and straightened by heat and pressure in air-tight ovens at a uniform heat between heavy revolving plates, we produce a perfectly even temper throughout the plate, and being free from that uneven strain or tension caused by so much unequal hammering they are not so liable to buckle, which was a great source of trouble and expense in the old style of saw.

These saws will stand up to their work better under all circumstances, and being made of a higher quality steel than it is practical to use by the old method, they hold an edge longer and will do more work than any other saw on the market.

We are prepared to make prompt deliveries of all Saw Orders—Rush Orders by mail or wire receive immediate attention.

**R. H. Smith Co., Limited**

**Saw Manufacturers  
ST. CATHARINES, ONT.**

## Saw-Mill Machinery

We manufacture the following High-Grade Saw-Mill Machinery:—New Modern Saw-Mill Carriages, with either three or two head-blocks ; P. Payette's New Patent Saw-Mill-Dog, for use in either winter or summer ; P. Payette's Grip-Set Works ; Steam Feed Valves, Steam Lifter and Loaders Valves. Five different class and style of Edgers, for either light or heavy duty. Combined Gang-Circulars and Edgers, or Independent Gang-Circulars.

Steam-Canters, Steam Lifters and Loaders, and a general line of saw-mill machinery. Detachable Chain-Sprockets, Castings of Gray-Iron, Semi-Cast Steel, and brass castings for general use.

Descriptive Booklet and prices mailed free upon request.

# GOODYEAR

**BELTING**

12" - 5 ft. *Goodyear*  
16" - 8 ft. *"*

**PACKING AND VALVES**

Sheet Packing..... *Goodyear*  
Cloth Insertion Packing..... *"*  
Gaskets and Rings..... *"*  
Round Duck Packing..... *"*  
Hydraulic Packing..... *"*  
Square Duck "..... *"*  
Square Duck (with rubber back)..... *"*  
Rubber Valves..... *"*

**HOSE**

Mill Hose..... *Goodyear Indemnities*  
Suction Hose..... *Goodyear*  
Steam Hose..... *"*

*"Write Goodyear after every item on that list."*

**D**ON'T take a chance on these items. Your factory cannot give high efficiency with inferior equipment.

A valve leaking—a belt stretching—a hose bursting. These may not seem very serious in themselves, but from the standpoint of "lost time" and "disorganization" they are serious.

And they are *avoidable*. Install reliable equipment—goods that have a trouble-saving reputation among factory superintendents and practical men.

You will save money by using *Goodyear* lines.

**GOODYEAR RUBBER BELTS**

Goodyear Belting saves power by its close, non-slipping grip of the pulleys. It is a non-stretching Belt—therefore avoids loss of time for "taking up." Its "long life" is a positive economy.

*Goodyear Conveyor Belts* are in use from one end of the Dominion to the other. The surface is made to stand the hardest usage. We make Conveyor Belts for every purpose, and guarantee satisfactory service under the most strenuous conditions.

**GOODYEAR HOSE**

So diverse are the conditions surrounding the use of *Steam Hose*, that these should be specially stated when ordering. We make Steam Hose to meet every condition of service, and Goodyear Steam Hose will give the highest satisfaction.

*Goodyear Suction Hose*—smooth or rough bore. Steel wire wound internally to prevent collapse. Built for every conceivable purpose; oil, gasoline, acids, etc.—made in all sizes up to 16 inches.

**GOODYEAR VALVES AND PACKING**

Save time and annoyance; save power and efficiency; by packing valves, glands and steam joints with Goodyear material.

**MAGNET RED SHEET PACKING** for the special requirements of machine shops and boiler rooms. It is particularly adapted for high-pressure service, because made of special heat-resisting composition. Makes a tight joint against pressure from air, or hot water. It is unaffected by oil and settles into a close, impenetrable joint under heat.

**MAGNET GASKET TUBING**—makes a tight joint against high pressure. Can't blow out. Can be cut to suit the job. Supplied with rubber core and tape.

**ROUND DUCK PACKING.** To use only against lower pressures, made of good quality cotton duck with round core.

**HYDRAULIC PACKING.** Unexcelled as a packing for pump cylinders, hot or cold water plungers, hydraulic elevators, etc. A good packing for high pressure hydraulic work, and also for boiling water.

**CLOTH-BOTH-SIDES AND CLOTH INSERTION PACKING.** A pliable cold-water packing which gives good service.

**SQUARE DUCK PACKING.** Usually supplied in twelve foot lengths. Made of good quality duck and friction. Excellent for cold water service.

**SQUARE DUCK PACKING WITH RUBBER BACK.** This is a superior cotton packing with gum back. It practically cuts out friction, and gives long and good service.

**GOODYEAR VALVES** are used in hundreds of industrial plants. They are specially made to meet special conditions.

Send for our catalogue. Practical men find it of great interest. Write our nearest branch. They will mail you one free.

## TERMS OF SUBSCRIPTION:

Canada, United States and Great Britain, \$2.00 per year in advance; other foreign countries embraced in the General Postal Union, \$3.00.  
 Single copies 15 cents.

"The Canada Lumberman and Woodworker" is published in the interest of, and reaches regularly, persons engaged in the lumber, woodworking and allied industries in every part of Canada. It aims at giving full and timely information on all subjects touching these interests, and invites free discussion by its readers.

Special care is taken to secure for publication the latest and most trustworthy market quotations throughout the world, so as to afford to the trade at home and abroad information on which it can rely in its operations.

Advertisers will receive careful attention and liberal treatment. For manufacturing and supply firms wishing to bring their goods to the attention of owners and operators of saw and planing mills, woodworking factories, pulp mills, etc., "The Canada Lumberman and Woodworker" is undoubtedly the most direct and profitable advertising medium. Special attention is directed to the "Wanted" and "For Sale" advertisements.

## New Brunswick's Opportunity Missed

The situation which has arisen in New Brunswick of late in connection with the timber license regulations, is most unfortunate. The one redeeming feature is a general opinion on the part of the lumbermen that the government have really sought to adopt regulations which would work out to the best interests both of the people and the timber owners. The failure of the new regulations to effect this result will probably induce the government speedily to take further steps to bring about the development of the timber resources of the province in a profitable manner.

There is one all-important principle in connection with the regulation of timber cutting operations, which must be borne in mind by governments and by all who are interested in the profitable development of timber resources. It is a simple principle, but one which nevertheless has been sadly neglected, in connection with nearly all past attempts at timber license legislation. Briefly, the development of timber resources requires capital in large amounts. Money can only be induced to promote such industries if its owners are made practically certain of long enough possession of necessary raw materials to enable them to obtain profitable results.

Governments, in the past, have been restrained by an unreasonable fear, that in granting long term leases to cut timber they were alienating their timber entirely and placing it in the hands of people who might become too powerful and hold it for speculation rather than development in the interests of the country. Possessed by this fear they have gone to the other extreme and have granted the right to cut timber on short term leases only. The interests of license owners have been forcibly placed in antagonism to the interests of the public by this system. It has become the interest of the owner of the timber to cut it down and market it without consideration of the in-

creased value and profit which might be secured over a long period of time, if the government were to give them possession long enough to encourage conservative operation. Instead of inspiring the confidence of capital, governments have driven it to a restless fear that it will not be safely employed in the development of timber resources. The result has been disastrous. Timber limits have been wastefully operated. Capital has been discouraged from developing timber resources and the standing timber of the country has, after a number of years, come to such a state that there is now great danger that the continuance of the lumbering industry of the future has been permanently jeopardized.

\* \* \*

Why should the government not accede to the request of the timber holders, that their licenses be made for a long enough period of years to tempt capital to engage in the development of these resources? Are they really justified in taking the view—as the government of New Brunswick has taken it—that a period of thirty years with an extension of twenty years, is sufficient for establishing the permanence of the pulp and paper industry in that province, and a period of twenty years with an extension of ten years, sufficient for the lumbering industry? That is the way the government of New Brunswick has seen the situation. Premier Flemming considered that it was necessary to limit the period covered by the licenses. He expressed decided opposition to perpetual licenses. At first glance his views seemed reasonable to many people, but back of them there is a misconception of the meaning of the terms "perpetual leases." The government considered that the pulp and paper industry in New Brunswick would not require a period of ninety-nine years in order to induce capital to invest in the erection of plants. It considered in fact, that a ninety-nine year lease was the same as perpetual ownership. Practically, this is not the case. A ninety-nine year lease would leave the government in complete control over the bonus, stumpage and mileage charges. They would have unquestionable and effective right to regulate the industry for the benefit of the people of the province. There would be nothing to fear under such a system. There would be good reason to anticipate encouraging results. The term "perpetual ownership" is unfortunate. Such a system might more fairly be termed "perpetual partnership." The partnership nature of the case has been overlooked by the government. It would still possess the right to say how much license holders should pay for the right to cut timber and would thus have ample control, for taking care of the interests of the public.

Under a ninety-nine year license to cut, the pulp and paper industry would be able to establish itself successfully. Under a thirty and twenty year plan, the success would be extremely doubtful—so doubtful that one of the important companies which the government expected to commence the development of a large water power and the erection of pulp and paper mills, will not do so. Such companies are not seeking to force the hands of the government. They simply ask sufficient encouragement to lock up their capital in a profitable industry. Under present conditions they cannot afford to do so. They must, in some manner, secure the right to obtain their raw material for a period of years long enough to pay interest upon their capital, with a reasonable prospect of returning the sum invested at the end of a period during which depreciation has practically eaten up the original investment.

Under a thirty and twenty year license plan—making fifty years in all—there would be little inducement for such an investment. A company working under such a license would not be encouraged to operate in a manner regulated by consideration of the future growth of the young timber. The approach of the end of the period of the license would unquestionably find them with their limits impaired to such an extent as to make future operations unprofitable. Under a ninety-nine year system, a company would be justified in paying minute attention to the future value of the young growth, and would operate in such a manner as to make its timber resources perpetual. The two results are so entirely different that the government should have no hesitation, once it has been convinced of the failure of the present plan, in adopting a new one. The failure of the recent regulations, so far as inducing capital to enter the pulp and paper industry is concerned, is already certain. Companies to which the premier

referred as intending to invest capital in this industry, have signified their intention not to do so under the new terms. The government must go further or admit failure. They have so far, missed a splendid opportunity to treat the whole matter in a broad and liberal manner, which would inspire confidence and offer real inducements to capital to come in and establish large permanent industries. Their good intentions are acknowledged by many timber owners in New Brunswick. If this confidence on the part of the owners is justified, the government will soon admit the necessity for going still further in order to encourage them.

\* \* \*

As the matter stands to-day absolutely nothing can be done by some of these capitalists who desired to establish pulp and paper plants. They are really further away than they were a year ago. A year ago these capitalists had everything ready for erecting and equipping modern and up-to-date mills and investing large sums of money which would have given employment to numbers of men. Before committing themselves finally, they desired renewal of their licenses for a period of ninety-nine years, a fixture of their ground rents and timber stumpages for fifteen to twenty years, and a guarantee that at the end of that period, these charges would be re-arranged for another period to be agreed upon, but that in no case should they be charged higher rates than imposed on other lessees of the Crown. They intended to erect a pulp mill and the Canada Lumberman understands that they would have agreed to erect a paper mill also, as soon as market conditions made it possible. This was all the government should have expected, but they refused the ninety-nine year lease and insisted upon the erection of a paper mill within a specified period. The result was that the capitalists were completely discouraged. In spite of all they could do, the government could not be brought to see the matter from this point of view. Now there is danger of the capital finding employment elsewhere. It is simply out of the question for it to proceed with the New Brunswick enterprise.

\* \* \*

Had the government made the leases for a period of ninety-nine years and fixed the ground rents and stumpage demands periodically this industry and others would unquestionably have been under way already. Large numbers of workmen would have been engaged to-day in the erection of plants. In the course of a few months the forests of New Brunswick would have been providing raw material for an industry which would have meant much to the future of the province. It would have been feeding, clothing and sheltering many New Brunswick working-men. The licensees would feel secure in conserving their timber, knowing that when it was ready to cut they would have the right to utilize it.

As it stands to-day, the government policy forces lessees to cut. Their policy is really one of destruction instead of conservation. Lessees under short term lease with the attendant uncertainty as to renewal, are encouraged to cut and abandon leases that should be conserved and protected from fire until the growing timber reaches something like its highest value. Proof of the disastrous effect of this unwise policy can be seen all over the province of New Brunswick to-day in the large area of waste lands, and New Brunswick is not alone among the provinces in the wasteful example it has set. The case of New Brunswick, brings very forcibly to the front, the whole problem as it occurs in the different provinces of Canada, and ought to stir up those who are in authority to adopt a system which really is concerned, both with the interests of the lumbering and pulp and paper industries, as well as the interests of the public, rather than a system which gives these considerations a secondary position and is unfortunately influenced too much by the importance of the timber policy as a vote producer.

These criticisms are not offered in a harsh manner. They are inspired by a consideration of the best interests of the people who own the country's timber, viz., the people themselves. At the same time they take in to consideration the interests of those who convert these raw materials into merchantable products. Governments should express in legislation the views of the people whom they represent. Unfortunately, governmental institutions are not ideal and they have not always been able to overcome the accumulated mistakes of their predecessors. To-day the governments of the different provinces of Canada have these mistakes before them to rectify. New Brunswick is in an enviable position for taking the lead in a great movement.

#### Northern Hemlock and Hardwood Association's Report

The cut of hardwoods and hemlock by fifty-two members of the Northern Hemlock & Hardwood Manufacturers' Association during March was 48,588,000 feet, while during the same month there were shipped 43,570,000 feet. The cut during March, 1912, was 50,977,000 feet and there were shipped during that month 49,678,000 feet. In hardwoods there was some noticeable excess of cut over shipments, as the total production of hardwood lumber by the fifty-two members

reporting was 30,614,000 as against shipments during March, 1913, aggregating 17,680,000. These figures are almost identical with figures for March of the preceding year. A summary of the report shows that there is a decrease of eleven per cent. in the hemlock cut of March, 1913, compared with March, 1912. The decrease in hemlock shipments was eighteen per cent. The decrease in hardwood cut and hardwood shipments were both one per cent. Thus the total decrease in cut in both hemlock and hardwoods during the year was five per cent. and the decrease in shipments twelve per cent.

Reports from Wisconsin and upper Michigan give an interesting comparison of the estimated and actual log input for 1912-13. The estimated input of hardwoods during the 1912-13 season was 200,497,000 feet, while the footage actually logged aggregated 202,763,000. For hemlock the estimated cut was 307,200,000 and the actual cut 289,579,000.

It can readily be seen that, according to the present outlook, the total lumber production in Wisconsin and the upper peninsula will be somewhat less in 1913 than in 1912.

#### The Outlook for a Dry Summer

The prospects for a dry summer during the present year are more certain than usual and are resulting in increased activity on the part of Provincial and Dominion governments in the direction of organizing their fire protection forces. Lumbermen, also, who own large tracts of timber, will have to give the matter greater attention than usual, unless weather conditions show a decided change. Last summer was so wet that forest fires did little or no damage. Continued immunity cannot be expected for another summer and it is the part of wisdom for those who have interests at stake to commence early and continue persistently in taking every reasonable precaution until the danger season passes.

The damage done by fire to commercial stands of timber in North America is from \$25,000,000 to \$100,000,000 annually, according to the experts who have made a study of the question. From 1880 to the present time, the annual loss is estimated to be \$50,000,000. These figures do not include estimates of the losses sustained in the destruction of young growth and forest litter, in which lies the hope of future timber growth.

In some years, forest fires assume the size of national disasters. Such was the Peshtigo fire which swept over an area of 1,280,000 acres in Wisconsin in 1871, utterly ruining the country and bringing death to 1,500 people. Other fires which stand out in the history of the past century as examples of the ruining power of the forest's great enemy are,—Miramichi fire, Maine and New Brunswick—1825, 3,000,000 acres burned and 160 lives lost; Pontiac fire, Quebec—1833, 1,600,000 acres burned; a fire in Michigan in 1871—2,000,000 acres burned; Michigan fire, Michigan—1881, 1,000,000 acres burned and 138 lives lost; Phillips fire in Wisconsin—1894, 100,000 acres burned and 13 lives lost; Hinckley fire in Minnesota—1894, 160,000 acres burned and 418 lives lost; Fernie fire, British Columbia in 1908,—64,000 acres burned and 9 lives lost; Great Idaho fire, Idaho and Montana in 1910,—2,000,000 acres burned and 85 lives lost; Baudette fire, Minnesota and Ontario in 1910,—300,000 acres burned and 42 lives lost.

British Columbia is commencing to reap the benefits of its recently organized Forest Protection Service and the efficiency of its work this summer may be put to serious test. With half the timber wealth of Canada within her borders and an annual revenue from the forest which can attain a total of at least \$100,000,000, British Columbia's interest in the protection of forests from fire is almost beyond estimate.

#### How to Avoid Credit Troubles

In the lumber business there is one subject which is of interest to all branches of the trade, the all important matter of credits and collections. Never does a convention take place of lumbermen, whether manufacturers, wholesalers or retailers, at which someone it has everything to do with his success or failure. This is such a simple matter of fact that it is strange how many business men allow the question of credit to look after itself. There is only one alternative in this matter. A man must be the master of the credit situation, or it will be the master of the business and cause interminable trouble.

In the retail lumber business, credits and their management make up a large portion of the regular day's work. In good times, credits have a way of working out fairly satisfactorily, but the moment that business becomes quiet, they are a source of anxiety, unless one has them under his thumb. The best way to control credits is to see that they are kept within as small a limit as possible, consistent with securing profitable business. No better way of doing this can be found than to settle upon a definite policy as to the terms that will be given to customers, then to stick to it through thick and thin. Primarily, the matter resolves itself into one of account collecting. The Canada

Lumberman has published many articles upon this matter in the past and has enjoyed discussions upon it, as a rule, with every lumberman whom it has visited in the course of its calls upon the trade. None of the information which it has ever received has been more interesting and more thoroughly to the point than a letter which was received from the firm of D. M. Heise and Company, Stouffville, Ont. The letter is reproduced in another part of the present issue. The chief point brought out is one which every lumberman, especially every retailer, will do well to consider and then to enquire whether it can be applied to his own business, either in the form outlined, or in some modified form. Briefly, the plan of D. M. Heise and Company is the old one of encouraging cash payments. They have made their terms, cash thirty days and after that a promissory note, with interest at the bank rate until the account is paid. In some cases they have been having their troubles in making the system work out, but they have stuck to their part of the arrangement and are taking care that the other fellow does the same. There is no reason, especially under present trade conditions, why a customer who intends to act squarely should object to doing business on this basis. A customer has no right to the interest on the lumber dealer's money. If he cannot make a living by other methods, he certainly will not be able to do so by doing the lumberman or others out of the interest on the money which he owes them.

We would advise our readers to turn to the letter from D. M. Heise and Company on another page of this issue and to read it through carefully. It may be valuable to them. It will at least be most interesting. After reading this article and thinking about it for a time, perhaps some of our readers will be inclined to send us a letter for publication, giving their own views, the question is one which cannot be given too much publicity.

### Cross-Ties Purchased in 1912

A total of 16,619,362 cross-ties were purchased by Canadian steam and electric railway companies in 1912. This is an actual increase of 2,230,138 ties or 15.5 per cent. of the total number purchased in 1911. The total value of these ties at the point of purchase was \$7,469,336, being an average of 45 cents per tie. The average price in 1911 was 30 cents and the increase of 6 cents in 1912 is due to the increases in the prices of Jack pine and cedar ties which were purchased in greatest quantities in 1912.

Jack pine still heads the list, although fewer ties of this were purchased than in the preceding year. The greatest increase in the use of any one kind of wood was in the case of eastern cedar which moved up from fourth to second place on the list. The great variation in the use of this material from year to year is an indication of the uncertainty of the supply.

The use of Douglas fir and hemlock increased and these two kinds of wood retained their relative places on the list. One of the greatest decreases was in the use of tamarack which dropped from fifth to ninth place on the list. This is another wood of which the supply is uncertain.

The four hardwoods, oak, beech, maple and birch were all used in greatly increased quantities, indicating the general tendency of railways operating fast, heavy trains to reduce the use of cedar and other soft, weak, woods, and to increase the use of hardwoods, or chemi-

cally treated southern hard pine. In all, nineteen different kinds of wood were used for cross-ties in 1912.

The steam railways in 1912 purchased a total of 16,136,600 ties, 97.1 per cent. of the total number purchased in Canada. These railways used all the western larch, chestnut, beech, maple, birch, red pine and balsam ties.

The electric railways using less than three per cent. of all the ties, purchased cedar in greater quantities than any other material. Ties used by these railways are not required to carry the heavy loads and endure the excessive rail cutting that is experienced on steam railway roadbeds. Oak, and elm are the only hardwoods used by these railways, although imported hard pine is used to a slight extent. Durability in contact with the soil is of more importance for this purpose than strength or resistance to wear.

There is a noticeable increase in the use of chemically treated ties by Canadian railways. In 1911 only 206,209 ties or 1.4 per cent. of the total were treated chemically to prevent decay. In 1912 a total of 1,518,189 ties or 9.1 per cent. received chemical treatment. The Canadian railways are evidently taking advantage of the saving that can be accomplished by the use of preservative treatment of cross-ties.

### U. S. Investigating Canadian Pulpwood Question

The right of print paper made from the woods of Crown lands of British Columbia to enter the United States free of duty under the only operative clause of the Canadian reciprocity agreement is being investigated by the State and Treasury Departments at Washington. British Columbia is the only province from which Crown land paper enters the United States free. Western wood and paper manufacturers have protested to the Government that the agreement between British Columbia and the Powell River Paper Company, which sends the Crown land paper in free, are such as to impose a restraint upon the exportation of lumber and wood pulp. Such restrictions would prevent free entry of lumber, wood pulp and paper from the lands affected. The Spanish River Paper Company, of Ontario, has appealed to Secretary McAdoo to reverse the decision of former Secretary MacVeagh, denying them free entry for their paper on the ground that their agreement with Ontario imposed restrictions. This company and other Canadian concerns claim there is no difference between their status and that of the British Columbia company.

### Pulp Wood Shipments

Pulp wood shipments from stations on the Temiskaming & Northern Railway for the month of March show a total of 682 cars, containing 8,739 cords, an increase of 176 cars or 2,244 cords over the preceding month this year, and an increase of 408 cars and 5,395 cords above the corresponding month of last year. Of the 682 cars that were despatched from T. & N. O. points during the month, only 11 were consigned to American points. Ten went to Johnsonburg, Pa., and one to Suspension Bridge, N.Y. The balance was taken by three Canadian pulp mills at Sturgeon Falls, Thorold and Latchford. These figures have an especial interest as representing the strides already made in the North Ontario pulp wood industry, which is a comparative infant among the industries of the province.

# Midland, Ont.—A Leading Lumber Centre

Producing Eighty Million Feet Annually—Also An Important Consumer—  
A Town of Remarkable Industrial Activity

There are many progressive towns in Canada that owe their origin and their prosperity to the great lumbering industry, which occupies so important a place among the industries of the Dominion. The town of Midland, Ont., can be rightly classed among these. The lumbering industry has been the backbone of Midland for over forty-one years, the first sawmill having been erected that long ago on the present site of the Playfair & White mills. From this modest beginning has arisen the present well-proportioned and substantial town.

Midland has all the elements that will bring forth growth and prosperity, all the natural resources and causes for advancement. It is favored with the most important factor of all, from the manufacturing and industrial standpoint—good location, situated as it is at the lower end of the Georgian Bay, a position midway between the head of the eastern end of the Great Lakes and the sea, and being an important link in the chain of traffic from the prairies to the ocean. The harbor with its six miles of water front, formerly named "Christendom Bay," is acknowledged to be the finest and best on the Great Lakes and unusually well protected from storms. The geographical position of Midland thus gives it an excellent natural harbor, making it the chief port of the Georgian Bay and the gateway to the 30,000 Islands with a commanding grasp on both passenger and freight navigation.

Railroad transportation competition, one of the first things to attract the wide-awake manufacturer and business man, is keen so far as Midland is concerned, as the town now has the C. P. R. and the G. T. R., and will soon have the Intercolonial Railway. The Grand Trunk has a branch line terminating at Midland which comes off the main North Bay line from Orillia. The C. P. R. terminates a

line just a couple of miles across the bay at Port McNicoll and the Canada Central Railway is building from Montreal to Midland. Over its tracks, the Intercolonial and other roads will have running rights, thus giving direct seaboard communication. Arrangements are also nearly completed which will provide an electric line connecting Midland with Penetanguishene, Victoria Harbor, Port McNicoll and Coldwater. Thus it will be seen that, with its location and transportation facilities which are really the essentials, coupled with a progressive civic government, Midland, by the help of its lumber industry, has built the foundation for a great future among Canadian towns and cities.

The town itself is situated on a range of semi-circular hills in horseshoe shape with a gradual descent to the shore, giving residents an unobstructed view of the beautiful bay stretching for miles outward. Its high altitude, abundance of pure air, pure water and complete sewage system, makes it a splendid residential place. Midland is renowned for having more good substantial homes in proportion to population than any other town in the province of Ontario.

Four large sawmills and two of the biggest planing mills in the province are located in the town of Midland. Three of the sawmills are running, but the mill belonging to Mr. Norman Playfair will not operate this season. Between 75,000,000 and 80,000,000 feet of lumber will be cut in the town during the season, while nearly 20,000,000 feet will be consumed by the two planing mills. Midland is also the headquarters of several large wholesale lumber concerns, branch works of the Canada Iron Corporation and several others closely allied to the lumber trade. More detailed descriptions of each follow. Before dealing with these, however, we have paragraphed some im-

Midland Ont.—Plant of the Canada Iron Corporation

portant industrial facts relative to Midland which will interest readers of the Canada Lumberman.

Midland, Ont.

Incorporated a town in 1890.

Population 6,500.

Assessed property value \$2,500,000.

Owens its own water, electric light and power systems.

Has shipbuilding yards from which steel tugs, boats and other craft are turned out.

Has coal docks handling from 90,000 to 100,000 tons of coal per year.

Has the largest wireless station in Canada.

Will have a dry dock this year costing over \$250,000, to be built in units, the first unit having a lifting capacity of 1,200 tons.

Is the head office of the Simcoe Railway and Power Company, also has offices of the R. & O. Navigation Company and Fort William Coal Dock Company.

Has a shipbuilding and wrecking company and plant.

Is the headquarters of the Dredging Company with four dredges and steam submarine drill plant.

The elevator capacity immediately in and surrounding Midland is something over 9,000,000 bushels of grain and the warehouse capacity is almost equal to that of the largest city. During the winter months this storage keeps the railway and other employees busy shipping and handling the grain and freight trade east and west.

### Georgian Bay Shook Mills, Ltd.

In 1899, the Georgian Bay Shook Mills were established, under the management of the late Mr. P. Potvin, for the purpose of manufacturing box shooks. In order to make economical use of the lumber and not to use up the better end for the lower grade products, the plant gradually branched out into the manufacture of planing mill

Log Towing Tug owned by Manley Chew

products. Thus the foundation of a successful business was well and carefully laid, from the beginning, so that, at the time of Mr. Potvin's death in 1907, the plant had already come to include one of the large planing mills of Ontario.

After the death of Mr. P. Potvin, his son, Mr. F. P. Potvin, became president and general manager, and the business continued to grow in size and output until it is now the largest plant in Canada manufacturing planing mill products and box shooks; shipping principally in car lots to all parts of Ontario, as well as Quebec and points west to British Columbia.

Box shooks constitute one of the principal products of the plant, nearly 300 car load lots being manufactured and shipped in the course of a year. The box factory is thoroughly equipped with the latest and most improved box manufacturing and printing machines. The lowest ends of material are worked up in this department to advantage, and the refuse furnishes the fuel for power.

The planing mill products have established a reputation for high grade and up-to-date designs. Something like 450 carloads of all kinds of building materials are shipped annually, consisting of such items as factory frames for some of the largest plants in Canada, house building materials of all kinds, trim, stairs, columns, doors, sash and hardwood finish.

The veneered door plant alone claims to manufacture more veneered doors than any other plant this side of the United States border. They are now undertaking the manufacture of a special low-priced high-grade veneered door to meet the competition from United States doors.

The planing mill plant is up-to-date in every department, and is equipped throughout with all the latest improved woodworking and sash and door manufacturing machinery on the market. The product is in the front rank for design and finish, and is popular with the trade generally.

Materials are handled in this plant with great economy, and

Midland Ont.—Manley Chew's Mill

Midland; Ont.—Playfair &amp; White Mill

Midland, Ont.—Chew Bros. Mill

utilized to the greatest possible extent. There is practically no waste of good stock, as small pieces of apparently no value are worked up into match blocks, while the sawdust, being fine and dry, is in good demand for certain other large industries.

The company operate a complete modern sawmill under the name of The Thunder Bay Lumber Company, at Thunder Bay, Ont., near Lafontaine, and own large timber limits which contain some of the choicest maple and beech stock in the country. In this way they manufacture from the tree to the finished product. This applies particularly to their native hardwood flooring in maple and beech. The reputation of "Midland Brand" is well known for high-grade, workmanship and finish.

Located alongside the main line tracks of the Grand Trunk Railway, with three sidings running through the yards, and fronting directly on the Georgian Bay right at the entrance to Midland Harbor, with their own docks, the plant is in a position for immediate shipment by either water or rail. Shipments for the West are loaded from scows on the C. P. R. steamers at Port McNicoll, three miles away.

The company maintain their own fire fighting apparatus, including a high duty pump, running night and day, connected directly with the Georgian Bay.

Besides their own docking facilities the company also maintain their own tugs, scows and other water craft for the purpose of forwarding lumber.

About two hundred hands find employment in the planing mill and box factory the year around, and thirty-five more are required for the sawmill.

Sales offices are maintained in such places as Toronto, Guelph, and Winnipeg, and the trade is especially supervised by their traveling representative, Mr. W. F. Pelz, 1263 Dufferin street, Toronto, formerly of the W. F. Pelz Lumber Company, who is well known among the trade. G. C. Seibert, Midland, is in charge of sales.

### Chew Bros.

The firm of Chew Bros. have a thoroughly modern mill located in the town of Midland, and have both rail and water facilities right at their mill door. The average output of the mill is from 15,000,000 to 20,000,000 feet of lumber per season, and from 8,000,000 to 10,000,000 lath and 1,000,000 pickets.

The main building is of frame construction. On the first floor are located all the shafting, pulleys, belting, carriers, etc., and on the second floor, one single cut No. 3 Allis band, one double cut band and outfit, and a No. 3 Wickes gang, all equipped with 14 and 15 gauge saws with steam niggers and loaders. Their lath mill and bolter was supplied by P. Payette & Company, of Penetang, and does splendid work. The third floor is used as a filing room for band, gang and circular saws.

The firm use two engines of 340 horse power and have a boiler house about 40 x

Midland, Ont.—Plant of Benson and Bray, Limited

45 feet, constructed with concrete floor and steel roof in which are five boilers of 450 h.p. They have their own electric plant and in addition are machine and blacksmith shops. The lumber yard has a capacity of 20,000,000 feet with eight trams extending from the mill the entire length of yard, for conveying lumber to piles.

For shipping facilities they have a water dock capacity of from two to three million feet, also two railway sidings extending the full length of the yard, on which to place cars and load material at the least possible cost. There is also an additional siding for the purpose of loading mill refuse, such as slabs and edging, to secure proper seasoning, and for the storage of which they have one of the best yards in the province. All worthless refuse is consumed in a large refuse burner.

The firm of Chew Bros. is now composed of Messrs. Edwin Letherby, the Geo. Chew Estate and Manley Chew. The late George and Thomas Chew constituted the firm for over fifteen years prior to December, 1900, at which time, the late George Chew became sole owner. Towards the latter part of February, 1901, he sold out to his son, Manley Chew, and Edwin Letherby, who carried on the business for two years. Towards the close of 1903, the late Geo. Chew again became interested, and in the spring of 1903 Albert G. Chew secured an interest. Mr. Geo. Chew, one of the best known lumbermen of the Georgian Bay and the founder of the business, died in November, 1911.

Mr. Edwin Letherby entered the employ of Chew Bros. as bookkeeper in December, 1885, working under salary for fifteen years, till

Midland Ont.—Plant of the Georgian Bay Shook Mills

he became a partner, in 1900. During those years the business has grown from an output of 20,000 feet per day to its present capacity, and under his able management is steadily expanding. Mr. Letherby firmly believes in a greater Midland and that its future will be one of great prosperity and steady growth. He has served the people of Midland as chief magistrate, being mayor for two terms, 1908 and 1909, and for years previously was actively identified with municipal work in the town. He is a man of strong executive ability and great capabilities.

Mr. Manley Chew owns and operates several other mills and therefore is able to devote only a portion of his time to the interests of Chew Bros. From time to time he renders invaluable services in the examination of timber limits and in giving attention to saw-logging operations, of which he has an extensive practical knowledge.

The firm started their mill this year on April 21st and will have a full season's operations on their own stock and on contract stock.

### Playfair and White

In 1895 Mr. James Playfair, who had for a number of years, up to that date, carried on a successful lumbering business at Collingwood and Sturgeon Bay, purchased the old Cook mills at Midland, originally built by H. H. Cook. This was the beginning of the present large plant. The mills were remodelled, docks built and sidings laid down. In 1898 Mr. D. L. White became associated with Mr. Playfair in the business, the name of the firm changing to Playfair & White. Mr. White was already widely known in the Georgian Bay district as a successful lumberman.

The saw mill located near the Grand Trunk Station at Midland, has a capacity of 125,000 feet of lumber and 60,000 lath per day. The machinery of the mill comprises two double cutting band mills and a resaw. The bands being one of the Wm. Hamilton and one of the Garland make. There are six boilers and three engines of 650 h.p. The company operate an electric light plant for the mill and yards.

The yards comprise almost 25 acres and have water frontage for piling 10,000,000 feet, and railway sidings for 10,000,000 feet more. The yards are so conveniently arranged that shipments can be made expeditiously from any part by either rail or water. The fire protection system is most complete, having a separate hose arrangement distinct from the town's fire appliances by which, at a moment's notice, immense streams of water can be diverted to any point on the premises.

At the beginning of this business, only one or two tugs were required, chiefly to handle the company's own logs. This was the nucleus of the Midland Towing and Wrecking Company, comprising some of the largest and most powerful tugs on the Upper Lakes, which has since been merged with the Inland Lakes Company. The wrecking plant is complete for handling the largest class of wreck-age, having steam pumps, lighters and gear of all descriptions which have, on different occasions, rendered good service to the Lake Marine.

The season's output of lumber at the Playfair & White mills will be almost 20,000,000 feet.

### Manley Chew

The mills of Geo. Chew & Son, Midland, Ont., were built in 1899. The firm at that time were composed of Messrs. Geo. Chew, A. G. Chew and Manley Chew, the former retiring from the firm shortly after. Mr. Manley Chew being sole owner and manager for the past twelve years.

The present mill building at Midland is 65 x 125 feet, with boiler house 30 x 40 feet. The boiler house is built of brick with iron roof, is practically fireproof and contains a battery of four boilers. A Waterous engine furnishes power to drive two double cut band saws, combined gang edger, lath and picket mills, as well as all the minor parts of an up-to-date saw mill. There are good shipping facilities by both water and rail, the dock holding 5,000,000 feet of lumber and 3,000,000 lath, with a depth of water of from 14 to 30 feet. There is a railway yard, with room for 13,000,000 feet, three railway switches, four trams and an excellent drying situation. Two years ago a saw-dust house was put up in connection with this mill and the trimmer house was also extended.

Besides this mill at Midland, M. Chew also owns a large mill at Tannerville, located several miles from the town. This is also a modern mill with double cutting bands and gang edgers. Each of his mills has a capacity of 100,000 feet daily.

This year, Mr. Chew's total output will run from 25,000,000 to 30,000,000 feet, quite a percentage of which will be hardwood.

Mr. Chew is a resident of Midland and one of her most prominent citizens. He is a man of wide executive ability and is ever found giving his aid to all those plans that tend to promote the best interests of the town in which he lives. His position in the industrial world is a high one and he is justly popular with his many associates

and friends. For the term 1908-1911 he represented Simcoe in the Dominion Parliament.

### Benson & Bray, Limited

One of the most modern and up-to-date planing mills to be found in Canada has recently been completed at Midland, Ont., by the firm of Benson & Bray, Limited. Messrs. Benson & Bray, two of the principals of this firm, started in business in a very small way in 1905 on Sixth street. At that time they had only several small woodworking machines, run by a 6 h.p. gasoline engine. Their progressiveness, however, brought them much business and within two years from that date they were obliged to move to a larger factory, on the corner of Front and Third streets. In a year's time this factory also had to be enlarged, and year by year they progressed until in 1912 it was found absolutely necessary to erect a much larger building in order to take care of their growing trade, the present building being the result. The new building is of two-storeys, 74 x 250 feet, built entirely of fireproof, full mill construction with automatic sprinkler system throughout the building and vacuum steam heating equipment. They have a floor space on the two floors of 28,000 feet. The ground floor has a 6-inch solid cement floor from end to end which facilitates the handling of trucks.

Among the machines on the ground floor of the new plant, are to be found a No. 401 S. A. Woods Matcher which is one of the most up-to-date of its kind. This machine has a capacity of 200 lineal feet per minute with an automatic feeding table attached, which enables the company to manufacture stock at the rate of 200 lineal feet per minute. Some of the other machines to be found on the ground floor are an S. A. Woods No. 107 B. inside moulder, a Berlin double sur-facer No. 177 and a Berlin band resaw No. 289. The second floor is fully equipped with an E.-B. Hayes Dowell door machine with large capacity, also a Berlin Royal tripple drum sander, a Matterson No. 131 belt sander and a Buss No. 8 ball bearing shaper.

The power plant is located at the end of the building separated from the other part by a double fireproof wall of full mill construction. The boiler house is 40 feet square with a 25-foot ceiling and has a reinforced concrete flat roof without supports, with large fire-proof shavings vault in connection. Two Goldie & McCulloch boilers of 120 h.p. each, together with a 300 h.p. Wheelock engine supply the power for the mill.

One of the special features of the mill is the accommodation provided for the employees. On each floor are to be found the latest plumbing appliances which prove a great convenience to the men.

The building is equipped with an elevator service to facilitate the handling of their product and large dry kilns are to be found in connection with the same.

The shipping facilities are ideal. Private switches run down each side of the mill connecting with the main line of the Grand Trunk and located within a hundred yards are the company's docks, whereby they can make quick shipments by water to different points in the country. At the present time they are devoting their attention to the manufacture of sash, doors, frames, interior finish of all kinds, hardwood and veneer work. It is their intention, however, to specialize on doors in the very near future. All their fancy woods are imported direct from foreign countries and shipments are now coming in from Russia and South Africa.

Special facilities are to be found for custom dressing, and at the present time four cars at one time can pass through the mill. In April of the present year this concern was incorporated as a limited liability company with capital of \$200,000. The former owners taking into partnership with them two well-known men in the lumber field. These are Mr. Dwight J. Turner, of the Turner Lumber Company, Limited, Toronto and Mr. C. M. Tremere, who also has had a wide experience in saw and planing mill work. The personnel of the company at present is:—President, Jas. A. Benson; vice-president, D. J. Turner; secretary, C. M. Tremere; treasurer, M. J. Bray.

### Canada Iron Corporation, Limited

Of the many industrial enterprises of Simcoe County, Ont., and they are varied in their scope, there is none that holds a higher position in the world of industrial development than does The Canada Iron Corporation, Limited, with furnaces and machine shops located in Midland. The company control mines and plants in four provinces of the Dominion. The Canada Iron Corporation, Limited, was organized and incorporated under Dominion Charter in 1909, with a capital stock of \$10,500,000, and to-day controls twelve plants, the larger ones being located at St. Thomas, Ont.; Fort William, Ont.; Three Rivers, Que.; Hamilton, Ont.; Midland, Ont.; Londonderry, N.S.; Radnor, Que.; Drummondville, Que.; Torbrook, N.S., and Bathurst, N.B., with head offices in Montreal. The products manufactured by the company are pig iron, foundry, Bessemer and malleable steel, cast iron pipe, hydrants and specials for gas and water,

ingot moulds and castings for all purposes, mooring bollards for concrete and wooden docks, hoisting machinery for all purposes, car wheels, with or without axles, band wheel grinders, etc. In fact, nearly everything in iron and steel.

The Midland plant is one of the largest of the company's holdings. This plant was established in 1900, and as it stands to-day is a model engineering works of the higher order. The plants, which in reality consist of two in their nature and construction, are built of brick, iron and concrete. The first furnace that the company built at Midland had a capacity of 115 tons daily. Several years ago the second furnace was completed, giving the plant a capacity of 465 tons, and the re-modelling of the old furnace increases the capacity to 500 tons daily. The company have their own docks and boats, so that the ore from the mines is brought direct to the furnace plant. The shipments by both rail and water amount to over 425,000 tons annually, this enormous freightage being equal to the total shipping of many of the middle sized cities of the country. The machine shops and foundry are separately located from the blast furnaces, and are modern in their construction and fittings, and consist of a group of brick, iron and concrete buildings, in which are located the machine shop, foundry, boiler house, pattern shop and several out-buildings. These are the blast furnaces, covering about forty-four acres, but the company own several hundred acres adjoining, for extension purposes. In the several departments of the plants employment is given to from 300 to 350 skilled laborers, each demanding the price of expert workmanship, thus making the pay roll of the company one of the largest, if not the largest of any concern in Simcoe County.

Mr. Geo. D. Drummond is the manager and superintendent of the Midland plants. He ably takes care of the company's interests, is a skilled engineer and thoroughly understands the iron and steel business in all its branches. He is a son of Mr. John J. Drummond, the able general manager of the long line of blast furnaces operated by the company. Such interests as these make for progress and prosperity and the citizens of Midland are justly proud that such immense interests are located in their midst.

#### David S. Pratt

A resident of Midland who has been prominently identified with the lumber industry in that section of the country for many years past is Mr. David S. Pratt. Mr. Pratt controls large timber limits in the north country and gets his logs sawed by contract by one of the mills in the town of Midland. This year he will handle over 2,000,000 feet of different kinds of lumber besides his wholesale business. He also has a large retail yard in the town, through which he handles lumber and builders' materials. The yards and sheds are splendidly equipped and arranged with every convenience for prompt shipments of all orders, no matter how extensive. Mr. Pratt is also the manager of the Midland Coal Dock Company, where all the coal boats are unloaded. This concern has a storage capacity in Midland of 30,000 tons and last season handled upwards of 100,000 tons of coal.

In commercial, industrial and financial circles Mr. Pratt occupies a prominent position.

#### Mayor H. J. Craig—The Lumbermen's Friend

One of the best known men in Midland, and a man who has done excellent work in promoting its welfare, is Mr. H. J. Craig, who has been a resident of Midland for nearly thirty years, and is manager of the Standard Bank in that town. He has been closely identified with the lumbering industry of this section from a financial standpoint. At present Mr. Craig is the chief magistrate of the Georgian Bay town and also occupied the mayor's chair in 1911 and for many years previously has been closely identified with municipal work. Mr. Craig is, by the way, one of the oldest subscribers to the Canada Lumberman, having taken the paper continuously for twenty-five years.

#### H. H. Hettler Lumber Company

The firm of H. H. Hettler Lumber Company, the well-known Chicago lumber merchants, have Canadian offices in Midland, Ont., with Mr. Walker as their Canadian manager. This company own extensive limits in the Dokis Indian Reserve on the French River, and their logs are sawn by contract at the Midland mills and in the vicinity. Last year they cut twenty-eight million feet and twelve million pieces of lath.

#### Midland Engine Works

The business of the Midland Engine Works was originally established in 1895 by Messrs. J. Bruce & Samuel Hanley, and has been conducted most successfully since its inception. They manufacture marine gasoline motors and saw mill engines, car wheels, steam launches and many specialties in iron and steel. The plant is composed of a group of substantial buildings, which together with

the yards cover over an acre, located near the water front and connected with the Grand Trunk Railroad by sidings, giving the best of transportation facilities. In the industrial, commercial and financial life of Midland, Messrs. Hanley hold a prominent position. They believe in the future of their town, that it will become a large centre of industry and to this end they are ever found giving their aid to promote its welfare.

#### Midland Shoepack Company

A factory located in Midland which has a close connection with the lumber business is that of the Midland Shoepack Company. The proprietor is Mr. A. W. Yager, a resident of Midland for a number of years and a man who has had a wide experience in shoe and shoepack manufacturing. Mr. Yager started the present business in Midland in 1904, on Toronto street. The business increased to such an extent that two years ago it was found necessary to secure larger quarters and the present large and up-to-date factory on King street is the result. This concern is selling shoepacks to the lumber trade throughout the country from coast to coast. Last year Mr. Yager put on the market a special pack which does away with the necessity of the draw string. Although dispensing with the draw string it relieves the strain on the sewing, so that it is impossible for the pack to rip, which is a common occurrence with the ordinary pack. He has secured a patent on this pack which is already to be found in different centres all over the country and is proving very popular with the lumber and construction trade.

#### Freeman Lumber Company, Limited

This company, with head office in Midland, has limits in the townships of Freeman and Conger, to the extent of 33 square miles, consisting principally of pine and hemlock. It gets its stock cut by contract at the Midland mills and this year will market over 2,000,000 feet. The company was incorporated in 1908 and the officers are:—J. Hill, president; Fred G. Hill, vice-president and general manager; C. M. Tremere, secretary-treasurer.

#### A Valuable Forest Map

The first installment of what promises to be an excellent forest atlas of North America has been published by the United States Forest Service, under the direction of Henry S. Graves, chief forester. Part one, dealing with pines, has been prepared by Geo. B. Sudworth, Dendrologist. The atlas contains 36 duplicates of the map of North America, upon each of which is shown in green, the area in which a particular species of pine is to be found. The ranges outlined for the pines are based upon all available published and unpublished data of reliable character. The information has been drawn largely from unpublished field notes, recorded observations and reports of Forest Service officials, engaged in the exploration, surveying and administration of the 163 different national forests now established, which aggregate 187,406,376 acres.

Extensive and continued lumbering operations with attending forest fires have so changed and in some cases exterminated, parts of the original stand of most of the North American pine areas as to render it impracticable to show the commercial distribution in connection with its botanical range. These maps, therefore, indicate only the general occurrence of species within the prescribed areal limits and have no reference to the density or continuity of growth.

Contrary to popular belief, our present knowledge and published records of the geographic ranges of North American trees is still very incomplete. Lack of space has doubtless prevented many writers from giving, with other essential facts about trees, more than very general information regarding range. It is true, also, that the meagreness of information may be due to some extent to a disregard of the value of exact range data. For the forester's purposes, however, as it would seem also for other scientific purposes, it is highly important that much more accurate information be made available, and the simplest means of presenting this information is in the form of maps.

The atlas is a work which will involve a vast amount of careful study and co-operation on the part of those who have undertaken it and all others whom they can persuade to assist them. It is unquestionable that the information, thus secured and compiled in readily accessible form, will be of the utmost importance to all who are interested in the forest resources of North America.

#### Rapid Destruction of Saw Mill

The Wisconsin Lumber Company's saw mill located at Deering, Mo., was totally destroyed by fire on April 17th. The fire was discovered at 12.10 p.m. and the mill plant was completely destroyed in thirty minutes. The warehouses, tenements and commissary, also lumber yard containing eight million feet of lumber, were saved. Loss \$75,000; fully insured. The mill will be rebuilt immediately in an up-to-date manner, and will probably be in operation by October 1st.

### A New Principle in Car Stakes

The accompanying illustrations give an excellent idea of a car stake which Mr. Martin Kehoe, North Bay, Ont., is at present bringing to the attention of railroad companies and the railway commissions in connection with the lumber shipping business. The difficulty in securing car stakes and also the frequent disputes regarding

them, between railway companies and shippers have always been a source of loss. Frequent attempts have been made to solve the problems connected with this situation. Many of those who have looked into the car stake illustrated herewith believe that it will go a long way towards simplifying matters and that it would be a great benefit to the trade if it could be generally adopted.

In staking a flat car with round stakes, according to the present methods, each car involves the destruction of eight young trees. Wiring and staking in a timber country costs on an average of \$2.50 per car, placing no value on the trees from which the stakes are made. An additional feature, making the adoption of some practical car stake of the utmost importance, is the danger to life, which present methods involve. In order to unload logs with wooden stakes, it is necessary for one man to stand in front of the car and cut the stakes. This operation frequently results in injury to the workman, and sometimes death.

Millmen prefer loading flat cars with lumber after the car has been staked, but in a great many cases refuse flat cars and order box cars, so as to avoid the troubles incident to staking. It is claimed by those who have looked into the stake shown in the accompanying illustrations that it will serve the purpose of any shipper

who may be making his shipments on flat cars. It will be seen from the illustration that the stake, when not in use, lies in a groove on the car, flush with the rest of the platform. A snow plough or any other class of machine can therefore be loaded upon a flat car just as simply as one which is not equipped with this stake. Practically, this is the first patent car stake that could be used for any general purpose. It is made of angle iron and has cross-chains attached and

can be put in position in one minute. The illustrations explain the working of the stake clearly.

Mr. Kehoe is taking steps to bring this stake to the attention of the railway commission and also of the railway companies. In this effort he has already met with considerable success.

### St. Lawrence Company's Developments

The St. Lawrence Pulp & Lumber Company, Gaspé Bay, P.Q., are offering bonds for public subscription, consisting of \$3,000,000 first mortgage sinking fund, gold bonds at par. Mr. R. F. Whitmer, president of the company, is also president of the Parsons Pulp and Lumber Company of West Virginia, The Champion Lumber Company of North Carolina, and Wm. Whitmer & Sons, incorporated, of Philadelphia. Wm. Sharp, vice-president of the company, is president of the Jessup Paper Company of Philadelphia, and the Kenmore Pulp and Paper Company. The proceeds of the bonds issued will be used for paying off all indebtedness on the property and furnishing ample working capital, also to increasing the capacity of the present lumber mill (now about 80,000 feet per day), to erecting a pulp mill, constructing a logging railroad and making other necessary improvements in the efficiency of the property. When these improvements have been fully completed it is expected that the annual output of lumber will be in excess of 30,000,000 feet, and the output of pulp, about 30,000 tons per annum. The pulp mill will cost approximately \$1,000,000 and its location and erection will be in charge of Hardy S. Ferguson, of New York. Other mills will be erected at a later date which will bring the output of lumber up to 50,000,000 feet at least. The timber holdings of the company include the following stands:—1,212,000 feet of balsam valued at \$3 per thousand; 969,600,000 feet of spruce valued at \$3 per thousand; 121,200,000 feet of cedar valued at \$2 per thousand; a total of 2,302,800,000 feet of merchantable timber valued in all at \$6,787,200; also 4,040,000 cords of pulpwood at a minimum value of \$1 per cord; bringing the estimated total value of the timber stand up to a minimum of \$10,827,200.

### Laurentide's Proposed Extensions

Ottawa, May 7th (Special to the Canada Lumberman): The proposed extensions to the plant of the Laurentide Pulp Company, at Grand 'Mere, Que., which were announced in the Canada Lumberman recently are to cost approximately \$1,000,000. Application has been made to the Department of Public Works to construct a dam across the St. Maurice River, at Grand 'Mere. The dam is to be a concrete structure with sluice gates and a spillway 1,900 feet long. It is understood that the application will come before the Cabinet in a few days and will be granted. The enlargements will mean permanent employment for a large staff of extra men. The construction of the dam will improve conditions on the river greatly, by doing away with the Grand Pile Rapids about twelve miles above Grand 'Mere.

### National Forestry Convention

The Canadian Forestry Association have announced July 7th-9th as the date of the Dominion Forestry Convention to be held in Winnipeg. Arrangements are under way for what promises to be one of the most representative and successful gatherings ever held in the West. Delegates from all parts of Canada, and from many of the States of the Union, will convene in the Industrial Bureau Hall as guests of the Provincial Government and the City of Winnipeg, to discuss the problems of the forest resources of Canada. The programme which is now in preparation, will be a most interesting one. Particulars of the programme and of railway rates, etc., may be had from James Lawler, Canadian Building, Ottawa.

### Changes in Harvard Forestry Course

The Harvard School of Forestry, Harvard University, Cambridge, Mass., in their official register, volume 10, state that beginning with the year 1913-14, the Harvard School of Forestry will offer general training in forestry as heretofore, followed by special training in one of the several branches of the profession. A general training alone will no longer be sufficient to secure the degree of master of forestry. The curriculum will hereafter divide the two years' programme between a first year devoted to the study of the subjects necessary for a broad grasp of technical forestry, and a second year to special training or research in one of the following fields: (1) the operations of forests; (2) wood technology; (3) forest entomology; (4) dendrology. The first year's work will extend from the first week in July until the middle of the following June. The work of the second year will be located wherever the specialty chosen by the student requires, either wholly or in part on the Harvard forest, or at Jamaica Plain or in part in some lumber region where a particular investigation is to be carried on.

# Ontario Retailers Doing Well

**Building Activity Continues  
Advanced Prices Holding  
a Good Season in Prospect**

The retail lumber trade in Ontario does not seem to have been experiencing any falling off in business during the last month, as might have been expected from a number of reports which were received lately from wholesalers and manufacturers, who, for a time, were uneasy about the outlook for the coming season. Apparently, there has been no development which would satisfy retailers in curtailing their purchases. The reverse, in fact, is probably the more general condition, as reports received by the Canada Lumberman are largely to the effect that trade is exceptionally active, payments are fairly prompt, demand is strong and stocks are going quickly into consumption, the result being a volume of business considerably in excess of that of a year ago. Following are some of the reports which have been received:—

## Everything Active at Newmarket

Editor Canada Lumberman: Newmarket, May 5th.

The past six weeks have been very busy ones with us and our sales have been unusually heavy for this time of year. Of course, the severe wind storm of Good Friday was instrumental in causing this demand. The factories in our town are growing rapidly, and housing space is at a premium, which gives promise of continued activity for the whole season, as there is considerable building of a speculative nature under way, as well as many handsome structures intended for homes by the builders themselves.

As we stocked up heavily last fall there have been no serious inroads made upon our stocks as yet, and, although we raised the prices from four to five dollars per thousand for the rougher grades, it would appear that further raise will be necessary when we begin to purchase to replenish our stocks. As there are several portable mills cutting up small bushes in the vicinity, it is extremely difficult for us to hold the price of hemlock at a level where a reasonable profit is assured.

Collections on the whole are none too satisfactory. The supplies for the buildings within town are purchased almost entirely by the contractors and builders, and they, as a rule, have to be carried along by the dealer until they have buildings completed before they are prepared to make any reasonable payment. The farmers we find good cash pay, usually coming with the cash in their pockets for all purchases.

P. W. Pearson.

## Bowmanville Trade Prospering

Bowmanville, Ont., May 5th, 1913.

Editor Canada Lumberman:

Retail trade conditions are very good in this section, in fact the best they have been for years, and the outlook seems good for a continuance of these conditions during the present season at least.

The demand for lumber and building material of all kinds is very good, stocks are fairly good, although the demand for 10 and 12 ft. lengths in undressed material is rather greater than the supply, and spruce and hemlock are taking the place of pine for many purposes, notwithstanding the sharp advance in hemlock again this spring. Prices are, of course, tending upwards all the time, and preventing those of limited means from doing a great deal of building. One or two syndicates, however, are taking the place of the individual, and erecting several blocks of houses which are an absolute necessity on account of the growing condition of the town, and with waterworks and sewerage development now under way this seems likely to be maintained. Collections are not as good as they might be, but with the added influx of population, and the good wages which are being paid generally, this difficulty will probably be solved later on.

McClellan & Company, Ltd.

## Healthy Business Conditions at Hamilton

Editor Canada Lumberman: Hamilton, Ont., May 2nd.

The lumber demand is good. Plenty of work is offering to keep all busy at present. The demand would have been much greater had not some check been given to the building by loans becoming more difficult to procure.

We think that this feature has been a move in the right direction as the tendency to build rashly without counting the cost was becoming too strong. All legitimate building will go on as before and there will be plenty of work to keep builders in all lines actively engaged for the season.

Stocks at present are large and travellers may not be finding car lot orders for lumber so plentiful; this is because the yards generally have been stocking up, anticipating a brisk demand in the early

spring. Prices will remain firm as there is plenty to do. Many permits are being taken out and all labor is high in price.

D. Aitchison & Company.

## Business Doubled This Year

Editor Canada Lumberman: Exeter, Ont., May 3rd.

We find trade generally good. Take our business compared with the first four months of last year we find we have doubled our business. This has partly been owing to the wind storm of March 22nd, and the demand for lumber and shingles has been large.

We might also state that we find our shingle trade to be on the increase, owing to steel shingles and metal roofing not giving satisfaction, which people are now beginning to find out.

We have all the work we can handle and are receiving more from our wholesale trade than we can attend to at present.

The stock, we find, is about as usual, with the exception of hemlock, which is scarce and very high. We are using spruce and mill culls instead. The cost of building operations will be at least ten per cent. higher than last year.

Wages of all kinds have advanced. Collections have been very slow and money has been hard to get, but things are easing up a little in this respect.

The Ross Taylor Company, Ltd.

## Stocks Low at Snow Road

Editor Canada Lumberman: Snow Road, April 29th.

Stocks of all kinds of lumber are very low in this vicinity, and the demand is very sharp. The prospects for large building operations in the nearby cities and towns have not been better for years. Our stock was all sold early, and we have contracted for this year's cut of hardwoods. Owing to the C. P. R. and Canadian Northern Railway building near here, the demand for ties and cull lumber is better than we have ever seen before. Hardwoods are not in quite as good demand with our usual customers, owing to conditions in the United States and the free entry of foreign lumber, our largest customers being able to buy Michigan maple and birch for less money laid down in their yards than we like to take for it in our yard. The same will apply in the case of southern woods. These odd leaks in our tariff wall should be remedied at once.

The Chandler-Jones Lumber Company.

## Hemlock and Shingles Scarce at Strathroy

Editor Canada Lumberman: Strathroy, Ont., May 3rd.

There is a lot of building going on in Strathroy, although lumber has taken an advance of \$3 per thousand. Laborers who were only getting from 15c to 20c an hour last year are now getting from 20c to 25c an hour. Carpenters who were getting from 20c to 25c an hour are now getting from 25c to 30c; masons who were getting 30c are now getting 50c, the reason being that there are two large buildings being erected here along with numerous small jobs.

I am finding it very hard to get 1-in. x 10 ft. or 12 ft. hemlock stocks, without taking resawed plank. Hemlock and B. C. shingles are the only material I have any trouble in getting. I have had a car of B. C. shingles on order for over a month and have not received the invoice yet.

R. W. Nicholson.

## Demand Exceeding Supply at Stouffville

Editor Canada Lumberman: Stouffville, Ont., May 3rd.

The spring trade is exceptionally good this season. The demand exceeds the supply, or at least we cannot keep enough stock on hand, in shingles at least. Prices are good and collections are better than for a few years. The wind storm on Good Friday certainly put business in the way of the village and country lumber dealer. It is very hard, in fact almost impossible for us to get the proper stock of lumber for our trade.

We are doing business on a 30-day cash principle and it is working nicely. The customers can pay in thirty days, as well as in ninety days, in most instances, but it is the education on cash payment which they need to make business more pleasant.

D. M. Heise & Company.

## Niagara Trade Expecting Good Year

Editor Canada Lumberman: Jordan Harbor, Ont., April 30th.

The outlook in this district was never better. We anticipate an exceptionally good year for the lumber business. The retailers are fairly well supplied with lumber and prices are considerably higher than last season. We do not see anything to effect building operations at the present time. The fruit crops are practically assured

and that is what is largely relied upon in the Niagara district. On the whole the outlook is very promising for this season. Wm. Fretz.

#### Business Dull at Guelph

Editor Canada Lumberman: Guelph, Ont., May 5th.

We look to the west for two-thirds of our business. As everybody knows, things are very bad in the west at the present time, and it has only left us the Ontario market. As we are not very well organized in Ontario we are slacker than we have been in fifteen years. Conditions around Guelph are the poorest they have been for some years. The expected boom did not materialize.

Robert Stewart Limited.

#### Good Conditions at St. Catharines

Editor Canada Lumberman: St. Catharines, Ont., May 6th.

Trade conditions are good here and the outlook for business during the summer is also good. There is a scarcity of hemlock lumber and prices have advanced very considerably. Pine lumber has also advanced but not to the extent of hemlock. Collections are somewhat slow but we expect they will improve in a short time.

Henry Wise.

#### Outlook Bright at Brantford

Editor Canada Lumberman: Brantford, Ont., May 6th, 1913.

We find the demand for building material is about normal and prices are gradually getting better. Building operations are just opening up and at present the outlook is as good as in 1912, which was a record year. Hemlock and the low grades of pine are very scarce but the better grades of pine are to be had at a good price.

Mickle, Dymont & Son.

#### Better Prices at Dorchester Station

Dorchester Station, Ont., May 3rd.

Editor Canada Lumberman:

In our locality there are prospects of a good season in the building trade. There has been an exceptionally good demand for shingles this spring. In the retail trade we are getting better prices. In the past we have been selling too close to cost. Dealers are beginning to realize the folly of such a policy. I find collections better than usual.

E. A. McCann.

#### Good Outlook at Hagersville

Editor Canada Lumberman: Hagersville, Ont., May 3rd.

Present trade conditions in this locality are very good. The outlook for business during the summer is pleasing. Quite a number of buildings are being erected, hence there is a good demand for lumber, etc. The prices are considerably higher than they were a year ago.

A. & W. J. Bailey.

#### New Hardwood Grading Rules

The grading rules of the Hardwood Manufacturers' Association have been revised in accordance with the changes authorized at the recent annual meeting held in Cincinnati on February 4th and 5th. Copies of the new book are now in the hands of the members and are also ready for general distribution.

The revised rules are effective from May 1, 1913, and embody the latest ideas in the inspection and grading of hardwood lumber.

#### R. Truax & Sons New Factory

The accompanying illustration shows the new factory which will be erected by R. Truax & Son, at Walkerton, Ont. The illustration does not give a correct idea of the length of the building, as a section in the centre of the illustration had to be omitted, in order to make it appear to advantage in our columns. The building will be 300

feet long and 60 feet wide. There will be only one storey. The foundation and floor will be of cement and the walls of brick, 12 feet high, with lantern roof as shown in the illustration.

The equipment of the plant will include the machinery in the present plant, viz., 72 machines, practically all new and up-to-date moulding machines; also a complete set of boring machinery, blind and sash machinery. The company are also building a dry kiln, which will hold, when completed, about 105,000 feet of lumber. The kiln will be of solid cement and iron. When these buildings have been completed the company will be equipped with a thoroughly modern and up-to-date plant.

#### The Philosophy of the Cash Price

Editor Canada Lumberman: Stouffville, Ont., May 7th.

We started in business last November, taking over Mr. J. A. Heise's business here. Therefore did not have much experience in account collecting up to that time. The writer however was book-keeper and yard manager for J. A. Heise, and had all the collecting to do. We made our terms then, but they were not lived up to, but we set our terms now, as cash 30 days, after that a promissory note with interest at bank rate until paid.

Our reasons were:—

1st. To insure ourselves enough ready cash to run the business.  
2nd. That the majority could pay as well in 30 days as in 90 days.

3rd. We found that some people were getting interest on money in the bank, while we had to pay interest to run our business.

4th. That we could do business cheaper on cash than credit.

Some of the disadvantages of credit are as follows:

1st. Give some people an inch, and they will take an ell, or they will never pay.

It makes it necessary to keep a bunch of practically dead accounts in your ledger which you are loafing over all the time, thus wasting time and brains.

It costs MONEY to hold customers over on the books.

It will cause more worry and work than all the other parts of a business.

Credit very often means creditors, which is not any too good, in some instances. We certainly have our troubles in making this new system work out, but we stick to our part of the bargain, and we also see that the other fellow does his part. We also refuse to take notes in some cases, especially where the amount is small, as it is cash we want, not interest, and it does not pay always to discount a note, as some people are very careless, and it is often charged back again.

Nine times out of ten if you ask a man for the cash he will hand it over to you, but he will always ask for credit first. By making terms such as ours, we treat all comers alike, and if one man pays in 30 days he gets cash price, and if his neighbour does not pay until 90 days he also gets the cash price, but with 60 days interest, thereby giving the cash man the preference, which is only right.

Compel the public to pay cash, and they will deal with you, but give them credit, and a large percentage of them will go to your competitor. Very few people like to be dunned, and we certainly do not blame them.

D. M. Heise & Co.

#### Fire Destroys Pulpwood Stocks

According to a despatch from St. Rose, P.Q., ten thousand cords of pulpwood stored in the Quebec Central Railroad yards there were recently destroyed by fire. The pulpwood was the property of the Quebec and St. Maurice Industrial Company, and of Mr. J. Gagnan, of Beauce; Mr. B. C. Howard, of Sherbrooke, and Mr. J. R. C. Chabot, of St. Justine.

Fine New Plant to be Erected By R. Truax & Son at Walkerton. Ont.

### Canadian Western's Annual Report

The annual report of the Canadian Western Lumber Company, Limited, for the year 1912 shows a profit of \$1,336,464, which is reduced by interest on debenture stock, interest on loans on capital account, debenture stock sinking fund, reserve for depreciation, accounts receivable, organization expenses, etc., to \$388,946. The total accumulated profits carried forward to 1913 amount to \$683,425. The report states that conditions for the coming year look promising. The company already has considerably more business on its books than at the same time a year ago, and at prices ranging from \$1 to \$2 per thousand feet higher. The export market has lately improved very much, and the company has already booked for export during the first six months of 1913, 10,000,000 feet, at an average price of \$2 per thousand over the prices prevailing at this time a year ago. Present indications are that the average price for the coming year will be at least \$1 per thousand feet higher than the average obtained during 1912. The company hopes to manufacture between 190,000,000 and 200,000,000 feet of lumber during 1913. The annual report states that considerable study has been given during the past year, by the company, to finding a market for some of its waste materials. It is now reported that a new article can be manufactured from this waste, at a profit to the company. The Canadian Western Lumber Company and the Columbia River Lumber Company still own approximately 9,801,000,000 feet of standing timber.

### Annual Report of British Canadian Lumber Corporation

The profits for the year 1912 of the British Canadian Lumber Corporation, Limited, totalled \$97,176, and the directors have decided to defer the payment on the 6 per cent. cumulative preference shares. The total profit was \$177,457, reduced to \$97,176 by general expenses. The directors state that the operations were not as successful as anticipated for the following reasons:—first, the average selling price of lumber at Vancouver during the year 1911 was \$20 per thousand feet, and in 1912 it declined to \$18.50 per thousand feet. At the same time the cost of logs advanced 50 cents during last year, making a net reduction in the profit of \$2 per thousand feet, board measure, on the entire lumber output of the Corporation; second, the Corporation had in operation during last year but two mills, one of which only operates about seven or eight months out of the year on account of the cold winters in the mountain district; third, the loss of the company's planing mill at Crescent Valley (Nelson), which was destroyed by fire in June, 1912. The company have now erected a new planing mill at this point, which will rapidly turn the lumber on hand into the finished product. The fire necessitated storing unfinished lumber to the extent of twenty million feet at one time, as compared with a normal average of a fifth of this quantity.

The new plant at New Westminster (the sawmill of which was completed in November) will cut and manufacture into products for the market, five hundred thousand feet, board measure, per day. It has taken almost a year longer than was anticipated to complete this plant, but the Corporation now not only own the largest exclusively electrically equipped mill on the continent, but they also generate and develop their own electric power from the waste products of the mill.

The retiring board of directors was re-elected. It is composed of Mr. G. F. Johnston, president; Hon. Robert Mackay, vice-president; Messrs. J. W. McConnell, G. B. Allison, Montreal; C. J. Booth, Ottawa; C. S. Mayes, St. John, N.B.; H. E. Hopper, Indianola, Iowa; and F. L. Buckley, managing director, Vancouver.

### U. S. Mills Fear Canadian Timber

The Pioneer Western Lumberman referring to the probability of the duty on lumber entering the United States being removed, says editorially:—"The mills of Canada can manufacture lumber products cheaper than can our own country's plants. In the first place there are no labor union troubles in that country. Wages are lower and the cost of living is considerably less than in the United States. The plant operatives in Canada do not have to pay the heavy taxes which American mill owners are compelled to add to the cost of doing business. Then again, and this is most vital and important, the timber operators in British Columbia do not have to own their own timber lands. They secure what is practically a lease, with a definite limit in which they can exploit the timber, with the result that the element of interest upon the money invested can be deducted from the already light cost of doing business. And, finally, the freight rate in foreign bottoms from British Columbia ports to those along this western coast of our country is much lower than that which has to be paid to American vessels plying between American ports."

### Important B. C. Timber Deal

A large timber limit deal was closed recently when Lacey & Company, of Chicago, sold berth "W" on the Lower Lillooet River to the Deere Plow company, of Moline and Chicago, for a total approximating \$2,100,000. The property was sold on the basis of \$3 per 1,000

on an approved cruise showing the standing timber to be 700,000,000 feet, mostly cedar and fir. Its area is about 10,704 acres, and the lower section is less than three miles from Haney on the line of the C. P. R. The limit is located within the Dominion railway belt. Less than a year ago the former owners bought the same limit from the Shevlin estate, of Minneapolis, for \$700,000 cash.

### Will Operate Extensively in Vancouver Island

The White Bros. Lumber Company, Limited, a well-known firm of lumber manufacturers, in Canada and also in the United States is reported to be actively developing its extensive interests in British Columbia, as a result of the prospect for the early opening of the Panama Canal, and also the likelihood of lumber being admitted into the United States free of duty. The firm is an off-shoot of a large Michigan corporation, in which Messrs. W. H. White and Thos. White, of Boyne City, Mich., and W. O. King, of Chicago, are the three principal shareholders. These three members of the company are now in British Columbia inspecting the company's holdings and developing plans for their operation. Their limits are said to comprise 90,000 acres, all practically in one block on the Clanche River and its tributaries, in the Rupert district, near the north east end of Vancouver Island. The property is estimated to contain 5,000,000,000 feet of standing timber, consisting of yellow fir, white pine, spruce, fir, cedar and hemlock. The principal shipping port from which the company will build logging railways will be Beaver Cove, almost opposite Albert Bay. It is reported that the company is considering the erection of either one large mill or three or four smaller mills, with a total capacity of 500,000 feet daily. Logging operations will be inaugurated immediately under the direction of Mr. Thos. White.

### Effect of Tariff Removal in B. C.

An interesting communication from Mr. E. H. Bucklin, general manager of the Small-Bucklin Lumber Company, Limited, New Westminster, B.C., dealing with the attitude of British Columbia mills in connection with the United States tariff situation, was recently published by the "Timberman," Portland, Ore. In the course of his letter Mr. Bucklin says: "the British Columbia mills are at present able to supply all the lumber imported into Canada from Oregon, Washington, Montana and Idaho. The mills, both in the mountains and on the coast of British Columbia, were not willing to sacrifice timber to the extent necessary, or manufacture it at a loss to meet the price at which lumber from the United States was sold in Canada, and considered it an unwise policy to do so even if they were able, and so, many of them curtailed production on that account.

"We can easily understand how some operations in the United States with large obligations were forced to sacrifice, but we fail to grasp the policy of many of the strong interests who are so prominent with their theories of conservation and confidence expressed in regard to ultimate values.

"In regard to shipments from Canada to the United States, in case of removal of United States duty, it is very evident there would be practically no such movement at present or until United States prices should have advanced considerably, and then that advance would stimulate further advance in Canada. This is further demonstrated in the foreign cargo trade, where the cargo mills in the United States have no tariff assistance, and in which the percentage of increase in shipments of the Oregon and Washington mills for the past ten years, has been much in excess of that of the British Columbia mills, and is at present.

"If for any reason, a removal of the United States tariff in general would cause depression in the United States, I fear that British Columbia mills will be dominated by United States prices.

"It is also quite likely that a material reduction in the United States' duty on lumber and in general will be followed by strong Canadian agitation for further Canadian reduction with a good prospect of success, as the free list at present is much more extensive in regard to lumber and shingles than that of the United States, and both political parties in Canada are inclined toward reduction rather than an advance on these products, which is quite in contrast with the policy of the United States in the past."

### Western Timber for Panama Canal

A report from Prince Rupert, B.C., says that five thousand poles for use on the telegraph lines along the Panama Canal, are to be cut from Graham Island, near Prince Rupert. This is the first of the Graham Island timber that has found a market and may presage the development of an important industry, as experts have reported that nowhere else could trees be found more adaptable to the manufacture of poles and flag-staffs.

The Forestry Branch of the Department of Lands of British Columbia will use six powerful launches this summer for its work along the coast.

## View and Interview

### Chemical Pulp Business Endangered

One of the most prominent pulp and paper manufacturers in the province of New Brunswick in a letter to the Canada Lumberman regarding the trade situation says:—"The new United States tariff bill, if passed in its present form, will put a quietus on the chemical pulp business in Canada, and the prospects are not very favorable for existing mills. Europe will have the advantage under the existing tariff of \$5.33 per ton on unbleached and \$7.00 per ton on bleached pulp. It is going to be hard for Canada to compete."

### Backward Logging Conditions in Muskoka

Mr. R. J. Hutcheson, of Huntsville, who was recently in Toronto, stated that there is more timber left in the bush in the Muskoka and Parry Sound districts than has been the case in the last fifteen years. The number of logs taken out this season was very much less than last, as operators were only able to draw from the 20th of February to the 11th of March. Owing to the absence of rain in these districts the streams are very low and the prospects are not very bright at present for getting their logs down.

### Sawmills Operating In Labrador

In an interview in Quebec City, Mr. H. R. Reid, of New York, vice-president of the Labrador Pulp and Paper Company, speaking of the operations at Hamilton Inlet, where the company are constructing large pulp mills, said that, since last fall, two large saw mills have been built, and are now at work. The company have also started on the construction of a pulp mill, with a yearly capacity of 90,000 tons. A second mill, with an annual capacity of 50,000 tons, will be built at Sandwich Bay, but the directors will not commence this work until the larger mill begins the production of pulp. The output, of both mills, Mr. Reid stated, is contracted for, the British Wall Paper Company having agreed to purchase the largest portion. The company will have no lack of water power, Mr. Reid estimating the development of horse power at a very large amount. About 1,200 men have been at work on the company's properties in Labrador during the winter, and a large quantity of dimension timber has been cut for wharves and bulkheads.

### Cross Ties and Poles In Good Demand

A correspondent of the Canada Lumberman discussing the market for poles and ties at Ottawa, writes as follows:—"For cedar poles 7 in. top, 30 ft. and longer, the market this year is a steady one the supply meeting the demand fairly well with the possible exception of 35 ft. lengths which is the length mostly required. Prices have advanced yearly, as the supply in the Laurentian district is a limited one obliging operators to go further afield each year.

For railway ties the demand this year is strong with the general supply not up to normal. Prices are firm and are in advance of any season heretofore in this district. It has been generally held that railways in the past have secured their ties at altogether too low a price. Figuring the feet board measure in a tie, at the price the railways have until with in a year or two paid per piece, it would about equal the price of No. 2 mill culls.

The getting out of railway ties has hardly ever paid lumbermen operating their own camps and the much abused settler has contributed to the railways their requirements at a price almost always lower than the actual labour involved.

### Visiting Lumberman Urges a Lumbermen's Club

S. L. Purdy, Coehill, Ont., manufacturer of hemlock, hardwoods, etc., visited Toronto recently and was a welcome visitor at the office of the Canada Lumberman. Mr. Purdy reports that prices of hardwoods and hemlock are exceedingly firm. Trade is a little quiet at present, but he believes that this is the result largely of shortage of stocks in the hands of manufacturers. During his business calls in Toronto he found little or no difficulty in disposing of his stocks at good prices and he had an optimistic view of the outlook for the immediate future.

Mr. Purdy is strongly in favor of establishing a lumbermen's club in Toronto. Manufacturers visiting Toronto, he says, invariably devote much of their time to looking about in order to get into touch with the right parties with whom to do business. If there were some central headquarters, such as would be provided by a lumbermen's club, visiting lumbermen would be able to go there and obtain immediate information, which, under present conditions, they can only obtain after making a large number of enquiries, and which they cannot possibly obtain so thoroughly as they could at a lumbermen's club. The social end of such an institution would be very pleasant,

according to Mr. Purdy's views. Visiting lumbermen, after they have concluded their business have little or nothing to do but return to a hotel and wait until train time. A club with suitable quarters in Toronto, would provide a place where visitors could spend their spare hours in company with men whose business interests were similar to their own. The time would be pleasantly spent and on many occasions additional business would be picked up.

From the point of view of the visiting lumberman, a club in Toronto would certainly be valuable. Firms with offices in Toronto would find it even more useful than those whose business only brought them to Toronto occasionally.

### Held Services in 350 Lumber Camps

Through the efforts of the Shantymen's Christian Association, 16,000 men in three hundred and fifty lumber camps in northern Ontario attended religious services and received 5,000 Bibles during the past winter, according to the secretary's statement at the annual meeting of the Association held recently in Toronto. The total receipts for the year were \$3,252.79, against \$2,789.07 for the previous year. Four missionaries of the Association, Messrs. George Creagh, T. E. Snelgrove, P. A. Grandjean and William Henderson, Superintendent, addressed the meeting. Mr. Henderson stated that the only hindrance to the work was lack of workers. Officers were elected as follows: President, Mr. H. B. Gordon; vice-president, Mr. D. Purvis, North Bay; secretary-treasurer, Mr. Thomas Yellowlees; superintendent, Mr. Wm. Henderson; directors, Messrs. H. B. Gordon, John McClelland, J. J. Gartshore, John Firstbrook, W. H. Shaw, Thos. Yellowlees, Wm. Henderson, Dr. W. H. Howitt, A. G. Browning, W. H. Lailey and D. Purvis.

### Miscellaneous Personal and Trade Notes

Bartram Brothers, Limited, wholesale lumber dealers, Ottawa, Ont., report that Mr. E. M. Ball is now working Quebec Province in their interests.

Mr. James W. Sewall, of Old Town, Maine, has a crew of men in Northern New York, planting 200,000 white and Scotch pine on burnt land there.

Reports from Hopewell Hill, Albert County, N.B., state that the lumber drives on the Crooked Creek have been hung up on account of low water and drivers were all obliged to await the occurrence of rain.

Reports from North Tonawanda state that the market has received quite an impetus by the arrival of the first cargo of lumber for 1913. All lines of lumber are experiencing an active trade. Prices are steady and firm.

During the year 1912 the Australian Commonwealth imported timber to the value of \$14,127,484, as compared with \$13,849,762 during the year 1911. The exports during the same years were as follows:—1912, \$4,308,357; 1911, \$5,122,468.

Announcement is made by A. F. Fugl, district manager of the Hudson's Bay Company, at Edmonton, Alta., that it will take a party of bankers and lumbermen to Fort McPherson, 300 miles within the Arctic circle the coming summer. The visitors to the land of the midnight sun will leave Edmonton early in June to join the fleet of scows at Athabasca Landing, to connect with the steamer Grahame at Fort McMurray and proceed to Smiths Landing, where the tourists will board the steamer McKenzie River for the Arctic district. The party will return to Edmonton early in September. This will give the business men an opportunity to see what the vast hinterland of Alberta offers in the way of undeveloped natural resources.

### J. R. Booth Narrowly Escapes Death

Ottawa, May 7th, (Special to the Canada Lumberman):—"The veteran lumberman, Mr. J. R. Booth, and about 25 of his employees, had a narrow escape from death yesterday, when a cofferdam at the Booth mills, which was keeping the water out of a log drive where a new boom was being put in, was broken down by the rising water behind it. Mr. Booth did not get to safety, via a ladder leading from the drive to the ground level, a second too soon. The accident resulted in the death of Romeo Champagne, 17 years old, son of the foreman of the gang working on the boom. The breaking of the cofferdam put the power house out of business for a short time and consequently tied up a big section of the mills.

### Union Lumber Company's Interesting Advertisement

The attention of readers of the Canada Lumberman is drawn to the advertisement of the Union Lumber Company, Limited, which appears on page 9 of this issue. On that page they list a large and varied stock of pine, which they can ship on shortest notice. A novel feature in connection with the advertisement is the quoting of the rates to different points which gives prospective buyers an idea of the cost of haulage to any point at which he is located.

## This is <sup>FAY-EGAN</sup> "Lightning" 333 Machine reducing and grade raising up to you lumber man

### Reduces Costs 40 to 50%

—the feeding speed of the 333 is practically unlimited. With one operator it will do as much work as two or even three old style machines with an operator for each. The saving in labour costs alone will soon make up the first cost of a 333.

### Raises Grades 10 to 30%

—on the fastest feeds you will get perfect lumber; your most knotty and cross-grained stuff will finish up perfectly smooth, so that your entire mill output will grade 10 to 30 per cent. higher, with the corresponding increased price benefit to you.

### Other Savings

—remember, too, you will save the space, transmission, cost of upkeep, heads and belts of your excess machines. Right here note the gravity tighteners on each belt, automatically tightening the belts under heavy loads, and allowing them to hang slack when machine is shut down.

# Unique Chemical and Lumber Operation

Elimination of Waste Completely Effected by Dominion Wood and Lumber Company and Trout Creek Logging Company

Trout Creek Logging Company's Mill  
—Rear view showing Log Pond,  
Dam and Boiler House.

One of the most noticeable and important features in connection with lumber operations in Canada of late years, has been the tendency of lumber operators to study the opportunities for utilizing every available source of raw material found upon their limits. The economical conversion of the timber resources of the country is of the utmost importance, not only to the people of Canada, but to those who have invested their money in timber limits and manufacturing plants. It is interesting therefore, to note the operations of an Ontario company, which is converting practically everything upon its limits into valuable products, each of which is bringing sufficient profit to make the operation justifiable.

These operations are located at Trout Creek, Ont., and are being

carried on by the Dominion Wood & Lumber Company, Limited, The Ballantyne Lumber Company, Trussler Bros., Limited, and the Trout Creek Logging Company, Limited. In the year 1907 the firm of Edward Clark & Sons, Toronto, and Mr. W. J. Foster, Toronto, purchased the old limits of the South River Lumber Company in the township of Ballantyne and consolidated them with certain other limits in the township of Chisholm. In 1908 these interests formed the Ballantyne Lumber Company, of which the capitalization was \$50,000, whose officers were: Edward Clark, Toronto, president; W. S. Kelly, Bridgenorth, vice-president; W. J. Foster, Toronto, manager, and A. E. Clark, Toronto, secretary-treasurer. Between the limits referred to above and the main line of the Grand Trunk Railway, Messrs. Trussler Bros., Limited, of Trout Creek, owned between 25 and 30 square miles of timber and it was planned to develop a scheme of operation by which both of these limits could be logged simultaneously. With this object in view, the Trout Creek Logging Company, Limited, was formed in 1910, for the purpose of building and owning sawmills and a railway to be constructed for the consolidated undertaking. The officers of the Trout Creek Logging Company, Limited, were: Edward Clark, president; J. Kaufman, Berlin, vice-president; G. Trussler, Trout Creek, secretary-treasurer, and W. S. Kelly, Bridgenorth, and W. J. Foster, directors.

During the fall of the year 1911 and the summer of 1912, nine miles of railway track were constructed through the limits of Messrs. Trussler Bros. in the township of Laurier, and into the limits of the Ballantyne Lumber Company. At the same time a sawmill was constructed at Trout Creek.

Early in August of 1911, the Dominion Wood and Lumber Com-

Sawmill, Chemical Plant and Logging Cars, Trout Creek, Ont.

pany, Limited, was organized for the purpose of constructing and operating a chemical plant at Trout Creek, using up the hardwood remaining on these limits after the lumber had been taken off and also utilizing the refuse from these limits and sawmills. The officers and shareholders of this company were: Jacob Kaufman, Berlin, president; A. E. Clark, vice-president; G. Trussler, secretary-treasurer; T. Hodgson, Orillia, manager; directors, W. J. Foster, W. S. Kelly, Edward Clark and J. W. McConnell, Montreal.

The Trout Creek Logging Company, Limited, has constructed, in addition to its railway line, mentioned above, two sidings, 1,100 feet long, on the main line of the Grand Trunk Railway about three quarters of a mile south of Trout Creek station. From these sidings the main line of the Trout Creek Logging Company's tracks branch off through the townships of Laurier and Ballantyne, being located as nearly as possible through the centre of the two limits, in order to provide the most advantageous logging facilities for both.

The tracks are of standard gauge, with 60-pound rails. The company have purchased a Heisler geared locomotive, which is giving excellent service, and Russell logging cars, for hauling in the logs. They have also purchased a number of Grand Trunk flat cars for hauling cordwood. With this equipment they estimate that they can make four trips a day, drawing out about five cars of logs and two cars of wood each trip, making a total of between 50,000 and 60,000 feet of logs per day and between 50 and 60 cords of wood per day. Sidings have been constructed along the main line at different points for the advantageous loading of the logs and wood.

The Trout Creek Logging Company, Limited, have also purchased about 400 acres of land at a point where their tracks join the Grand Trunk tracks and have erected a circular sawmill with a capacity of

Dominion Wood and Lumber Company's Plant and Charcoal Coolers,  
Trout Creek, Ont.

Dominion Wood and Lumber Company's Plant—showing Wood Buggies,  
Trout Creek, Ont.

between 30,000 and 40,000 feet per day. Two spring creeks run through this property, one of which the company have dammed so as to create a good-sized log pond, into which logs can be dumped from the railway cars. The exhaust steam from both the chemical plant, which is located near by, and the sawmill, as well as all the exhaust hot water from the stills in the chemical plant, will be turned back into this pond, making it feasible for the company to operate all the year round. One and a-half million feet of logs can be put into the pond at one time, thus affording ample capacity for the operation of the mill.

Conveyors and a hog have been installed at the sawmill by means of which all the surplus refuse in the form of sawdust, buttings and edgings, not required for firing the boilers of the sawmill, are cut up and conveyed across to the engine room and furnace room of the chemical plant. This, together with the slab product from the mill, which will also be conveyed to the chemical plant by conveyors, will enable the chemical company to operate without the purchase of any fuel other than this refuse material. In this way, the company have been able to get along without constructing any burners in connection with the sawmill and so have materially reduced the fire risk in connection with the operations. In order to reduce the fire risk still further, the engine and boiler rooms have been built entirely of concrete and are completely shut off from the sawmill.

The new equipment in the sawmill, in addition to that which was brought from a former mill, includes a new E. Long Manufacturing Company carriage, a boiler, manufactured by the Waterloo Manufacturing Company and a new hog manufactured by The Wm. Hamilton Company, Peterboro, Ont.

#### A Modern Chemical Plant

The Dominion Wood & Lumber Company have been fortunate in securing the services of Mr. Thomas Hodgson, of Orillia, Ont., who has had a great many years' experience in connection with the construction and operation of chemical plants in this country. Before undertaking the construction of the chemical plant Mr. Hodgson visited a number of modern plants in the United States and Canada and he has thus been able to adopt the most modern methods for constructing and operating the plant at Trout Creek. At the present time the chemical plant has a capacity of 20 cords a day, but it has been left in such shape that this capacity can be doubled at any time, at a small cost, as all the machinery in the plant has been put in with double capacity.

The chemical plant is constructed entirely of concrete and is all under one roof. The operations are conducted entirely by gravity, doing away with pumping and other cumbersome methods, as used in less modern plants. The ovens are double ended so that they can be drawn and filled from either side. There are two ovens, each with a capacity of 10 cords. The railway tracks are so planned that the wood buggies for the chemical plant can be placed on a siding alongside of the main wood siding. The wood cars can thus be unloaded directly into the buggies, which are then drawn into the ovens of the chemical plant without extra handling.

In connection with this plant the company own some elevated lands at a short distance away, upon which they have constructed a dam on a creek crossing the elevation. From the dam a 6-inch water pipe runs into the plant, providing a complete water system throughout the plant and distilleries. A fall of about 80 feet is thus secured and a pressure of about 70 pounds is obtained in the pipes. This does away with practically all pumping for the distilleries. By means of

hydrants throughout the chemical plant, sawmill and yards, excellent fire pressure is obtained.

The Dominion Wood & Lumber Company, Limited, are in an advantageous position with regard to supplies of raw material. They have completed a contract with the Ballantyne Lumber Company and Trussler Bros., Limited, by which they get all the cordwood from the limits of these two companies during the next twenty years. The Trout Creek Logging Company, Limited, have contracted to deliver this material to the plant, thus doing away, so far as the Dominion Wood & Lumber Company are concerned, with the question of delivering and all the difficulties arising out of delays due to shortage of cars, etc. The company also have a contract with the Trout Creek Logging Company to take all the refuse from their sawmill for fuel purposes. This does away with the necessity for purchasing coal and reduces the operating account by about 50 per cent. At the present time, the Dominion Wood & Lumber Company purpose to manufacture wood alcohol, acetate of lime, charcoal and tar refuse products. They have contracted, for the next five years, for the sale of the complete products of their plant prices which they consider will return a nice profit to their shareholders.

#### How The Chemicals Are Made

The charcoal is manufactured by baking hardwood in large ovens contained in air-tight compartments. The liquids are drawn off from these ovens in the form of vapours distilled and reduced into wood alcohol and acetate of lime. After the baking process, during which all the liquid has been taken out of the wood, the balance is taken out into coolers and is sold later on as charcoal. Sidings have been planned in such way after the cooling process, the charcoal can be loaded direct into cars for shipment. Another siding is arranged which comes directly to the alcohol tanks. The alcohol can be loaded direct from the plant. On the other side of the plant another siding has been constructed, so that cars can be shoved right up to the acetate sheds and the product loaded direct into the cars. It will be seen that, in every regard, facilities have been provided for reducing the amount of handling to a minimum.

In addition to the plant at Trout Creek, a second sawmill has been erected on the new line of the Canadian Northern Railway, running from Ottawa to Capreol, at a point about nineteen miles south-east of North Bay. The Ballantyne Lumber Company found that a portion of their limit could not be logged successfully by means of the railway, on account of the height of land. The second sawmill will take the logs from this part of the limits. As soon as the line of the Canadian Northern Railway is operating, the cord wood taken off this portion of the limit will be shipped to the plant at Trout Creek. This mill is equipped with a circular saw and has a capacity of about 25,000 feet per day.

The sale of all the products of the Ballantyne Lumber Company will be controlled through the office of Edward Clark & Sons, Toronto. The Trussler Bros. products will be sold by Trussler Bros., of Trout Creek.

#### Operations in the Woods

During the past season, Trussler Bros. have not been operating their mills, but it is their intention to cut a considerable amount of timber next fall, from a portion of their limits which is adjacent to the track of the Trout Creek Logging Company, Limited. These logs will be loaded directly upon cars and taken out to the plant and sawed next fall.

The Ballantyne Lumber Company have had a camp in operation during the past winter at about the end of the line of the Trout Creek Logging Company, Limited, and have taken out about 3,000,000 feet,

Heisler Geared Locomotive operated by Trout Creek Logging Company.

A Gang of Hardwood Cutters.

a large portion of which is now at the mill and on which they will be cutting during the present summer, having started about the 12th of the present month. These logs are mixed pine, hemlock, spruce and hardwood. In addition to this, the company have operated a camp on the northern end of their limits and have taken out between a million and a million and a-half feet of logs which goes to the mill on the Canadian Northern Railway. They will also have about 50,000 hemlock railway ties at this point.

After cutting off the logs on these limits the company are following up the operation by putting in a gang of wood cutters to cut up the tops of the hardwood and all the rough timber which is useless for lumber purposes, making it into cordwood for the chemical plant. The small amount of rough refuse left behind will be piled and the company will take advantage of the first favorable season of the year to burn it, so as to prevent any danger of bush fires. One of the illustrations published herewith shows a group of Italian laborers who are employed at cutting cordwood on these limits. The two companies have about 7,000 cords of dry cordwood on hand to go ahead with the operation of the chemical plant, which commenced operations about the 12th of the present month. It is the intention of both companies to keep cordwood gangs in the bush all the time, so as to ensure good supplies of dry cordwood for the chemical plant and to keep the bush cleared up.

The company's equipment for housing their men is thoroughly modern. In addition to excellent camps in the woods where the men are well fed and housed, the company have their own boarding house near the sawmill, in which they accommodate forty or fifty men. Splendid quarters are provided in these buildings which includes cookery, dining room and sitting room on the first floor, and bedrooms on the upper floor. Hardwood floors and hardwood trim have been used throughout the building. The upper floor has sleeping capacity for forty or fifty men. Instead of the regular bunks which prevail in most camps and boarding houses the men are provided with attractive rooms and iron beds. Each room accommodates two men. Every room is well ventilated, and is finished with beaver board.

An excellent spring, located directly under the boarding house provides good drinking water. The cook therefore, never has to leave the building to get water. The boarding house has concrete foundations and a good cellar. One of the most interesting members of the companies' staff of employees is Wm. Cox, the cook, who hails from Somersetshire, England, and is responsible for much of the good humor which continually prevails among the men in the camp. "Billy," as he is popularly known, is also a successful amateur photographer and we are indebted to his skill for the illustrations accompanying this article.

#### Logging Railroad Makes Operations Cheap

The logging railroad operated by the company affords many advantages in addition to securing cheap transportation for the companies' logs. It does away with all necessity for cadding in order to get supplies into camp. As the tracks are of standard gauge, the company are able to take car loads of oats and hay direct to the camps and unload them from the car into their store houses. The railroad also enables them to provide the men in the camps with all kinds of fresh meats and vegetables, which can be drawn to the camp on the trains every day without any extra cost to the company. Thus they are able to feed the men well at a minimum of cost.

Mr. W. J. Foster, Toronto, is manager of the bush operations of the Ballantyne Lumber Company and also in charge of the operation of the logging railroad. Mr. Jas. Trussler and Mr. W. S. Kelly look after the mill and manufacturing end of the business for the logging company. Mr. T. Hodgson is manager of the chemical plant and has been fortunate in securing the services of a number of expert hands from different factories in Canada and the United States.

The large 200 h.p. boilers in the chemical plant were purchased from Jenckes Machine Company, Limited, St. Catharines, Ont. The alcohol tanks were purchased from The John Inglis Company, Limited, Toronto, and W. A. Case and Company, Buffalo, furnished the equipment of copper stills, etc. The chemical company have storage capacity for about 10,000 gallons of alcohol.

From the above description it will be seen that the Dominion Wood and Lumber Company and its allied companies have an exceptionally interesting operation. The economical conversion of all its resources into marketable products, makes the undertaking one which will unquestionably be looked upon as a pioneer in the movement toward eliminating all waste in connection with the logging and sawmilling business.

#### Kingsdale Planing Mill and Lumber Company

The Kingsdale Planing Mill & Lumber Company, Limited, head office, 22 College street, Toronto, with mill and yard at Kingsdale, Ont., was incorporated recently with capital stock of \$100,000. The incorporation of this company is the outcome of the rapid industrial

development of Kingsdale which has resulted in a great demand for all building materials. This company, together with the Kingsdale Brick Company, Limited, and the Builders' Supply & Hardware Company, Limited, were formed in order to meet the large demand which has developed. The company have made arrangements for moving all of the plant and equipment of Ross and Branscombe from Mount Albert to Kingsdale, which is located at stop 34 on the Metropolitan Railway, Yonge street. The large business which had been worked up by Messrs. Ross & Branscombe will be handled more satisfactorily from Kingsdale, where excellent shipping facilities are available since the construction of a new siding to the mill by the York Radial Railway. It is expected that the demand for building materials at Kingsdale will soon make it necessary to erect a larger mill. The electric power for the plant will be furnished by the York Radial Company and it is expected that the mill will be in operation not later than June 1st. The company have secured 50 acres of land immediately at the rear of Kingsdale on part of which they will erect a brick building for their mill as soon as a switch from the Canadian Northern Railway has been installed.

#### Utilization of Waste at Cooperage Plants

By James Innes

There has been considerable discussion of late, in the United States trade papers, of the alarming amount of waste material produced at mills manufacturing cooperage stock. No doubt this is true at a great many of the mills in the southern States where timber is cheap and labor is expensive, and where there is not the demand for short staves to utilize part of the waste at the stave mills, and short hoops at the hoop mills and the small heading at the heading mills.

A great many of the mills in the south are run by men with very limited capital, who only manufacture one line of goods and anything that is not available for this particular line, is allowed to go to waste. These men with small capital, generally run a stave plant only, whereas it is far more economical to run a heading plant in connection with a stave plant, so as to use up short blocks.

In Canada, the waste has been reduced to a minimum. There are very few plants manufacturing staves exclusively. Most plants manufacture staves and hoops, staves and heading or a full line of staves, hoops, heading and heading lines. By running these plants together, where bolts are not long enough to make standard sizes of staves, the blocks are generally long enough to make heading from 9 in. diameter up, and where hoops are manufactured, short plank not long enough for a keg hoop and hoops with bad ends are utilized to make heading liners for barrels.

Practically all that is left at the Canadian mills is fuel for the boilers. The cores from the stave bolts are readily sold for summer wood. There is really not enough left at any Canadian mill to warrant a side line being produced out of the cores and slabs, as a good price is obtained for these for wood. Only small toys could be made out of them in any case and in very small quantities.

In the southern States it would pay to manufacture toys at a good many of the stave mills, or wooden bungs or probably clothes pins; or a small specialty factory could be run to advantage making such articles as clothes hangers and probably butter dishes. In former years there used to be considerable waste around the Canadian mills where staves were manufactured exclusively, but at that time timber was cheap. Elm logs could be bought at from \$3 to \$4 per thousand delivered at the mills, where they are costing from \$25 to \$30 now. But with the high price of timber and the opening of the demand for export for short staves and the demand for the home trade for keg hoops and keg heading, the waste at the Canadian mills has been reduced to a minimum.

Staves are now being manufactured from 14½ in. to 34 in. long; heading from 9 in. to 21 in. in diameter, and hoops from 35 ft. 4 in. to 7 ft. long.

The price for wood being paid by the house-holders has also advanced from \$1 per cord to \$2.50 per cord; that is for a short cord 16 in. long, while listings which formerly sold for 1c per bundle now bring 5c per bundle and goose necks about the same; so that there is no inducement for Canadian manufacturers of cooperage stock to go into the manufacture of specialties, as, in the first place they have not enough waste from their cooperage stock to warrant putting in machinery to use it up, and in the second place, the price paid for wood would probably realize more for this waste than if it was manufactured into small articles.

The United States Forest Service has issued circular 213, of the Forest Products Laboratory series, dealing with mechanical properties of woods grown in the United States. The circular contains a preliminary summary of tests of small, clear, green specimens of 49 species of wood. The results will be of exceptional interest to all who are interested in the lumber industry both in the United States and in Canada.

## Insurance As An Asset

By Foster V. Smith.

**T**HERE are few, if any, subjects which are of more vital importance to the business man—to the lumberman,—than that of insurance against the hazards of his business. The business man carries insurance on his property and the various phases of his business, largely as a matter of course, as a safeguard against the elements of uncertainty—of chance, those business hazards which he considers largely if not wholly beyond his control. Does your insurance fully accomplish its purpose or would it if you should suffer a loss?

There is vastly more to insurance than a mere policy, and if this is fully appreciated by the ordinary policy holder he most certainly does not show it by his attitude. When considering the insurance contract there are three matters of importance to be passed upon—the ability of the insurance company to perform,—the provisions of the contract or policy offered—and the consideration called for, or as generally termed, the rate.

Too often the attention of the policy holder ends as soon as the question of rate or insurance cost is settled. This is a phase of the insurance question to be sure, which should have all the consideration it received, and perhaps more. I dare say the membership of this Association would be startled indeed if the fact were known and it were disclosed here, just how much money you could save annually in the cost of your insurance. By the individual efforts of each of you much could, without doubt, be done, and by the concerted efforts of all of you, the effect would unquestionably be pronounced. Each one of you owes a duty to every other one to avoid a loss, and consequently each one has an interest in seeing to it that all others exercise proper diligence to avoid losses. Insurance is simply the system through which the burden is distributed and as losses increase, insurance rates must accordingly increase; as losses decrease, the rate should accordingly decrease.

### Study to Reduce the Hazard

It is your duty then to study the hazard side of your business and use all reasonable means to reduce it; and the results will pay you well. However, when considering this subject as a business transaction, the matter of cost is of less importance than that of the quality of the thing purchased.

The financial responsibility and general reputation of the Insurance Company often receives scant consideration at the hands of the policy holder. How many of you actually make any investigations of those on which you depend, and indeed the ordinary policy holder does not know all the vital elements which contribute to an insurance company's worthiness.

The policy is a promise to pay a substantial sum of money under certain conditions, and it may become one of your principal assets. You should pursue a systematic investigation as to the obligor's ability to perform. Ascertain its total assets; its paid capital, if a stock company; its surplus of assets over all liabilities; its reserve for unearned premium liability or re-insurance reserve; ascertain its loss and expense ratios and compare these items for a period of years preceding. This should afford a reasonably safe guide and show not only the company's present ability to pay, but also whether it is operating at a profit.

The subject which should command the closest attention, and that which is perhaps usually given the least, is that of the contract, or policy itself. The provisions of the contract, generally receive little if any actual study at the heads of the policy holder. We have the anomalous situation of a man purchasing something for a substantial consideration for which he pays the price named by the other fellow, of whom he knows but little, if anything; he accepts the article made and offered by the other fellow, and in fact he has nothing substantially to do with the transaction other than to pay for it, not once, but annually.

### Risks and Risks—The Form of Contract

One risk is just as different from another as one individual is from another, and if the fire insurance contract is to cover the property properly and duly provide for existing hazards and conditions, it must be drafted with the particular risk in view. There are various methods under which a policy contract may be drawn and with varying advantages to the policyholder. It is a story too long to develop here, but I urge each one to make it a point to read the printed conditions of the standard fire policy through, slowly and carefully, seeing to it that you understand it. Note the conditions and restrictions it imposes, then read the rider form attached to it and ascertain certainly if your hazards are met, and your property covered. The printed portion of the contract is intended to be varied so as to meet

the conditions which are peculiar to the risk contemplated, and in the majority of cases some variations should be made.

If the insurance is to be carried with intelligence, you must know, with a considerable degree of accuracy, not only the property covered, but its value. The prudent man will schedule and value this carefully while the property is in existence, before the fire. Thereafter, the best that can be done is to make a good guess.

In shaping the coverage of an insurance contract, that is, the statement of the property insured, great care should be exercised. You should advise yourselves fully on this, since the extent and desirability of the protection depends very much upon this portion of the contract. Matters which are simple enough when once disclosed to you, make a very material difference in the amount of indemnity which may be collected under certain conditions.

Under certain conditions, as where the contract requires a certain percentage of values to be carried in insurance, it is desirable to certainly eliminate from contemplation of the contract, certain property which is of such a nature that it would not be materially damaged by fire. There are countless opportunities for the exercise of intelligence in connection with the formulation of the insurance agreement. It can be done to the advantage of the insured both in reducing the insurance cost and improving the protection offered.

### Watch the Details of Insurance Cost

Carefully estimate your values, watch them as they increase or decrease from time to time, properly distribute the insurance and carry it with a view to covering the probable loss. Keep an insurance cost system, especially as to fire and liability insurance, showing the risk covered—the amount of insurance carried and how it is distributed—the rates applying and total cost—losses sustained—insurance collected and how applied—and an accurate narrative of each fire and accident, showing its cause, its extent and any factors which contributed to aggravate or reduce it. Such a system will be helpful to you in many ways, and especially so, after it has been kept up for a period of years.

Put in force immediately a definite system in this matter of your insurance. Attend to it yourself if you can, but if you are too busily engaged in other matters, then put a competent clerk in charge of the details, your very business life may depend upon it.

Attend to these matters just as though you expected a loss tomorrow. In this manner much difficulty may be avoided. An appalling percent of adjustments of losses of any consequence are but compromises. Much of this results from failure of the insured to give proper attention to his insurance, and it is too late after the loss has occurred. If insurance is carried for the purpose of relieving business uncertainties, do not add another uncertainty. See to it that the contract will bind the company to do what it is your purpose that it should do when you accept and pay for it.

### Canadian Imports and Exports

Ottawa, Ont., April 14, 1913.—The imports of paper and manufactures of paper into Canada during the ten months ending January of this year reached a total of \$6,798,451, as compared with \$5,110,389 for the corresponding period of last year. From the United States the amount was \$4,646,941 and from Great Britain, \$1,499,577. Exports of paper from this country also increased very considerably. The total for this year's period was \$4,647,456 as compared with \$3,125,095 last year. The value sent to the United States was \$3,050,729 and to Great Britain, \$489,614. Wood blocks for pulp were exported to a value of \$5,810,997, this being greater by \$746,603 than the amount for last year's period, and the exports of manufactured pulp advanced from \$4,326,787 to \$4,676,956.

### Prices Steady at New York

Chase, Talbot & Company, New York, N.Y., in a recent weekly market letter refer indignantly to the stand which has been taken by some wholesale salesmen of late, who have been spreading reports that prices are likely to be a little lower during the summer. Messrs. Chase, Talbot & Company report that if there ever was an opportunity for purchasing, it is afforded at present. "We quote" they say, "without fear of contradiction, spruce to be worth \$25 to \$32; hemlock, \$22 to \$27; eastern white pine, \$23 to \$30, for such stock as is generally shipped to the New York market." Spruce laths they quote at \$5. In conclusion they say:—"if the requirements of the yards prove to approach the average during the next few months these prices should at least be maintained if not bettered."

The introduction of a system of patrol of railway lines in the Province of New Brunswick, for the prevention of forest fires, has been arranged at a conference held at Fredericton.

John Lineham, Okotoks, Alta., owner of a lumber mill at that place died recently after a lengthy illness. Mr. Lineham had been a resident in the neighborhood of Calgary for over thirty years.

# Machinery and Equipment

What Manufacturers of Logging, Sawmill and Woodworking Appliances are Doing

## The Defiance Machine Works, Defiance, Ohio

The accompanying illustration shows the plant of the Defiance Machine Works, Defiance, Ohio. The firm are specialisers of high-grade machines for the economical production of hubs, spokes, rims, wheels, wagon, carriage and automobile woodwork, shafts, poles, neck yokes, single-trees, hoops, handles of every description, spools, bobbins, insulator pins and brackets, table and chair legs, balusters and newel posts, gun-stocks, hockey and golf sticks, dumb-bells, Indian clubs and oval wood dishes; also machines for wood bending, mortising, boring, planing, polishing, sanding, shaping, turning, sawing, knife and bar grinding, pulley, motor fly-wheel and knife balancing, and all classes of general woodwork, from the very smallest to the largest sizes.

In the development of this modern plant from its incipency, the fact emphasised so largely during its history is that the shop is itself the principal tool, and this fact has not been lost sight of to the present day.

Founded in the year 1850, its steady growth has been remarkable. To-day one who is fortunate enough to visit this plant sees a group of buildings, one, two or more storeys in height, together with new additions just completed of brick and reinforced concrete, saw tooth, fireproof construction, with as much ribbed fire glass along its sides as the limitations of space will allow. Every feature of construction is thoroughly modern, with a view to aid in the saving of time and labour.

Approaching from the main thoroughfare one first arrives at the newly erected spacious warehouse, wherein is housed the completed stock of machines all arranged for the careful observance of the critical buyer. Large fireproof doors lead to the main machine shop and erecting room, thence to the testing room, crating room and foundry. Immediately to the rear of the main machine shop we find the casting, cleaning and steel storage rooms, blacksmith, annealing and tempering departments, as well as a most complete knife room. An interesting feature of the blacksmith, annealing and tempering departments is the fact that no smoke or gases are allowed to find a circulation in the entire building, but are caught immediately and properly disposed of, thereby ensuring perfect ventilation throughout the entire plant.

Electric drive is used throughout, the power being supplied by a large, newly erected power dam, three miles above the city. A com-

plete automatic sprinkling system offers perfect protection for the entire plant against all fires from any source. An electric travelling crane forms the means for placing heavy castings and machine parts off and on the automatic drill presses, planers, etc. Electric factory trucks are used to convey heavy parts and machines to any department of the plant, thus effecting an immense saving in the passing of the various machine parts from one department to another.

The very best and most expensive tools are used throughout the entire plant, and this, together with the employment of nothing but skilled mechanics, ensures every user of Defiance machines of ultimate woodworking machine efficiency. A most desirable feature worthy of mention is the fact that the employees of this plant are well versed in all the branches of their work, serving four full years of apprenticeship, thus enabling them to render every available service in the perfection of their product.

Defiance machines are known throughout the entire world for their long life, accurately and economically working wood in its various stages as would bespeak success to their users. It may be of some interest to our readers to know that Defiance woodworking machines are specified as "standard equipment" in the arsenals of sixteen of the leading powers of the world, as well as in their workshops and ship-yards. They will be found in the plant of the successful woodworker, no matter in what portion of the world it may be.

## Breeze Denison & Co's. Patent Steel Band Mill and Carriage

Messrs. Breeze, Denison & Company of Newburgh, Ontario, are putting on the market their Patent Steel Band Mill and Carriage, illustrated herewith, which is proving a favorite with portable saw mill owners throughout the country, and is already in successful operation in a number of mills in Ontario. There are several special features in connection with this mill which distinguish it from others of somewhat similar construction. It is so constructed with braces bolted to the same timbers which support the base of the mill, that a concrete foundation is not necessary for installation, the supporting timbers being attached to the track which prevents variation in the cutting of the boards. A special feature of this mill is the power bearing carriage, designed to do away with lost side motion, an essential feature for successful work in double cutting. The mill also has double action, friction set works, working on thin steel disc which can be successfully used in place of the usual foot friction in receding knees. This cuts down the weight in the pinion shaft, thereby reducing the momentum so that it is beyond the speed of the setter to over set by rapid work. The carriage can be charged from high to low speed instantly and can be operated without passing the saw more than six inches either way. The manufacturers claim that, by operating with this mill, over twenty per cent. more lumber can be obtained from the logs, as well as a superior cut. This they claim was done at several places in Ontario last year.

Breeze Denison & Company's Patent Steel Band Mill and Carriage

### New Axe Plant in Canada

The new factory of the Canadian Warren Axe & Tool Company, of St. Catharines, Ont., was completed on January 1st, 1913, and is now equipped with the most modern machinery for the manufacture of axes and logging tools. The logging tool department has been in operation since February 1st and the new axe department will be ready to make shipments about August 1st. We call the attention of our readers to page 59 on which appears a cut of the plant.

### Annual Meeting of Belting Salesmen

In accordance with its policy adopted a number of years ago the Graton & Knight Manufacturing Company, of Worcester, Mass., well-known oak leather tanner and belt maker, recently held a salesmen's convention at its main factory in Worcester. This convention was attended by the company's salesmen from all parts of the country, and the various sessions were devoted to an inspection of the factory, to a study of methods of manufacture, as well as to the sale and application of the company's products. At the conclusion of the convention a banquet was served at which more than 100 officers, salesmen and other employees were present. A feature of this year's meeting which was especially inspiring to those in attendance was the presence of Henry C. Graton, founder of the business. To a very large extent the phenomenal growth of the business from a small belt shop in 1851 to a plant that is one of the largest of its kind in the world is to be attributed to the sagacity of wisdom of Mr. Graton and his early associates, and to the persistent adherence of the firm to the policy early adopted of endeavoring to meet the steadily increasing demands for the most serviceable leather belting.

### A New Fast Feed Molder

J. A. Fay & Egan Company, have been building molders since 1830, and now pride themselves on being able to produce a molder with that "built-in" quality, gained as the result of eighty-two years' experience in this line.

In these eighty-two years they have learned not only what must go in, but also many things that must be left out, to produce a machine for maximum results. They have studied the requirements of the manufacturers, and know just what a molder has to do, and how to build it to make it meet these requirements. Their machines have won universal favor.

Their latest model is the No. 305 Fast Feed Inside Molder, illustrated herewith. It is a finely built machine, strong and powerful in all its parts, with the newest and latest advantages for rapid adjustment. All gearing is completely covered, and the sideheads are hooded. The feed works consist of four rolls, 7 in. in diameter, all driven by heavy gears. It is made in two widths, 12 in. and 15 in., and works material up to 6 in. thick, is equipped with profile jointing attachment, and will not tear out on knotty or cross-grained stock. It is built with lots of reserve power, and will take care of the heaviest classes of work.

The manufacturers will be glad to send a large photo, and a detailed description of the 305 to interested parties. Their address is 465-485 West Front street, Cincinnati, Ohio.

### A Severe Test for a Band Saw

The accompanying illustration gives an interesting idea of some of the difficulties that a band saw may cause while at work; difficulties that are not likely to be detected until the pressure is released and the band taken off the wheels. Then something happens. A band saw at the plant of Atwood Brothers, Whitman, Mass., tied itself into the remarkable knot shown in this illustration. It is not known

A Twisted Band Saw

just what was the cause of this peculiar tie-up, but it is believed that something had tightened on the blade near the tooth edge. The quality of the steel enabled the saw to keep in shape while running under this handicap. Twisted though the blade is, there is not a break or a crack in it anywhere. It is a fine example of the tenacity of Simond's Band Saw Steel.

### Manufacturers of Useful Felt Goods

The Gibson property on Tanner street, Gananoque, Ont., which was purchased some months ago by Mr. N. E. Booth, of Brooklyn, N.Y., has been acquired by the Booth Felt Company, Limited. The directors are N. E. Booth, Brooklyn, N.Y.; E. W. Booth, Brooklyn, N.Y.; Edward S. Sheppard, Gananoque, Ont.; B. A. Booth, Gananoque, Ont., and T. R. Brawley, Brooklyn, N.Y.

Mr. Sheppard, secretary and general manager of the company, has arrived at Gananoque from Brooklyn, where he has been with Mr. Booth for the last six years. The plant is being put in shape for manufacturing a complete line of felt goods for all mechanical and commercial uses. It covers felt washers, packings, lubricating pads, all kinds of dust and weather proofing strips, insulating materials, noise preventing typewriter pads, felt heel pads for shoes, wicks for fan motors and machinery, buffing and polishing wheels, hand

J. A. Fay & Egan Company's No. 305 Fast Feed Inside Molder

blocks for rubbing and polishing, discs for electric lamp bulbs and a thousand and one other specialties in the line of felt for manufacturers of machinery and mechanical appliances of every description. The machines for this particular line of work have all been designed and built specially by Mr. Booth.

Mr. Sheppard is thoroughly familiar with the entire business and any orders or correspondence sent to Gananoque will be attended to promptly. This business is a branch of the N. E. Booth felt business established about seven years ago in Brooklyn, N.Y.

### Death of Daniel Simonds, of Fitchburg, Mass.

Mr. Daniel Simonds, president of Simonds Canada Saw Company, Limited, and also of the Simonds Saw Company, Fitchburg, Mass., died at his summer residence on Long Island Sound near New York on May 5th.

Mr. Simonds, who was sixty-six years of age, and a descendant of an old Puritan family, became president of the company in 1888, when the capitalization of the firm was \$50,000. During his management several increases of capital were made until it reached \$500,000. At the present it is estimated that there is a surplus of \$1,000,000. Mr. Simonds was engaged actively in the business from the date of his assumption of the presidency, erecting various branches throughout the United States, and also opening branches in Canada. In 1906 works were started in St. Henry, Montreal, under the name of the Simonds Canada Saw Company. Branches were operated later in Vancouver, Ottawa, and St. John, N.B.

The Simonds Saw Company, Limited, was founded eighty-one years ago, by Abel Simonds, father of the deceased, one of the pioneers of New England industry, and the employees in Canada and the United States now number between 1,800 and 2,000.

Mr. Simonds leaves a widow and three sons.

### Dodge Manufacturing Company's New Catalogue

The Dodge Manufacturing Company, Limited, have published a new catalogue (B8.) dealing with their power transmission machinery. This catalogue, which supercedes all previous issues, is one of the most elaborate and expensively prepared catalogues which we have had the pleasure of receiving. It is bound in the form of a book with stiff cloth covering. The pages are of excellent callendared paper which shows up the illustrations and letter press in a most attractive manner. The catalogue is profusely illustrated with half tones, line drawings and tables which convey exceptionally definite information as to the value and variety of the products of the Dodge Manufacturing Company, Limited. The catalogue will be of great value to power-users, mill architects and engineers. An excellent index is contained at the back of the book by means of which the large amount of information which is included can be readily located. The catalogue gives, not only valuable information regarding the company's products, but a well selected variety of general information of value to engineers, architects, etc. The Dodge Manufacturing Company, Limited, are to be congratulated upon their progressiveness in issuing so useful and valuable a catalogue.

### Wm. B. Mershon & Co.'s Band Resaw Catalogue

Wm. B. Mershon & Company, manufacturers of band saw machinery, Saginaw, Mich., have published a 10th edition of their Catalogue of Band Resaws and Hand Book of Saw Fittings. The catalogue contains illustrations and descriptions of the company's special tools for the use of thin saw blades, comprising everything in the way of band resaw and band rip saw equipment required in the sawmill, planing mill, box factory, or in any woodworking plant. The line of machines manufactured by Wm. B. Mershon & Company is very extensive and adapted to a wide range of requirements, as will be quickly realised after looking through the catalogue. The book also contains a special treatise on saw-fitting tools, and descriptions of the most improved methods of fitting saw blades for various requirements. Wm. B. Mershon & Company will be pleased to send copies of this interesting and useful book to any who apply for it.

### A New Catalogue Illustrating Radcliff Saws

The Radcliff Saw Manufacturing Company, Limited, of Toronto, have issued to the trade their first catalogue. This is replete with a fully illustrated line of goods they manufacture and sell, in saws, knives and mill supplies and contains also valuable information for every mill man and woodworking. Among the various lines and features are those of R. Hoe & Company's Saw Bits and Shanks, L. & I. J. White, Buffalo, N.Y., planer knives, Carborundum Company, of Niagara Falls, N.Y., "Aloxite" Grinding wheels and Nicholson File Company's files and rasps, for which they are agents. The catalogue also features their splendid facilities for repairing band or circular saws, including the welding of new shoulders on broken inverted tooth saws also for making over solid tooth circular saws into inserted tooth style.

## Canada's Pulp and Pulpwood

1912 Statistics Prepared by Forestry Branch

TABLE 1.

PULP WOOD, 1911 and 1912, by Provinces: Total Quantity of Wood Used, Total Value, Average Value per Cord, and Number of Firms Reporting

| Province              | 1911          |              |                        |                        | 1912          |              |                        |                        |
|-----------------------|---------------|--------------|------------------------|------------------------|---------------|--------------|------------------------|------------------------|
|                       | Wood Used     | Value        | Average Value per cord | Number of Active Mills | Wood Used     | Value        | Average value per cord | Number of Active Mills |

### Graphite for the Boiler

The Joseph Dixon Crucible Company have published a new booklet entitled "Graphite For The Boiler." Graphite has been sold to remove scale from boilers for many years. The booklet explains in a few words as possible why and how Dixon's Boiler Graphite does its work. Those who have used Dixon's Boiler Graphite, know its effectiveness and realize how much fuel it saves by keeping the boiler tubes and shell clean, and how much time and labor is saved in cleaning your boilers. Also how little it costs as compared with boiler compounds.

Those who have not used it, should read every word of the booklet carefully and ask themselves how they can afford to continue the old hammer and chisel method of removing scale from boilers that eat up the coal pile.

The Joseph Dixon Crucible Company claim to be the oldest and largest manufacturers of graphite and graphite products in the world. They stand behind every one of their hundreds of different products and Boiler Graphite is no exception to the rule.

Write The Joseph Dixon Crucible Company, Jersey City, N.J., for their booklet "Graphite For The Boiler" which will be sent you free of charge.

The Smart Turner Machine Company, Limited, Hamilton, Ont., are supplying The Canadian Warren Axe & Tool Company, St. Catharines, Ont., with one of their Rotary Force Pumps.

# WANTED & FOR SALE DEPARTMENT

## PUBLISHER'S NOTICE

Advertisements other than "Employment Wanted" or "Employees Wanted" will be inserted in this department at the rate of 15 cents per agate line (\$2.10 per inch) each insertion, payable in advance. Space measured from rule to rule. When four or more consecutive insertions of the same advertisement are ordered a discount of 25 per cent. will be allowed.

Advertisements of "Wanted Employment" will be inserted at the rate of one cent a word, net. Cash must accompany order. If Canada Lumberman box number is used, enclose ten cents extra for postage in forwarding replies. Minimum charge 25 cents.

Advertisements of "Wanted Employees" will be inserted at the rate of two cents a word net. Cash must accompany the order. Minimum charge 50 cents.

Advertisement must be received not later than the 10th and 26th of each month to insure insertion in the subsequent issue.

## Wanted—Lumber

**MAIL CONTRACT**

Sealed tenders addressed to the Postmaster General, will be received at Ottawa until noon, on Friday, the 20th of June, 1913, for the conveyance of His Majesty's Mails on a proposed Contract for four years, six times per week over Rural Mail Route from Stouffville (via Altona and Glasgow), Ont. from the Postmaster General's pleasure.

Printed notices containing further information as to conditions of proposed Contract may be seen and blank forms of Tender may be obtained at the Post Office of Stouffville, Altona, Glasgow, Siloam, Goodwood, and at the Office of the Post Office Inspector at Toronto.

G. C. ANDERSON,  
Superintendent.

Post Office Department,  
Mail Service Branch,  
Ottawa, May 8th, 1913. 10-12

Says a well-known logger: "It takes centuries to grow a forest, and it is up to we loggers to use care in the harvesting of the crop. The farmers grow a crop of wheat every year, and if this year's crop should be destroyed he can grow another next year; his loss can be replaced. Yet he would be classed as a lunatic if he were to harvest wheat with a steam machine having a boiler burning wood and scattering sparks. The logger risks his centuries old crop with this kind of machinery every summer and no one calls him crazy. Why? Because everybody's doing it,

and it has been looked upon as an unavoidable risk that he must encounter and make the best of. But the time now has come when this risk can be avoided, by burning oil as fuel in donkey and locomotive boilers. We have been shown the way to avoid this summer fire risk, and also have been shown that by so equipping our machinery we can save half the present fuel cost with wood, thus getting back the total first cost of the oil equipment in the first three months' operation."

The International Forestry Congress will be held at Paris, France, during the coming season. It is considered probable that it will be arranged to found a permanent international forestry institute, similar to the Agricultural institute at Rome.

**Canada and Shipbuilding**

Thanks to the enterprise of English and Scottish firms, Canada will soon be in a position to build the largest war and merchant ships afloat or projected, says the Timber News, of London, Eng. Satisfactory progress is being made with the construction of the yard at Sydney, Cape Breton, in which John Brown & Co., Clydebank, and the Fairfield Co., Govan, are jointly interested. At St. Johns, New Brunswick, where the Norton Griffiths Company are carrying out a big harbor improvement scheme, it is also intended to lay down shipbuilding plant, and in this connection Cammell, Laird & Co., Birkenhead, have several times of late been prominently mentioned, as well as Sir W. G. Armstrong, Whitworth & Co., Elswick. Then at Montreal, Vickers, Ltd., Barrow, are busy with the necessary slips and workshops, though, owing to the inadequacy of the St. Lawrence Channel, it is not expected that they will be in a position to build vessels of large size for several years yet. In addition, other yards are being established at Vancouver and Esquimalt, B.C., which should be able to look after Pacific Coast requirements; at Port Arthur (Ontario), and at Sault Ste. Marie. At present, in addition to dry dock subsidies paid by the Dominion Government since 1882, the only aid to the industry that is of much value is the duty of 25 per cent. on ships, dredges, and yachts built abroad for use in Canadian waters, vessels in American or any other foreign ports.

**Papermaking in Washington**

G. C. Howard, of Everett, recently has contributed an article to an Eastern paper industry journal, discussing the making of paper in the state of Washington. Portions of this article are specially interesting to the lumbermen considering the waste problem. In part, Mr. Howard, says:

"The slabs, edgings and sawdust from the extensive lumber

industries of the state furnish an enormous quantity of material of prospective value, and particularly for special grades not now being made. The grain regions of the central and eastern portion of the state provide a very large tonnage of straws.

"These raw materials exist in ample quantity to support an extensive development of the industry. In general they are easily accessible to transportation and power, but this is not true in the case of cottonwood, which is of particular value in book and magazine papers. The manufacturers in this line are already confronted with the necessity of reforestation to assure a future supply of this species.

"With the present cost of cord wood for pulp it is not economical to use saw mill slabs to make into white stocks owing to the high cost of perfectly cleaning and freeing from bark. Neither is the wood resinous enough to work for turpentine by the steam process as practised in the long leaf pine region of the south. There is, however, a large amount of this waste that can be easily segregated to give a raw material sufficiently clean and of good fiber length for many purposes."

# Review of Current Trade Conditions

## Ontario

Dealers are busy shipping orders on hand and considerable lumber is being moved out of local yards. This is particularly the case in western Ontario. The yards are however, still fairly well stocked and are not making very big purchases.

Spruce and hemlock are moving rapidly and are difficult to obtain, but white pine, with the exception of mill and deal culls, is somewhat inactive.

Hardwoods remain about the same with the exception of United States oak, which has seen a considerable rise in the last few weeks, largely on account of the floods.

As seeding is now in full swing, business may be expected to be a little quiet for a week or two.

Most of the saw mills in the Georgian Bay district are operating and have a fair average amount to cut.

Reports from Ottawa indicate considerable activity in the lumber trade during the past fortnight, as the result of increased building operations and the opening of navigation on the St. Lawrence River. Woodworking establishments are very busy with orders for interior woodwork for a number of high office buildings now nearing completion. A fairly active export trade is reported to Great Britain, with the demand about normal for all grades. All the saw mills in the Ottawa Valley are now sawing.

## Eastern Canada

The lumber trade at Montreal continues rather quiet although steady and at unchanged prices. Dry common stock is scarce and the demand is in excess of the available supply. Wholesalers report that the volume of business, up-to-date during the present year, is in excess of that during the corresponding period of 1912. Lath are scarce and dear at Montreal and it is expected that prices will continue at their present level at least. Manufacturers have disposed of the 1913 cut at prices higher than any since 1906. There is a good demand for dimension timber, which is expected to continue. Freight to Great Britain have been lowered by 5s., as a result of vigorous protests made by shippers against the recent increase of 7s. 6d.

The paper and pulp trade at Montreal continues unchanged. The market for news print is firm, but that for ground wood is quite unsatisfactory, prices being low. The demand for Canadian pulp is rather limited at present. Sulphite is strong again.

All the mills at St. John are now operating. Driving conditions on the St. John have not been good, as the high water in the river did not last long. Some of the logs in the branches of the main streams are likely to be hung up. Many of the operators in the lower sections of the province have been obliged to leave some of their logs in the brooks. Unless heavy rains come soon, a serious shortage is probable. Logs are selling at unprecedented prices, such as \$16 for merchantable and \$11.50 to \$12 for battens. Bank logs at St. John are bringing \$14.50 for merchantable spruce and \$10.50 for battens, 8 in. to 10 in. at the top end. All English deals being cut at St. John have practically been sold for \$16.50 on specifications running 60 per cent. 7 and 8 in. x 3 in. balance 9 in. and up. Narrow scantling are bringing \$14 to \$14.50 and ends \$12. There is a good demand for merchantable spruce boards at \$15 at the mills for 4 in. and up wide, while clear boards are bringing \$30. All kinds of refuse material are from \$1 to \$2 higher than last season. Lath are selling at \$3.25 to \$3.50. Shingles are scarce and are selling at 10c per M higher than in 1912. It is expected that the stock of cedar logs will be much less than in 1912.

A steady and strong demand continues for eastern spruce at Boston, although dimension stocks are not satisfactory. The supply of random is light and the demand fair, so that prices are well maintained. At Pittsburgh there is an active demand for good spruce, but prices are unchanged. Eastern clipped hemlock boards at Boston are being held by some dealers at as high as \$25.50. No sales are reported at more than \$25, but the stocks are light enough to make manufacturers feel that the market will advance. In Pittsburgh on the other hand, although stocks of hemlock are light, there are reports of sales at a reduction of 50c. Hemlock lath at Pittsburgh are selling freely at prices varying from \$4.65 to \$4.75 and stocks are apparently low. There is a fair demand for hardwoods at Boston and prices are strong. At New York, the demand for hemlock is good throughout the list, boards are practically out of the market. Hardwoods at New York are in good demand and stocks are not too plentiful.

White cedar shingles are firm at Boston. A steadier market is reported for red cedar shingles. The market for 1½-inch lath is rather difficult to describe as sellers are apparently insisting on higher prices than retailers will pay at present.

## Great Britain

A fair amount of current business is reported from London and the better grades are quite firm. Importers however, are not satisfied with the situation, as the volume of trade is not large and buyers are not looking for forward goods at all eagerly. This is rather unsatisfactory from the importers' point of view as stocks are commencing to arrive and they would like to see them moving off a little more rapidly. Excellent weather has prevailed of late and it is expected that an improvement will soon take place. Contracting builders are busy, road paving is active and the packing trade is rather spotty. The consumption is about at an average. Deliveries at the London Docks during the week ending April 19th amounted at 4,103 standards as compared with 3,270 during the corresponding week of 1912. At Foy, Morgan & Company's recent auction sale, unsorted spruce from St. John sold at £10 10s. for 3 x 9. First Quebec, 3 x 7, brought £13 15s. and £13 5s. Unsorted St. John ditto, sold for £9 10s., £9 5s. and £9.

The volume of trade at Liverpool is fair and steady, for current business, and comes from all sources of the softwood trade in the district. There is no particularly strong feature, but just a generally steady market. This is considered to be a satisfactory state of trade for this time of year, from the builders' point of view. The general outlook for future trade is good. Consumers are beginning to find that holders are justified in asking high prices, on account of the high prices asked by shippers abroad. Consumers are therefore beginning to come into the market, as they see no probable advantage in holding out any longer. The first arrival of Canadian pine goods from Montreal are not expected until towards the end of May. It is not expected that there will be any pressure to make shipments from Montreal. No change is reported in the c.i.f. market for spruce deals. Liner parcel prices continue firm and the parcels are gradually becoming small and going practically into consumption from the quay. A slight easing off is reported in spot values, the reason being hard to explain. Generally speaking, present spot quotations are not in harmony with c.i.f. values. Orders are small, as consumers still seem to expect lower prices. Importers are encouraging this condition to some extent by cutting one another's prices.

Pine and spruce are still moving slowly at Glasgow. Stocks on hand are light, but quite sufficient for the present quiet demand. Prices of spruce have recently been shaded, shippers apparently preferring this to storing their stocks. This situation is rather curious in conjunction with the reported shortage of supplies and the firmness of other markets.

## United States

The general business conditions prevailing throughout the United States have not encouraged a large volume of trade in the lumber business during the past fortnight. There is a feeling of hesitation as to the result of the readjustment of the tariff. This is a development which has occurred periodically in the United States whenever tariff alterations were under consideration. At the present and corresponding stages in the development of the situation, business interests have invariably commenced to discount any possibility of future depreciation. In most cases the result is a temporary check of a healthy nature and a satisfactory impetus to trade when the situation clears out a little later on. The lumber trade at present seems to be acting in this manner and marking time. An encouraging feature is the continuance of a fairly good demand.

The chief feature of the situation is the absence of future buying. The railroads and large industrial concerns are apparently waiting for further developments. An encouraging factor is the situation in the steel industry. Steel manufacturers are well sold up into the third quarter and still have extensive back orders on their books. The crop outlook also is most encouraging, so that a large volume of trade may be reasonably expected, without consideration of the tariff. The lumber trade however, is not so extensive as was expected during the early spring, as dealers in general are buying only for current distribution. With the exception of a few lines of yellow pine, prices are very strong and in a position to meet successfully any tendency towards a decline, as stocks are not excessive and many

## **Cleveland-Sarnia Sawmills Co., Limited**

**SARNIA, ONTARIO**

A. F. HOLDEN, Pres. F. H. GOFF, Vice-Pres. E. C. BARRE, Gen. Mgr. W. A. SAURWEIN, Ass't. Mgr.

items are really out of the market. It has taken manufacturers a number of years to reach this satisfactory situation and it is to be hoped that they will do nothing to reduce their advantage, by producing a greater volume of lumber than the markets require.

The building situation continues to encourage the lumber trade, nearly every large city reports an increase in the quantity of building. The indications are that an enormous amount of building material will be consumed during the present year. The yellow pine market shows some improvement, although there is still considerable doubt as to the immediate future. Many manufacturers however, expect the market to regain all the strength which it has lost and to experience a stiffening of prices in the near future.

Stocks of northern pine are now moving from Great Lake points to Bay City, Saginaw, Toledo, Cleveland, The Tonawandas, Buffalo, Chicago and Milwaukee. Shipments to Saginaw River and Lake points from the Georgian Bay district are expected to be heavy. All grades of white and Norway pine are strong. Low grades, especially those for box making continue scarce. The Northern Pine Manufacturers' Association report that 47 mills among their membership pro-

duced 57,512,809 feet in March, compared with 37,733,447 feet in March, 1912, an increase of 65.5 per cent. For the first three months of 1913 the production was 178,663,244 feet an increase of 66,444,617 feet. For the first three months of 1913 the shipments increased 6.5 per cent., as compared with the corresponding period of 1912, the total being 295,025,422 feet. The lath production during March exceeded that of March, 1912, by over 6,000,000 pieces and in the first three months the production was 52,332,575 pieces, as compared with 24,726,262 pieces during the corresponding period of 1912. Green stock has been brought into good shape very rapidly by the clear dry weather of the past fortnight. Low grade lumber in the Saginaw Valley is now bringing \$2 more than at the end of last season.

No change of any importance is reported in connection with hardwood markets in the United States. The general condition is one of prosperity. In the northern hardwoods maple, beech, birch and soft elm are in good demand and scarce. The increased use of maple for other requirements besides flooring is commencing to make it difficult for flooring manufacturers to obtain their stocks. All kinds of number 3 common hardwoods are scarce and selling at high prices.

## Market Correspondence

**SPECIAL REPORTS  
ON CONDITIONS AT  
HOME AND ABROAD**

### A Short Season Possible in New Brunswick

St. John, N.B., May 7th (Special to the Canada Lumberman):—All mills at the Port of St. John are now in operation turning out practically 600 M of sawn lumber per day, which means the consuming of about 625 M feet of logs in the ten mills, but at the present writing it does not look as if this rate can be kept up during the whole season, as the water in the river and streams is rapidly dropping and some of the logs have, already been left in the branches of the main streams which come into the St. John. The river opened about April 20th for driving, and a few days afterwards the water rose to a great pitch, caused by very warm weather. During the last week in April the driving was extra good, but a cold wave followed which has continued without any rain, until all the ice and snow in the woods has been melted and it now depends entirely upon rains, whether the logs shall get to booming limits or not. About 35 to 40 millions of old logs were wintered at St. John, which, with the cut of about 60 million would not have made an ordinary season for all the mills here, as logs are not equally divided. If we have any logs hung up, the season will be extra short. In the lower sections of the province many of the operators have had to leave some of their logs in the brooks. The snow wasted out of woods very early and left nothing to fall back upon. Of course this does not apply to all sections, as conditions vary. On the Oromocto, the drives are practically safe. On the Little River, in Sunbury Co., the River Valley Lumber Company have about a million hemlock hung. It is said that the Partington Pulp Company have had to leave about 4 million in the Taxis for want of water. On the Salmon River, all the drives are in, about 15 million in all. A large quantity of which is hemlock. Practically all the hemlock being cut is for timber for the wharves at West St. John, N.B., so it can be well seen that unless conditions change soon, the shortage will be much increased. A much larger quantity of bank logs is coming into Springhill than it was thought would be the case in the early spring. Logs are selling for \$16 for merchantable, with batten at \$11.50 to \$12, an unprecedented price. At St. John, the bank logs are being sold for \$14.50 for merchantable spruce logs, \$10.50 for battens, 8 to 10 inches at top end. Spruce pulp logs are bringing \$8 to \$9, pine logs \$10, and fir logs \$8.50, which are the highest logs have sold for at any time in the history of the milling industry here. The supply of bank logs is not more than half of the usual quantity cut. It can be seen from the prices being paid for logs that the mill man although getting a higher price for his sawn materials is yet below a reasonable profit.

The conditions of the labor market are the worst they have ever been here. While there are many men looking for work, the class of men to be found is very inferior. Great unrest seems to prevail among the labor element. Talks of strikes are in the air, but it is felt that this is mostly agitation and has no material foundation. The lumber industry is taxed to its utmost, and, should the labor ask for any advance on the rates now in force it will simply mean that the mills will be forced to close. Practically all the woodworking factories are idle, the men having demanded 15 per cent. advance in wages and recognition of the Union. This, the employers feel they cannot grant. Hence the mills are closed, and no advances have apparently been made by either party.

Practically all the English deals which are being manufactured have been sold for \$15.50 for specifications running 60 per cent. 7 and 8

x 3, balance 9 in. and up with narrow scantling at \$14 to \$14.50, ends, \$12. Merchantable spruce boards are in good demand at \$15 at mills, 4 in. and up wide, with clear boards at \$30 per M. Refuse lumber of all kinds is higher by \$1 to \$2 per M than last season, largely caused by activity in local building, by the demand from New England and by the cost of the better article being so high. The prices being paid for refuse are higher than ever before realized.

Laths—The sellers who have any are asking from \$3.25 to \$3.50 per M. on the wharves here. This is much higher than laths have ever sold at here. Stocks of all grades of shingles are low, practically all second class and No. 1 being used direct from saws, with the prices about 10c per M. higher than in 1912. The stock of cedar logs will be much less than in 1912, and the shingle industry will be forced to buy elsewhere before the end of the season.

Box shooks—Trade is quieter than in 1912, although the fish trade has really not opened, to date.

J. E. Moore's new mill at South Bay is expected to start in about a month.

The Fraser Lumber Company's new mill at Fredericton will be ready about August 1st.

The Riddle Robbins Lumber Company, of Boston, who are building a small rotary mill on the Belisle, a tributary of the St. John, expect to get started about August 1st. They will saw chiefly for the New England Market.

At this writing very few logs have come into the booms of the St. John River Log Driving Company. The drift drive will about finish the work of cleaning up the lower sections of the river this week and will have picked up about 35,000 pieces.

### Montreal Market Quiet But Firm

Montreal, May 10th; (Special to the Canada Lumberman):—With no unusual demand to report, the lumber trade keeps very steady, with quotations maintained. It may be said, however, that there is not sufficient dry common stock to meet the demand. Generally speaking, wholesalers are satisfied with the business done so far this year, and some firms have had a large turnover than at this period in 1912.

Local trade is fairly brisk, and if the building permits to date are any criterion there is every prospect of increased buying during the remainder of the season. The permits for the past month were \$3,322,406, as compared with \$2,314,102 last year. For the four months the total was \$5,190,253, against \$3,735,261 in the corresponding period in 1912. An unfavorable feature is the slowness of collections.

Lath are particularly scarce and dear, and quotations are likely to hold, as manufacturers have sold the coming cut at the highest prices since 1906.

Dimension timber is in good request, and is certain to continue so, owing to the large contracts which have been given out.

Firms shipping to the United Kingdom made vigorous protests against the advance in freight rates, and followed this action by declining to ship at the new rates. In consequence of this stiff attitude the steamship companies reduced the freights by 5s per standard, which leaves them 2s 6d higher than those of last year. At the date of writing no lumber has been shipped, although a fair amount of timber has gone to the United Kingdom. That the advance in

# DRY SPRUCE BOARDS

**W**E wish to inform our customers and friends that we have on hand in our Sayabec yard about 22 million feet of our 1912 late summer and autumn sawing. Is now dry and ready for prompt shipment.

¶ We have our usual full assortment of widths, thicknesses and grades and are now prepared to accept orders for May, June and July shipments.

¶ Our Sayabec Dressing Mills are of large capacity and produce Fenderson's "Silk Finish."

Jacquet River, N. B.

**WE CARRY THE LARGEST AND BEST ASSORTMENT  
OF DRY SPRUCE IN CANADA**

freights was unjustified is shown by the partial reduction by the steamship companies, and exporters still feel that rates are too high, having regard to the competition which Canadian lumber has to meet in the British markets.

The Montreal Lumber Association of the Board of Trade have passed a resolution asking the Dominion Board of Railway Commissioners to grant reciprocal demurrage in the event of cars of lumber not being lifted within 48 hours of completion of loading, and in the event of cars not being placed for unloading within 48 hours after arrival at destination. The association also ask that the settlement of demurrage matters be conducted by an officer of the Commission instead of by the Canadian Car Service Bureau. No data has yet been fixed by the Commission for hearing arguments in the case.

No change of any moment has taken place in the paper and pulp section. News print still keeps firm. Ground wood is a very unsatisfactory market, prices being low. Water conditions are good on the other side of the border, and under these circumstances, the demand for Canadian pulp is limited. Sulphite is again strong, production all over the world being easily absorbed. Advices from Europe favor higher prices. It is reported that the Wayagamack will be turning out 100 tons of chemical pulp per day by the Fall.

### Increased Activity at Ottawa

Ottawa, May 7th, (Special to the Canada Lumberman):—There has been considerable activity in the trade during the past two weeks, due, no doubt, to the opening of the building season, and the opening of navigation on the St. Lawrence. During the latter part of last month business was not so brisk as local lumbermen would have liked, but now they report conditions encouraging for a good season. Much more lumber is being shipped from Ottawa to Toronto and other points west than to Montreal and points east. In Ottawa, permits for buildings were taken out in April totalling \$787,300, as against \$457,000 in April, 1912. The total value of the permits taken out since the first of January is \$1,180,730, as against \$861,735 for the same period last year. Indications are that this year will be a record breaker for the number and value of buildings erected in the city. Woodworking establishments are as busy as they can be, filling orders for interior woodwork for the several skyscrapers now nearing completion.

Exporters report that the British trade is fairly satisfactory. The demand is about normal for all grades in the British market. There has been but one change in the prices lately and that is in white pine stock, which has gone up \$1.

Sawmills in the Ottawa Valley are now as busy as they can be and large gangs of men are engaged on the river driving the logs.

The employees in the J. R. Booth paper mill were given an increase in their wages this week of 25 to 30 cents per day.

Work on the erection of a new warehouse and woodworking factory is being rushed by the McAuliffe Davis Lumber Company at their Chamberlain Avenue yards, to replace the buildings which were destroyed by fire a short time ago. They intend installing the latest woodworking machinery and will probably be looking round the market for the newest and best in a few weeks.

Manufacturers of fixtures and fittings for offices and stores might, with advantage, direct their attention to Ottawa, as there are whole blocks of new stores and offices being built on the main streets, and it is the intention of the owners to have them fitted up elaborately.

### North Shore Mills Busy

Thessalon, Ont., May 5th; (Special to the Canada Lumberman):—The creek drives are all out and the drives on the streams are progressing favorably. The water was very high for a few days, so much so, that the piers at the mouth of the Mississaga River were carried away. Fortunately no logs got away, as the booms held. Two tugs were placed at the mouth of the river with 7,000 feet of booms to catch the logs, should the booms give way, but everything turned out O.K. There were about 10,000,000 feet of logs in the booms at the time, belonging to Waldie Bros. and the Thessalon Lumber Company.

The mills are all sawing—those that are in commission. The large mills at Cutler and the North Channel mill at Thessalon will not run this season. The Eddy Bros. mill at Blind River made a very early start, sawing on the 8th of April and will continue sawing till the ice takes in the fall. There are a large number of boats loading lumber at the different mills at present bound for the various ports on the lakes. John R. Stover, general manager of the firm of Eddy Bros., passed through here a few days ago and reports the drives of his firm coming along well, abundance of water and a full crew of drivers.

The Thessalon Lumber Company have a large crew on their local railroad, railing logs across the portage, about three miles into the Georgian Bay waters.

### Brighter Prospects at The Restigouche

Campbellton, N.B., May 5th:—With the early spring, things are looking pretty bright for the mills although the conditions were none of the best for the drives. Scarcity of men was the greatest drawback felt by the lumbermen but notwithstanding this the drives are coming well, encouraging reports being received on all sides. The Shives drive from Bruntland Brook is the first down and is the earliest for some years. Hazen Brook drive is reported safe, and Five Fingers is reckoned about two-thirds out and pretty safe. No definite word has been received from the others but report has it that they are coming well. Richards No. 1 mill started on April 29th and the others are all ready to begin the season's work. Athol mills will start in about this week, and the shingle mills here are likely to start sawing any day now. The cut this year will compare favorably with that of previous years and with the early start, a good season is expected. The rebuilding of the Charlo mill recently destroyed by fire will be proceeded with shortly by the Richards Company.

### Tonawanda Trade Topics—Active Market General

North Tonawanda, May 7; (Special to the Canada Lumberman):—The arrival of the first cargo of lumber for 1913 gave the local market a decided impetus. Local dealers report more orders than for several weeks and a well defined movement in all lines of the lumber industry. Prices show no sign of falling off and there is no retrograde movement anywhere. It is needless to say that everybody is satisfied and that hopes are held out for a better all-round season than last. 1912 saw a total of 325,000,000 feet of all kinds of lumber brought here by boat alone. With 50,000,000 more feet at least arriving by rail, nearly 400,000,000 feet of lumber furnished the volume of business at the Tonawandas last year. With 1913 practically certain to exceed these figures, it is not strange that local lumber interests are looking forward to one of the busiest years locally of the last decade.

W. E. Kelsey & Son received the first cargo of lumber of the season when the steamer Edward Buckley arrived with 600,000 feet of white pine. The Buckley loaded at Marionette, Wis., and came down the river to the Tonawandas on May 3. The schooner Unadilla with a cargo of hemlock for the same firm arrived at Tonawanda the following day. The first lumber laden vessel arrived at the Tonawandas last year just a week later than this year. There is a big fleet of other vessels on the way down the lakes from both Canadian and American shipping points and before the end of the present week more than 6,000,000 more feet of lumber will have been docked at the Tonawandas.

It is now definitely known that the Erie Canal will not be open before June 1 at the earliest. The change in date, which is two weeks later than usual, means a handicap to local shippers of lumber. Many orders were taken for prompt shipment by canal on May 15, the usual opening date, which means that the railroads will now get the business. The late opening of the canal will also result in holding many million feet of stock at upper lake ports until it is known definitely when the canal will be ready for business.

Mr. John Keenan, of Vancouver, one of the best known lumber salesmen in the local market, has accepted a position with the W. C. Edwards Lumber Company, of Ottawa, Ont. Mr. Keenan leaves the employ of A. Weston & Son, of this city, with whom he has been associated for nearly twenty years. Mr. Keenan has already taken up his duties with his new employers. His family will continue to reside in North Tonawanda.

The J. W. Scribner Lumber Company, of North Tonawanda, large forwarders of Canadian lumber, have moved their offices from the Robertson Bank building to the new Sweeney "electric" building, at the corner of Sweeney and Webster streets.

Local lumber dealers are not pleased with a recent notice from the railroads that freight rates will shortly be increased five per cent. The increase is not local but will affect every part of the United States. The net results to the railroads at the Tonawandas will run into hundreds of thousands of dollars, since lumber shipments from the local market have long kept the Tonawandas in third place among the largest shipping points of New York State.

The deadlock which existed between the Tonawanda Lumbermen's Association and the Longshoremen's Association whose members handle all lumber taken from lumber carriers at local ports was broken this week after negotiations which extended over a period of six weeks. The lumbermen finally granted all of the demands for increased handling with the exception of one item. Following is the new schedule of rates:—

Spruce, 40 cents per thousand feet. 5 cents increase.  
Norway, 40 cents per thousand feet. 5 cents increase.  
Tamarack, 50 cents per thousand feet. 10 cents increase.  
Hemlock, 45 cents per thousand feet. 5 cents increase.  
Basswood, 40 cents per thousand feet. 5 cents increase.  
No. 3 boards and better, 30 cents per thousand feet. 5c increase.

## EDGINGS

### Ontario

The Mississauga Pulp & Paper Company, Limited, Toronto, Ont., has obtained a charter.

S. R. Hughes' Planing Mill, 79 Portland street, Toronto, was recently damaged by fire.

Jas. Gillies' planing mill, Preston, Ont., was destroyed by fire on May 1st. Mr. Gillies will rebuild at once.

The Shevlin-Clarke Company, Fort Frances, Ont., are now operating day and night at practically full capacity.

H. S. Sternaman, Cayuga, Ont., is enquiring for prices on carload lots of joists, 2 in. x 4 in., 10 ft., and 2 in. x 8 in., 14 ft.

Walter Lawson's sawmill at Stewarttown, Ont., was recently completely wrecked by a boiler explosion. Fortunately, none of the men working in the neighborhood were injured seriously, although a number had miraculous escapes.

The McAuliffe, Davis Lumber Company, Limited, Ottawa, Ont., are erecting a new warehouse and woodworking factory at their Chamberlain avenue yards, to replace the buildings which were recently destroyed by fire. They will install the latest woodworking machinery and will probably be in the market in the course of a few weeks.

The Devon Lumber Company, Limited, has been incorporated with a capital of \$50,000, to carry on business as lumber and timber manufacturers and dealers in all its branches, with head office at Ottawa. The provisional directors are Thos. A. Low, of Renfrew, F. N. McCrea, Sherbrooke, Que., and J. R. Osborne, barrister, of Ottawa, Ont.

The Lusty Lumber Company, Limited, Rodney, Ont., whose plant was recently destroyed by fire, report that they intend to rebuild, although they have not yet definitely decided when they will commence operations. They are putting in a portable mill to cut stock for their new plant. It is possible that the new plant will not be put up until next autumn.

The McLaren Lumber Company, Limited, of Brockville, Ont., has been incorporated with a capital of \$75,000 to carry on business as saw and planing millers, dealers in timber, lumber and wood of all kinds, with head office at Perth, Ont. The provisional directors are Peter McLaren, J. L. P. McLaren, and F. W. Hall, barrister, all of Perth, Ont.

The Cockburn Lumber & Concrete Company, Dundas, Ont., are drawing up plans for the construction of switches and sidings connecting with the Grand Trunk Railway. They will also have twelve separate tracks of 60-pounds rails from their kilns to the dry rooms. The company will manufacture fence posts, telephone poles, cement bricks, blocks, sewer pipes, etc.

The Laberge Lumber Company, Limited, has been incorporated with a capital of \$100,000 to carry on business as general contractors and builders, manufacturers and dealers in logs, timber, lumber and other wood products, with head office at Sudbury, Ont. The provisional directors are J. A. Laberge, J. B. Laberge, and Louis Laforest, contractors, all of Sudbury. The company are erecting a sash and door factory at Sudbury, costing about \$60,000, with a dressing capacity of about 200,000 feet per day.

A report from Kenora, Ont., states that the Backus interests have secured an extension of three months to their option on the Keewatin Power Company's property and that negotiations are proceeding satisfactorily. The extension is made in order to conclude arrangements with the Ontario government for pulpwood properties. This is expected to be concluded within six weeks or two months and the company will then take over the property and commence developing power. Mr. D. McLeod, manager of the Keewatin Lumber Company reports that when arrangements have been completed with the town and government, 9,000 h.p. will be developed, which will be used in a one hundred-ton pulp mill which will be erected and equipped at once. It is also the intention of the new company to install a paper mill at a plant at Keewatin formerly used by the old Keewatin Lumbering and Manufacturing Company.

### Eastern Canada

The Quebec-Labrador Pulp & Lumber Company, Limited, Montreal, P.Q., has been registered.

The mill of the Continental Lumber Company, Limited, at River Charlo, N.B., was recently destroyed by fire. The loss is covered by insurance.

Considerable damage was caused recently by a fire which broke out in the lumber yard of L. Villeneuve and Company, St. Lawrence Boulevard, Montreal.

J. L. Cunningham & Company, lumber dealers, Richmond, P.Q., have been registered. The members of the company are J. L. Cunningham and E. L. Hall.

Price Brothers have just commenced to operate their third paper unit of fifty tons capacity per day at Kenogami, P. Q. This mill is one of the largest in Canada, there being 24 grinders, driven by four turbines of 4,000 h.p. each.

The National Lumber Company, Limited, has been incorporated in the province of Quebec, with head office at Papineauville, and capital stock of \$99,000. The incorporators are A. Belanger, A. O. Belanger, L. N. Desjardins, of Papineauville, L. Bourdon and L. Fouthier, of Fassett.

Damien Lalonde, Limited, have been incorporated with a capital stock of \$200,000 to deal in lumber and to manufacture doors, windows, sash, etc., and to carry on business as timber merchants and saw mill proprietors, with head office at Montreal. The incorporators are Damien Lalonde, Lionais and H. Lalonde, all of Montreal.

The mill of the Miramichi Pulp and Paper Company, at Chatham, N.B., has been purchased by Albert E. Reed, of London Eng. It is reported that the

purchase is made on behalf of the Dominion Pulp and Paper Company, and that the plant, which has been idle since January, 1911, will be considerably enlarged.

Finch, Pruyn & Company, incorporated, Glen Falls, N.Y., have placed an order with Clark Bros., of Belmont, N.Y., for a complete sawmill, which they intend to erect on the Henri River, P.Q. The plant will include an 8-foot band mill with steam feed carriage, capable of handling 35-foot timber, horizontal resaw, edger, etc.

The statement was recently made that the E. B. Eddy Company, of Hull, were discontinuing the pulp and wooden pail departments of their industry. It is now reported that in the wooden pail department only is manufacturing being stopped. The making of indurated fibreware from pulp will be carried on as hitherto, but on a more extensive scale.

The Belgo Canadian Pulp & Paper Company, Limited, Shawinigan Falls, P.Q., report to the Canada Lumberman that the 500 square miles of timber limits, known as the Metabetchouan Limits, which they recently purchased from Messrs. Sharples, Power and Calvin, were secured in order to obtain the wood upon them for a sulphite plant and two more paper machines. The Belgo Canadian Company are reported to have paid in the neighborhood of \$500,000 for these limits.

Application has been made to the New Brunswick Legislature for the incorporation of the Restigouche Lumber Company, Limited, with head office at Dalhousie Junction, N.B., and capital stock of \$75,000. The applicants are as follows:—R. L. Hicks, Dalhousie Junction; W. S. Smith, IDahousie; Allan McC. Hicks, Dalhousie Junction; L. J. Hicks, Dalhousie Junction and A. E. G. McKenzie, Campbellton. The objects of the incorporation include the building and operation of sawmills and other subsidiary powers.

The Smith Lumber Company, Woodstock, N.B., who recently lost their sawmill by fire, report that they are already at work upon the erection of a new mill. The building will be 32 ft. x 120 ft. with a lean on one end, 12 ft. x 40 ft. The following machinery will be installed: rotary saw with gunshot feed, gang edger, shingle machine, lath machine, planer, and barrel heading machine. The plant will be built upon concrete piers and the company intend to have a thoroughly up-to-date mill.

#### Western Canada

The old Massett sawmill belonging to Wanless Bros., of Vancouver, at Massett, B.C., has been renovated and re-opened.

The Knowles-Smith Lumber Company, Limited, has been incorporated in British Columbia, with head office at Comox, and capital stock of \$25,000.

The Vedder River Shingle Company, Limited, has been incorporated in British Columbia, with capital stock of \$10,000, and head office at New Westminster.

The Reliance Shingle & Lumber Company, Limited, has been incorporated in British Columbia, with head office at South Vancouver, and capital stock of \$10,000.

The Forest Mills of British Columbia, Limited, successors to the Dominion Saw Mills & Lumber, Limited, Revelstoke, B.C., have commenced operations at four of their mills at Three Valley, Taft, Cascade and Comaplix, B.C.

D. F. Brooks, St. Paul, Minn., president of the Powell River Company, Powell River, B.C., reports that the company will probably erect a new sawmill and shingle mill near the company's plant, to handle the by-products of the paper plant and such timber as is available in the neighborhood.

Cushing Brothers, Limited, have been incorporated with a capital stock of \$2,000,000 to carry on business as timber and lumber dealers, saw mill proprietors, timber growers, etc., with head office at Calgary, Alta. The incorporators are R. W. Hart, solicitor, G. M. Miller, and J. V. Guilfoyle, all of Toronto.

The Dominion Department of Railways and Canals have awarded contracts for \$130,000 worth of lumber for the Hudson Bay Railway. The successful contractors are: The Atlantic Lumber Company, Kent Building, Toronto; Musgrove Lumber Company, Halifax, N.S.; and The Long Bell Lumber Company, Philadelphia, Pa.

The Columbia River Lumber Company, Limited, Golden, B.C., in their annual report show profits of \$327,896. Interest on debenture sinking fund and accounts receivable reduced this to \$131,694. The profits for the year are \$77,958 in excess of those of the preceding year. In conjunction with the Canadian Western Lumber Company, this company has proceeded with the establishment of retail yards to the number of 180.

Columbia Western Lumber Yards, Limited, have been incorporated with a capital stock of \$5,000,000 to carry on business as lumber merchants, manufacturers and dealers in logs, timber and all wood products, with head office at Toronto. The incorporators are G. Ruel, S. P. Biggs, barristers, and W. B. Fleming, solicitor, all of Toronto. The company is associated with The Canadian Western Lumber Company, Fraser Mills, B.C.

The Forest Branch of the Lands Department of British Columbia has sold four isolated tracts of timber, realizing about \$20,000. One tract of 160 acres of logged-off land was sold to A. P. Allison at \$1.50 per M. plus the royalty of 50 cents, another tract of 90 acres on the Gilford Island brought \$1 per M., and the royalty. A lot of 160 acres on Duncan Island was sold to the East Coast Logging Company. A lot of 30 acres on Jarvis Inlet was sold to the Paterson Timber Company of Vancouver. These were all areas which were formerly considered nearly valueless from a timber point of view.

A report from Victoria, B.C., states that the Chemainus Lumber Company and the Empire Lumber Company will shortly commence logging operations upon timber lands in the neighborhood of Cowichan Lake. The E. & N. Railway has completed its branch from Duncan to Cowichan Lake, making it possible to bring out the logs economically. The Chemainus Lumber Company has been operating in the neighborhood of Chemainus for a number of years. The Empire Lumber Company is a United States concern of recent organization, with a large amount of capital. It is reported that the Empire Lumber Company will commence the construction of a large mill at Osborne Bay on the east Coast of Vancouver Island. It owns large timber holdings on the west shore of Cowichan Lake, which it bought some years ago from the E. & N. Railway.

## INDUSTRIAL LOCOMOTIVES

The day has come when only the very best locomotives will meet the needs of logging roads and switching around industrial plants. It is now necessary to produce special designs to meet special needs. For years we have been busy studying the conditions in all fields where locomotives are used and have designed our locomotives to meet those conditions.

Proper designs insure efficiency, reduce the coal bills, lessen repairs, and give maximum work for a minimum of expense.

Our locomotives embody the best construction and are sturdily built. They are simply in design, and all wearing parts are accessible for easy repairs.

Interchangeable repair parts, sure to fit, are kept in stock for prompt shipment.

Dominion Express Building, MONTREAL, CANADA

## When The Oil Or Grease Fails

There is sure to be trouble, unless this contingency has been guarded against by the proper use of

## DIXON'S FLAKE GRAPHITE

Then there can be no trouble. For the graphite which will have adhered to the bearing surfaces will itself act as a lubricant, always minimizing friction and keeping the bearing cool until the oil or grease supply is restored. Let us send you a copy of our book "Graphite As A Lubricant," No. 238, and a test sample.

## Do you ever use Conveyors for conveying shavings or other material?

We have a special Scandinavia belt for this purpose, which is proving extremely satisfactory for this kind of work.

Write for Information and Prices. We can make you an attractive proposition.

# Federal Engineering Company, Limited

TORONTO, 90 Sherbourne St.

MONTREAL, Unity Building

# The Three Goodhue Belts

**"EXTRA" "STANDARD" "ACME WATERPROOF"**

These three brands are made for three different services and each brand is the best quality made from selected hides with the stretch taken out.

"Goodhue Belts" stretch less than any other belt by 15 to 25 per cent. This quality effects a great saving because it is unnecessary to be continually shortening the belt to keep it taut.

"Acme Waterproof" brand is made for the wet places in a mill and will give a remarkable service under the most trying conditions.

When you buy a belt—buy a Goodhue. Prices and particulars on request.

DANVILLE - QUEBEC

## GET 20 PER CENT. MORE LUMBER FROM YOUR LOGS

by using our

### Patent Steel Band Mill and Carriage

Results from logs of given dimensions cut on Breeze, Denison & Co. pat. band mill.

| Diam. | Log Length | Feet Lum. |
|-------|------------|-----------|
| 18in. | 16 ft.     | 45        |
| 10    | 12         | 54        |
| 10    | 16         | 69        |
| 1     | 15         | 96        |
| 14    | 16         | 171       |

This result was attained by different users of our mills during the season of 1912. We can prove to your satisfaction that this mill will cut more lumber and superior lumber than any other Band or Circular Mill on the market.

#### Special features of Mill

Concrete foundation not necessary. Frame constructed with brace bolted to same timbers which support base of mill. This prevents any movement of mill foundation throwing mill arbors out of cross line. Supporting timbers attached to track which prevents variation in cutting of boards.

#### Roller Bearing Carriage

designed to do away with lost side motion which is quite necessary for successful work in double cutting bands.

#### Double Action Friction Set Works

working on thin steel disc, which can be successfully used in place of usual foot friction in receding knees. This cuts down weight in pinion shaft, therefore reducing momentum, so that it is beyond speed of setter to over set by rapid work. Carriage can be changed from high to low speed instantly and can be operated without passing saw more than six inches either way. Knee opening to 44 inches. Guide prevents any binding motion to the gip and will automatically raise when coming in contact with knot in timber. Guides adjustable when mill is running.

A Canadian Built Mill of superior manufacture.

HORSE DEPARTMENT

"The Place to Buy them Worth the Money"

## The Truck That Saves It's Cost Several Times Over in The Year

This truck is designed for lumber yards and planing mills and will be found invaluable for loading and unloading cars.

The front gearing is detachable and may be used with eight or twelve hind gearings. It is a double-header, nuts on axles being kept tight with Steel Cotter Keys.

Oil cups on the wheels and the fact that there is no resetting of tires saves any amount of trouble.

The old wooden-wheeled truck is a back number in comparison with this. It will pay you to write for our general catalogue which describes these trucks in detail, and pick out the style you want now.

## The Shimer Cutter Heads For Door and Sash Work

These Heads are designed especially to meet the requirements of Door and Sash makers—to save all the hand fitting. The shape of the mould desired is turned into the Circular Bits, guaranteeing a uniform pattern, and that there will be no trouble in framing door and sash parts when matched with Shimer Cutter Heads. Prices are as follows:

|                                                                             |                           |
|-----------------------------------------------------------------------------|---------------------------|
| Door Head in solid section, complete with Bits to work 1 to 1 1/4 in. Doors | \$18.03                   |
| Door Head with Expansion feature, complete, extra.                          | 2.60                      |
| Bits for heavier doors from                                                 | \$7.28 to \$9.36 per set. |
| Sash Head in solid section, complete for 1 to 1 1/4 Sash                    | 17.91                     |
| Sash Heads with Expansion feature complete, extra.                          | 2.60                      |
| Bits for heavier sash                                                       | \$7.40 to \$7.66 per set. |
| Cope Heads without Bits, each                                               | 6.45                      |
| Cope Bits moulded to pattern,                                               | \$1.43 to \$1.56 each.    |

If you wish to reduce running expenses it will pay you to study the advantages offered by the Shimer Cutter Heads. There is nothing like them for strength—for Reliability—for Fast Cutting—for Quick Adjustment—for all-round work and lasting qualities.

These tools are turned out of Solid Steel Forgings—have the Shimer "make-ready" which saves you all the fitting and trying—keep your work up to the standard.

All F.O.B. Jamestown, New York.

## OUR NEW TRADE MARK

This mark, which will now appear on the label of every package of genuine Cling-Surface symbolizes two benefits assured to power users by systematic Cling-Surface treatment of belting and transmission ropes.

First, the preservation of the belt or rope fibres due to the food value of Cling-Surface in replacing spent natural ingredients, and in resisting climatic changes, moisture, steam, etc.

Second, the economic advantage of slipless belts and ropes run slack, as made possible by increased pulley contact arcs and the "cling", imparted by Cling-Surface to the belt face or rope surface.

Cling-Surface owes its success largely to penetrating and lubricating qualities.

Instead of making the belt sticky, it leaves the surface soft and clean and makes the interior flexible. Thus a belt is put into condition that permits easing and relief of the strain within, and on the pulleys, hangers and bearings. Belts so slackened effect a direct power saving, lessen wear on the journals, minimize the danger of hot boxes, lessen the frequency of lubrication, make less lubricant necessary, seldom need repair attention and minimize shut downs.

Send us a trial order for Cling-Surface and we will send you valuable literature on the care of your belting and ropes. And if you are not entirely satisfied with results from Cling-Surface you can have your money back. We quote f.o.b. Toronto.

## "JOHN BULL"

### Larrigans and Leggins

We illustrate two of our products that should be in the outfit of every lumberman. Both the larrigans and leggins are made of a special oil-tanned leather of our own tanning. It is unusually tough and absolutely waterproof.

When you need larrigans or leggins ask for "John Bull" brand and insist upon getting it. Every pair stamped with our trade mark.

### R. M. Beal Leather Co.

### "Black Diamond"

will do more work and easier than any other belt made. Give it a trial. Unequalled for Dynamos, Fans or any high speed machinery with small Pulleys. Does not require to be kept as tight as the regular Oak Belt.

# Dominion Timber Regulations

---

Licenses to cut timber on Dominion Lands in the Provinces of Manitoba, Saskatchewan, and Alberta, the Northwest Territories, within twenty miles on either side of the main line of the Canadian Pacific Railway in the Province of British Columbia, and in the tract of three and one-half million acres to be located by the Government in the Dominion in the Peace River district in the Province of British Columbia, lying east of the Rocky Mountains and adjoining the Province of Alberta, shall be disposed of by public auction at the office of the Dominion Timber Agent for the districts in which the berths are situated.

Before any parcel of timber is offered for sale it shall be surveyed by a duly qualified Dominion Land Surveyor into berths of an area not exceeding twenty-five square miles, and each of such berths shall then be thoroughly cruised by a duly qualified timber cruiser in the employ of the Dominion Government. The Minister shall then fix an upset price at which the berth shall be disposed of, and no berth shall be sold at less than the price so fixed.

Purchases to the amount of one thousand dollars or under shall be paid in cash at the time of sale. Purchases over one thousand dollars and not exceeding five thousand dollars shall be paid, one-half in cash at the time of sale, and a note or notes shall be given for the remaining half of the purchase price, payable in three months, with interest at the rate of five per cent. per annum. Purchases over five thousand dollars and not exceeding ten thousand dollars shall be paid one-third in cash at the time of sale, and notes shall be given for the remaining two-thirds of the purchase price, payable in three and six months, with interest at the rate of five per cent. per annum. Purchases exceeding ten thousand dollars shall be paid one-fourth in cash at time of sale, and notes shall be given for the remaining three-fourths of the purchase price, payable within three, six and nine months, with interest at the rate of five per cent. per annum. Notes shall be made payable at a bank in the city or town in which the sale is held or at a bank in the city of Ottawa. Cash payments must be made at the time of sale in legal tender or by an accepted cheque on a chartered bank, or by a draft issued by a chartered bank, payable to the order of the Deputy Minister of the Interior. If default is made in any payment required by this section the sale shall be forfeited and void.

The purchaser must also pay the cost or the estimated cost of the survey of the berth before a license is issued.

The licensee shall pay an annual ground rent of five dollars per square mile except for lands situated to the west of Yale, in the Province of British Columbia, in which case the yearly ground rent shall be five cents per acre.

The licensee shall pay the following dues on timber cut on his berth:—

Sawn lumber, 50 cents per thousand feet, board measure.

Railway ties, eight feet long,  $1\frac{1}{2}$  cents each.

Railway ties, nine feet long,  $1\frac{3}{4}$  cents each.

Shingle bolts, 25 cents per cord.

And 5 per cent. on the sale of all other products of the berth.

## Timber Permits

Yearly permits are granted to settlers, mine operators and others on application to the Dominion Timber Agents, from whom further information can be obtained.

**W. W. Cory,**

Department of the Interior, Ottawa,

Deputy Minister.

December 20th, 1912.

# Potato Scale Boiler Cleanser

"A Deadly Enemy of Scale"

We absolutely guarantee this Boiler Cleanser to remove all old scale, and if a small quantity is used continually, it will prevent any new scale from forming.

The composition of this Cleanser is of such ingredients that it is harmless to metal.

Send us a gallon of feed water and we will mix a quantity for **free trial** to suit your water conditions.

WRITE TO-DAY

**C. C. Snowdon,** Wholesale  
P. O. Box 1384 - CALGARY, ALTA.

# Counter Weights

When one ascends the other descends in obedience to the laws of gravity and trade. Price, one of the weights, ascends when quantity, the other weight, descends.

Southern pine production is decreasing and the deficit in that section must be made good from other sources, largely by an increase in the production of lumber in the intermountain country and on the Pacific slope.

That means an increased, a competitive demand for western timber, and a gain in the value of the stumpage and the manufactured product.

With these FACTS in mind can you afford not to profit by them?

For particulars of some of the great bargains now offered, address.

## HANCHETT New Hand Lap Grinders

**Hanchett Hand Lap Grinder**  
**BUILT IN ALL SIZES**

The First Machine Designed Primarily as Hand Lap Grinder. All other lap grinders were designed as Automatic Lap Grinders and transformed to Hand Grinders by leaving off the automatic attachments. In this new lap grinder improvements are secured which greatly shorten the time required to grind a lap besides being more convenient and easier to operate.

We provide an adjustment for raising and lowering the emery-wheel, which is placed at the top of the machine and is controlled by a hand wheel which is under the hand of the operator while he is operating the carriage moving the emery-wheel back and forth across the saw. So that without changing his position or even moving his hand from one adjustment to another, the operator can change the adjustment so as to keep the emery-wheel in contact with the saw as the lap is ground down. In this way there is no time wasted in stopping to change adjustments, and the emery-wheel is kept in constant contact with the saw at any pressure desired. By the same adjustment the emery-wheel is quickly lowered to square the ends of the saw before grinding the lap.

This lap grinder is equipped with our improved saw table adjustment for moving the table out to square the ends of the saw before grinding the lap, or to inspect the lap in course of grinding. This adjustment is positive and will not wear loose. The table is always firmly held in position and perfectly rigid, and yet is easily released to move away from the emery-wheel by less than one-eighth turn of the hand wheel, and clamped at any point for inspecting or squaring the lap, and as easily returned. The pitch and height of the table are easily adjusted to grind a lap of any desired bevel or width.

The emery-wheel carriage runs on rollers so that the emery-wheel is moved back and forth across the saw with very little effort, and is much easier to operate than the ordinary hand lap grinders.

We also provide a hand wheel adjustment for tilting the track or ways on which the emery-wheel carriage runs, to insure that the emery-wheel shall always operate exactly parallel to the saw. This is a new adjustment which most filers who have had experience in grinding laps will appreciate. It insures equal grinding of the lap from end to end.

The improvements embodied in this construction put these machines in a class by themselves, and make the grinding of a lap by hand a very different operation from what it has always been heretofore. When a filer has familiarized himself with this machine we believe that within the time usually required to attach the saw to the older style automatic lap grinders and get the adjustments set ready to start the machine to grinding, he could have the lap practically completed on the new Hanchett Hand Lap Grinder.

# Maximum Production, Minimum Cost

It has been proven that the capacity of the latest Berlin Matchers is limited only by the ability of feeders to keep them full of stock. At the highest speed yet attained Berlin Matchers have produced the finest finish and, more than that, they have proven their ability to stand up under the strain.

The great problem, then, is how to feed the latest matcher so as to secure maximum production.

That question is answered, finally, with the automatic feeding table, shown connected to a Berlin Matcher, in the illustration. Only with its assistance can the greatest possible production of matched stocks and profile patterns be reached and maintained. Over present average production this automatic feeding arrangement will increase output at least 33 1-3 per cent. In many cases more than that.

The fine, clean-cut work of the Berlin Matcher saves 30 per cent. in grades. An additional 5 per cent. may be saved with the help of the feeding table, as it allows the feeder time to turn stock for the best face.

Production with this matcher unit will cost from 40 to 60 per cent. less than with old type 100 feet per minute machines.

The six large feed rolls comprising the feed works of Berlin Matchers are the heaviest used on a matcher today. And unlike most matchers, the outfeed rolls need never be raised off the stock. An efficient "vacuum cleaner" clears stock of shavings and chips before it passes between the outfeed rolls. This does away with damage to stock face through that source.

**The best lumber  
manufactured  
today is run  
on Berlin  
Matchers**

**The largest  
mills in  
the World are  
equipped with  
Berlin Matchers**

The feed rolls are chain driven, reducing the number of gears and pinions on the machine to five. This in itself keeps repair cost down to 50 per cent. of the same expense on other machines.

Gravity belt-tighteners on the slack side of all belts cut belt expense enormously. Belts last twice as long under gravity tighteners as they do under the stationary type. Not only that but less power is required with gravity than with rigid tighteners.

The automatic feed table is simple and requires very little power to drive. Its design is correct, its feed positive, allowing no piling up of lumber going into the feed rolls. It has been tested for several months in Southern, Northern and Western mills. It is offered to progressive millmen as a successful answer to their demand for a means of securing full benefit of their matchers' capacity and earning power.

Those who already have fast feed matchers should take advantage of the increased output possible with the automatic feeder. The mills that have not already installed the latest type Berlin Matchers will find additional reason for doing so, in the matcher unit illustrated on this page.

Don't put this matter off any longer. Old machines will be worth less in the spring than they are now, and they are earning less for you every day than a new machine would. Berlin salesmen will gladly make a trip to explain anything to you. They have large photographs that show details you will want to know about. We'll send a man to show you if you say. Do you?

You should have the Berlin Matcher Circular. Ask for it

JUST WHAT THE NAME IMPLIES  
—taking all your small logs just as  
they come from the pond and cutting  
them up into boards or dimensions,  
getting every board there is in the  
log, never over-slabbings (wish we  
could say this of all head sawyers.)  
Built to handle either one or two logs  
at once, up to 14 in. diameter.

KEEP THE SMALL LOGS AWAY  
FROM THE HEAD SAW and CAR-  
RIAGE entirely, raise your cutting  
capacity, and install economy by the  
same stroke.

Not an EXPERIMENT, but an  
ECONOMIC NECESSITY.

Think it Over Carefully, then Write  
us for Details.

Head Office, Saginaw, Michigan, U. S. A.

# The Popular JUMBO Edger

Our latest model is an improvement on the one illustrated here

**T**HE Jumbo combined gang  
and edger is one of the most  
popular pieces of saw mill  
machinery that we manufacture and  
we have some very flattering recom-  
mends for it.

12 saws are used on the machine, 8  
on the gang side and 4 on the edger  
part. "Jumbo" will rip up cants  
to 8 inches thick and it is impossi-  
ble for a cant to fly back. Reverse  
friction is supplied in case cant  
binds and this prevents saw from  
being curved.

Let us quote you on saw mill equip-  
ment or repairs.

Our literature will interest you

**"Everything for the saw mill, from  
the motive power to the trimmer"**

## MOWRY & SONS, Gravenhurst, Ontario

The  
Markof  
Quality

### 3 Saw Improved Lath Bolter

#### Points Worthy of Notice

Main frame made in one piece.  
2 lower feed rollers 5" diameter  
and **power driven**.

2 upper pressure rollers both  
**power driven**.

Front pressure roller raises to-  
wards the saws, and being power  
driven prevents bolts from flying  
back out of the machine.

Bolts cannot stick.

At the price we sell this mach-  
ine it has no competitor.

## Long's Quality Lath Bolters

### 4 Saw Lath Bolter

A machine for mills of  
large cutting capacity

Please notice

this machine has—Three Mandrel bear-  
ings, the outer one being easily removed  
or taking off saws for filing.

Four lower feed rollers, all **power driven**.  
Two top pressure rollers, **power driven**.  
Bolts cannot stick or fly back.

Goodyear Conveyor Belt for the Rainy River Gravel Co., Vancouver. Made in one piece—seven hundred and fifty feet long.

A seven hundred and fifty feet Goodyear Conveyor Belt in actual service at Rainy River, Vancouver.

Part of our order of 140 rolls of Elevator Belting for the Saskatchewan Government Elevators

## Special Belts for Special Purposes

### *Goodyear Imperial High-speed Belting*

For high speed a High-speed Belt should be used. Great strength is demanded. A belt that is to grip a small pulley and transmit high power must be specially built for the purpose. It must resist the strong tendency to slip on the small, rapidly-revolving pulleys.

This Goodyear High-speed Belt is made with a friction surface that grips the face of the pulley—conveying *all* the power.

It gives long service. The Belt is durable because there is no internal friction—no ruinous grinding. That is where the Imperial High-speed Belt excels. It flies around a small, high-speed pulley without setting up internal friction.

In Goodyear Belts the elimination of all stretch, and the solid cohesion of duck and rubber, prevent any movement within the belt. Thus the Belt gives long and efficient service.

### Elevator Belts

Elevator Belts are a Goodyear specialty. The essential requirement in these belts is strength—and Goodyear Elevator Belts have it. That is why they are in constantly-increasing demand. The buckets do not pull out. Long wear in the belt is assured because the plies of fabric do not separate in service. Goodyear Rubber Belts are used in hundreds of elevators throughout Canada.

### Conveyor Belts

Where a sound and reliable belt is needed for hard service—for the conveying of stone, grain, ore, coal, etc., a Goodyear Conveyor Belt specially made for the work is the best investment. The Goodyear Conveyor Belt has a rubber face of great toughness, which prevents cutting and chipping, and increases the life of the belt. Not affected by weather. We make Conveyor Belts to any specifications. No better conveyor service can be given than that obtained from a Goodyear Belt.

### Endless Belts

We make Endless Belts to order in any width, length and thickness—and for any purpose.

*Send for our interesting book on the choosing of a Belt—you'll find it useful. It is free.*

### FROM SPANISH

We will make special prices on anything on the list attached for immediate shipment as they require more piling ground, and the only way we can give it to them is to move the 1912 cut which is in good shipping condition.

Can supply from this point anything in 4/4, 5/4, 6/4, 8/4 and 12/4 from 4-in. to 12-in. wide, 10 to 16 feet long.

If you are in the market now or will need in the near future any of these sizes we will make a price that will get your order.

## Do You Want a Salesman?

☐ Every live lumber salesman in Canada reads the Canada Lumberman and Woodworker.

☐ You can get the man you want through a small advertisement in the "Wanted and For Sale" department of this paper.

## Steam Press

THE American steam press is carefully designed and substantially built of steel. It is used for baling shavings, asbestos and many other materials.

The cylinder is 30" diameter by 45" high and the pressure maintained is from 60 to 100 lbs. according to the amount of material wanted in each bale.

**A  
Message  
to You**

(Please read)

DOES it mean anything to you to know that **you** can get prompt shipments of the highest quality Lumber and Shingles at the same prices you are paying for inferior service and goods?

IS there anything more unsatisfactory to **you** than being held up by delays in receiving the stock you are in urgent need of—maybe it is only a few pieces of lumber or bundles of shingles out of a car?

HOW do **you** feel when stock for which you have been waiting arrives and is poor quality—unfit for the use you require it?

WHY don't **you** place your orders with a Company who can, in shipping you, obviate the worries and dissatisfaction mentioned above.

**OUR MESSAGE TO YOU — DEAL WITH US.**

# The One Certain Way to Obtain Woodworking Machine Quality

USE

## "Defiance" Woodworking Machines

Guaranteed to fulfill all our claims.

No. 2 Automatic Spoke Driver

Claiming woodworking machine quality is an easy matter. But guaranteeing quality is a different matter. For the benefit of the manufacturing public, we combine the two—full value and perfect satisfaction thrown in. For the benefit of ourselves, we substantiate the claims and back the guarantee with our sixty three years of practical experience. And it's all for the sake of turning out a high grade product for the benefit of our customers.

Write us about DEFIANCE service. It's worth knowing about.

**THE DEFIANCE MACHINE WORKS - DEFIANCE, OHIO, U.S.A.**

# The Popular JUMBO Edger

Our latest model is an improvement on the one illustrated here

THE Jumbo combined gang and edger is one of the most popular pieces of saw mill machinery that we manufacture and we have some very flattering recommends for it.

12 saws are used on the machine, 8 on the gang side and 4 on the edger part. "Jumbo" will rip up cants to 8 inches thick and it is impossible for a cant to fly back. Reverse friction is supplied in case cant binds and this prevents saw from being curved.

Let us quote you on saw mill equipment or repairs.

Our literature will interest you

## Dr. Stewart's Pure Condition Powders

### LUMBERMEN AND CONTRACTORS:

You can save yourself unnecessary expense and worry by feeding Dr. J. M. Stewart's Pure Condition Powders this Spring.

After horses being highly fed for their heavy winter's work, they are apt to be in bad condition and need a "SPRING TONIC" and nothing corrects it as quickly and thoroughly as Stewart's Condition Powders.

These powders should not be confused with stock foods. They are composed entirely of roots, herbs and barks, free from all injurious dope, such as arsenic, resin or antimony, and are guaranteed to be the greatest disease Preventing Powders on the market.

### C U R E S

Coughs, Distemper, Scratches,  
Pink Eye, Worms, Blind  
Staggers, Hide  
Bound, Etc.

Two cans guaranteed to put your horse in first-class condition, 2 lb. cans, \$4.50 per dozen.

**Palmer Medical Company, Limited**  
Windsor, Ont.

## Are Your Horses in Good Condition?

Horses for all lumber work are subjected to the hardest hauling under the most severe conditions. They should therefore be as fit as all possible care and attention can make them.

**In the Lumber Camp,  
Around the Mill, In the Yard**

and wherever lumber has to be hauled the horses are always liable to a multitude of small injuries which if not attended to promptly may develop into lameness or disfigurement, thus reducing the working capacity of the horse and impairing its value from a sale standpoint.

You should always have handy and ready for use

### Good Liniment

to reduce bruises, strains, soreness; allay pain and inflammation quickly, be an antiseptic dressing to a cut or burn, or to heal a wire cut, wound or laceration.

### ABSORBINE

is an antiseptic healing preparation as well as a resolvent and a discutient. It will assist nature in bringing about a dissolution of the bunch, restore the circulation, gradually restoring the part to its normal condition.

It will produce permanent and complete results without blistering or removing the hair, and will leave no blemish. You can work the horse at the same time. All enquiries on special cases answered without delay—full information and instruction on request. Absorbine \$2.00 per bottle at dealers or express prepaid. Manufactured only by

424 Lyman's Bldg. -:- MONTREAL, CANADA

The making of a Knife depends principally on getting it hard and tough enough to stand the severe usage that it is subjected to in machine use, and at the same time leaving the Knife at such a temper as will permit the user to grind it

and keep it in shape when needed. We feel that this temper is reached perhaps a little more closely in Simonds Knives than in others on the market. We also believe that for holding a cutting edge the Simonds Knife leads others.

## The Retailer a Community Builder

One of the strangest things in human nature, so far as the publishing business is concerned, is the reluctance of the public to take advantage of the free publicity which is at their disposal if they only look for it in the proper manner. We hear a great deal about the energetic methods of modern business and about the business man of today being so wide-awake. The publisher of a newspaper or a magazine of any sort is occasionally inclined to doubt the accuracy of this opinion. Take for instance the position of the retail merchant in any Canadian town. Does he begin to appreciate the influence of the local weekly paper? We do not believe that one in a hundred knows that his local paper is a gold mine from which he can draw profits, if he feels so inclined. The trouble is that the man seldom knows just where to start or how to go about it. If he would place himself in the position of the editor of a small country weekly every now and then, he would probably gain an insight into the situation. The editors want the kind of material that is interesting to his readers. Many of these readers are farmers. Many of them are residents of the town or its neighboring towns. These people want a general assortment of personal and local news. After that they want articles which give them information and entertainment. Some want short stories. Some want humor. All, however, will read an article which shows them how to increase their incomes, whether from farming or business, or how to reduce the cost of living or carrying on business by building better houses and barns or making improvements which mean a saving in the long run.

The retail lumberman can create a demand for his stocks which he does not know exists, if he studies the opportunities in connection with the local newspaper. He can call the attention of the readers to the advantages of certain classes of stocks, or to the benefit derived

from conducting their operations in a certain way, all of which involve the purchase of lumber. Take for instance a farming community in which cattle raising and dairying are important. How many retail lumbermen really appreciate the fact that they could sell a large quantity of lumber in such a district for the building of silos, if they sent the editor of the weekly newspaper an occasional article telling how silos are built and how they enable the farmer to feed his stock in the winter to far greater advantage than it could be done otherwise. Every retail lumberman in such a farming district ought to become a specialist on silos and know all about them and how they are built to the best advantage. He should either write an occasional article upon the matter or clip one from some farming journal and send it in to the editor. In nine cases out of ten the editor will be glad to have it and there will spring up a friendliness between the lumberman and the editor which will be certain to have a good effect upon any advertising which he may also be carrying in the paper.

A meeting of a branch banker's association was held recently in an agricultural section of the country and one of the speakers talked about silos and farming matters in general. He considered the silo question one of great importance to the banking community. The president of the association told the others present that, where farmers were good, he would take their notes drawing 5 per cent. interest, provided that they would use the borrowed money in the building of silos. He even told the other bankers present that if they did not feel able to carry the loans he would take them off their hands. When the bankers are willing to do this much the retail lumberman who is going to have most of that money to handle, in return for lumber for the silos, ought to do something to encourage the movement. The little effort which it will cost a retailer to furnish the newspapers with articles telling farmers how they can consume lumber to make silos, is as nothing compared with the results that may be expected.

The silo end of the question is really only its beginning. Once a farming community gets started upon the road of improvement in any particular line, it is safe to say that it will not stop until it has investigated many others and put some of them into effect. If every farmer in a certain dairying and cattle raising section were to build a silo in one season, that community would flourish like the green bay tree. The prosperity of the whole community may be brought about by methods of this kind. The retail lumberman is one of the most important factors in the business life of his community. His influence may be used not only to promote his own welfare, but that of all the people with whom he does business. He owes it to himself and to all the community to become a community builder in every sense of the word. All over Canada to-day one may find men who have realized the importance of these facts and who are making, or who have made good. The remarkable growth of the whole country during the last few years is due, not alone to the fact that we have had a great flood of immigration coming over our land, but also to the fact that those who are here, the retail lumberman among them, are keen to realize their own importance in the great industrial scheme for the distribution of wealth and have been living up to many of their opportunities. There is however, in the direction pointed out above an opportunity which has not yet been utilized to anything like the extent of its possibilities and which retail lumbermen would do well to think over seriously.

## Preventing Forest Fires

The Forestry Department of British Columbia is taking energetic steps this year to prevent the development of serious forest fires by enacting, publishing and enforcing strict regulations for loggers, railroads, hunters, campers and all others who use fire in the woods. An important meeting of the Provincial Forest Board was held at Victoria recently, when it was decided to confer upon all employees of the Forest Board authority to issue, suspend and cancel fire permits, a new proviso being added also under which similar authority will hereafter be enjoyed and exercised by all road superintendents throughout the province, these officials now coming under the definition of foresters for permit issuance purposes. This action will facilitate the securing of permits for the destruction of clearing slash wherever such work has to be done by the agency of fire. The board

also enacted the regulation of May 20th last with respect to precautions necessary in the use of camp fires. It is prescribed that "any person who during the period between May 1st and October 1st sets out any camp fire for the purpose of preparing food or for obtaining necessary warmth, shall (1) clear away all inflammable material for a distance of three feet in every direction from the edge of said fire and (2) shall totally extinguish said fire before leaving the place."

Notices will again this season be displayed conspicuously throughout the forest areas pointing out plainly to each who reads that he may make certain that he has had no part in setting in motion a devastating conflagration by the observance of six simple and easily remembered rules of common sense:

"Be sure your match is out before you throw it away.

"Knock out your pipe ashes or throw your cigar or cigarette stump where there is nothing to catch fire.

"Don't build a camp fire any larger than is absolutely necessary; and never leave it, even for a short time, without extinguishing it with water or earth.

"Don't build a camp fire against a tree or log; build a small one where you can scrape away the needles, leaves and grass from all sides of it.

"Don't build bonfires; the wind may come up at any time and start a fire you cannot control.

"If you discover a fire, put it out if possible; if you can't, get word of it to the nearest forest ranger or fire warden as quickly as you possibly can."

Regulations were also adopted, to have force this season in connection with the operation of donkey engines, now an established

necessity of the modern logging camp. These regulations, too, are brief and businesslike, as hereunder:—

"Engines—Every donkey engine and locomotive must be equipped with an efficient spark-arrester and with devices which will prevent the escape of fire from ash-pans and fire-boxes.

"Ashes and Coals—Ash-pans and fire-boxes must not be emptied while locomotives are in motion. Ashes and coals taken from ash-pans and fire-boxes of locomotive and donkey engines must be immediately extinguished with water or placed in a safe pit or on a spot of bare ground.

"Fire-fighting tools—Every donkey engine and locomotive must be provided with a sufficient supply of water and with a pump capable of forcing water to a height of twenty-five feet, 150 feet of hose, six 10-quart buckets, six shovels, three axes, three mattsacks, all to be in good repair for fire fighting purposes.

"Snags—All dead trees and snags within 200 feet of any donkey engine at work must be felled.

"Watchmen—A watchman must be kept on duty at every donkey engine under fire during the noon hour and two hours after operations have ceased for the day.

"Camps—A sufficient space around all camp buildings must be cleared of brush and other fine combustible material.

"Smoking—Lighted matches, cigars, cigarettes and pipe-ashes must be completely extinguished before being thrown away.

"Responsibility—Foremen, engineers, and all men working in the woods, as well as contractors, operators and owners are responsible for the carrying out of these regulations."

## Chemical Pulp Penalized by New Tariff

Although there is much in the new United States Tariff Act which will please Canadian producers of lumber and pulp and paper, there is one feature of it which is not meeting with approval on the part of Canadian pulp and paper manufacturers. The old difficulty arising out of the desire of Canadians to prevent their raw materials from being exported to the United States, there to be further manufactured and give employment to citizens of that country, is still to the fore. The new United States tariff bill penalizes pulp and paper shipped from Canada into the markets of that country, if it had been manufactured from timber taken off Crown lands in a Canadian province which prohibits the export of pulpwood in a raw state. This is a serious question and one which is attracting very careful consideration from pulp and paper manufacturers in Canada. The difficulty is one which ought to be overcome, if there is any possible means of doing so, without injuring the material interests of either country. The solution of the situation will depend entirely upon the attitude of the various governments concerned, rather than upon the efforts of any individuals whose interests may be involved. Nevertheless the governments of the Canadian provinces will probably study minutely any representations which may be made.

It would not be of any service to go into the history of this situation in these columns at present. The matter has been dealt with fully from time to time as the various developments have taken place. It is sufficient, at this stage, to remark, that the government of the United States has adopted a tariff policy based upon the important principle of encouraging manufacturers and serving the interests of consumers by removing the duty upon important raw materials entering into the manufacture of products of United States industries or forming articles of general consumption. The policy is wholly commendable. The chief dispute in the United States will be as to the wisdom of the method of securing the desired results.

The pulpwood situation is only a very small feature of the whole. United States manufacturers of pulp and paper are anxiously looking into the future and seeking to ensure a permanent supply of pulpwood for their pulp and paper plants. The extravagance of their predecessors has reduced them to a state of penury, so far as their own pulpwood resources are concerned and they must of necessity secure numerous stocks from other countries, if their mills are to continue in operation indefinitely. Canada is the chief source of these

stocks and the manufacturers of the United States look with alarm upon the attitude of certain Canadian provinces which have prohibited the export of raw pulpwood. This prohibition will, if permitted to continue unchecked, remove the pulp and paper manufacturing centres from the United States to Canada. This removal will probably take place rapidly. The question is whether it can be prevented at all. It would certainly take a much longer time to bring about if all Canadian pulpwood could be exported in a raw state to the United States. Therefore, the question to-day is practically in the same state as it was when the prohibition was first put into effect. Some subsequent developments have cleared the air to a certain extent and shown each country pretty definitely where the other stands. Apparently however, there is still a deadlock and it becomes the immediate duty of legislators both in Canada and the United States to enquire whether a reasonable solution cannot be obtained.

The views of a prominent Canadian pulp and paper manufacturer upon the United States tariff, as published in the *Canada Lumberman* of May 1st, show the subject in one of its most interesting lights. This correspondent, after studying the tariff, concludes that it places a duty on all papers under 4c per pound (which formerly, when manufactured from private lands wood, were free) with the exception of newspaper at 2½c per pound and under, and imposes a penalty upon chemical wood pulp from any country restricting the export of the wood or ground wood, of chemical wood pulp, and of news paper itself. Chemical wood pulp had previously been free when exported after being manufactured from private lands wood. Mechanical wood pulp is now to be free whether manufactured from private or public lands wood. Why a penalty should be placed on one form of pulp and not on another is a question which is difficult to answer. The same correspondent remarks that paper manufacturers in the United States are not satisfied with this harsh treatment of Canada, and are urging their friends in congress to impose further penalties upon Canadian news paper entering the United States, as well as stricter regulations in regard to chemical pulp. This leads to the very natural question as to what Canada will do if this proposition becomes law? Will she continue to allow 1,000,000 cords of free lands wood to go across the border to be made into pulp and paper in the United States, and compete against a Canadian product, chemical pulp, with these items subject to a duty of \$2 per ton, while United States mills

get free wood with which to compete against Canadian pulp and paper? The whole situation is apparently one which hinges upon the determination of Canadians to keep as much of their raw material as possible at home and the similar determination of United States manufacturers to force Canadians into sacrificing their pulp wood resources, if this can possibly be done.

An interesting side light upon the whole situation is cast by the

recent decision of the United States court of Customs Appeals in connection with the most favored nation treaty. When the United States permitted Canadian pulp and paper manufactured from public lands pulp wood to enter that country free of charge, other countries laid claim to similar favorable treatment. This claim has been going its course through the courts and the recent decision is to the effect that all nations are entitled to the same treatment.

## United States Lumber Production Decreasing

The long delayed United States census bureau report on the lumber, lath and shingle production of 1911 has been issued. The total production of lumber reported by 28,107 mills in 1911 was 37,003,207,000 feet, as compared with 40,018,282,000 feet reported by 31,934 mills in 1910. These figures represent a decrease in lumber production from 1910 to 1911 of 3,015,075,000 feet, or 7.5 per cent. Conditions as a whole in the lumber trade during 1911 were not greatly different from those of 1910. Over half of the lumber cut goes into buildings and rough construction, about one-tenth into boxes, a twentieth into car construction, and a fourth into other uses. Laths produced in 1911 numbered 2,971,110,000 and shingles 12,113,867,000.

The report says that, making no allowance for growth, decay or fire, the present estimated stand of timber suitable for lumber, if used for that purpose only, would last less than sixty years at the present rate of consumption.

During the three years 1909, 1910 and 1911 there was no change in the relative rank of the three most important lumber producing states. During this period Washington stood first; Louisiana, second, and Mississippi third.

These states all showed percentages of decrease in their production in 1911 from 1910. Only nine states showed increases; thirty-eight showed decreases. The decreases for these states were as follows:—Louisiana, 3.8 per cent.; Mississippi, 3.8 per cent.; Oregon, 13.5 per cent.; North Carolina, 1.4 per cent.; Arkansas, 3.6 per cent.

In the Pacific northwest the annual cut of lumber is one-half of 1 per cent. of the stand, in the Lake states it is about 5 per cent., and in the six leading Southern States it is about 2.7 per cent. It is apparent that the Lake States are using their supply of timber at the most rapid rate of any of the great producing regions, while the reverse is true of the Pacific northwest.

The cut of yellow pine was 36.6 per cent. of the entire cut in 1909, 35.3 per cent. in 1910, and 34.9 per cent. in 1911. Douglas fir, while

showing a slightly decreased production in 1911 as compared with 1910, still showed a somewhat greater cut than in 1909. White pine held practically the same relative position while oak showed a decreased production. The cut of hemlock is also shown to be decreasing. Cypress, birch, sugar pine, tupelo, balsam fir, walnut and lodgepole pine are the only kinds of wood for which an increased cut was reported in 1911.

The production of twenty-nine kinds of lumber is shown in a table. Southern yellow pine, Douglas fir and white pine supply over half the lumber of the country.

The reduction in the yellow pine cut of 1911 from 1910 was 1,246,000,000 feet, but it is probable that the actual decrease was not so large, since the number of mills which reported was 1,705 less in the latter year than in the earlier. The stand of yellow pine timber in the Southern States has been recently estimated to be about 380,000,000,000 feet. Taking the total production as shown in the preceding table, 4 per cent. of the stand was cut in 1911. Louisiana led all other states, furnishing one-fifth of the total quantity of yellow pine lumber sawed in that year.

Thirty-nine states contributed to the country's supply of oak lumber in 1911, and 17,025 mills reported it. The principal output is in Tennessee, West Virginia, Kentucky, Arkansas and Virginia, which five states together produced more than half the total in 1911. Tennessee leads all other states. The output of oak in some of the older and more thickly settled parts of the country holds up remarkably well. The total oak cut in 1911 was 3,089,440,000 feet.

The report discusses in detail the production of important species of lumber. Four-fifths of the shingles are cedar. The production of shingles as well as laths fell off from 1910.

The average value of all lumber produced in 1911 was \$15.05 per thousand, the average value of soft wood lumber being \$1.17, and of hardwood lumber \$18.19. The average value of all lumber in 1910 was \$15.30.

## Editorial Short Lengths for Busy Readers

The first telephone system to be installed in southern British Columbia by the Forestry Department of the Provincial Government will run from Grand Forks to Lynch Creek up the north fork of the Kettle River.

With a view to protect the forests of Quebec from fire caused by sparks from locomotives, the Dominion Board of Railway Commissioners and the Quebec Public Utilities Commission have appointed six inspectors to patrol the railways. Mr. W. C. J. Hall is at the head of this body, the members will enforce the orders of the Commissioners and will see that proper appliances are used to prevent forest fires.

Conditions generally among the British Columbia mills are satisfactory, though the firm and high price of logs tends to stiffen prices of lumber. The ultimate result will be high quotations for the finished product. While surplus logs are not to be found in abundance, the supply is not stringent. Run of camp timber goes at about \$11, with graded figures from \$8 to \$14. Even higher prices than this is stated to have been paid in instances. Shingle cedar is up 50 cents, with current price at \$9.40, and a probability of it going higher. Bolts are quoted at from \$5.50 to \$6. Changes are being effected in several plants to enable shingles to be cut from the log.

Formerly, the log was not much in demand, but gradually it is being utilized. Even so, it is not anticipated that shingle bolts will be overly plentiful during the coming summer.

H. R. MacMillan, Chief Forester for British Columbia, is reported as having expressed the opinion that the removal of duty upon shingles entering the United States will place the manufacturers in British Columbia in an infinitely better position than they have formerly occupied. He believes that there is practically an inexhaustible supply for raw material for shingle manufacturing in British Columbia. The British Columbia shingle has always been admittedly superior in quality to the Washington shingle, and even as tariff arrangements have been, the Provincial shingle mills have been able to hold their own in the Prairie markets. The natural result of the elimination of the duty will be a considerable influx of American capital for the establishment of shingle mill plants along the coast, where the practice of past years has been to log for high grade timber only, much cedar being left in the woods as waste which can now be economically and profitably utilized. Not only will British Columbia gain through the working up of this raw material in by-products but also in the creation of small farming communities such as almost invariably spring up as a sequel and consequence of the operation of shingle mills.

# Paper Making at Sault Ste Marie, Ont.

Splendid Plant of the Lake Superior Company—Four High Speed Machines Now in Operation. Detailed Description of Equipment

Paper Making at Sault Ste Marie—The Wood Carrier

The complete new pulp and paper plant of the Lake Superior Company, situated at Sault Ste. Marie, Ontario, is one of the most modern and thoroughly equipped plants of its kind in existence today. The site upon which the buildings are located lies on the north side, about midway between the upper and lower levels of the St. Mary's River. On the south side, only a short distance away, is the Canadian lock, reported to be the largest operating lock in the world, and from the roofs of the buildings the view shows the Canadian and American Saults spread out in opposite directions, with the broad expanse of St. Mary's River to the east separating them.

The buildings' walls, wherever they can be observed from the main thoroughfare, are constructed of sandstone taken from the excavation. This stone is composed of reddish tints, very pleasing to the eye, and gives an appearance to the building much better than that usually seen in mill walls. A visitor not being acquainted with the locality is generally very much surprised to learn that the buildings enclose a manufacturing establishment, the appearance and style of architecture having more the appearance of public buildings than those of a manufacturing plant.

The canal for supplying water for the grinder room and power house, taps the river within the property limits at the southwest corner, and is excavated for a distance of 2,400 feet, where it ends at the racks of the grinder room and power house. The canal excavation is mostly through rock which was used in the construction of the building walls.

Paper Making at Sault Ste Marie—The Grinder Room

Paper Making at Sault Ste Marie—The Wood Room

Just above the canal inlet is located the main slasher building. Here, the logs are taken from the river, where they have been driven directly, from the sections to the north where they are cut. A sluice 1,400 feet long, which has its receiving end directly under the seven saw slasher table installed in this building, and its other end emptying into the block tank in the wood room, conveys two foot blocks from slasher to wood room.

A storage area capable of storing about 35,000 cords lies on the north side of the sluice. A cable conveyor running side by side with the sluice, enables the blocks to be returned to the wood room at will and as it is eventually planned to stack only rossed wood, this conveyor will convey wood from the wood room for storage, with the under strand returning the wood from the storage to wood room.

The wood room is a building 56 ft. x 287 ft., and is equipped with Green Bay and Witham barkers. Two chippers in connection with two crushers chip and crush the 2 ft. blocks, and the chips are elevated and screened on a Ryther & Pringle flat screen, from thence they go by a series of bucket elevators and belt conveyors to the chip bin over the digesters. The blocks for grinder room consumption are conveyed from the wood room to the block bin in the grinder room by means of a cable conveyor. A direct connected pump, located in the basement of the slasher building, supplies water for operating the sluice and this water, after emptying into the block tank in the wood room, is drawn off through an overflow at the op-

Paper Making at Sault Ste Marie—The Beater Room

posite end of the tank, thereby forming a circulation for carrying the blocks to the barkers.

#### The Beater Room Equipment

The beater room is a building 86 ft. x 234 ft. and the equipment consists of large size Quiller horizontal screens and Sherbrooke deckers, from which the deckered ground wood is dropped directly into a storage tank in the basement. Located in the basement with their tops rising about four feet above the main floor are the mixing chests, so called. These chests are equipped with agitators revolving on vertical shafts and mix the stock thoroughly. Ground wood is pumped directly into these chests from the ground wood decker chests and from a single sulphite storage chest located in this basement, the sulphite stock is pumped, the valves controlling the supply of both ground wood and sulphite being operated from the main floor. There are two chests for each machine and the stock after being mixed is pumped from the chests by a Gould stuff pump, to the jordan head boxes, from where it goes directly to the jordan. For each machine there is a large size jordan engine located on the main floor of the beater room. For two of the machines Black-Clawson jordans have been installed, the remaining two are of the E. D. Jones & Sons Company's make. There are also installed in this room five E. D. Jones & Sons Company beaters. These beaters are for use only with lap stock and dump directly into the ground wood decker chest and are to be used for emergencies only.

The fresh water supply for operation is taken from the canal through an intake pipe to a well located in the beater room basement. From this well, regulated by gates, the water flows over a screening chamber, the excess water over an overflow into the sewer. Centrifugal pumps direct connected to a.c. motors take their suction from the screen chamber and the water is piped directly from these pumps to the numerous departments wherein it is used.

#### Grinder Room Machinery

The grinder room adjoins the east end of the beater room and is a building 80 ft. x 280 ft. On the main floor which is on the same level as the beater room floor, wet machines with a capacity of about 75 tons of ground wood stock per day, are placed. Through the centre of the room a block tank constructed of reinforced concrete runs and extends from the underneath side of roof trusses through the main floor to the basement level on which the grinders are located. Blocks coming through the wood room are conveyed directly over this block bin and drop off at the sections needed. Twenty-four Jenckes Machine Company's grinders for 54 x 27 in. stones are operating in the grinder room, being coupled together in pairs, each pair direct connected to a new American turbine unit. These units consist of five 34-in. runners mounted on one shaft and each turbine unit is rated at 1,000 h.p. on an 18-ft. head, but tests have proven their power to be 25 per cent. in excess of this amount. The complete installation of turbine units was furnished and installed by the Dayton Globe Iron Works Company, of Dayton, Ohio.

Each wheel unit revolves in an open flume, access to which may be found on the main floor where openings are left. The south ends of the flumes open on the canal and are protected by a series of racks running completely through the length of the building. The columns supporting the rack steel work allow the introduction of two gates for each flume, in order that the flumes may be drained when repairs are needed on the wheels. These gates are constructed of steel and are so designed that they may be raised and placed in any flume open-

Paper Making at Sault Ste Marie—Calenders and Winders

ing where needed. A main stock trough runs the entire length of the building beneath the grinder room floor, and receives the stock from sets of four grinders each, which discharge into a short stock trough connecting with this main trough. At the west end and just inside the beater room basement is located the sliver screen pit from whence the stock after being screened is pumped directly to the head box of the screens on the main floor. Centrifugal pumps are installed direct connected to a.c. motors, the pumps being manufactured by the Platt Iron Works Company. Between every other pair of grinders a short block trough of reinforced concrete connects directly with the block bin and the blocks upon being discharged to the bin from the overhead conveyor float out into the trough and are loaded on racks from whence they go direct to the grinders. A white water tank has been constructed in connection with the block bin and runs the entire length of the room. All white water from deckers and wet machines is discharged here and all showers for grinders and pits are connected directly to this tank. A centrifugal pump located in the beater room basement has its suction from this tank and discharges white water to screens, beaters, mixing chests and other parts of the equipment where white water can be used.

#### Four Machines in Operation

The machine room is a building 170 ft. x 270 ft., and is designed to accommodate four machines which are now installed. No. 1 and No. 2 machines are 156-in. high speed Fourdrinier new machines, manufactured and installed by the Black-Clawson Company, of Hamilton, Ohio. No. 3 and No. 4 machines are 196-in. and 184-in. respectively, manufactured and installed by Pusey & Jones, of Wilmington, Delaware. These latter machines have open dryer pits, the felts running on felt rolls located under the machines in the basement. All machines are driven by line shaft erected on concrete piers with driving cone pulleys belted to driven cone pulleys on the main floor. From thence the main drive-in shafts are driven through bevel gears.

Paper Making at Sault Ste Marie—Wet end of machines

Paper Making at Sault Ste Marie—The Finishing Room

The two 156-in. machines are each driven by a Hamilton-Corliss twin engine, manufactured and installed by the Hooven, Owens, Rentschler Company, of Hamilton, Ohio. The 184-in. and 196-in. machines are each driven by a slightly larger twin engine of the same make, being belted to the receiving pulleys on the variable lines. Each machine is equipped with a constant speed line shaft suspended from the floor beams by drop hangers and belted to d.c. motors. Each machine has a reinforced concrete machine chest in the basement from which the stock is pumped direct to the machine stuff box by a triplex stuff pump. A centre row of columns extending from the basement floor support the roof trusses at the centre and divide the room into two sections of 80 ft. and 90 ft. These widths give ample clearance back of the machines and unusually wide centre aisles. Skylights through the centre of the room and over each centre aisle between machines give excellent light throughout the room. Two cranes, one of ten ton capacity, for two smaller machines, and one of twelve ton capacity for the two larger machines, are installed for handling the machine parts during erection and for repairs during operation.

The finishing room is 270 ft. x 126 ft., giving ample floor space for finishing and storing the paper upon delivery from the machines. This room is lighted by three sets of skylights and windows so that there is no need of artificial light except throughout the night hours.

At the north end of the finishing room, a train shed 35 ft. x 170 ft. is added. Two shipping tracks running by the side of an 8 ft. shipping platform give ample space for handling the maximum output of the four machines without loss of time.

Adjoining the machine room on the west side is the boiler room 139 ft. x 129 ft., in which are now installed four batteries of boilers, each rated at 1,000 h.p. These batteries each consist of 500 h.p. Babcock & Wilcox water tube boilers installed over 8 x 10 Murphy furnaces, manufactured and installed by the Murphy Iron Works Company. Foundations are constructed for a future battery of the same type. The furnaces are equipped with an American Blower Company's induced draft installation direct connected to horizontal steam engines. The fans discharge into a reinforced concrete tank which extends 129 feet above the firing floor level and was constructed by the Webber Concrete Chimney Company.

#### Up-to-Date Ash Handling System

The ash handling system is one of the most up-to-date yet installed. An ash tank is located just outside the boiler room and connected by pipes which run through open ducts in the floor just under and in front of the ash and coal sifting pits of the Murphy furnaces. A blower operating in connection with this system forms a suction in the pipes and the ashes, upon being raked directly from the pits to openings in the pipes, go to the ash tank, from thence they are loaded in cars for removal.

A coal crusher is located on the north side of the boiler house under a hopper in which coal is dumped directly from cars. A reciprocating feeder delivers this coal to the crusher from whence it is conveyed by an inclined conveyor to the coal bunker which is suspended through the centre of the room. This crusher and conveying system has been installed by the Link-Belt Company. Over the bunker a coal tank is located in connection with the ash handling system and by means of a by-pass the coal from the sifting pits of the Murphy furnaces can be handled to this tank by exactly the same process as the ashes are conveyed to the ash tank. The ash handling system throughout has been installed by the Guarantee Construction Company of New York City.

All hot water returns throughout the mill are delivered to an open feed water heater from whence the water is pumped to the boilers by two feed water pumps.

Installed in a building adjoining the boiler room are two 1,000 gal. Underwriters' fire pumps having their suction in the water well in the beater room basement, and discharging directly into the underground fire protection mains.

Adjoining the machine room and finishing room on the west side is the sulphite mill. The digesters are manufactured by the Manitowoc Boiler Works Company, of Manitowoc, Wisconsin, and are 17 ft. in diameter and 54 ft. in height.

Adjoining the digester house on the south side is the acid tube building in which are installed eight acid tubes five feet in diameter by 100 feet in height, and just outside of this building are six acid storage tanks each of 30,000 tons capacity.

Adjoining the digester house to the west is the sulphite flat screen room, beneath which are the blow pits and on the floor above the sulphite riffler room. The screens are installed in the flat screen room grouped into four lines of four screens each, each line being driven by one continuous shaft, and screens and shaft are set on a slight incline so that the tailings are forced by gravity over the plates and are taken off at the low end of the line by a conveyor. In the riffler room a reinforced concrete riffler has been constructed and worm knotters of the Baker & Shelvin type have been installed.

Stock is pumped directly into a stock tank in this room from the blow pits.

In the sulphite wet machine room which adjoins the flat screen room are installed Baker & Shelvin vertical centrifugal screens. A battery of pneumatic sulphite thickeners, manufactured by the Sherbrooke Machinery Company, of Sherbrooke, Que., are installed and the deckered sulphite from these machines drops to the decker stock chests beneath, from whence it is pumped through a triplex stock pump to the storage chest in the beater room basement. Opposite the decker stock chests are three chests which are used for surplus blow pit stock and the piping is so arranged that the stock can be pumped from either these chests or blow pits at will. On the main floor, four wet machines manufactured by the Algoma Iron Works of Sault Ste. Marie, Ont., are installed for handling any excess sulphite over that needed for the paper machines.

In a building located a short distance west from the sulphite mill is installed a complete plant for roasting pyrites and also an equipment of four flat sulphur burners and one large size rotary burner of the Trombly & Paull make. Four pyrites roasters are installed and the gas is taken off through a flue of the most improved construction to the cooling room where it is scrubbed and cooled. From thence it passes through an underground duct directly to the basement of the acid tube building and after passing through a second cooler it is admitted to the tubes. This same duct is used to pass the gas when taken from the sulphur burners.

The roofs of the buildings throughout, except for the boiler house and train shed, are of wood supported on steel roof trusses with a great abundance of skylights. Reinforced concrete roofs supported on steel beams cover these latter two buildings.

The main floors throughout, with the exception of the finishing room and digester house, are of reinforced concrete, and the basement floors throughout are of the same material, the digester house and finishing room floors being of wood supported on steel girders.

The yards and all the buildings are protected by an underground hydrant service and interior sprinkler equipment with a dry pipe system in the wood room and at the slasher building, installed by the Evans Almirall Company of New York City. This service consists of eleven two-way hydrants located at points where protection is needed throughout the property and all roofs and sections of the basement are protected by the interior sprinkler installation.

The piping installation throughout for the mill has been erected by the contractors. All valves and fittings are of the Crane Company's make and the piping for high pressure steam throughout the boiler house and to the engines is made up of full weight pipe and bends, with Craelap flanges, and extra heavy cast steel fittings. All high pressure steam lines were made up complete by the Crane company and erected at the mill by the contractors.

#### The Electrical Equipment

The wiring for lighting and motor installations throughout the mill has been installed by the contractors. All the large motor units are 2200 volt, 3-phase, 25 cycle, a.c. motors and the smaller units are of the 500 volt d.c. type. The lighting current throughout is 110 volt, 25 cycle a.c. In a tower room over the southwest corner of the beater room the switchboard is located. A 500 volt d.c. board, a 2200 volt a.c. board, and a 110 volt a.c. board are here installed and pass a load of 2500 kw. d.c., and 1700 kw. d.c., and 100 kw. a.c., respectively, when the mill is in operation. The a.c. motors have been furnished by the Canadian General Electric Company, and the d.c. motors by the Lancashire Dynamo & Motor Company, Manchester, England. The switchboard and all apparatus pertaining thereto are of the Canadian Westinghouse manufacture.

Actual construction of the buildings was commenced about August 1st, 1911, by the H. E. Talbott Company, of Dayton, Ohio, who have been the general contractors on the work, and the first two machines were started up in the last week of June, 1912. When the size of the mill and the amount of work done is taken into consideration, this construction period marks a record in the construction of paper mills, which has never before been equalled, as, except for the erection of the other two machines, practically all the work for a four machine mill had necessarily to be finished before commencing operation on two machines. The remaining two machines were started, one just before the first of January, 1913, and the other just after, which was within the limit allowed by the estimated commencement of operation of four machines.

Mr. George F. Hardy, of 309 Broadway, New York City, was the consulting engineer, and Howard S. Taylor, his representative, was the resident engineer in charge of the construction and equipment of the mill.

Arrangements have been practically completed for the sixteenth annual convention of the National Hardwood Lumber Association, which will be held at the Hotel Sherman, Chicago, Ill., on June 5th and 6th. A large attendance and an exceptionally interesting convention are assured.

### Growth of Quebec's Pulp and Paper Industry

An interesting article was published recently in the Toronto Globe dealing with the remarkable advance which has been made of late in the pulp and paper industry of the province of Quebec. "No industry in this province," says the Globe "is showing such phenomenal growth as the pulp and paper industry."

It is only, however, with the past three or four years that this industry got upon its feet and received any attention from the business world. Previous to that time all the big mills on the continent were located south of the border, and the smaller Canadian mills operating in a less remunerative field, were unable to make much headway. Careless methods of cutting and the heavy demands made upon the American forests practically exhausted their available supplies of pulpwood and they turned to Canada. For years American millowners were allowed to take out pulpwood from this Province without let or hindrance. Some two or three years ago Sir Lomer Gouin put into force a measure prohibiting the exportation of pulpwood cut from Crown lands, which proved to be the beginning of the wonderful expansion of this industry. American manufacturers, knowing that they could not get pulpwood from this province, crossed the border, bought up limits and located their mills on this side of the line. In one year following the passing of the measure no less than nineteen pulp, paper and lumber companies were incorporated in this province, with a total capitalization of \$41,709,000. This capital came largely from the United States, Great Britain and France, although Canadians contributed a considerable amount. Last year several of the newly-incorporated mills commenced production, while during 1913 a large number of others will commence active manufacturing.

#### The Sulphite Output

While there has been activity in the production of all kinds of paper, there has probably been a greater expansion in the output of sulphite than in any other commodity. At the present time, Canada is producing in the neighborhood of 300 tons of sulphite pulp per day. According to figures prepared by the Canadian Pulp & Paper Men's Association, the increase in the tonnage of sulphite for 1913 amounts to 760 tons per day; in other words, the amount of new sulphite to come into the market during the present year is more than double the present output of the Canadian mills. A number of the older and established sulphite mills are fearing this competition, especially in view of the tariff changes south of the border. In a measure, this discriminates against Canadian-made sulphite. Under this new tariff, all sulphite from Canada, whether cut from freehold or Crown lands, will pay a duty of one-tenth of one per cent., or about \$2.00 per ton. As European-made sulphite is relieved of the present duty of \$3.33 per ton, it will be possible for European makers of sulphite to put their product in the United States \$5.33 per ton cheaper than the Canadian manufacturer can place it there. This means that Canadian sulphite will be practically cut out of the American market, and it would look on the face of things as if Canada had gone a little too deeply into the manufacture of sulphite. At the present time, we export to the United States about 900 tons per month, while Europe sends the neighboring Republic over 2,000 tons per month.

#### Consumption of Pulpwood

A gratifying feature of the statistics in regard to the consumption of pulpwood shows during the past year a total of 1,846,910 cords of pulpwood cut in Canada, 866,042 of which were manufactured into pulp in Canadian mills, while 980,866 cords were exported in the raw or unmanufactured state. The total cut for 1912 shows an increase of 21½ per cent. over the figures for 1911, while the increase in the manufacture of pulpwood in Canada amounted to nearly 29 per cent., as compared with an increase in our exports of raw pulpwood of less than 17 per cent.

The importance of the pulp and paper industry to Canada is shown from the following table, which gives a total of 85 pulp and paper mills in Canada and Newfoundland, of which 83 are located in Canada. The table follows:

|                      | Canada | Newfoundland | Total |
|----------------------|--------|--------------|-------|
| Firms . . . . .      | 83     | 2            | 85    |
| Mills . . . . .      |        |              |       |
| Paper . . . . .      | 3      | 1            | 54    |
| Pulp . . . . .       | 70     | 2            | 72    |
| Groundwood . . . . . | 45     | 2            | 47    |
| Sulphite . . . . .   | 17     | 1            | 18    |
| Soda Pulp . . . . .  | 5      | 0            | 5     |
| Sulphate . . . . .   | 3      | 0            | 3     |

### Scarcity of Ground Wood in New York State

Advices received recently in Toronto from ground wood manufacturers in the State of New York tell of a rapid drop in the water in the rivers of that State. The outlook is for a considerable short-

age in the production of ground wood during the present year. Reports from various Canadian points are to the effect that stocks of ground wood are also short.

### Will Build Sawmill and Sulphite Plant

The St. Lawrence Pulp & Lumber Corporation, recently formed under the laws of the state of New York, with head office at New Carlisle, Bonaventure County, P.Q., will erect a large sawmill and a sulphite plant. The company is capitalized at \$4,000,000. Its president is Mr. Robert Whitmer, Philadelphia, one of the largest individual dealers in lumber in the United States and a large manufacturer of lumber in northern Virginia. Mr. Whitmer is president of many lumber concerns, among others being Wm. Whitmer & Sons, Philadelphia, the Parsons Pulp & Lumber Company and the Champion Lumber Company of West Virginia. The Vice-president is W. H. Sharp, Philadelphia, president of the Jessup & Moore Paper Company, Philadelphia, the Kenmore Paper Company and a number of other pulp companies.

The other directors of the company are J. G. Campbell, of A. B. Leach & Company, bankers, New York, and Vice-president of the Parsons Pulp & Lumber Company; Thomas Coale, president of the Thos. E. Coale Lumber Company, Philadelphia; E. M. Chandler, of Chandler Bros. & Co., bankers, Philadelphia; Frederick H. Ely, attorney, Philadelphia; W. F. Fuqua, president of W. F. Fuqua & Company, brokers, Philadelphia, and Geo. W. Robertson, president of the Excelsior Coal Company, Shamokin, Pa.

The company have issued \$3,000,000 in bonds which have all been taken up. These are for a period of twenty years at 6 per cent.

The St. Lawrence Pulp & Lumber Corporation have acquired the limits of the Grand Pabos Lumber Company which formerly belonged to King Bros., Quebec. The limits comprise 404,000 acres and are situated in the Gaspé Peninsula, P.Q.

The company also have other important holdings in the province of Quebec, details of which cannot be published at the present time. They propose to cut from thirty to forty million feet of lumber per year and to erect a sawmill for manufacturing this quantity. They will also erect a sulphite plant with a capacity of one hundred and fifty tons daily and will secure their pulpwood for this plant from the above limits. The sulphite plant will cost over \$1,000,000.

The pulp mill and sawmill will be located at Pabos Mills, County of Gaspé. The company will also build a railroad to enable them to operate their limits successfully and to permit the running of the pulp mill all the year round. The railroad will be from fifteen to twenty miles long. Engineers are now at work laying out the line and the building of the road will start almost immediately. The output of the mills will be shipped both by rail and water. Before purchasing the limits, the St. Lawrence Pulp & Lumber Corporation had them cruised by Lemieux Bros. and Company, New York, who reported them to be of a very high standard.

The pulp mill will be erected under the superintendence of Hardy S. Ferguson, of New York, and Mr. Chester Allbright, of Philadelphia, both of whom are expert construction engineers.

The general manager of the new company is Mr. H. W. Racey, who for ten years was engaged with Price Bros., Quebec, and for a number of years occupied an important position with one of the large British Columbia lumber companies.

Mr. John Hall Kelly, L.L.L., New Carlisle, P.Q., is attorney for the company and is acting as their Canadian representative. He reports that the undertaking gives promise of encouraging success. The great value of the property, the very favorable operating conditions, the quality and marketability of the products all render the proposition exceptionally interesting. Mr. Kelly reported recently that by the end of May there would be a thousand men at work on the erection of the pulp mill and the construction of the railroad.

### Mahogany Measurements

A reader of the Canada Lumberman in a recent letter makes enquiry as to the manner in which mahogany is estimated and sold at the auction sales at London, England. Mahogany logs are measured for the sales conducted by Messrs. Churchill & Sim, on what is known as Brokers Sale Measure, according to which system certain fixed allowances are made by rule, as well as extra allowances for defects in the logs according to the direction of the measure. These allowances together amount on the average to about 30 per cent. The "foot" referred to in price quotations is the superficial foot, 1-in. thick, 1 ft. wide, 1 ft. long, but owing to the allowances above referred to, an average price of say 8½d would be reduced by about 30 per cent., to arrive at the price per superficial foot "full measure," bringing the price, therefore, to about 6d per foot or \$120 per thousand feet b.m. African mahogany sold at the London auctions is subject also to a charge of 6s 6d per ton. African mahogany reaches London indirectly by way of Liverpool and the extra charge is for freight from Liverpool to London.

## Ontario Lumber Salesmen

### Men Who Keep the Stocks Moving

Alfred E. Read, Toronto

Alfred E. Read, Toronto

The lumber business in Canada has a unique history and there is nothing more remarkable about it than the frequency with which one hears of a young man, or an old man for the matter of fact, who has made good in the lumber business and whose early business training was obtained in the woods. The woods experience may not always have been the starting point of his career, but it is invariably one of the early influences in such a career and from the day when a young man graduated from the bush to the office or to the road, his progress has generally been rapid and sure. The woods are the best place in which to obtain a grounding for the lumber business. One may learn a lot in the yard of a large firm or of a mill, but if he wants to feel that confidence which is essential to success, the best and quickest way to get it is to go to the woods and learn all about the raw material of the lumber business in its natural state.

Alfred E. Read, of Read Bros., Ltd., 43 Victoria street, Toronto, saw the wisdom of such a course and followed it. He was born in September, 1886, on a farm near Richmond Hill. The public school and high school at Richmond Hill were responsible for his early acquirements in the way of general knowledge and when the high school was through with him he secured his introduction to business methods in the office of John Eyer, Toronto, where he acted as book-keeper. Office work was only a continuation, so to speak, of his education, and then he went to the woods for a couple of winters and learned how lumber is felled and taken to the mill and what the elements are when making up the cost of a shipment of lumber, so far as the woods end of the operations are concerned. In the woods also he got that attitude towards the lumber business and towards life in general which could only be obtained under such conditions, and which is so important a factor in the make-up of many a successful lumberman.

When he came out of the woods Mr. Read acquired further practical knowledge by spending a year with the firm of Greer & Ford at Wilberforce, Ont., where he found out what the different kinds of lumber look like, by working at lumber grading. With this equipment in the way of practical experience in the woods and at the mills, Mr. Read took a turn on the road as a travelling salesman for John Eyer. In this way he completed his qualifications as a lumber salesman and soon felt entitled to look around for an opportunity to get into business for himself. The opportunity arrived in 1910 and Mr. Read lost no time in taking advantage of it. He opened an office at 18 Toronto street, under his own name. The business grew quickly and during the following year he formed a partnership with his brother, Alex. P. Read, under the name of Read Bros. The business continued to grow rapidly and at the time when the partnership was formed, the present offices were obtained.

The beginning of the present year found the business still expanding so rapidly that more capital was required to conduct it. The partnership was therefore turned into a limited liability company with a capital of \$40,000. The firm are now carrying on a large wholesale lumber business in western Ontario and are making a specialty of soft woods. The greater portion of the excellent stock of lumber carried by the company is purchased in northern Ontario. Mr. Alfred E. Read's official position in connection with the company is that of secretary-treasurer and he is also one of the directors.

Professor J. A. Bancroft, of McGill University, who last summer explored the Quebec hinterland, speaks in glowing terms of the possibility of the territory. He states that the forests composed to the extent of some 90 per cent. of black spruce, white spruce, jack pine and balsam. There is a tremendous wealth of most excellent pulpwood, and there are large and small areas where the spruce and jack pine are suitable for lumbering.

### Personal News of Interest to Lumbermen

Alderman W. K. Grafftey, of the Montreal Lumber Company, has been appointed acting mayor of Westmount, P.Q.

Edwin B. Caldwell, formerly chairman of the board of directors of the Canadian Puget Sound Lumber Company, Victoria, has succeeded S. W. Barker as general manager of the company.

C. E. Raven, formerly with the Case Shingle & Lumber Company, Raymond, Wash., is superintendent of the new cedar mill erected on the Fraser River by the Canadian Western Lumber Company in connection with its large plant.

Mr. Geo. Esplin, of G. & J. Esplin, and Mr. William Rutherford, of William Rutherford & Sons Company, Limited, have been elected members of the executive committee of the Montreal Branch of the Canadian Manufacturers' Association.

Mr. J. Ander, formerly assistant general manager and attorney for the Swedish Canadian Lumber Company, Nordin, N.B., has resigned his position to become secretary-treasurer of the Canadian Gear Works, Limited, Newcastle, N.B. Mr. A. Kulinder former manager of the company's plant at Rexton, N.B., has been promoted to fill the vacancy caused by Mr. Ander's resignation.

Mr. W. B. Bartram, of the firm of Bartram Bros., Ottawa, Ont. has recently returned from Gaspé coast, where he has been attending the loading of three vessels with lumber for the Montreal market. Bartram Bros. have made shipments out of Three Rivers for New York by water and have already started loading off the Ottawa River by barge. They will ship this year about 12,000,000 feet from the Gaspé coast and about 25,000,000 feet from the St. Lawrence coast.

Mr. A. H. D. Ross of the Faculty of the School of Forestry of the University of Toronto recently visited a number of the important lumbering centres in New Brunswick. While there he consulted with Professor Miller, Dean of the University of the New Brunswick School of Forestry. On his return to Toronto Mr. Ross will leave for western Canada to take up his summer work as consulting forester for the C. P. R., with headquarters at Calgary. Professor Miller will occupy a similar position during the summer in connection with the C. P. R.'s forestry work in eastern Canada.

Col. A. D. McRae, vice-president and general manager of the Canadian Western Lumber Company, has returned to Vancouver from a business trip to England. Regarding the money market, he reports that conditions will be much improved very shortly. This will have a direct effect on the lumber industry in British Columbia, for it all depends on easy money within the next 60 days if this is to be the banner year for lumber sales in British Columbia. He reports that there is not a vacant house in any of the towns on the prairie, and labor is markedly scarce, but money is needed if building is to be done extensively.

Prof. R. B. Miller, Dean of the University of New Brunswick Forestry School, has accepted a position with the forestry branch of the department of natural resources of the C. P. R. During the summer he will do some consulting work similar to that done by Prof. A. H. D. Ross, of the University of Toronto, in British Columbia. The work will be carried on under the direction of Mr. B. M. Winegar, the C. P. R. forester at Montreal, who has charge of the eastern work. The Dominion Commission of Conservation contemplated some investigation work in New Brunswick this summer, but have temporarily postponed it in view of the C. P. R. work.

### Necrological Record of the Past Fortnight

Joseph Young, saw mill operator, North Bay, Ont., died recently.

The death is reported of John W. Porter, lumber manufacturer, Westville, N.S.

Wm. T. Toner, a well-known lumber dealer at Collingwood, Ont., died suddenly at his office on May 23rd, at the age of 67. Mr. Toner leaves a wife, one son and one daughter.

Michael Kennedy, aged 56, a well known Ontario lumberman, died at his home at Forest after a short illness. For many years Mr. Kennedy worked for the Sutherland-Innes Company, Chatham, Ont., as timber buyer and foreman of their mill at Forest, Ont., and left them when he was appointed Crown Timber Agent. Mr. Kennedy was essentially a woodsman, and one of the best estimators of timber in the country.

Robert Neilson, a lumberman who was well-known for many years in the vicinity of Owen Sound, Dundalk and Fesserton died recently at Toronto of heart failure, brought about by the amputation of two of his fingers a fortnight ago. The late Mr. Neilson was 64 years of age and was born at Proton Station, Ont. He leaves two daughters and four sons, one of whom, Mr. R. A. Neilson, is a successful lumber merchant at North Battleford, Sask.

**Back in His Former Position**

John Jenness, Ottawa, Ont.

John Jenness, formerly with the Rathbun Company, Deseronto, Ont., whose portrait we have pleasure in reproducing herewith, has been appointed to the management of the export trade and the outside trade on doors, sash, blinds, etc., together with the city and outside trade in boxes and box shooks, for the Estate of James Davidson, Ottawa, Ont.

Mr. Jenness has had a long experience, especially calculated to fit him for a position such as the one to which he has been newly appointed. He was born in Boston, Mass., and lived there until he reached the age of sixteen years, after which he struck for the west, as it was then called, and got as far as Attica, Mich., where he entered the employ of his uncle, Mr. I. N. Jenness, a well-known lumberman of that

place. After a short time in this position he obtained an appointment with W. D. Mershon & Company, Saginaw, Mich., with whom he remained for ten years, doing excellent work and securing a knowledge of the lumber business, which has enabled him to make a name for himself as one of the most successful men in the management of the sales operations of a large lumber manufacturing and woodworking institution.

After remaining with W. B. Mershon & Company for ten years he left them in 1900 to accept a position with the Saginaw & Manistee Lumber Company, Williams, Arizona, where he looked after the interests of W. B. Mershon in that company. Mr. Mershon was at that time secretary-treasurer of the Saginaw & Manistee Lumber Company. Unfortunately Mr. Jenness could not stand the high altitude of Williams, Arizona, and ill-health obliged him, after he had only remained there one year, to seek a rest at Los Angeles, California.

After recuperating, Mr. Jenness turned his attention towards Canada and secured a position with the Rathbun Company at Deseronto, Ont. He remained with this firm for nine years and finally left them to accept a position with James Davidson, Ottawa, Ont. Eighteen months later Mr. Jenness returned to the Rathbun Company with whom he then continued until quite recently, when he again considered a proposition from the Estate James Davidson. The result is that he is back again with this company occupying the position which he occupied before leaving them.

Mr. Jenness needs no introduction to those members of the lumber trade who have been calling upon the Rathbun Company or the Estate James Davidson, since he was connected with them. His numerous friends in the trade will be pleased to hear of his continued success.

**Even Tension**

Recently, while talking to a band saw filer who was in my employ, I mentioned even tension. He claimed to have heard different ones speak of even tension, but did not understand what they were getting at. I tried to explain to him how to get even tension, but could not get him to stop talking long enough to listen to an explanation. By taking a few "resting powders" he might be able to sit still long enough to read this article on even tension, and get the same results as though he had had patience enough to listen to someone explain even tension to him in person.

It is a very easy matter to carry even tension by fitting your saws to tension gage—that is, by not showing any more light under gage than your straightedge shows on leveling block after saw is perfectly level. This way of working tension would be very awkward for a short time before one would get accustomed to working his saws in this manner, especially after being in the habit of showing light before starting in this way.

There are a number of filers who work tension in this manner, and, as a rule, their saws will stand more feed, crack less and look much brighter, being clear of lumps. I will be pleased to have up-to-date band saw filers give their views in *The Woodworker* on even tension, for the benefit of those who do not understand what even tension is, as they might be able to make a plainer explanation than I have. I do not follow band saw filing, but have had several years' experience in saw-milling.—W. E. S., in *The Woodworker*, Indianapolis.

**J. R. Collins Leaves Fassett Lumber Co.**

John R. Collins

Mr. John R. Collins, for the past five years manager of the Fassett Lumber Company, Limited, of Fassett, Quebec, has severed his connection with that concern and left last week for Pennsylvania, where after a short rest he will proceed to the Southern States to look after his lumber interests. Mr. Collins formerly intended to leave Fassett last fall and had given in his resignation then, but was prevailed upon by the President, Mr. J. Sloat Fassett, of Elmira, N.Y., to remain until the spring. Mr. Collins is a native of Pennsylvania and has had a life long experience in the lumber business, having been connected with the Goodyear Lumber Company, of Buffalo, for sixteen years prior to going to Fassett. Taking over the management of the Fassett Lumber Company five years ago at a time when operations there were none too progressive. Mr. Collins, by successful management and keen business acumen has placed the company in the front rank. He leaves a business, every cog in which is running perfectly, and a plant which for its size cannot be outclassed in the province of Quebec.

During his stay in Canada Mr. Collins has made many friends both in the lumber business and outside, among whom his departure will be deeply regretted, and who will join with the Canada Lumberman in expressing the wish that his future efforts will be crowned with as great success as he has attained in his management of the Fassett Lumber Company.

The management of the Fassett Lumber Company has fallen on Mr. S. J. Staniforth, who for the past two years, has filled the position of assistant manager. Mr. Staniforth has been associated with the company for six years and has demonstrated his executive ability so conclusively that his elevation to the managership has been the natural result. We wish him every success in his new office.

**Band Saw Guides and Band Resawing**

There is one thing most saw-filers, especially those who file for saw mills, do not take into consideration. That is, most band rip saws are fitted with steel guides, and if your saws are not just right they will strike the sides of guides and it does not take long until you have casehardening. I have had a great deal of trouble along this line, especially if I did not watch the operator pretty closely and see that he kept his guides adjusted properly. I have often wondered why machinery manufacturers do not fit their machines with wood guide blocks, and thus eliminate the trouble along that line.

I have filed for large mills and would just as soon handle large saws as small ones. When you come to saw kiln-dried oak, ash and maple, then run air-dried and green cypress and cedar with the same saw, you can find plenty of difficulties, especially when your saw begins to get a little dull, on from 18-in. to 26-in. stock. I have sawed some 32-in. stock on a 4-in. by 32-ft. saw, cutting 4-in. every revolution of the saw, with the foreman wanting to know if I could not speed up a little.

I was called to a certain place once where they were having trouble, and when I got there I asked the foreman for a job, without him knowing who I was. He asked me if I knew anything about a resaw and I told him that I knew a little. "Well," he said, "we are having trouble with our resaw." When asked what it was, imagine my surprise when he said, "The man that sold me that machine said I could run a saw three months without changing." I was in an awful hurry to tell him I did not want a job, then I told him who I was and that the superintendent had sent for me. I also told him that he, I, nor any other man could run a saw that long. At last I agreed to take that part of the mill with the understanding that he stay out. I have resawed 42,000 feet of 5/4 pine on that same mill in 9½ hours, on one saw, but usually run two saws a day; that is, changing every five hours.

G. S. in the *Woodworker*, Indianapolis.

The hearing in the matter of petitions produced against the construction of the Meductic dam by the St. John River Hydro-electric Company, Limited, was concluded recently before the St. John River Commission, after which the hearing adjourned. A decision will be given later on.

# Poles Purchased in Canada During 1912

An Increased Consumption Shown of Nearly Four per cent.—Average Price \$1.83 per pole—Greater Use of B. C. Poles

The Forestry Branch of the Department of the Interior has completed the preparation of statistics regarding the quantity and value of poles purchased in 1912. The results will be published in bulletin form in the near future. The statistics in the bulletin will be based on reports received from 207 telephone companies, 131 electric light and power concerns, 29 electric railways, 18 steam railways (operating telegraph and telephone lines) and 4 telegraph companies. These 389 companies reporting purchases in 1912 represent at least 95 per cent. of the wooden pole users in Canada and the figures in this bulletin include at least 95 per cent. of the poles purchased in 1912.

Pole users are divided into two groups with steam railways, telephone and telegraph companies forming one group and electric railway, power and light companies the other. The accompanying table shows the number, total value, average value and per cent. distribution of poles purchased in Canada in 1911 and 1912.

There were 608,556 wooden poles reported as having been purchased in Canada in 1912. This number is an actual increase of 22,853 poles or 3.9 per cent. increase over the figures for 1911. While this increase is slight, it follows a decided decrease from 1910 and 1911. The average pole has a life of at least ten years and the demand for poles is therefore more or less intermittent, depending on the building of new pole lines.

Altogether nine kinds of wood were reported for poles in 1912, with Eastern cedar heading the list as in past years. Cedar has been and probably will be for some time the most popular wood for telegraph, telephone, and other pole lines, although the purchase in 1912 shows a decrease. Wood for this purpose need not be especially strong or hard, as there is little or no mechanical strain to be endured. Durability in contact with the soil, lightness and a slender tapering form are most essential, and cedar seems to fit those requirements better than any other native wood used in an untreated state.

## B. C. Poles In Greater Use

The use of the British Columbia species of cedar (*Thuja plicata*) has increased in the last few years with the decrease in the supply of poles of the eastern species in the greater length classes. While these poles are not so strong or durable as those of eastern cedar, they can be obtained in greater lengths, and the source of supply is more easily accessible. The two species of cedar together formed over 85 per cent. of the total.

Balsam fir was reported for the first time in 1912. This wood is being used more and more each year for all purposes, especially in the Maritime Provinces, where the supply of pine is beginning to fall below the demand. As far as form and lightness are concerned this should make excellent pole material if its lack of durability were made up for by some preservative treatment. Increases are to be noted in the use of eastern spruce, tamarack, spruce, and chestnut, with balsam fir added to the list, and decreases in the use of eastern cedar, jack pine, Douglas fir and hemlock. No poles were reported in 1912 of red, white or yellow pine.

The average prices given in the above tables are based on the cost at the point of purchase and may or may not include transportation charges. Only in the case of those woods which are used in large quantities, can the value given be taken to represent the relative value of the wood. The average value of poles in 1912 was \$1.83, an increase of only 3 cents over 1911. A slight increase was recorded in the case of eastern cedar and other increases to be noted are in the

value of poles of spruce and jack pine. All other kinds of wood decreased in value and the balsam fir reported in 1912 was valued at an average price below the general average for 1911.

Steam railways, telephone and telegraph companies reported the purchase of 549,560 poles in 1912. This number is an increase of 5.4 per cent. over the total for 1911 and is evident in the cases of western cedar, tamarack and the newly added material, balsam fir. All other woods show a decrease in number although Douglas fir and chestnut were added to the list of woods purchased by steam railways. The average value of \$1.51 per pole is an increase from 1911. The average values of poles purchased by this class of pole line companies is always less than with the electric railway, power and light concerns as the steam railway and telephone companies are usually closer to the source of supply and purchase their poles in greater quantities. They also use more poles of the shorter length classes. These companies used all the poles purchased of balsam fir, tamarack, jack pine, Douglas fir, and chestnut. They purchased 90.3 per cent. of all the poles used.

The electric railway, power and light companies purchased a total of 58,996 poles, 9.7 per cent. of all the poles purchased in 1912. This number is a decrease of 5,135 or of over eight per cent. from the total in 1911. These companies used only four kinds of wood—cedar (eastern and western), spruce and hemlock. Hemlock was not reported in 1911 by these companies and poles of Douglas fir, chestnut, yellow pine and tamarack reported in that year were dropped from the list in 1912. The electric companies as a rule purchase the best class of poles of the greatest length and seldom obtain their supply locally. These facts are probably responsible for the high values in the above table. The average per pole of \$4.79 is an increase of 24 cents over 1911.

## Pole Consumption by Length Classes

Of the total 608,556 poles 66.1 per cent. were from 20 to 25 feet in length and were valued at \$1.15. Over twenty per cent. were in the 26 to 30 foot class and were valued at an average of \$2.42. In the 31 to 35 foot class 7.8 per cent. of the poles were placed and these were valued at \$4.01. The 36 to 40 foot poles formed 3.4 per cent. of the total at \$5.38 and the poles of 40 feet and over at a value of \$6.68 made up the remaining 1.5 per cent.

Cedar poles formed the bulk of each length class and made up practically all the poles in the greater length classes (36 feet and over). Tamarack and spruce poles were also used in the greater length classes and formed a large per cent. of the poles between 26 and 35 feet. The jack pine poles were all in the 26 to 30 foot class and practically all the poles of Douglas fir, chestnut, and hemlock were less than 25 feet in length.

The spruce and chestnut poles in the greatest length class (40 feet and over) were purchased for special purposes and their low prices do not indicate their relative value.

Many of the pole line companies use preservative treatments of different kinds to prevent decay and insect injury. These include impregnation of the butts of the poles with creosote, zinc chloride and other chemicals. In some cases the bark is left on that part of the pole which comes into contact with the soil, and this tends to increase the life with some kinds of wood. Painting the butts of the poles with hot tar or creosote will increase their life by several years. Many companies have found that the increased life which is accomplished

POLES PURCHASED, 1911 AND 1912, BY KINDS OF WOOD AND CHIEF USES: NUMBER, TOTAL VALUE, AVERAGE VALUE AND PER CENT DISTRIBUTION

| Unspecified .....   | 942     | 5,820       | 6.18                  | 0.2         |         |             |                       |             |

by preservative treatment brings about a considerable saving in the annual cost of the upkeep of a pole line. By thorough treatment with preservatives, many non-durable woods, such as balsam fir, are being used satisfactorily where their use in an untreated state would not have been possible.

## Cross-Tie Consumption Increasing

**Statistics for 1912 Show Purchases of 48 per cent. More Ties Than During 1911—Average Price Advanced**

The consumption of cross-ties in Canada during 1912 reached a total of 21,308,571, instead of 16,619,362 as reported in the advance bulletin recently published. The revised bulletin on the cross-ties purchased in 1912, prepared by the Forestry Branch of the Department of the Interior, will show the above total, the value of which was \$9,373,869. Part of these were imported but the bulk of the ties used on Canadian railways are cut in Canada. The imports of ties in 1912 were valued approximately at \$1,697,431, which would indicate that less than one-fifth of the ties purchased in 1912 were imported.

The total of 21,308,571 cross-ties purchased during 1912 was an increase in actual numbers of 6,919,347 or a 48.1 per cent. increase over 1911. This increase took place on almost all the railways in Canada and was especially noticeable on transcontinental lines.

Nineteen different kinds of wood were used with jack pine still leading. The use of each material increased from 1911 with the exception of eastern spruce and red pine. Balsam fir and western spruce were added to the list of 1911 and poplar and black ash were dropped.

The use of the cedar tie has varied greatly from year to year. In 1908, 1909 and 1910 cedar ties headed the list, although the numbers purchased showed decreases each year. In 1911 cedar ties formed only 10 per cent. of the total and fell back to fourth place on the list. In 1912 the use of this material increased by some 1,898,710 ties and this wood moved up to second place on the list, forming 15.6 per cent. of the total.

Douglas fir has steadily increased in use since 1909, when data concerning its use were first obtained. Oak and the other five hardwoods—chestnut, beech, maple, birch and elm—have also increased remarkably. There seems to be a tendency on the part of the management of older established steam railways to reduce the use of soft, light material for cross-ties, especially where fast trains and heavy rolling stock are used. Some of the eastern roads have ceased to purchase cedar, pine, hemlock, and tamarack ties and use only the hardwoods. The use of imported hard pine has increased with the hardwoods and was used in making 3.1 per cent. of the ties purchased in 1912. Western larch formed 5.6 per cent. of the total number, over a million ties of this wood having been purchased.

### Average Price Shows an Advance

The average value of ties, at the point of purchase, increased from 39 to 44 cents in 1912. Increases are noted in the case of jack pine, cedar, hemlock, tamarack, eastern spruce, chestnut, beech, maple, white pine, birch, red pine, and elm. The increases in the values of beech, maple and birch were probably due to the fact that ties of these three materials were treated chemically in considerable numbers to prevent decay, and their cost is materially increased on this account. The decreases were in the values of Douglas fir, oak, hard pine and western cedar. Western larch ties were purchased at the same price as in 1911.

The values in all cases, being based on the cost at the point of purchase, can never be considered to represent exactly the relative values of the different kinds of wood for cross-ties. So many variable factors enter into this cost that only in those cases where ties of a certain kind of wood are used in large numbers can the values given in the above table be said to indicate the intrinsic value of the material.

Steam railways in 1912 reported the purchase of 20,825,209 ties, this number forming 97.7 per cent. of the total for all Canada. The total is an increase of 7,025,227 ties or an increase of 50.9 per cent. over 1911.

Steam railways paid an average price of 44 cents for their ties as compared to 50 cents paid by the electrical lines. The steam railways paid less for every kind of wood used by both classes, with the exception of eastern spruce. These companies are usually closer to the source of supply, but in greater quantities, and have better facilities for transporting their tie material than the electric roads. The steam railways used all the ties purchased in Canada in 1912 of the following kinds of wood:—Western larch, chestnut, beech, maple, birch, red pine and balsam fir.

### Steam Roads Using More Hardwood Ties

It is interesting to note the increased use of hardwoods by steam railway companies. In 1911 woods such as oak, chestnut, beech,

maple, birch, elm and black ash together formed only 1.8 per cent. of the ties purchased. In 1912 this percentage increased to 6.7 per cent. through increased purchases of 1,148,578 hardwood ties.

Electric railways in Canada reported having purchased 483,362 cross-ties in 1912. This is a decrease of 18 per cent. from 1911, and, where the purchases of these railways in 1911 amounted to over four per cent. of the total, they formed less than three per cent. in 1912. As stated previously, the values of ties of every kind of wood used by both classes were greater in the case of steam railways, with the single exception of eastern spruce.

The greater part of the material used by these companies was of the softer, lighter woods. Coniferous woods formed together 99.4 per cent. of the total. The only hardwoods used were oak and elm, and these together formed only 0.6 per cent. of the total. Imported hard pine, however, is used to a slight extent, and this material is in reality much harder than many of our native so-called hardwoods.

Decreases in the number of ties purchased by electric railways are noticeable in the cases of cedar, Douglas fir, oak and white pine, and these wood together form the bulk of the material used. Increases are seen in the use of hemlock, tamarack, jack pine and eastern spruce.

Ties of Western cedar, Western spruce, hard pine and elm were reported for the first time in 1912. The use of red pine and chestnut was not reported by electric roads in 1911. These companies used all the western spruce ties reported in 1912.

### Increasing Use of Preservative Treatment

Many Canadian railway companies are now beginning to realize the value of preserving at least a part of their tie material from decay and insect injury. The practice of chemical treatment of railway ties has been carried on by railways in the United States for some years with apparently satisfactory results.

The practice in Canada is just beginning, but is increasing rapidly with the increasing cost of tie material and the constantly decreasing supply. In 1910 practically no treated ties were used by Canadian railways. In 1911 some 206,209 ties received chemical treatment before being placed in the roadbed. This number, while forming only 1.4 per cent. of the total number of ties used, was, nevertheless, an indication of the increase in this particular form of conservation. In 1912 a total of 1,818,189 ties were chemically treated. This number forms 8.5 per cent. of the total number of ties purchased. Steam railways used 1,798,189 of these treated ties and electric roads used 20,000.

The treated ties were mostly hardwoods, as it has been found more economical to treat the heavier, stronger woods than those which are liable to fail from mechanical wear before they have time to decay. The greatest actual saving by preservative treatment is found in the use of the so-called "inferior woods," provided that these are properly protected from mechanical wear. Until the price of the durable woods becomes excessive the railway companies will not resort to expensive treatment of inferior woods on account of this cost of protecting them from mechanical wear.

### A Fireproof Wood Preserving Process

Many of the processes of preserving timber by impregnating it with chemicals or oils, have the serious objection that they increase the inflammability of the timber. The process using zinc chloride as the preservative overcomes this and in fact renders the timber practically fireproof. In a recent issue of the Canada Lumberman an illustrated article was published dealing with the interesting plant of Alex. Bruce & Company at Fort Frances, Ont., which uses a zinc chloride preservative, combined with sulphate of alumina, to prevent the preservative from bleaching out of the wood. This article referred to the process as rendering the wood "inflammable," which, of course, was an error, the word which should have been used, being "fireproof."

### Rangers Going North

About 500 fire rangers have left for Northern Ontario, and in accordance with last year's rule, only those who have had previous experience or have demonstrated their capacity for the work have been appointed. While a number of Varsity students have gone as in former years, the majority of rangers are woodsmen and lumbermen. The Department of Lands, Forests and Mines appointed several inspectors to see that railway locomotives are properly equipped with spark arresters, thus carrying out the recent order of the Board of Railway Commissioners, making railways responsible for fire along the right of way.

A meeting of Hemlock Manufacturers of Ontario was held in the Queens Hotel, Toronto, on May 23rd. The general feeling of those present was that the outlook was promising for a good season. Stocks at the mill are undoubtedly short.

# Utilization of Waste from Hardwoods

## Factors Which Regulate Economical Conversion of Hardwood Timber into Lumber, Chemicals, etc.—Analytical Study of Costs

By R. B. Goodman\*

First of all, I desire to call your attention to the fact that in speaking of hardwood waste we do not mean an economic waste at all, but simply despoiled or left-over material. If the producing of something valuable out of this material can be done at a profit, it should be saved, but it must be remembered that the waste material is something tangible and evident to the senses, whereas the labor that may be expended in rendering this waste material valuable is often illusive and intangible, and unless the operation has an accurate system of accounting, the efforts to save waste material may easily cause a greater waste of labor.

The problem of utilizing waste material is largely a problem of more efficient processes of labor, and results are often so misleading that all of us occasionally find ourselves handling waste material in one way or another at an actual loss. The amount of waste material, however, accruing from the manufacture of hardwood lumber is so great that we feel the necessity of making some effort toward its utilization.

This waste material takes place, first, in the woods; second, at the mill; third, at the place the lumber is consumed.

In this paper I shall discuss only the first two of these sources. The waste in the woods is the greatest in bulk. Our specifications for logging birch and maple are 8-in. surface clear for birch and 10-in. surface clear for maple. Since we adopted these specifications the value of birch and maple has increased over \$5 per thousand, and it occurred to me that this advance would enable me to cut my logs on a much harder specification, both as to size and character of the log.

We made interesting experiments in this line. We reduced our specifications to 7-in. and up for birch and 8-in. and up for maple, and included a fairly hard grade or No. 2 log. This difference in the specification increased the cost of logging from \$1 to \$2 per thousand. The smaller and rougher logs decreased our cut at the mill some twenty per cent., with a consequent increase in cost of sawing of that amount. The larger percentage of low-grade lumber decreases the average value of the product of the log, so that by endeavoring to utilize the poorer logs in our forests, and thus to decrease the waste of material in the woods, we virtually increase the cost of our lumber more than \$5 per thousand; and if we had had any means of determining the actual cost of manufacturing the poorer logs into lumber, it would probably have amounted to four or five times the value of the product obtained, so we have come to the conclusion that with our stand of timber 8-in. and 10-in. surface clear limits for logging birch and maple are the limits of economy. These specifications take not more than from thirty to thirty-five per cent. of the weight of the wood from the land, or from sixty-five to seventy per cent. of the weight of the material in our forests is left on the ground as having no economic value.

The second source of waste material is at the mill—saw kerf, slabs, edgings and trimmings. The modern band saws have reduced the waste of saw kerf to less than half of what it was with the circular saw—in other words, it has been reduced from twenty per cent. to about eight per cent. If anyone is sawing lumber with a circular saw, he can save the price of a band mill in saw kerf in a year's sawing.

More careful sawing or the use of slab resaw has reduced the waste of material from slabs, and careful attention to edging and trimming, the use of odd lengths in lumber, the crowding of wane and bark into low-grade crating and box lumber has still further reduced the amount of waste in sawing up the log.

In hemlock, basswood and elm, a percentage of the waste of slabs and edgings is utilized for lath and squares, but when all these things are taken into consideration, there is still over a cord of refuse to a thousand feet of lumber. Approximately two-thirds of this goes into fuel as sawdust and hog feed, and one-third is available for other uses—that is to say, that approximately fifty per cent. of the weight of the merchantable log goes into lumber, thirty per cent. into fuel, and twenty per cent. into wood available for other uses.

If these percentages of waste are approximately correct, you will see that the lumber produced from the hardwood forest is fifteen per cent. of the weight of the standing timber and that this is under the most improved modern conditions of manufacture. If the birch and maple yield sixty per cent. merchantable lumber against forty per cent. No. 3, the merchantable lumber would be approximately nine per cent. of the weight of the material in the standing forests.

The utilization of this waste material so that we obtain a value from it in excess of the labor expended on it, is a problem with as many different solutions as there are different hardwood operations. If the mill is located at a remote distance from the timber and freight is paid on the logs, it is obvious that the possibility of bringing in a greater proportion of weight of material from the standing timber is largely reduced. Mills that are located at a remote distance from the timber are usually in large towns or cities, and the waste material at the mill is more available for sale as fuel than for any other purpose. When the mill is located in the heart of the timber, as our mill at Goodman, we have found that after selling a small amount of our mill waste for local consumption as fuel, we have reached the end of our resources, for the best prices that we have been able to obtain in the larger cities for short wood have not compensated us for the actual cost of handling same from the mill to the car; and while we have made no experiments of our own, we have offered for the past four years, and are still offering, to finance any reasonable proposition submitted to us for the manufacture of our refuse into any of the numerous articles of commerce made from small pieces of wood—all the way from dowel pins to pail handles. All the propositions that have come to us, however, have been impracticable, the cost of the labor involved precluding any possibility of profit, and while there are many specialties in hardwood, such as broom handles, special material for the manufacture of furniture, agricultural implements, tenpins, billiard cues, etc., nearly all of these specialties require not the refuse material but the pick of the logs.

We have tried to solve the problem of utilizing a larger proportion of waste material in the woods, and practically all of the waste at the mill in birch and maple, by erecting a chemical plant at Goodman for destructive distillation. This plant is of the oven type. Plants for the destructive distillation of hardwood in this country are of three types—the small retort plant, in which the wood is packed in small iron retorts and then charred; kiln plants, in which the wood is charred partly by its own combustion; and oven plants, in which the wood is loaded on iron buggies and shoved into large iron retorts or ovens. Our plant has six of these large retorts, each holding eight cords of wood at a charge, or a daily capacity of charring forty-eight cords of hardwood. This plant, with its adjacent wood yards, system of track and the installation of boilers and pumps for supplying steam and water, cost approximately \$200,000, and the preparing of chemical wood and other requirements of operation require a working capital, in addition, of \$25,000. The returns from this plant, after a fair deduction for depreciation, show a profit of between six and eight per cent., and the prices at which we are supplying this plant with hardwood leave a margin of profit of approximately \$1 per cord. As the compensation, however, allotted to the production of the wood fluctuates with the market value of the chemicals produced, and as the chemicals are all now at a high value, we do not figure more than a return of fifty cents per cord for stumpage over a long period of years.

The requirements of wood for the retorts are very exacting. Only the heaviest slabs and edgings can be used, and it is impossible to use wood containing excessive doze or streaks of rot; the wood must be split so that it does not exceed 6-in. in thickness or 12-in. in width; the wood must be all hardwood and seasoned for one year before it is ready for use. We have found serious difficulty in getting out this wood by the old method of wood choppers working in the timber. These difficulties are: scarcity of expert labor and its inferior quality, the necessity of constant and rigid inspection of the wood, and, after the wood is out, the risk of fire during the year it has to stay in pile for seasoning. The labor required to haul this wood and load on cars is as great as the original chopping, and to these items of risk and expense we add the necessity of leaving in our logging spurs for a year longer than would be required for logging only, consequently requiring a double amount of steel for this purpose.

On account of these objections we early came to the conclusion that it would be cheaper to manufacture the chemical wood at the mill. We cut the chemical wood in log lengths—i.e., we log the land clean, leaving only saplings under 5-in., dozey trees, and tree tops. We bring this chemical wood to our mill with our merchantable logs, sorting at the mill and running the rough and small logs to the wood mill, where they are butted to 50-in. and run through split saws to be cut into sizes complying with retort wood specifications. The heavy slabs and edgings are conveyed so as to mix with the output of the wood mill, and the wood is piled on cars at the mill and taken to the chemical wood yard, where it is piled to dry and season.

\* The above article, read recently by R. B. Goodman, before the Northern Hemlock and Hardwood Manufacturers, is published as an interesting supplement to the article published in the Canada Lumberman of May 15th on the operations of the Dominion Wood & Lumber Company, at Trout Creek, Ont.

This process, being mixed with our regular operation, is obviously one in which it is difficult to determine actual unit cost, but we believe that this method is cheaper, and certainly more reliable, than chopping in the woods, and it enables us to utilize wood that the choppers are unable to split by hand. The wood mill, however, is an additional investment.

The operation of a retort chemical plant, while comparatively simple, requires a few highly skilled men and great care in the regulation of its operation. Our plant has an installation of one 1,500-gallon pump for pumping water for the condensing of the vapors, and five 150-horsepower boilers for supplying steam for distillation. A switch engine is required for shifting the wood cars and pulling the retort buggies. The labor required for all departments aggregates ninety men. This includes extra force in the woods, wood mill crew, wood handlers, firemen, and the men handling the products in operating the plant.

Products of the plant are approximately as follows: Per cord of wood, 50 bushels of charcoal, 11 gallons of 82 per cent. crude alcohol and 160 pounds of acetate of lime. These products, with the exception of charcoal, are easily marketable under normal market conditions. The difficulty with the charcoal is that the domestic market within shipping radius of our northern hardwood operations is so narrow that it is impossible to depend upon it, and our chief wholesale use of charcoal is in the manufacture of charcoal iron. Owing to its low value and great bulk and its tendency to spontaneous combustion, it is impracticable to ship charcoal in bulk for any great distance by rail, so that the second step in the process of utilizing chemical wood is the erection of a blast furnace, unless there is already one near enough to the operation to contract for its output. The other products, alcohol and acetate of lime, while being capable of shipment for long distances, and even available for export, are chemicals for which there is not a very large demand in the arts. Wood alcohol has to compete with the more cheaply manufactured and more widely denatured grain alcohol, and only a slight stimulation to the production of acetate immediately reduces its price. In the course of the past five years the total value of the charcoal, alcohol and acetate produced from a cord of wood has fluctuated from \$6.00, with practically no demand, up to a total of \$11.00. Our costs per cord, carbonized, are about \$8.50. As the weight of a cord of wood is approximately equal to a thousand feet of lumber, and we are obtaining a cord of wood for each thousand feet of lumber manufactured, it will be seen that we are utilizing twice as much of the material in our hardwood forests as we were in the manufacture of lumber alone. Our own plant is the minimum in size that it is practicable to operate; plants twice or three times its size are better suited to economy of operation. It would follow, therefore, that the requirements for even the smallest chemical plant are as follows: First, a mill located near the timber, the available hardwood timber to be at least twenty years' supply at the rate of 10,000,000 feet of hardwood per year; second, sufficient supply of running water; third, proximity of charcoal iron furnace.

With these conditions met, the mill in the woods can make as great a profit out of its hardwood refuse as the mills in the larger towns by disposing of their wood as fuel.

### Troubles with Bearings—How to Overcome Them

Perhaps the following proffered information is not new to most readers, but if new to some, those who are "next," will not begrudge them the knowledge, writes M. C. Cantrell, in *Berlin Quality*. If there is one part of a matcher or moulder, particularly the latter, that is more trouble than any two or three other parts put together, it is the side spindles. Invention has done much to "trap" these troubles but one in particular is still at large. I refer particularly to the top bearing; and the trouble there is caused by the overhang,—the cutter head working on the outer end of the spindle.

When the heads are in perfect balance, and the work light, things may go fine for a long time. But the adjustment requires rather a different treatment than other bearings, and more constant attention. It is next to impossible to prevent vibration of the spindle in the upper end of the bearing, and particularly so if there is a bad balance, heavy work or the least bit of lost motion. This serves to wear the babbitt lining away more in the upper half than in the lower, and when once started, the trouble increases rapidly.

In taking up the slack in this bearing, it is too often done by setting up the cap screws until all lost motion is gone without knowing whether one end of the cap has been brought down more tightly than the other. Different makes of machines employ different methods of securing the caps, which require different treatment in making adjustments.

It is common practice to set up the caps screws on one side only, of the cap. If the cap is properly leveled with the arbor, good enough. But if not, trouble will result. And the fact that the upper end of the bearing is almost invariably larger by the time adjustment is necessary, it follows that it is just that often out of proper alignment.

For making this adjustment, remove the belt, and if the cap is

held in place by four cap screws, begin with the upper screw on each side. Set one a very little at a time, doing so alternately, until the arbor does not turn perfectly free. Then begin with the screws in the lower end of the cap. With the first tightening of these two, we usually find that the arbor turns more freely; but continue to set them until a slight stubbornness in turning is again felt. Then "slack" away on these two until the arbor turns smooth and free. Again set the upper two very cautiously, and as soon as a slight change toward binding is felt, stop, and a smooth, cool running bearing is the usual result. In this way the upper end of the bearing will be slightly more snug than the lower, and I have always got better results from such an adjustment.

If the cap has but one cap screw on each side, with set screw above and below them, to act in place of liner for holding the cap rigid, begin by loosening all the set screws, then set the cap screws until the arbor begins to turn hard. Then begin with the set screw, and bring them together until the arbor becomes more free, then set the lower ones a bit harder, and the adjustment will be right. Care must be used when tightening the set screws for, if set too hard they will spring the cap, giving an uneven bearing against the arbor, which causes heating and poor work.

When there is any unnecessary slack in a high speed bearing, it rapidly pounds and cuts away the babbitt lining, and naturally follows the line of least resistance. With the bearing in point, this line unfortunately, is in direct line with the force of the recoil caused by knife pounding, which makes bad matters worse. Under these conditions the bearing quickly becomes worn oblong, and is then entirely spoiled, as the longer diameter is at right angles with the direction the cap must travel when setting it up. Hence, to undertake to take up this slack by setting the cap, it would bind to the burning point, and yet leave lost motion in the direction that would do the most harm. When this condition is reached, re-babbitting is the only real remedy. If the damage is only slight, and time very limited, heavy scraping in the center will overcome it to an extent allowing short runs on light work; but this should be resorted to only in cases of emergency.

A word about babbitting. Almost every one has his pet way for doing this work. And though there are many good ways to do it, some are better than others. Of the many that I have tried, covering a wide range of work, I have had the best success with the following: (I am now speaking of doing the work when regular babbitting mandrels are not at hand).

Wrap the arbor with little more than a full turn of medium writing paper, and wind it full length of the bearing with a heavy cord,—a medium size chalk line answering the purpose well,—then place it. Put in liners in the proper way for pouring both cap and base at the same time. Prepare as large a "funnel" as convenient, as the pouring should be done as quickly as possible, because filling quickly allows the metal to more completely fill to the limit and make a firm bedding against all parts of the casting; when if poured slowly, the metal is apt to chill and not only leave parts unfilled, but in a condition that will cause it to loosen in a short time.

Loosening of the babbitt lining in a newly poured bearing is caused, I think more often by this defect than any other. But regardless of how the pouring is done, don't molest the work in any way until perfectly cold. It is common practice to hoist the cap and remove the arbor as soon as cool enough to be handled. This is a mistake. The unequal expansion of the different metals, and of parts of the same metal on account of uneven temperatures, allow a certain warping and change of shape in the lining that leaves an imperfect bedding. The upper portion, especially, closes in and requires heavy scraping to allow perfect freedom. During this process of warping through cooling, the babbitt lining has a tendency to pull away from the casting along the edges. As it closes in, just to that extent does it have to be scraped away on the inside, and just that much of a start has been made toward loosening,—and in the latter case, just a little goes a long ways. All this is avoided by leaving the arbor bedded until cold.

Now all this applies to the older designs of boxes. By way of overcoming these troubles, the really up-to-date machines have much heavier arbors than formerly, and boxes that require much less attention, being provided with special oiling devices, and some of them having automatic adjustments. These are points to be looked after when purchasing machinery, and not be misled by the statement that "this is our latest model." It may be a high speed machine, and able to swallow a board at 250 ft. per, and yet take half of the time to keep it in condition to run the other half. And last but not least, don't buy a machine because it is cheaper than some other fellow's machine. If you are offered a certain machine at three hundred dollars less than some other make, that is supposed to do only the same amount of work, don't forget that there is a reason for the difference and that you will find it after the machine has been installed and started, and the discovery will not be a "pay streak," either. If you have the work to do, doing it with the latest, the best, and the highest priced machine will prove the true economy.

## 3 in.-4 in. COMMON LUMBER 10 in. and 12 in.

The Latest and Most Modern Method  
Price for Common Lumber

A Cost of 75 Cents per Thousand Feet Board Measure

In many sections of the country, East and West, in spite of the utmost care in sawing there accumulates a vast amount of common lumber, 3", 4" and even 6" wide, which at times is almost impossible to move without cutting the price several dollars per thousand. Most lumber manufacturers would be satisfied were it possible to obtain from their narrow width common lumber the actual cost and, in most instances, in order to move the accumulated stock quickly they are compelled to sacrifice.

By the Linderman method two 4" strips can be joined to make 8" shiplap at a cost which will not exceed 75c. per thousand feet, and a comparison of the figures between 8" shiplap and 4" common lumber at what it is sold for, adding to it the cost of joining it together by the Linderman method and the cost of milling it, leaves a net increase in price of from \$2.50 to \$4.00 per thousand. 10", 12" or even wider widths can be built up in the same manner and at the same cost per thousand, no matter whether the lumber being worked is spruce, hemlock, fir, cedar or pine.

Narrow lumber can also be joined together for rough sheathing, partition work, barn or subflooring and other purposes.

There are Eight Different Lengths of Linderman Machines  
Ten, Twelve, Fourteen and Sixteen Feet

# CANADIAN LINDERMAN COMPANY

## BER Converted into 8-in., SHIPLAP

For Obtaining a Greatly Increased  
on Lumber

Yields a Return of From \$4.00 to \$5.00 per Thousand

Shorts and odd lengths can be joined to narrow widths, making a composite board of any length desired up to 16'. This is accomplished by running a binding strip on the outside the full length desired and joining to it two or more pieces of miscellaneous lengths that will equal the length of the binding strip. To this can also be joined another series of short lengths so arranged that the butt end joints will not come opposite one another and to this then can be joined the second outside binding strip. Such a composite board will show tight joints not only where they are joined together on the edges but the butt ends of the boards will be tight, making a board as strong and stronger than the natural wood. Such a product, while it may not bring a price equal to a wide board of the same dimensions, will yet yield a profit of several dollars per thousand over the cost of manufacture. In this way the cuttings from the flooring machines or from the sawmill can be converted into a marketable product instead of as now being sold as kindling or sent to the burner.

Full information and particulars in detail will be gladly given and we will arrange to work samples of your own stock if you so desire.

Work Stock up to Three, Four, Six, Eight,  
Feet Long

## Why Band Saws Snake or Lead

There are a number of causes for this pair of very undesirable features in band-saw practice. The most aggravating cases, however, are usually brought about by two or more of these causes, and they generally occur with the beginner; he allows one thing to go wrong while his attentions are turned to another.

Tension wrongly put in, the plate being out of level, a back that is too tight for the front, faulty tooth-fitting, and some fault in the machine itself, are the most prominent of these factors that cause a band to run untrue and spoil otherwise good lumber—and not frequently loose a man his job. To take up the first in the line in which they are above enumerated:

A bandsaw may have so much tension—as tension is generally understood that it will not lie flat of its own weight on the leveling-block, and yet not be tensioned rightly; a saw may drop below the gage that the best of filers recommend as being of the correct circle for the particular width and thickness of blade one is using, and still not be tensioned rightly. To offer an exaggerated illustration, one may take a saw that is perfectly flat, with no tension whatever, and roll it so hard on a single line in the centre that it will buckle up on the bench as though it were loaded to death with tension from edge to edge. And here I may illustrate another point—and, as well, add a word of caution: If the saw is made to fit the gage instead of dropping below it, one may readily detect this one loose place in the middle and the corresponding tight places in either quarter; if the operator is in the habit of allowing his saw to drop below the gage, the tight places on either side of the centre are not so much in evidence. Therefore, I advise making the saw fit the gage; it will show up many tight spots below. If the gage is not of sufficient depth, get one that is. If you happen to be a beginner, read this paragraph again—then cut it out and paste it in your hat.

One of the most fruitful causes of leading—it is commonly called “bull-heading,” and it isn’t an unsuitable name by any means—lies in having too wide a tire on the front edge. (Here allow me to add that too wide a tire on the back is almost as bad in that it decreases the working width of the plate and keeps the saw from taking the feed it ought to take). To find out how wide your tires are, hold the saw upward with one hand, and with the other rock the straight edge over the inverted drop. Wherever there is a flat place, or a place that shows hollow under the straight edge, that place is tight. I regard this an infallible test.

Of course to keep narrow tires on a band—more especially, be it observed, the toothed-edge tire—means that the saw will pull out quicker, and therefore require more working in order to keep the tension in and the back sufficiently long to allow the front to catch the proper tautness when on the wheels. But right here is the secret of success—one of the secrets of success, at any rate; and if the filer hasn’t time on account of other work to keep his saws as they should be kept, it is surely not his fault.

A saw that is out of level can do any sort of devilment that one can imagine; the whole basic principle is put away by this. The outside of the blade, for reasons too obvious to need enumerating here, is the quickest to become lumpy, and is therefore the side which the filer should watch particularly; and it is also the side upon which the filer should finish when working the saw at the bench. Leveling the teeth, in my way of seeing, is one of the most careful and delicate operations in the upkeep of the steel ribbon. The teeth being subjected to so much friction by the sawdust and the sides of the cut—and perhaps they are worn a little by the clampscrew of the swage—become slightly thinner than the other parts of the saw; and if one does not make allowance for this in leveling, he may find a lead that will be hard to account for. Moreover, the teeth show up light under the straight edge more readily than the other parts of the plate, owing to the fact that there is always a throat to each tooth.

A back that is too tight is another prominent cause of badly sawn lumber, as even the inexperienced man can see if he will think about it for a minute. The heating of the toothed edge from friction is sufficient to cause the front to become too long for the back if the saw had a straight back to begin with—which is another way of saying that the crowned back is the thing to use.

Next comes faulty tooth-fitting. If the teeth are so blunt that they scrape instead of cutting, or if they are so thin that they chatter and are easily bent to one side, then the saw is apt to snake or lead. If the grinder does not grind squarely, or if the swage or shaper is not doing its work as it should be done, the same undesirable features

may be in evidence. A cardinal sin with the beginner lies in swaging out the points too wide, and afterward overworking the steel with the shaper in order to get the points down to the proper width; this takes the life from the steel, and causes the points to soon crumble. Many a good saw is sent back as worthless, and many a good emery wheel is relegated to the scrap heap, because the young filer didn’t know. If the steel is hard enough to hold tension well, it is too hard to admit of kneading.

The machine itself may cause its saws to run badly, no matter how well they have been fitted. By all means the rolls should be in line with the saw; and by all means care should be taken to see that the guide stands at the same place with regard to the blade when it is up and when it is down. When the wheels have become badly worn on the front, the case may be helped somewhat by adding more crown; but the proper thing to do is to have the wheels trued up. Too much crown may suit the bad condition of the wheels; but it causes the blade to flutter on the back, and vibration knocks out the guides and bears the unsavory reputation of having at divers times caused the saw to crack.

And never line up the wheels without lining up also the guide and the rolls; it won’t take long to do this latter, and it is a measure of precaution that may pay big dividends in satisfaction.—Hapsburg Liebe, in Berlin Quality.

## Ideas in the Manufacture of Flooring

The hardwood flooring manufacturer is one of those who deal with high-priced material all the time, and consequently is looking around constantly for some way to get out of having to charge such a big percentage up to waste as is usually the case. That problem has been responsible for the testing out of a number of plans which would enable material to be gotten out with a minimum loss.

One of the ideas which has been frequently suggested and occasionally tried, involves the use of a veneer saw. The obvious and principal advantage to be gained from this plan is reduction in the loss of material by cutting down the amount of kerf. From this standpoint the plan looks good, especially to the flooring man who has been figuring how much quartered-oak lumber he has been burning under his boilers in the form of dust.

The biggest objection resulting from the use of this plan depends upon the fact that the use of the veneer saw involves the cutting up of green flitches. Thick stock has to be bought, and this, of course, cannot be dried, so the material which is cut off—the veneers, it might be called—must be dried by the manufacturer. And there’s the rub.

The drying of extremely thin stock is bound to be accompanied by a certain amount of kinking. The irregularity of grain, which is not always deserving of the term “knot,” is nevertheless likely to cause the material to buckle and kink in the dry kiln. And when an irregularity of this kind is developed, it has to be eliminated in planing, the result being that the saving made in the reduction of saw kerf is offset by the loss of thickness due to straightening out of the stock after it is dried.

“The dry kiln is a robber,” said a hardwood flooring man not long ago. “If we could get away from that end of the business we would have a good chance to get rich. But as long as we have to dry our stuff and wrestle with the defects which are brought out in that way, we are going to lose thickness because of the surface we have to take off in finishing the stock, and we are going to lose profits accordingly.”

But this feature of manufacturing flooring with a veneer saw is not the only difficulty. The actual operation of sawing is a great obstacle. The construction of a veneer saw is suited to the production of thin stock; in fact, since it was intended for that work, and for no other, it is really imposing on the saw to attempt to cut up thick stock with it. When you begin sawing veneer or lumber over  $\frac{1}{4}$ -in. thick, you are getting into difficulties, and nobody knows this better than the veneer man who has tried it.

The superintendent of a big veneer mill in the middle west, who is also interested in the manufacture of hardwood flooring, pointed out recently that such experiments as that of manufacturing flooring with a veneer saw could not be successful, for the reason that the danger of bending and breaking the thicker stock, because of the flange of the saw, is too great to warrant the method being used.

“Occasionally we have to cut stock  $\frac{3}{8}$ -in. thick,” he said, “for special purposes. This is the hardest part of the work in our mill,

and it takes a lot of careful watching and mighty slow progress to get it out without ruining the stock. Consequently I can't see how stock can be cut as thick as 7/16-in. in safety."

This might suggest the advisability of the saw manufacturers bringing out a saw that could do the work desired. It would probably have to be a little thicker than the veneer saw, hence the loss in kerf would be greater. On the other hand, the flange need not be so pronounced, and thus the manufacturing obstacle referred to might be overcome. But it is doubtful, at that, whether the problem could be solved in a way that would make the use of the saw desirable from the standpoint of the flooring manufacturer.

Another objection that might be made to the use of a veneer saw for this purpose is that it would possibly be penny-wise and pound-foolish to go to the necessary trouble to get out flooring in this way as a means of saving material, when it is certain that the labor expense would be considerably greater. With the use of a veneer saw the flitch has to be brought back after each cut, and the production of the saw is limited decidedly by this fact. In resawing and ripping in the usual way, flooring is manufactured on machines which take a continuous feed, and the output is several hundred per cent. greater than would be possible under other conditions.

"Cutting flooring on a veneer saw," said a hardwood flooring man recently, "is a beautiful theory, and one I have thought of many a time, especially since oak seems to have struck a rise which is going to be a continuous process from now on. But from all I have been able to learn of it, it is not now, and is not likely to be in the future, a success as a practical operation."

This particular manufacturer has evolved a plan which is somewhat similar, in its general results, to that which has been outlined, but the problem is gone at in a different way. Realizing that the loss which is suffered in drying thin stock might be avoided by drying it thick, the manufacturer was then up against the question of getting results out of thick stock in the matter of figure. This was gotten at by buying 2 1/4-in. plain oak lumber. This was ripped to widths of about the same extent, the strips then being turned over and sawed 7/16-in. thick across the grain, getting practically a quartered-oak effect out of the plain oak lumber.

The chief advantage of this plan was that the lumber was thoroughly kiln-dried before being sawed, so that the flooring cut out of the stock did not need to be run through the kiln, consequently there was no necessity for sawing it thick enough to allow for any loss in the equalization process. By this method the manufacturer got flooring which was 7/16-in. thick and 2 1/4-in. wide. The plan appears to have good possibilities, but as a matter of fact it is not now being

many instances have found this worth using. The difficulty with the plan is the same as that experienced when any other material has to be dried thin, and that is that it kinks and has to be planed thinner than expected in order to eliminate the troublesome buckle. Consequently this material is not as satisfactory as it would be if it were possible to get it 7-16-in. dry. This dimension loses somewhat on account of the natural shrinkage in drying, but the main difficulty is, as indicated, that drying results in the material developing slight defects, which have to be cured by the planer.

The troubles of the hardwood flooring man being so nearly involved in the drying proposition, it looks as if that trade, more than any other, would be likely to take advantage of whatever merits recently developed systems of curing lumber by steam pressure, have. Several flooring plants which have used vulcanizers for the purpose of coloring their material are interested in the new curing process, though they have not attempted as yet to adapt them to their own specific needs. In their work with the vulcanizer, however, they have learned what the possibilities of high-pressure steam are, and know that with the aid of ammonia they can color their wood quickly and effectively, the fumed effect being secured more quickly and cheaply than could be done by actually "fuming."

Manufacturers of flooring who have learned by experience that thin stock subjected to heat as well as pressure will turn to charcoal very readily, have called attention to the fact that it is more or less of a dangerous experiment to attempt to take liberties with the steaming process; and in view of the low price of charcoal, compared with the cost of oak lumber, they are inclined to play a conservative hand. Nevertheless, as suggested, successful work done with steam at about 50-lbs. pressure in the vulcanizer, in which coloring only was attempted, suggests that equally good results might be achieved in drying material by the same general process. C. D. G. in, the Wood-Worker, Indianapolis.

Through and joint rates on shorter and more direct railroad lines for transportation of lumber between Mississippi points and eastern New England and Canadian points became effective on May 21st, according to an order of the Interstate Commerce Commission. These rates were recently held up by the Commission at the instance of the railroads pending investigation. The Commission found that the new rates were neither discriminatory nor unjust.

### Plans of an Interesting Small Mill

By T. Hall Davis

In a recent issue of The Woodworker a correspondent asked for a plan of small mill, with machinery located, etc. Herewith is submitted plan of a mill which I think will answer the requirements, together with a list of machines and their locations. With this outfit a very good beginning can be made and more machines added as the business justifies.

It will be noted that a motor is used to furnish the power. This can be installed where most convenient, preferably on one side of the mill, on a platform at least 8-ft. above the floor. If steam power is used instead of electricity, a fire-proof engine room should be built outside the mill, opposite the main line shaft.

By installing a clutch, centrally located, on the main line shaft, a great saving of power can be effected. It will be seldom that all

machines are in operation at the same time, and when the clutch is thrown out a saving of about 50 per cent. in horse power will be effected.

It may be found that the placing of machines is not suitable for the work contemplated, in which case they will have to be changed to suit local conditions. I advise that this mill be built strictly fire-proof, as the saving in insurance will soon balance the first cost of construction.

used by the concern which originated it, hence it is probably not altogether satisfactory.

Another proof of the loss through drying is given in the attempts which have been made to make use of the edgings produced by band mills which are turning out veneer flitches. In squaring up the flitches a great deal of material is produced which is suitable for flooring, especially when it is cut thin to avoid the waste incidental to making 1-in. lumber out of it. Flooring manufacturers in a good

# WANTED & FOR SALE DEPARTMENT

## PUBLISHER'S NOTICE

Advertisements other than "Employment Wanted" or "Employees Wanted" will be inserted in this department at the rate of 15 cents per agate line (\$2.10 per inch) each insertion, payable in advance. Space measured from rule to rule. When four or more consecutive insertions of the same advertisement are ordered a discount of 25 per cent. will be allowed.

Advertisements of "Wanted Employment" will be inserted at the rate of one cent a word, net. Cash must accompany order. If Canada Lumberman box number is used, enclose ten cents extra for postage in forwarding replies. Minimum charge 25 cents.

Advertisements of "Wanted Employees" will be inserted at the rate of two cents a word net. Cash must accompany the order. Minimum charge 50 cents.

Advertisement must be received not later than the 10th and 26th of each month to insure insertion in the subsequent issue.

## Wanted—Lumber

### Basswood Wanted

No. 2 Common and Mill Cull. Winter cut preferred. Apply Firstbrook Box Co., Ltd., Toronto, Ont. 7-11

### Wanted

A stock of 1-in. and 2-in. Hemlock. M. Brennen & Sons, Hamilton, Ont. 8-11

### Wanted

Cedar Posts, 4½-in. and up at top, 8 ft. long. M. Brennen & Sons, Hamilton, Ont. 8-11

### Spruce Wanted

A stock of 1-in. and 2-in. cull and common. Apply M. Brennen & Sons, Hamilton, Ont. 8-11

### Wanted to Buy

Stock of Pine, Spruce and Hemlock logs, G. T. R. points preferred. Canada Pine Lumber Company, Hamilton, Ont. 8-11

### Wanted to Buy

1-in. and 2-in. Hardwood, common and better and cull. Apply M. Brennen & Sons, Hamilton, Ont. 8-11

### Basswood Wanted

No. 2 common and mill cull, winter cut preferred. Apply M. Brennen & Sons, Hamilton, Ont. 8-11

### Wanted

Two million feet Maple, also quantity of Birch. Shipments during Fall and coming Winter. Address Seaman, Kent Co., Ltd., Meaford, Ont. 11-22

### Wanted to Buy

Pine, spruce, hemlock, railway ties, common and better, and cull basswood and birch. M. Brennen & Sons Mfg. Co., Limited, Hamilton, Ont. 8-13

### Wanted

Twenty car loads white winter cut Basswood, No. 1 common and better, grade plump, inch thick when dry. For further particulars apply to Box 730, Canada Lumberman and Woodworker, Toronto, Ont. 6-11

### Tenders Wanted

We are large buyers of Norway and Tamarack lumber and would like to get into touch with best mills which could supply us according to the following specifications:

We want 10,000,000 feet of above lumber, 3-in. thick, 6 to 8 inches wide (preferably 8-in. wide) any length over 6 ft. The lumber must be full size, saw butted, all square edge and free from the following defects:—Unsound loose and hollow rod worm-holes, knot-holes through and round shakes, shakes on surface that show. Address Canada Creosoting Co., C. P. R. Building, Toronto. 11

## LUMBER

When you have any kind of lumber and lath to offer or logs for sale, send us a description and prices. The Turner Lumber Company, Limited, 25 Toronto Street, Toronto. 8-11

### Birch Wanted

Parties in Quebec or Eastern Ontario who could furnish ex stock or saw a carload or more of 10 in. x 1 in. No. 1 Common or Better. Apply at once to Box 806, Canada Lumberman, Toronto, Ont. 11

### Do You Want to Buy or Sell?

If you wish to purchase or dispose of a particular stock of lumber or logs, a mill property or timber limit, or some second-hand machinery, the CANADA LUMBERMAN AND WOODWORKER will bring quick returns. Use our "Wanted and For Sale Department."

### Birch Wanted

Want 200 M. ft. 10/4 1st and 2nds and No. 1 Common Birch. Give average widths and lengths and percentage of 14 and 16 ft. lengths. Want price delivered Philadelphia, Pa. and New York City.

Want 200 M. ft. 6/4 No. 1 Common Birch delivered Boston, Mass.

Want 5 cars 4½ in. and 5 in. 1sts and 2nds. Birch delivered New York City and Philadelphia, Pa. Reply Box 526 Canada Lumberman, Toronto, Ont. 14 T.F.

### Hardwood Pickets Wanted

Beech, Birch and Hard Maple.

1 x 1 x 42.

1 x 1 x 48.

1 x 1½ x 42.

1 x 1½ x 48.

1 x 1¾ x 42.

1 x 1¾ x 48.

Require Thickness, 1/16-in. Plump.

Quality—Free from all defects.

Can take delivery of green or dry stock.

Apply to The Canada Wood Specialty Co., Ltd., Orillia, for full particulars, price, etc. 24-1-TF

## For Sale—Lumber

### For Sale

Peeled cedar post 4½-in. to 7-in. top, 8 ft. long. Best of quality and made from green cedar. Chas. Pedwell, Lions Head, Ont. 9-t.f.

### For Sale

**New Brunswick White Pine 1912 Cut**

52,000 ft. 1½ x 7 and up 10/16 ft. 1sts.

93,000 ft. 1½ x 7 and up 10/16 ft. 2nds.

236,000 ft. 1½ x 7 and up 10/16 ft. 3rds.

31,000 ft. 2 x 7 and up 10/16 ft. 1sts.

108,000 ft. 2 x 7 and up 10/16 ft. 2nds.

57,000 ft. 2 x 6 x 10/16 ft. 1sts, 2nds, & 3rds.

225,000 ft. 2 x 7 and up 10/16 ft. 3rds.

28,000 ft. 3 x 7 and up 10/16 ft. 1sts & 2nds.

58,000 ft. 3 x 7 and up 10/16 ft. 2nds & 3rds.

225,000 ft. 3 x 7 and up 10/16 ft. 3rds.

Apply to

H. BOURGOUIN,  
Dominion Express Bldg.,  
Montreal, Que.

10-t.f.

### Cedar For Sale

About one and a half million feet Cedar, Culvert Timber, 8 x 8 to 12 x 12. For particulars apply to Mason, Gordon & Company, 80 St. Francois Xavier Street, Montreal, Que. 10-12

### Lumber For Sale

30,000 feet of 4-in. dry oak plank, No. 1 common and better. Has been on stick for one year. The Crown Lumber Co., Ltd., Woodstock, Ont. 10-11

## For Sale

1,000 acres good Hardwood Bush, estimated to cut six million feet. Distance five miles to siding and mill that could saw it. Large amount of Maple, Oak, Birch, Elm, Ash, also Cedar Ties, etc. Five years to take off. Must be sold at once. Low price and easy terms. Apply Box 807, Canada Lumberman, Toronto, Ont. 11-12

### Lumber For Sale

400,000 ft. 3 x 7 and up Merchantable White Pine.  
200,000 ft. 2 in. Merchantable White Pine.  
200,000 ft. 1½ in. Basswood, Log Run.  
500,000 ft. Hard Maple, 1 in. to 4 in.

Apply to

GEO. C. GOODFELLOW,  
C. Montreal, Que.

## For Sale—Machinery

### For Sale

One "Hamilton" Circular Resaw with two 44-in. inserted tooth saws. New; never used. Address Papineauville Lumber Co., Ltd., Papineauville, Que. 7-11

### For Sale

One second-hand fifty-eight inch Leffel Water Wheel, made by Paxton and Tate; in good repair. Apply to I. C. Prescott, Albert, Albert County, New Brunswick. 8-11

### For Sale

15 x 14 Robb Armstrong Automatic Engine, good as new. 25 h.p. d.c. dynamo or motor, both one-quarter price. 52 ft., good 12-in. double leather belt. Bargain, E. A. McCann, Dorchester, Ont. 11

### For Sale

One 50 h.p. Automatic Engine;  
One 25 h.p. Sliding Valve;  
One 70 h.p. Boiler.  
One Double and one single Shavings Exhaust Fan.

One Dowel Machine.  
For particulars write St. Marys Wood Specialty Company, St. Marys, Ont. 11

## Wanted—Employment

Advertisements under this heading one cent a word per insertion. Box No. 10 cents extra. Minimum charge 25 cents.

Position wanted as band and circular saw filer with practical machine experience in saw mills, box factory, furniture factory and railway shops. Prefer a big, steady job where a man of responsibility is required. Married, age 32. References O.K. Address Box 799, Canada Lumberman, Toronto, Ont. 11

## Wanted—Employees

Advertisements under this heading two cents a word per insertion. Minimum charge 50 cents

WANTED—One up-to-date Band Filer, also one Stock Gang Filer, also one Gang Sawyer. Good positions for the right men and can use them at once. Box 790, Canada Lumberman, Toronto, Ont. 10-11

WANTED—Lumber Scaler and Yard Foreman. Experienced man, conversant with Nat. H. W. rules and with the scaling conditions now in force in Canada. Address Box 805, Canada Lumberman, Toronto, Ont. 11

EMPLOYEE WANTED—Wanted a competent yard foreman and lumber scaler. Must have a thorough knowledge of all the various scaling rules of the Canadian Lumber Manufacturers as well as a fair knowledge of the grading rules of the Nat. H. W. & the Yellow Pine Manufacturers' Association of the United States.

Sobriety, honesty and ability will be well paid for. Address Box 804, Canada Lumberman, Toronto, Ont. 11

## Business Chances

WANTED—Good man with Portable Mill to saw out 1,000,000 feet of logs. Apply Box 791, Canada Lumberman, Toronto, Ont. 10-11

### For Sale

Lumber mill on Three-mile Lake in Muskoka. Cost \$2,500, will sell for \$1,300. Apply to Thos. Going, 405 Charlton Ave. W., Hamilton, Ont. 11-14

### For Sale

Timber limit on Georgian Bay, conveniently located 75 miles out of Soo. Well timbered with Hemlock, Pine and Hardwood. Can be logged cheap. Apply Box 781, Canada Lumberman, Toronto, Ont. 9-12

### For Sale

On easy terms, sawmill, new; just installed 50 h.p. Water Power, with electric plant. Good location for pulp mill. Good quantity of pulpwood close to C. N. R. and station; on river. Two million feet timber and 600 acres of good land. Townsite laid out. Sawmill and power or land sold separately if desired. For further information write J. H. Latremouille, Mount Olie Power Co., Box 48, Kamloops, B.C. 8-13

## Trustees' Sale of Valuable Timber Limits

The undersigned are authorized to call for tenders for the following timber limits situate in Block A, Upper Ottawa, Province of Quebec. These will be sold en bloc in two parcels.

Parcel Number 1, (Season 1913 and 1914). Limit 611 19 sq. miles River Ottawa, Grand Lake.

Limit 676, 25 sq. miles, S½ 16/4 Range, Block A.

Limit 677, 17½ sq. miles, 14/3 Range, Block A.

Limit 678, 12½ sq. miles, S½ of N½ 16/4 Range Block A.

Limit 679, 12 sq. miles, 16/3 Range Block A.

Limit 680, 15½ sq. miles, 15/3 Range Block A.

Limit 681, 25 sq. miles, S½ of 17/5 Range Block A.

Limit 682, 25 sq. miles, N½ of 17/5 Range Block A.

Limit 696, 25 sq. miles, N½ of 17/4 Range Block A.

Limit 683, 6¼ sq. miles, S.E. corner of ½ S. No. 15/4.

Total, 185 square miles.

Parcel Number 2. Limits 633 and 634, 50 sq. miles, Lot 8, Range 4, Block A.

The limits described in both Parcels are all surveyed and easy of access. They comprise some of the best pine and pulp-wood areas in the province.

Tenders in writing for the purchase en bloc of each parcel separately will be received by the undersigned Trustees at their office, Victoria Chambers, Ottawa, up to 12 o'clock noon of Monday, the 21st day of July next.

An accepted cheque for 10 per cent. of the price offered should accompany each tender. If tender accepted the balance of the purchase price shall be paid in equal installments at one, three and six months thereafter with interest at the rate of 5 per cent per annum.

For further particulars apply to the Royal Trust Company (Ottawa Branch), or to Code & Burritt, solicitors, Carleton Chambers, Ottawa.

Dated this 16th day of May, A.D. 1913.  
The Royal Trust Company,  
Trustees for Sale. 11-14

**For Sale**

Saw mill for sale in first class shape, capacity 15 to 20 M. ft. per day. Plenty of first class available timber. A good money-maker, and a good location. Geo. A. Oldreive, Wallacetown, Ont. 11

**Timber Limits For Sale**

Can be quickly and profitably disposed of by advertising them on this page. This is where buyers of timber property look for opportunities to invest. If your "ad" is here the investor will see it. Canada Lumberman, Toronto, Ont. tf

**For Sale**

Rare bargain. Band mill located in best lumber and log center on Puget Sound. Rail and cargo shipping facilities. Excellent log pond. Ten and a half acres of land. Price one-fourth of appraised valuation. Must sell quick. Box 765, Canada Lumberman, Toronto, Ont. 8-t.f.

**For Sale**

On reasonable terms a Portable Saw Mill. Waterous Co. make, all complete, in first class condition. Just finished winter sawing. Good location, large quantity of good hemlock and birch timber close to mill. For particulars apply P. O. Box 426, Parry Sound, Ont. 9-12

**Cash for Your Business**

factory or real estate. I bring buyers and sellers together. No matter where located if you want to buy or sell or exchange any kind of business or property anywhere address Frank P. Cleveland, 1479 Adams Express Building, Chicago, Illinois. Established 1881. 9-t.f.

**Rebuilt Band Resaws**

Merishon, New England Ideal Resaw, 46-in. Merishon Horizontal Sawmill Resaw, 66-in. Connell & Dengler Resaw, 60-in. Berlin Band Resaw, 44-in. Merishon Standard Perfected Resaw, 54-in. American Band Ripsaw, 42-in. 5-11

WM. B. MERSHON & CO.,  
Saginaw, Michigan.

**Sawmill For Sale**

On Georgian Bay, near Little Current, close to north shore; practically new, well built and equipped with shingle machinery; over one mile of water front, loading dock and sheltered booming ground; plenty of timber available locally or can be rafted in from north shore or Georgian Bay. Good opening for retail store in connection. This is a splendid chance for millman with small capital; price right. Good reason for selling. Great Lakes Lumber Co., Ltd., Owen Sound, Ont. 5-T.F.

**For Sale**

On Georgian Bay, saw mill in first class condition, with everything complete. Engine 75 h.p. Boiler 110 h.p. Sawing capacity 20,000 feet to 30,000 feet per day. Also including booms and chains. Good stable and office and everything complete. Shipping facilities by both rail and water. Size of mill site 40 rods by 5 acre water lot, with 4 acres of land. Owner retiring from business reason for selling. Address all enquiries to 201 Campbell Avenue, Toronto, Ont. 9-14

**Miscellaneous****MAIL CONTRACT**

Sealed tenders addressed to the Postmaster General, will be received at Ottawa until noon, on Friday, the 20th of June, 1913, for the conveyance of His Majesty's Mails on a proposed Contract for four years, six times per week over Rural Mail Route from Stouffville (via Altona and Glasgow), Ont. from the Postmaster General's pleasure.

Printed notices containing further information as to conditions of proposed Contract may be seen and blank forms of Tender may be obtained at the Post Office of Stouffville, Altona, Glasgow, Siloam, Goodwood, and at the Office of the Post Office Inspector at Toronto.

G. C. ANDERSON,  
Superintendent.

Post Office Department,  
Mail Service Branch,  
Ottawa, May 8th, 1913 10-12

**For Sale**

Three Driving Outfits complete, including tents, blankets, cookery, pike poles, peavies, punts, anchors, and wenches with lines, also several hundred boom chains 5/8 x 10 with clevis attachment. Box 797, Canada Lumberman, Toronto, Ont. 11

**Do You Need Help?**

If so let us know. We can furnish any amount of skilled and unskilled labor at shortest notice.

O'Donnell's Employment Bureau,  
116 Wellington St. West,

Phone Adelaide 3919.

**For Sale by Tender**

Tenders will be received by the undersigned up to twelve o'clock noon on Wednesday, the 2nd day of July, 1913, for the purchase of the following assets of the Northern Islands Pulpwood Company, Limited, Port Arthur, Ontario.

Parcel 1—Real Estate, being Lots 1, 2, 3, 4 and 5 of Sub-division of Park Lot 2 North John Street, City of Port Arthur, Ontario, 133 ft. by 131 ft., more or less, on Johnson Ave., valued at ... \$12,000.00

Parcel 2—Pulpwood lands in Lyon Township, District of Thunder Bay:

Lot A—19 locations, Acres  
having an area of approximately ... 2901.92

Lot B—12 locations, having an area of approximately ... 1709.50

Lot C—5 locations, having an area of approximately ... 988.50

Lot D—57 locations, having an area of approximately ... 9310.02

14909.94

Estimated to contain 125,000 cords of wood. Buildings and erections thereon valued at ... \$ 7,050.00

River and Road Expenditures ... \$14,056.00

Lot E—Equities and rights of the Company in certain licenses, permitting, under terms, cutting of pulpwood on—

1—Lands known as Nipigon Mining Lands, in Nipigon Township, District of Thunder Bay, as per list, having an approximate area of 63,863 acres.

2—Lands known as the Whalen Lands, in Lyon Township, District of Thunder Bay, as per list, having an approximate area of 1,132½ acres.

3—Lands known as the Squaw Creek Lands, in Lyon Township, District of Thunder Bay, as per list, having an approximate area of 2,084½ acres.

Lot F—Rights to cut on lands known as Magnet Point Lands in Black Bay of Lake Superior, to be located under Veteran Scrip, as per list, having an area approximately of 5,120 acres.

Lot G—Equity in Agreement to purchase Black Sturgeon lands, having an area of 8,000 acres, against which there is a debt of \$52,000.

Sawmill, Lot B, 94 x 20, valued at ... \$ 5,184.55

Machinery & Equipment, valued at ... \$22,747.81

Camp Equipment, as per Inventory ... \$10,250.00

Horses ... \$ 5,630.00

Parcel 3—Camp Supplies, as per inventory ... \$ 5,894.00

Parcel 4—Pulpwood and Piling, as per Inventory ... 2,468.00

Parcel 5—Launches, Motor Boats, Boom Stocks and Chains as per Inventory ... 11,082.35

Tug "Superior" ... 18,419.33

Tug "Viper" ... 3,903.34

Tenders will also be received for the parcels separately, and in case the whole property can be sold more satisfactorily in parcels, such tenders may be accepted.

Inventories may be seen on application to the Assignee.

Terms of sale:—One-fourth cash, ten per cent. at time of sale, and balance in two, four and six months thereafter, with interest at six per cent, satisfactorily secured. Marked cheque payable to the order of G. T. Clarkson, Assignee, for ten per cent. of amount of tender must accompany each tender, which cheque will be returned if the tender be not accepted.

The highest or any tender not necessarily accepted.

As to Parcel 1, the purchaser shall search the title at his own expense and the vendors shall not be required to furnish any abstracts,

deeds, or other evidence of title, except those in his possession. The purchaser shall have ten days in which to make objections or requisitions which if the vendor shall from any cause be unable or unwilling to answer, the vendors may then rescind the sale, in which case the purchaser shall be entitled only to a return of the deposit money, without interest, costs or compensation.

As to Parcel 2, Lots are sold without guarantee as to title, quantity of lands, or estimates of timber thereon and purchaser must accept title of the Assignee as it stands.

As to Parcel 4 and 5, these parcels are offered subject to prior sale.

For any of the Parcels of 3, 4 or 5, tenders must be for the whole amount of the parcel. Should there be any shortage, the same will be adjusted on the basis of shorts and longs, having regard to inventory prices, as compared with the combined value of the items in each parcel, as stated on this advertisement.

Tenders will be opened at the office of the Assignee, 33 Scott street, Toronto, at ten o'clock in the forenoon of Thursday, the 3rd day of July, 1913, when all tenderers are requested to be present.

Further particulars may be obtained on application to the Assignee.

Dated at Toronto this 19th day of May, 1913.  
G. T. CLARKSON,  
33 Scott Street, Toronto.  
Assignee.

# Review of Current Trade Conditions

## Ontario

Considerable improvement has been noticed during the past couple of weeks in the lumber trade generally. Wholesalers are busy delivering previous orders and although retailers are not ordering very much for immediate delivery, a number of inquiries are coming through the summer trade. The last week however, has showed a considerable increase in orders received by wholesalers. The better situation in the money market has also caused a more optimistic feeling generally than has been the case for the last couple of months and both mill men and wholesalers are looking forward to a profitable year. The demand for mill culls and box lumber is still as heavy as ever, but the better grades in pine do not seem to be moving very rapidly. The hardwood market is very strong and good sales are reported, basswood and ash being in particular demand.

Toronto retailers have been exceptionally busy during the past fortnight. Previous to that the market had rather a dragging feeling. For the last two weeks however, trade has been opening up well and retailers report that all their rigs are as busy as they could possibly be hauling out stocks. There is still some hesitation on the part of builders as a result of the doubtful situation in connection with the carpenters, who are hanging back and not say whether they intend to strike or not. Builders are therefore a little nervous about ordering stocks of lumber. The improvement during the past two weeks however, has taken place in the face of this handicap.

Indications seem to show that the cut in the Ottawa Valley district will be considerably larger than last year in spite of the bad weather conditions during the winter. The mills in this district are working full time and there is plenty of water so that there is no danger of the drives sticking. The demand for low grade lumber and the high prices asked for it has somewhat curtailed the building of cheap houses.

Ontario hardwood wholesalers report that the past fortnight has been much better for trade than the previous four or five weeks. Orders have been about twice as numerous and enquiries continue on a good scale. Stocks of dry hardwoods on the market are now very low. Two or three large blocks in Quebec were taken off the market a week ago. Wholesalers report a confident feeling that business will be active throughout the season.

## Eastern Canada

All the large mills in Nova Scotia got their drives down by the middle of May and commenced sawing about that time. Very few of the operators report having had any difficulties with their drives and it is expected that there will be very few logs held up in the streams this year. A number of the large Nova Scotia mills are not operating, such for instance as the mills at Tusket, Musquodoboit Harbor, Sherbrooke and Lawrencetown. These mills all belong to the Maritime Lumber Company which suspended operations last season. Other mills have nearly all a full cut of logs. Less lumber will be manufactured this year for the South American market. The cut for the English, United States and West India markets will be about the same as last season. The falling off in South American exports is the result of a very dull trade with that country during the past year. It is expected however, that the South American trade will improve during the present season and be in good shape next spring. The United States market continues very firm. Nova Scotia random cargoes of fair length are selling at \$24 to \$25 and schedules are bringing \$26 to \$27 in New York. Spruce covering boards are firmer than they were a year ago and are likely to continue so. Spruce lath are firm at \$4.75 to \$5. Planed hemlock random is selling at \$22 to \$23 and clipped boards are bringing from \$23 to \$24. Halifax exports to the United Kingdom have been very heavy this season. The local demand in Nova Scotia is generally good. In many localities it was never better than it is at the present time. The Halifax trade is finding difficulty in filling orders for the local yards. Local prices will probably be from 10 to 20 per cent. higher this season than a year ago.

Recent advices from St. John, N.B., state that the English market has sagged off since the early part of the year and has shown a drop of 10s. per standard since January and February. Ocean freights vary from 52s. 6d. to 55s. A few charters have been made at 50s. The United States market continues strong, but vessels are scarce for transporting lumber thither. Already \$4 per M. has been paid to Boston, and New York freights to-day are about \$4.50.

Eastern spruce at Boston is not in quite so strong a position as it was a few weeks ago. The prices are pretty firmly held. A slight

concession is reported occasionally. Some items are said to be accumulating at the mills. In Boston the demand for dimension spruce is a little weaker, prices being from \$26 to \$26.50. Boards are still strong although not so high as a short time ago. There is a fair demand at New York.

A large sale of eastern hemlock clipped boards for delivery during May, June and July is reported at Boston at \$23.50, which is recognized by retailers as an unusually low price. It is thought however, to indicate a turn in the tide and only necessary purchases are now being made. Northern boards, 12, 14 and 16 feet are offered freely at \$24. At New York the hemlock market continues strong and supplies at mill points are reported low. Retail yard stocks are ill-assorted.

White cedar shingles at Boston are steady although the demand is not very brisk. A fair business is being done in red cedars, but prices are rather unsettled. The lath situation shows no change. For  $\frac{5}{8}$  inch, \$4.50 is the regular price.

## United States

The general opinion in regard to the business situation in the United States at present is uncertain. One may find all kinds of opinions from extreme pessimism to cheerful optimism, the particular view depending in a good many cases upon the political opinions of the individual. In spite of this situation it seems reasonable to report that the general business of the country is in a satisfactory condition in spite of the tightness of the money market. The lumber trade has not experienced much difficulty in obtaining loans and discounting its paper. Collections are rather slow in some localities, but this is customary at this time of year. The general rule however, is that collections are fairly good. Conservatism is probably the most noticeable feature of trade conditions to-day. Manufacturing continues on a steady basis and the volume of business is large. Building supplies of all kinds are moving as extensively as they were a year ago. Apparently, the demand is largely for current consumption, speculative buying being practically absent.

The demand for northern pine is strong in all sections from the head of the lakes and the upper Mississippi to Buffalo. There has not been any over-production and manufacturers are in a good position to profit from the good demand. Much of the new cut of white and Norway pine is already contracted for. Prices are very steady. The demand in the east is not quite so active. Some improvement is reported in the demand for yellow pine. Enquiries are very numerous and larger than they have been of late. Stocks of some size and grades are considerably broken and their prices are firm. The market as a whole seems to be in a good condition. Hemlock continues very active, with the trade apparently ready to take anything that is offered at reasonably advanced prices. Stocks of hemlock in shipping conditions are quite light. Dry 1 x 6 strips and No. 1 common are practically out of the market. Stocks of 1 inch and 2 inch are also very scarce. Prices are from \$1 to \$1.50 higher than a year ago and the demand is quite 50 per cent. greater. The base price at Pittsburgh is \$23.50 and stock is coming forward at that point more promptly than a short time ago. In the east, retail yard stocks are ill-assorted and prices are firm.

A good volume of trade continues in the hardwood business although there is not the excessive run that there was earlier in the year. All dry stocks are quickly taken up. Northern stocks are almost exhausted. Shipments are already being made of newly cut basswood and birch in Wisconsin. There is a strong demand for 2-inch hard maple in all grades and stocks are scarce. Soft elm is a little more plentiful. Rock elm is not in as good demand as it was a month ago. A shortage of maple is reported from the Saginaw Valley.

## Great Britain

Reports from London are to the effect that the timber business has shown a slight improvement of late. The stock in docks is slightly greater than a year ago, yet it is frequently a matter of difficulty to satisfy demands for certain qualities and sizes. This is particularly noticeable in floorings and matchings. The freight market at London is not so favorable for importers as was expected, and everywhere business is quiet. Deliveries at the London docks for the week ending May 3rd amounted to 5,385 standards, as compared with 3,534 standards during the corresponding week of last year. At Messrs. Foy, Morgan & Company's recent auction sale a lot of 2 x 7 inch 6 to 8 foot dry third Quebec spruce brought £10 per standard

A. F. HOLDEN, Pres.   F. H. GOFF, Vice-Pres.   E. C. BARRE, Gen. Mgr.   W. A. SAURWEIN, Ass't. Mgr.

hundred. 2 x 6 inch was sold at £9 and 2 x 8 inch and 2 x 9 inch at £9 15s. These were the only transactions in Canadian stocks reported at the sale.

The soft wood trade at Liverpool is steadily improving, consumers apparently being satisfied that they will not better themselves by holding off. The spruce deal c.i.f. market continues fairly active, with values well maintained. Freights also are firm and are still the ruling factor in values of spruce. Apparently therefore, there is no reasonable ground for expecting prices to decline in the near future. Tonnage is not offered too freely and is quickly engaged at current rates. The spruce spot market is rather dull, as consumers are still

holding off from making large purchases. The demand is fairly steady and shows indications of some improvement. There is a good demand for 3 x 9 inch deals, and stocks of this size are rather broken. Stocks of spruce at Liverpool are mainly composed of 3 x 7 inch deals and oddments in scantling. Imported boards in stocks are practically composed of 1 x 4 inch. The freight market from New Brunswick and Nova Scotia ports continues unchanged. Freights for Canadian pine deals have been engaged from Montreal to Liverpool for the whole of the present season at 2s. 6d. to 5s. per standard in advance of the price paid last year. Birch is steady at Liverpool, but business is light.

## Market Correspondence

**SPECIAL REPORTS  
ON CONDITIONS AT  
HOME AND ABROAD**

### New Brunswick Market Report—Mills Running Full

St. John, N.B., May 20th (Special to the Canada Lumberman):—Practically no change has taken place in the lumber industry at this port during the past month. All the mills are running to full capacity, but very little of the sawn material is being shipped. The reason for this is that tonnage, as far as coastwise shipments are concerned, is very scarce, practically all of the vessels having gone to the southern shores of Nova Scotia, and to the north shore of New Brunswick, where much of the stock manufactured during the winter by portable mills, and shipped to the coast, besides a certain quantity held over by the larger mills, has been awaiting shipment. The shippers there are paying from 50c to \$1 per M. more than the shippers here feel that they are able to afford. The rates on the Nova Scotia coast to New York are from \$4.50 to \$5.50 per M according to the location of the shipping point. On the north shore of New Brunswick, as high as \$6.00 per M is being paid for long lumber freight to New York. The highest paid from the port of St. John to New York this season has been \$4.00 per M. Messrs. Stetson Cutler & Company are using barges chartered from the Pejepscot Lumber Company, to freight their lumber and laths, to New York, two of these barges are now loading, one taking about four million of laths. The other will carry away about 1,300,000 feet of long lumber. These barges are towed to New York by steamers. This of course is not a desirable way to ship, as the quantities taken are rather large and as a rule affect the price on the New York end, where some one buyer, if he takes the whole quantity, feels that when buying so large a lot, he is entitled to some concessions. Otherwise the vessel will have to shift a number of times to dispose of the cargo. This increases the cost of transport to the seller each time, but shippers are forced to do this to keep their mills in operation and to relieve others from whom they purchase, as much of the sawn stock for the American market is sold here on the wharves to Messrs. Stetson Cutler & Company.

Stocks of random 2, 3 and 4-inch sawn from American logs would be worth from \$18 to \$19 per M on wharves here, this to contain about 50 per cent. 8-inch and up, with a good line of 2 x 10 inch; average length about 18 feet.

Very few English deals are being shipped, as the shippers are said to be holding off expecting a further drop in ocean freights. Charters have been made for Bay of Fundy ports at about 50 shillings, but as yet no steamers are loading here. Small parcels of deals on order are being shipped to London, by liners. There has been no sailing of Manchester liners from St. John during the month of May, but it is said that one sailing will take place in early June via Philadelphia. The price of deal remains very firm and \$16.50 can easily be had for the usual specification of spruce. In fact it is said that one or two mills which have not contracted their season's cut expect to get \$17 on the wharves here.

Laths are also firm, any laths being sold here going at about \$3.35 to \$3.50 on sellers wharves.

Hemlock and spruce boards are very scarce and are bringing the highest prices ever realized, for hemlock boards dressed one side \$16 is being asked, and persons who want it are having a hard time to find a supply. Merchantable spruce boards are selling for \$15 rough, 4-inch and up wide.

Stocks of refuse lumber are being taken up as fast as the mills are cutting it, at \$11 for anything in two, three and four-inch, and \$12 for refuse boards, these are the highest prices ever realized for refuse stocks.

At the present writing, it looks very much as if at least fifty per cent. of the cut of lumber on the St. John will not reach the booms, the drive for St. John was on the main St. John River with the rear at Priestly Brook, about 5 miles below Seven Islands on May 15th, with the water practically gone and no rain has fallen on the head waters of St. John for about four weeks. The cold weather has con-

tinued right up to date. The water in the river at the head waters was very high, but has fallen practically as fast as it rose, nearly all the operators were forced to leave some logs in the brooks. On the Tobique River, the rear of the drive was at the Forks of Tobique about May 10th, but it yet has a long way to come to reach the booms. Therefore unless rain comes at once, it is felt that the chance for the logs to reach safe water will be very small, and the mills will be forced to close down much earlier than usual. The conditions in northern and eastern Maine are even worse than on the St. John, and the drives in many places have been abandoned.

The strike which caused the tie-up of the wood working factories in this city has been satisfactorily adjusted, and the plants are now in full operation.

### Rain Starts the Stranded Drives

Fredericton, N.B., May 23rd:—A twenty-four hours downpour of rain commenced yesterday morning and brought relief to many logging operators and lumber manufacturers throughout New Brunswick. The heavy rain raised the water in the Upper St. John River so much that it is expected that most of the stranded drives will be brought out. Several large crews have been sent back to the drives. The rain was general all over the province and eastern Maine. On the Miramichi, good progress is reported in starting some of the drives which have stranded. The Edward Partington Company have not yet sent any of their crews back to their drives on the Nashwaak.

### New Brunswick Driving Results

Fredericton, May 20th:—Recent advices from New Brunswick stated that the drives on the Pokiok would practically all come out safely with the exception of about 1,200 pieces belonging to the York and Sunbury Milling Company's cut, which at that time had been stranded, but for which there was a fair hope in case heavy rains should occur. Reports from Doaktown were to the effect that the drives were all coming out. The drive of the Miramichi Lumber Company on the north branch of the Taxis River was reported to have been hung up and fears were entertained that the drive on the south branch was meeting a similar fate. The Taxis drive is stated to total between six and eight million feet. Latest reports were that the drives on the south-west Miramichi had come out safely. About ten million feet belonging to the Miramichi Lumber Company on the Dunganvin was reported to have come out safely.

From the head waters of the St. John River it was reported that driving conditions were good and nearly all the drives would be brought out.

Randolph and Baker's drive at Green River amounts to about four million feet. About two and one half million feet of bank logs were recently reported to have already reached Springhill, most of which had gone to Donald Fraser & Sons, to be manufactured at the Victoria mill.

According to recent advices a new high record price for round spruce logs was established by the sale of sixty thousand feet by Moses Parent at \$16.50 per thousand for the merchantable over 9 inches and \$12.50 for battens.

The manager of the Pejepscot Lumber Company reports that although rain was badly needed he felt confident that his company's drives would all come out by the time they were needed.

The mill at Salmon River has been operating since April 15th, rossing pulpwood. They started sawing long lumber on May 12th having five million feet of logs in the booms at that time. Many of the logs received by the company on Salmon River and Martin Head Mills are of great size, comparing favorably with the best on the St. John River.

# DRY SPRUCE BOARDS

**W**E wish to inform our customers and friends that we have on hand in our Sayabec yard about 22 million feet of our 1912 late summer and autumn sawing. Is now dry and ready for prompt shipment.

¶ We have our usual full assortment of widths, thicknesses and grades and are now prepared to accept orders for May, June and July shipments.

¶ Our Sayabec Dressing Mills are of large capacity and produce Fenderson's "Silk Finish."

**WE CARRY THE LARGEST AND BEST ASSORTMENT  
OF DRY SPRUCE IN CANADA**

Mr. John Kilburn, who is in charge of driving operations on the head waters of the St. John reports that his lumber has all been brought out of the branches and started successfully upon the main river. His drive consists of between eight and ten million feet, which is for Murray and Gregory, Limited, St. John.

The drift drive on the lower St. John River was finished on May 15th, when about two and one half million feet of logs were located at Millidgeville, to be rafted by D. Fraser & Son. At that time it was reported that the Corporation drive between Grand Falls and Gagetown was under way. The river had been divided into sections each in charge of a foreman with Gordon C. Grant as superintendent for the St. John River Log Driving Company.

About fifteen million feet, belonging to Stetson, Cutler & Company, Murray & Gregory and the St. John Lumber Company are reported to have been hung up at Priestly Rapids.

### Nova Scotia Mills Have Plenty of Logs

Halifax, N.S., May 15th; (Special to the Canada Lumberman):—Most of the large mills throughout the province have their drives down now, and have commenced sawing; and the usual early summer conditions exist. Very few operators report any difficulty with their drives, and there should be very few, if any, logs held up in the streams this season. Winter ended very abruptly, but there are only a few logs left in the woods, not nearly the quantity anticipated in early February.

Quite a number of the large mills are not operating this year, such as Tusket, Musquodoboit Harbor, Sherbrooke, and Lawrence-town; these mills are all owned by the Maritime Lumber Company, who suspended operations at the end of the season, and are doing practically nothing this year. Other mills have nearly all a full cut of logs which will keep them going until the end of the season, in most cases.

The quantity of lumber being manufactured for the South American market is much smaller than usual, while the cut for the English, United States and West India markets will be fully as large as last season. The South American market has been very dull for the past year, and still shows very little improvement, although a few cargoes have been sold at fairly good prices. Freight rates are ruling at from \$13 to \$14, which is almost \$3 higher than last year, and this, in itself, has a decidedly lowering effect on the f.o.b. price here, which would be the case even were conditions the same at the other end.

Most of the larger manufacturers for this market are of the opinion that the demand will gradually strengthen and be in first-class condition by next spring. This should be the natural consequence of the one fact that so much less provincial spruce will be exported to South America this season. Several vessels are chartered from Nova Scotia ports, principally Annapolis, Yarmouth, Bridgewater and Ingonport.

### Firm Markets in the United States

The United States market still continues very firm, and prospects for the season through are good. It is the general opinion of the larger importers that the duty on lumber will be removed, and this, of course, will make it considerably better for the Canadian exporter. Even should the market be somewhat weaker the removal of the duty would offset this.

Ordinary Nova Scotia random cargoes of fair length are selling from around \$24 to \$25, while schedule cargoes are bringing from \$26 to \$27 in New York. Spruce covering boards are also much firmer than last year, and will probably continue so through the season, as the outputs of most of the larger mills have already been contracted for.

Spruce lath will continue firm at from \$4.75 to \$5. Planed hemlock randoms are bringing from \$22 to \$23, while clipped boards are bringing from \$23 to \$24. Sales of hemlock studding are reported at all the way from \$21 to \$23.50. Tonnage has been somewhat higher than last year, and rather difficult to obtain. Hemlock lath are a little higher although some charters at \$4.25 are reported.

Exports to the United Kingdom have been very heavy from Halifax this season. During the month of April, about 10 to 12 million feet was exported from Halifax alone. Tramp freights continue about the same, while liner freights are reported a little higher than they were a month ago, ranging from 47s 6d to 50s.

The local demand for lumber has never been nearly as large as it is this season. Contractors in Halifax report that work is being held up by scarcity of stock in the local yards. This will, of course, be relieved in a measure, when the summer mills have all begun operations. The prices will rule from 10 to 20 per cent. higher than last year.

### Notes

It is reported that Musgrave & Company have secured the contract from the Department of Railways and Canals, for all the hemlock, spruce and pine to be used in the construction of the Hudson Bay Terminals, amounting to some three millions.

The Brooklyn Lumber Company, who purchased the timber lands

and mill of the Crowe Lumber Company at Brooklyn, Hants County, have just brought a drive of about three and a half million feet into their Brooklyn mill and will start sawing very soon. They intend using this mill as it is, for the present season, and this fall, will put in a stock gang and cut from seven to eight millions annually.

Mr. Chisholm, formerly manager of the Sheet Harbor Lumber Company, is now managing the Brooklyn Lumber Company.

Mr. H. McC. Hart, who purchased the Aylesford property from Blackader & Blackader last fall, has made considerable alterations in this mill, and is about ready to start sawing his 1913 cut.

Mr. I. H. Mathers of I. Mathers & Son, Halifax, is on a business trip to London, anticipating an absence of about one month.

### Ottawa Trade News—Increased Cut Expected

Ottawa, May 22nd (Special to the Canada Lumberman):—Indications are that the lumber cut in the Ottawa Valley district this season will be considerably larger than it was last season, in spite of the fact that the conditions last winter were bad, owing to the mildness of the weather and the absence of snow and ice until late in the season. After conversations with several prominent lumbermen your correspondent learns that the mills up the river are as busy as they can be with everything in their favor. There is plenty of water, thus eliminating any danger of the drives sticking.

Trade is about normal, owing principally to the tightness of money. The demand for low grade lumber is still heavy and prices are high. One effect the increased demand in low grades has had, coupled of course with the high prices, is to curtail the building of cheap houses. Pine shows no tendency to decline in price. Good shorts, 1¼ in. to 1½ in. have gone up \$2 and 2 in. has done the same. Pine s.c. strips in the same class have advanced \$1.

The woodworking factories in Ottawa are exceptionally busy. The Estate James Davidson secured two large orders this week, one to supply the fixings and fittings or the interior woodwork for the new civic booster station and laboratory on Slater street, and a similar order including the sash and doors for the new ladies' college now building in the Glebe. This firm are very busy at their sawmill at Davidson, Que. They have 150 men working and will cut a good deal more this season than last. A fire department and apparatus has just been organized there.

The report that the W. C. Edwards Company intend going into the pulp making business was somewhat premature in some respects. Senator W. C. Edwards, the head of the company admits that the matter did have a momentary consideration but it has now been decided to abandon it.

In about a month's time the new warehouse and woodworking factory now being built by the McAuliffe Davis Lumber Company, on Chamberlain avenue, to replace the buildings destroyed by fire some time ago, will be out of the builders' hands. The newest machinery on the market will then be installed. The new buildings cover a site 90 x 120 feet, half of which will be used as a factory and about 30 x 40 feet form a boiler house, engine room and dry kiln. The building is a one storey structure, of brick with concrete floors and will cost when finished about \$12,000, exclusive of the machinery. A slow burning roof is to be put on. Later, another floor may be added. The same company has just built new yard buildings and sheds on Duke street adjoining their head offices. The frontage which measures about 250 feet, is of brick and is attractive in appearance. The depth of the yard is about 200 feet. The total cost of the sheds, etc., was \$12,000.

Mr. R. R. Williams who for the past three years and a half has been treasurer and director of the McAuliffe Davis Company is resigning at the end of this month. He was formerly with the old Chaudiere Lumber Company. Mr. Williams is a son of H. M. Williams, of the Williams Lumber Company. He intends taking two months holiday after his resignation goes into effect.

### Money Scarce, Collections Slow at Montreal

Montreal, May 26th (Special to the Canada Lumberman):—While trade is still good, there are many complaints of the scarcity of money and slow collections. Both wholesalers and retailers state that orders are very satisfactory, and that in certain lines more stock could be sold if it were available.

Exports to the United Kingdom are not being rushed, although a fair amount of birch has gone to the other side. Firms still feel aggrieved at the high freight rates imposed. A satisfactory feature is the reduction in insurance as compared with last year, 20c per \$100 being quoted to all United Kingdom ports, except Manchester, where 22c is the rate.

The Railway Commission will hear the application respecting reciprocal demurrage and average demurrage at a special session to be held at Ottawa on Monday, June 16th. The hearing was postponed until that date on representations by the Canadian Manufacturers' Association that more time is required to collect and codify the material to be submitted. The Commission has been taking evidence in

the West, and it is understood that the Chief Commissioner is desirous of hearing arguments on the date fixed for the Ottawa session.

Owing to the very dry spring, the water in the brooks and rivers is falling fast. In some sections in the Eastern Townships a number of drives have been hung up, the outlook being serious in middle and lower Quebec. Unless there is a heavy rainfall before the 1st of June, it looks as if 35 to 50 per cent. of the spruce logs will not reach the mills this season.

The chemical pulp market continues strong, the Canadian demand being excellent. Reports from Europe indicate that there is an increasing request for the pulp, and that the outlook is optimistic. Ground wood is weak, the situation being very unsatisfactory. Americans are buying practically nothing from Canadian mills, except under contract. Prices too are low, and stocks are accumulating.

### **Campbell-McLaurin Company Had a Good Year**

The annual meeting of the Campbell-McLaurin Lumber Company, Limited, was held on Tuesday, May 20th, at the head office, Board of Trade Building, Montreal. The report submitted showed that the company had a most successful year, and that prospects were excellent. The following officers were re-elected:—Mr. Alexander MacLaurin, Montreal, president; Mr. D. C. Culver, general manager of the Skillings, Whitney and Barnes Lumber Company, Ogdensburg, N.Y., vice-president; Mr. Arthur H. Campbell, Montreal, managing director; Mr. George L. Ryon, Ogdensburg, and Mr. Maurice Welsh, Toronto, directors.

### **Tonawanda Trade Topics—Quiet Business Expected**

North Tonawanda, May 23rd (Special to the Canada Lumberman):—The next event of importance to the local lumber market will be the opening of the Erie Canal on June 1st. This week saw the beginning of loading several million feet of lumber to be shipped by canal. Governor Sulzer has assured the lumber interests that he will direct the extension for two weeks longer than usual of canal navigation in the fall, to make up the loss of a fortnight at the opening of the present season.

Lumber shippers who use the Erie canal, which means practically every dealer in the Tonawandas, are not at all pleased with the prospect of paying record rates on stock shipped to New York and Albany this summer via the water route. Canal tonnage is scarce, however, and it looks as though the owners of tonnage would be able to command about what rates they wish. Cargoes are being loaded for \$2.40 to Albany and \$2.90 per thousand feet to New York. This is away beyond last year's rates at the opening of navigation when \$2.15 and \$2.65, respectively, prevailed.

G. Franklin Smith is the name of the newest lumber merchant at the Tonawandas. Mr. Smith has grown up in the trade and has a wide acquaintance in the territory contiguous to the Tonawandas. He will conduct a general wholesale business with particular reference to white and yellow pine, shingles and lath.

The last week or ten days have not been particularly inspiring so far as trade prospects are concerned. It was expected that the bright outlook of the first half of May would not only hold up but would show added strength to buying. On the contrary there has been a slight slowing up and good judges say there are signs of dullness in all lines of the lumber trade and that June will do well to hold its own. There is no reason to infer that anything serious may interfere to give business a black eye but the tariff bill which was expected to be framed without any perceptible disturbance to trade conditions is undoubtedly having the opposite effect and it will be fortunate if business in general and the lumber trade in particular, show any unusual confidence, before the bill becomes law in the fall, and has had a few weeks to indicate its entire significance. Building continues brisk in the Tonawandas.

During the first fifteen days of May, more than 10,000,000 feet of lumber was brought to the Tonawandas by boat. The customs reports shows that seventeen vessels arrived during this period. Three of the seventeen cargoes came from Canadian ports. Among the local dealers who are anticipating larger receipts than last year is the Eastern Lumber Company of Tonawanda.

### **Nashwaak Drive Hung Up**

A report from Fredericton, N.B., says that The Edward Partington Company's cut of between 12,000,000 and 14,000,000 superficial feet on the Nashwaak River and its branches is hung up. The largest portion of the lumber on the Nashwaak was to go to the company's pulp and paper mill at St. John. The Gibson Mills at Marysville now owned by the Partington Company are closed down and it will be at least a month before sawing operations are commenced. Not more than three-quarters of a million feet of logs have floated down the river into the booms at Marysville this spring.

## **Lumber Matters in the Law Courts**

### **Westholme Lumber Company Suing City of Victoria, B.C. for Breach of Contract and Damages**

The Westholme Lumber Company, Westholme, B.C., have instituted an action against the City of Victoria, Water Commissioner Rust and others, for unstated damages, or alternative remedies as a result of the city taking over the work on the Sooke Lake development, following the company's abandonment of the same. The company ask to have the contract set aside or for damages for breach of contract, or for damages for combination of the defendants to defeat and hinder the plaintiffs in carrying out the contract, or for a declaration that the defendants were unable to observe the conditions of the contract and that the plaintiffs are therefore entitled to be relieved from any obligations thereunder. Another action arising out of the same circumstances has been brought by the Bank of Montreal which has issued a writ against the company asking for a declaration that the charge in the document dated March 11, 1912, is a first lien, and for foreclosure and sale, the appointment of a receiver and taking of accounts, etc. The document referred to is a bill of sale or mortgage given by the company to the bank and covers the company's plant, etc., including the plant installed by the company on the Sooke Lake work. The bank claims repayment of \$202,144, together with interest amounting to \$7,565.

### **Vancouver Burner Bylaw Ultra Vires**

The Vancouver city council recently passed a by-law stating that the burners used by sawmills for destroying refuse should be a certain height, a certain distance from the mill and should be equipped with a wire crater at the top. The Rat Portage Lumber Company claimed in the Supreme Court that the city under its present charter had no right to pass such a by-law, and Judge Gregory upheld their claim. Some days ago the Rat Portage Company had been convicted for violation of the fire by-law by Magistrate Shaw in the police court and they brought an appeal with the above result.

### **Claims Commission on Sale**

An appeal has been heard by the full Court of Appeal in the case of Picard vs. Revelstoke Sawmills Company, Limited. It is alleged by the appellant that while holding an option for sale on the properties which belonged to the same people, a sale was effected through other sources and consequently commission should be paid to him. This would approximate \$75,000.

Arbitration proceedings were recently commenced at Vancouver, B.C., before a board consisting of Judge Grant, Frank L. Buckley and J. L. Gibson, in the claim of the Vancouver Lumber Company for \$519,000 damages for alleged injury to the value of its mill property on Bridge street, as a result of the alteration in the elevation of the Connaught street bridge.

### **English Market Less Firm**

Editor Canada Lumberman: St. John, N.B., May 15th.  
Driving conditions on the St. John River have not been favorable this year so far. We had very warm weather the last of March and the early part of April, and the snow gradually wasted away before the ice was out of the lakes and streams. Then, during the latter part of April the weather became cold, which cut the water off.

The English market has sagged off since the early part of the year. There has been a drop of 10 per cent. per standard since January and February. Ocean freights have ranged round from 52s 6d to 55s. In a few cases charters have been made as low as 50s. For the last two weeks there has not been much tonnage offering.

The United States market so far, has been strong, and prices well maintained, but the great difficulty now is to secure vessels for the transportation of lumber from provincial ports to the United States market. Already \$4 per M. has been paid to Boston, and New York freight today may be quoted at \$4.50. There is a lack of small schooners to carry from 125 to 175 M. Some few years ago we had a large number of coasters of this size, but the freights for some years past have been so low that there has been no margin left for the vessel owners. The transportation of this lumber in future will be quite a problem. It looks as if this work will have to be done by barges or steamers.

Our new mill at South Bay is now fairly well along, but it will probably be four weeks yet before completion. The delay is due to the delay in getting all kinds of machinery. Every manufacturer in the United States and Canada seems to be overloaded with orders.

Yours truly, JOHN E. MOORE.

What Manufacturers of Logging, Sawmill and Woodworking Appliances are Doing

## A Splendid Woodworking Machinery Catalogue

One of the most attractive and beautifully gotten up catalogues which have ever reached the Canada Lumberman is that of the American Woodworking Machinery Company, Rochester, N.Y. The catalogue is handsomely bound in stiff cardboard of light straw color and embellished with a most attractive design. The form of the catalogue is an interesting contrast to the form of nearly all others which we have received. It is in the ordinary book size, about 5 in. by 7½ in., and is therefore much handier for keeping upon the office desk and consulting, than the very large catalogues which are frequently published. The paper used is a high grade of calendered sur-

face which shows up the half tone illustrations in a splendid manner. The catalogue is profusely illustrated and contains a great quantity of valuable and interesting information. All who are interested in woodworking machinery will do well to write for a copy of this unique catalogue

## A Practical Pension Plan For Employees

In these days, when so much is heard of proposed legislation for enforcing the compensation of injured workmen, it is interesting to notice the few cases in which employers have been in advance of public opinion in regard to this question, and have adopted plans for the welfare and encouragement of their employees. Although the pension plan adopted in some cases is quite another matter from that of workmen's compensation, it is based upon a somewhat similar principle, viz., that the working man who has devoted his time, skill and energy to the service of a company is entitled to a reasonable assurance that when he has been incapacitated, either by injury or old age, the company will make some provision for his maintenance. An interesting instance of the adoption of the pension plan is afforded by the case of the Simonds Manufacturing Company, Fitchburg, Mass., and the Simonds Canada Saw Company, Montreal, Que. This plan was adopted on January 1st, 1908, and has proved satisfactory from the company's standpoint, as well as from the standpoint of those who have been benefited by it. The plan is simple and effective. It provides that all employees who have been twenty years or longer in the service of the company and have reached the age of seventy years, shall be retired and pensioned.

Any employee who has been 20 years or longer in the service of the company and has reached the age of 65 years may be retired and pensioned either at his own request or at the option of the company.

Any employee who has been 20 years or longer in the service of the company who has not reached the age of voluntary retirement and has become permanently incapacitated for work in the company's

service as a result of sickness or injuries received while not on duty, may be pensioned at the option of the company.

The amount of pensions granted shall be a monthly allowance to the employee for each year of service of 1½ per cent. of the average monthly pay for the last five years of service.

No assignments of pensions shall be permitted or recognized under any circumstances. Neither shall pensions be subject to attachment or other legal process for debts of the beneficiaries.

Pensions may be withheld or terminated in the case of misconduct on the part of the beneficiaries or for other cause in the judgment of the company.

Pensions shall be paid monthly unless revoked by the company and shall terminate with payment for the month succeeding that in which the death of the employee occurs.

The pension plan and pension rule are to be administered in the sole discretion of the Board of Directors of the company, and the rules may be changed by the Board of Directors at its discretion.

The pension plan is a purely voluntary provision made by the Board of Directors of the company for the benefit of those employees who have been long and faithful in the service and it constitutes no contract and confers no legal rights upon any employee, and in no way restrains the Directors in the exercise of their discretion in administering, altering or abandoning the plan.

Pensions are to be paid to those employees who have given their entire working time to the service of the company for the necessary period of years.

Length of service is to be reckoned from the date when the employee entered upon continuous service for the company to the date of retirement.

Leave of absence, suspension, temporary lay-off or disability shall not be considered as breaks in continuous service, and time thus lost shall not be deducted in reckoning length of service.

No employee receiving a pension from the company may re-enter its service; but such employee may, without forfeiting his pension, accept employment in the business of a character different from that of the company.

## Smart-Turner Contracts

The Smart-Turner Machine Company, Limited, Hamilton, Ont., are supplying Messrs. J. B. Laberge & Sons, Sudbury, Ont., with one of their automatic feed pump and receiver equipments; The Riordon Pulp & Paper Company, Merriton, Ont., with one of their centrifugal pumps, and Messrs. Price Brothers & Company, Kenogami, Que., with one of their centrifugal pumps.

## Two Interesting Cling-Surface Booklets

"Is there Rosin in Cling-Surface," is the name of a new 12 page booklet just issued by the Cling-Surface Company, Buffalo, New York. To prove that there is no rosin in this belt preparation the manufacturers show several fac-simile reports of chemical analyses made in England and Germany. Professor Orndorf of Cornell University is also quoted. The booklet lists many prominent users.

"How to make your canvas belts do best work," is the title of a 12-page booklet published by the Cling-Surface Company, Buffalo, N.Y. The booklet is well illustrated and is full of good sound technical arguments and data that should appeal to belt men.

## Barbados Market Report

S. P. Musson, Son & Company, Barbados, report under date of May 9th as follows:—Lumberstuffs.—White pine—There have been no arrivals during the fortnight, and a couple of cargoes would sell to advantage. Spruce—The position is the same. There have been no arrivals, and dealers yards are getting bare. We would recommend shipments. Pitch pine—no receipts. Shingles—The S.S. "Rhodesian" from Halifax has brought a small lot of 400,000 Long Gaspe cedar (the bulk of which is to our consignment) which are now on offer. In extra No. 1 cedar laying, we learn of a sale at \$2.55 per M. duty paid, usual conditions, to arrive. Shooks and wood hoops—No arrivals of either description.

The great amount of railroad construction at present in progress in Canada is creating an excellent demand for railway ties.

## EDGINGS

### Ontario

The Goderich Lumber Company, Limited, Goderich, Ont., recently suffered a loss by fire.

The Northern Planing Mills, North Bay, Ont., have been succeeded by the Northern Planing Mills, Limited.

The Mississauga Pulp & Paper Company, Limited, Toronto, has been incorporated with capital stock of \$2,500,000.

Cargill, Limited, Cargill, Ont., are equipping a large new match factory in connection with their business at Cargill.

Mickle, Dymont & Son have decided to move their business at Bradford, Ont., to a point nearer the Toronto market.

The Cockburn Lumber & Concrete Company, with an authorized capital of \$100,000, has been organized at Dundas, Ont., by John W. Cockburn, of the Cockburn Lumber Company.

Edward Clark & Sons, Toronto, report that the chemical plant and saw mill operated by the Dominion Wood & Lumber Company at Trout Creek, Ont., are now running in full swing. They recently made the first shipment of charcoal from the chemical plant.

The Ballantyne Lumber Company, the Trout Creek Logging Company, and the Dominion Wood and Lumber Company held their annual meetings at Trout Creek, Ont., on May 29th, 30th and 31st.

H. A. Ogilvie, Limited, have been incorporated with a capital of \$100,000, to carry on business as lumbermen, sawmill proprietors, builders, etc., with head office at South Porcupine. The provisional directors are G. H. Sedgewick, A. G. Ross and A. E. Langman, barristers, all of Toronto.

J. P. Newman, Wiarton, Ont., is erecting a large addition to his plant and intends to install the most modern machinery obtainable, for the manufacture of all kinds of dimension stock in hardwood, both dressed and plain, moulded or in the rough, and also frames for cots, mattresses, etc.

The Long Lake Lumber Company, Manning Chambers, Toronto, Ont., report that their output of 12,000,000 feet, which is being cut by the Thomson Lumber Company at Bigwood, Ont., on the French River, has been sold to Graves, Bigwood & Company, Byng Inlet, and the Sheppard Lumber Company, Waubashene, Ont.

### Eastern Canada

Luther B. Smith, lumber manufacturer, Central Blissville, N.B., recently suffered loss by fire at his mill. The damage was partly covered by insurance.

R. B. C. Urian, J. Almon and M. Andrews have been registered to carry on a planing mill business under the name of Andrews Bros., at Sydney, N.S.

The sawmill at Centre Blissville, N.B., owned by Luther B. Smith, was recently destroyed by fire. The loss on the building amounted to \$13,000, on which there was insurance of \$12,000.

The Restigouche Lumber Company, Dalhousie Junction, N.B., which was recently incorporated, is acquiring the mill property of Harrison & Hicks, Dalhousie Junction, and will continue the shingle business there.

Bonne Bay Limited, has been incorporated with a capital stock of \$290,000, to carry on a lumber, timber and pulpwood business in all its branches, with head office at Montreal. The incorporators are Jos. Drouin, Adelard Leduc, advocates, and Lucien Giroux, notary, all of Montreal.

A lumber factory to cost \$9,500, is being constructed on Rockland ave., Outremont, P.Q., by Warren Bros., the owners. The building will be on a site 52 x 175, and will consist of two storeys, the structure being of brick with concrete foundation. A boiler house of reinforced concrete will also be built. It is intended to manufacture woodwork for houses, such as doors, mouldings, and other interior finish.

The Belgo Canadian Pulp & Paper Company, Limited, who recently purchased 500 square miles of timber limits known as the Metabetchouan limits, from Messrs. Sharples, Power & Calvin, for about \$500,000, report that they intend to erect a sulphite plant to operate upon the raw material secured from these limits. They will also be erecting a new building alongside of their present plant, to house two more paper machines which they intend to add to their equipment. The purchase of the limits mentioned above has put the company in an excellent position for economical production of pulp and paper. At present, sulphite is the only raw material which they have to buy. When the new sulphite plant is in operation they will therefore be producing all their own raw materials.

The Buckingham Planing Mill Company, Limited, Buckingham, Que., are erecting a new mill in that town near the site of their present buildings. The new building will be 30 x 100 feet and will be complete in every detail with up-to-date machinery. This company have operated in Buckingham for some years under the name of the Parker Planing Mill Company, and several years ago amalgamated the plants of that company with the Buckingham Planing Mill Company, forming the present concern, known as the Buckingham Mill Company, Limited. With the combined plants in the new buildings, the capacity of this firm will be increased to fully five times the present size. The officers of the company are C. E. Parker, president; W. L. Parker, vice-president, and W. H. Parker, treasurer.

The recent issue of \$500,000 worth of bonds by the Wayagamack Pulp & Paper Company, Limited, Three Rivers, Que., was for the purpose of enlarging their paper mill plant, by the addition of a machine to make a complete line of kraft paper, in addition to the paper which they are already manufacturing. The company will then be in a position to manufacture kraft paper glazed on one side or on both sides as may be required. This will give them a full line of products. The machinery for the extension has been landed on the company's property. Extension has been added to the main plant next to the kraft paper mill, and this is now ready for the installation of the machinery. There is a large market in Canada for glazed kraft paper, and, on this

account, a market will be easily found from the outset for every pound of paper turned out. The machinery is being installed as rapidly as possible in order to have the new plant in operation by the end of June.

### Western Canada

James Parker, late of Seattle, has purchased a site at Eburne, on the Fraser River, and will install four shingle machines.

The Burns Lake Trading & Lumber Company is putting in a small mill on the Grand Trunk Pacific 150 miles from Hazelton.

The Winnipeg Board of Control has awarded a contract for 1,000,000 feet of lumber to T. D. Robinson & Sons, Limited, 258 Portage avenue.

The Bridges Lumber Company is erecting a mill on the Kootenay River, just west of Fort Steele. The capacity will be about 45,000 feet daily.

A shingle mill is to be built on the north shore of Burrard Inlet, opposite Port Moody, by Robert McNair, well known in the industry here.

The box factory belonging to the Alberta Box Company, corner 11th ave. and 12th street east, Calgary, Alta., was recently damaged by fire to the extent of about \$12,000.

The new plant recently erected by the Monarch Lumber Company at Saskatoon, Sask., has been completed and put into operation. The cost of the plant was about \$10,000.

H. T. Ross, formerly of the Ross & Lapp Lumber Company, Fraser Valley, has secured an interest in the St. Elmo sawmill erected last year at Ruby Creek by Brewer & Pousett, of New Westminster.

Cornwall & Gauthier, of Athabasca Landing, Alberta, are finishing the building of a sawmill at Mirror Landing, Alberta. The company has a contract to cut all the timber for the Edmonton, Dunvegan & British Columbia Railway.

The Corona Lumber Company, Limited, incorporated in Manitoba, to carry on business in the province of Ontario. The company's capital stock for use in Ontario is limited to \$40,000. J. S. Lovell, Toronto, is attorney for the company.

The site and mill of the Red Fir Lumber Company at Roche Point, Burrard Inlet, have been purchased by E. C. Knight, of the Vancouver Lumber Company. He will erect a large shingle mill in connection with the sawmill plant.

The Western Builders Insurance & Loans, Limited, 408 MacLean Block, Calgary, Alta., are erecting a planing mill to cost \$5,000 at Calgary. The building will be one storey, 50 x 130 feet. The company will require electric power machinery.

James McNaughton, formerly with the Chapman Timber Company, Scappoose, Oregon, is now logging superintendent for the Comox Logging & Railroad Company, under which name the Canadian Western Lumber Company is cutting on its limits at Comox.

The British America Lumber Company, owners of extensive timber limits in the neighborhood of Port Moody, B.C., will operate this season and the logs will be taken to Port Moody on a narrow gauge railway and be manufactured at the large mills at that point.

The Booth Logging Company has been formed by Mr. Anderson, of Aberdeen, Washington, and Mr. Becker, office manager for the Anderson Logging Company, Vancouver. A timber area of 200,000,000 feet has been acquired on Menzies Bay, Vancouver Island.

Officers of the Seaboard Logging Company, which will shortly start operations on its limits up the B. C. coast, are: President, Renfrew Stevenson; vice-president, C. F. Pretty; secretary and treasurer, G. W. Scarff; auditor, T. T. Dauphinee. Offices are in Vancouver, where the officers reside.

The Haslam Lake Timber and Logging Company, of Jamesville, Wis., has been registered as an extra-provincial company in British Columbia, with provincial head office at the Metropolitan Building, Vancouver. J. H. Lawson, Jr., Vancouver, is attorney for the company. The capital stock of the company is \$300,000.

A recent report from Vancouver states that the Vancouver Timber & Trading Company will erect a large sawmill on the north shore of Port Moody, B. C. A site has been secured consisting of thirty acres fronting upon deep water with a good shore line. It is said that the mill will have a daily capacity of 200,000 feet and that its erection will be commenced at once.

Fred Estey, of Nelson, B.C., and Alex. McRae, T. Kilpatrick and George McCarter, all of Revelstoke, have organized the Yale-Kootenay Lumber Company and have taken over the interests of the McBrien Lumber Company at Squilax, west of Revelstoke. The sawmill is now being remodelled and improved. All the principals are well known in lumbering circles in the interior of the province.

A deal involving the transfer of the Carlson lumber and planing mill at Lethbridge, Alberta, has been negotiated. The transfer includes all the property and timber, amounting to approximately 5,000,000 feet, some of which is still in the log. A. H. Knight has been appointed manager of the concern, which will be known as the Belly River Lumber Company, and it is expected that about 15,000 feet of lumber daily will be the capacity of the mill when put in good working order. Several improvements are to be made.

The Ocean Falls Company, Limited, whose large pulp mill was recently completed and made ready for operations, has closed its entire plant and discharged four hundred of its employees as the result of the institution of proceedings by certain of the creditors to invalidate the debenture issues of the company totalling \$3,000,000. The saw mill at Ocean Falls has been in operation for a year or more, but the large pulp mill had only just been placed in running order. It is feared that the litigation aroused by the proposal to reorganize the company will not be concluded for a year or more, unless the objecting minority creditors fall into line with the majority and accept the company's offer of settlement on the basis of paying off existing debts with 20 per cent. of stock in a new company and notes for the balance, for one, two and three years.

# Dominion Timber Regulations

---

Licenses to cut timber on Dominion Lands in the Provinces of Manitoba, Saskatchewan, and Alberta, the Northwest Territories, within twenty miles on either side of the main line of the Canadian Pacific Railway in the Province of British Columbia, and in the tract of three and one-half million acres to be located by the Government in the Dominion in the Peace River district in the Province of British Columbia, lying east of the Rocky Mountains and adjoining the Province of Alberta, shall be disposed of by public auction at the office of the Dominion Timber Agent for the districts in which the berths are situated.

Before any parcel of timber is offered for sale it shall be surveyed by a duly qualified Dominion Land Surveyor into berths of an area not exceeding twenty-five square miles, and each of such berths shall then be thoroughly cruised by a duly qualified timber cruiser in the employ of the Dominion Government. The Minister shall then fix an upset price at which the berth shall be disposed of, and no berth shall be sold at less than the price so fixed.

Purchases to the amount of one thousand dollars or under shall be paid in cash at the time of sale. Purchases over one thousand dollars and not exceeding five thousand dollars shall be paid, one-half in cash at the time of sale, and a note or notes shall be given for the remaining half of the purchase price, payable in three months, with interest at the rate of five per cent. per annum. Purchases over five thousand dollars and not exceeding ten thousand dollars shall be paid one-third in cash at the time of sale, and notes shall be given for the remaining two-thirds of the purchase price, payable in three and six months, with interest at the rate of five per cent. per annum. Purchases exceeding ten thousand dollars shall be paid one-fourth in cash at time of sale, and notes shall be given for the remaining three-fourths of the purchase price, payable within three, six and nine months, with interest at the rate of five per cent. per annum. Notes shall be made payable at a bank in the city or town in which the sale is held or at a bank in the city of Ottawa. Cash payments must be made at the time of sale in legal tender or by an accepted cheque on a chartered bank, or by a draft issued by a chartered bank, payable to the order of the Deputy Minister of the Interior. If default is made in any payment required by this section the sale shall be forfeited and void.

The purchaser must also pay the cost or the estimated cost of the survey of the berth before a license is issued.

The licensee shall pay an annual ground rent of five dollars per square mile except for lands situated to the west of Yale, in the Province of British Columbia, in which case the yearly ground rent shall be five cents per acre.

The licensee shall pay the following dues on timber cut on his berth:—

Sawn lumber, 50 cents per thousand feet, board measure.

Railway ties, eight feet long,  $1\frac{1}{2}$  cents each.

Railway ties, nine feet long,  $1\frac{3}{4}$  cents each.

Shingle bolts, 25 cents per cord.

And 5 per cent. on the sale of all other products of the berth.

## Timber Permits

Yearly permits are granted to settlers, mine operators and others on application to the Dominion Timber Agents, from whom further information can be obtained.

*J. J. Newman Lumber Co.'s Shed, Hattiesburg, Miss., Roofed with J-M Asbestos Roofing*

### A Big Money-Maker for Lumber Dealers

There is an enormous demand nowadays for a ready roofing that gives fire protection.

J-M Asbestos Roofing is the only roofing that fully satisfies this demand—because it is the only roofing made of that wonderful fire-proof substance—Asbestos. This means that when you sell this roofing you have no competitor. And there is a handsome profit in every sale.

## J-M ASBESTOS ROOFING

is composed of Asbestos and Trinidad Lake Asphalt. Being all-mineral it affords perfect fire protection, never rots, rusts or deteriorates. Therefore, it never needs coating or any other preservative. It is the cheapest-per-year roofing on the market. These are selling points that your customers will quickly appreciate.

Our campaign of advertising, costing thousands of dollars a year, is educating people everywhere to the advantages of this roofing. Right in your territory there are scores of property owners, architects and builders who will become live prospects for this roofing the minute you let them know you are handling it. And as we have only one dealer in each town; all this good business goes to that dealer! Will that dealer be YOU?

Don't delay. The roofing season is here. Write our nearest branch today for Catalog and Special Dealer Proposition.

## Small Mills and Lumber Yards find the <sup>FAY-EGAN</sup> "LIGHTNING" No. 40 Planer, Matcher and Molder an investment that pays—

### Holds Orders

That order for 25M feet of flooring that you had to pass up today—you had the lumber but it was not planned and matched and quick delivery was wanted. If you had had a No. 40, you could have made delivery of the entire bill the next morning.

The same thing applies to ceiling, siding, casing—you can make any of this stock in a hurry, in fact, you can make up anything to these limits on a No. 40.

Double surfacing, 24" x 6"—  
Matching, 14" wide — Mouldings,  
three-quarter inch deep.

### Economical

With a No. 40 in your mill or yard, you can greatly decrease the size of your stock saving the interest on the investment, insurance costs, and rent value of excess yardage required to carry a complete stock.

Weather-worn stock can be resurfaced and sold at full market value—low grade stock can be reworked and the grade raised at a good profit. The great value of this machine is proved by the hundreds of mills and yards, not only in the United States, but through-out the world, who are using it.

### A Paying Investment

The cost of installing and operating a No. 40, places it within the reach and makes it a paying investment for small mills or lumber yards.

It does not take up much space and a small gasoline engine or motor will furnish operating power at a low cost.

It does not require an expert to operate it—all adjustments are easy and simple to make.

The construction throughout is such that the No. 40 will stand up to the hardest kind of service and lots of it for many years.

**REMEMBER** — there's a big advantage for you to buy your Planer from the **FAY-EGAN** complete line. — You get the size and style of machine best suited to your individual needs.—Write for Planer Catalogue today.

## The Shimer "Limited" Cutter Heads WITH EXPANSION

will match Flooring at the rate of 150 to 180 lineal feet per minute. Special features enter into their construction to enable them to withstand the enormous centrifugal strains, and to cut clean and easy at fast feeds.

They are self-centered on the spindles by means of a chucking device which grips firmly thereto when drawn up, making a perfect fastening and one that insures all the cutters doing their share of the work.

If you have a machine that will swing these Heads and will feed up to 150 to 180 lineal feet per minute, we advise their purchase.

Price, net, for Flooring, \$72.46 the set complete like illustrations, In Solid Section, \$87.00 complete.

“Say, Ernest, how is it you’re using so many files now? There’s no more than the usual amount of work coming through. What’s the trouble?”

“Well, Boss, as I’ve told you before, we’ll have to go back to the old reliable **DISSTON FILES**.”

# GOODHUE BELTS

## "Acme Waterproof" Leather Belting

This brand is especially well suited to the wet places in a saw or pulp mill and will run true as long as it is in service. When you are overhauling your mill equip it with "Goodhue Belts" and you will never regret it. They are honestly made of solid leather—every inch a good belt and they won't stretch.

| 14    | 16         | 171       |

by using our  
**Patent Steel Band  
Mill and Carriage**

This result was attained by different users of our mills during the season of 1912. We can prove to your satisfaction that this mill will cut more lumber and superior lumber than any other Band or Circular Mill on the market.

#### Special features of Mill

Concrete foundation not necessary. Frame constructed with brace bolted to same timbers which support base of mill. This prevents any movement of mill foundation throwing mill arbors out of cross line. Supporting timbers attached to track which prevents variation in cutting of boards.

#### Roller Bearing Carriage

designed to do away with lost side motion which is quite necessary for successful work in double cutting bands.

#### Double Action Friction Set Works

working on thin steel disc, which can be successfully used in place of usual foot friction in receding knees. This cuts down weight in pinion shaft, therefore reducing momentum, so that it is beyond speed of setter to over set by rapid work. Carriage can be changed from high to low speed instantly and can be operated without passing saw more than six inches either way. Knee opening to 44 inches. Guide prevents any binding motion to the gip and will automatically raise when coming in contact with knot in timber. Guides adjustable when mill is running.

A Canadian Built Mill of superior manufacture.

## COTTON BELTS LEATHER BELTS GANDY BELTS CAMEL HAIR BELTS BALATA BELTS RUBBER BELTS ROPE DRIVES

Here is one more proof—an unbiased recommendation through the January Woodworker:

"Have had in use for fifteen months on a 5 kw. dynamo, a 5 in. three-ply cotton belt which has proved very satisfactory.

"Before putting belt to work I stuff it full of Cling-Surface and find I have a belt which handles the load in even better shape than a first-class leather belt and at just about one-third the cost.

"I also use the same kind of belt and method of treating in light feed belts on various machines with perfect satisfaction."

The man who wrote the above, (name unknown to us) certainly thinks well of Cling-Surface, but so does everybody who uses it.

Notice, he said, "I stuff it full of Cling-Surface." That's the proper way to treat a belt. The outside is of secondary importance. Reach the inside of the belt.

All belts are improved by Cling-Surface treatment. Even good rubber belts, as we have repeatedly proved in

## All Need Cling-Surface

actual installations, always do better with this treatment properly used.

Investigate Cling-Surface personally and you will find it a real essential to efficient belt management.

Let us have a trial order and if the Cling-Surface doesn't make good the trial won't cost a cent. Ask for our literature and let us quote f.o.b. Toronto.

# "JOHN BULL" Comfort

For real foot comfort there is nothing to equal the "John Bull" larrigans. They are made from the best leather, oil-tanned by ourselves. A desirable feature of "John Bull" larrigans is the counter stiffener that is sewn in with the leg if a sole or heel is required.

On every pair of "John Bull" larrigans you will find our trade mark—look for it and when you get it you know you have the best larrigan made.

# ASCENDING

**T**IMBER has its own place in nature's generous scheme of economy, and that is about all the place and all the value the timber of this country did have until a human demand for its products was created.

Since that demand set in it has regulated values. Originally not to exceed 10 per cent of the timber cut was marketable. With the broadened demand there now is a call for portions of possibly 90 per cent of the trees.

The outlet will continue to broaden indefinitely and timber will be handled with increasingly smaller percentage of waste until waste shall have been entirely eliminated.

If you buy timber this year you will profit by every increase in utilization. The **sooner** you buy the **greater profit** you will make.

*Begin Your Investigation To-day.*

"The Place to Buy them Worth the Money"

## The Truck That Saves It's Cost Several Times Over in The Year

This truck is designed for lumber yards and planing mills and will be found invaluable for loading and unloading cars.

The front gearing is detachable and may be used with eight or twelve hind gearings. It is a double-header, nuts on axles being kept tight with Steel Cotter Keys.

Oil cups on the wheels and the fact that there is no resetting of tires saves any amount of trouble.

The old wooden-wheeled truck is a back number in comparison with this. It will pay you to write for our general catalogue which describes these trucks in detail, and pick out the style you want now.

## INDUSTRIAL LOCOMOTIVES

The day has come when only the very best locomotives will meet the needs of logging roads and switching around industrial plants. It is now necessary to produce special designs to meet special needs. For years we have been busy studying the conditions in all fields where locomotives are used and have designed our locomotives to meet those conditions.

Proper designs insure efficiency, reduce the coal bills, lessen repairs, and give maximum work for a minimum of expense.

Our locomotives embody the best construction and are sturdily built. They are simply in design, and all wearing parts are accessible for easy repairs.

Interchangeable repair parts, sure to fit, are kept in stock for prompt shipment.

# Have You Our Latest Catalogues?

THE prestige attained by Waterous Sawmill Machinery is due to the fact that we have not been content to rest on our oars.

On the theory that the standard of to-day is not good enough for to-morrow—that to-day's "*best*" is to-morrow's "*good-enough*"—we have kept everlastingly plugging away.

As sawmill conditions have changed, our machines have been changed and redesigned to keep pace with them. For this

reason we have not published a general catalogue, but have issued small sized bulletins of each machine as we built it.

Assembled in a special binder these individual bulletins illustrate our complete line. **One of these binders is at your service.**

Tear out this page, write your name on the margin and send it to us—we will mail you our complete set of "Sawmill Machinery up-to-date." *You will find it the handiest reference volume on your shelf.*

# LAKEFIELD WHITE PINE

## WILL SATISFY YOU

For many years Lakefield has been among the leading White Pine producing centres and the stock among the most satisfactory.

The logs are small only running about forty feet to the piece which produces a clean, smooth, redknotted stock, ten to sixteen feet long.

Have a few carloads White Pine Lath  $6/4 \times 3/8 \times 4'$  in fair shipping condition.

Phone or write for quotations.

There are a few cars of each of the following sizes of 1912 dry stock still in pile.

|           |       |        |     |
|-----------|-------|--------|-----|
| 1 x 4/5   | 10/16 | Mill   | Run |
| 1 x 6     | "     | "      | "   |
| 1 x 7     | "     | "      | "   |
| 1 x 8     | "     | "      | "   |
| 1 x 9/11  | "     | "      | "   |
| 5/4 x 4/5 | "     | "      | "   |
| 2 x 6     | "     | "      | "   |
| 2 x 8     | "     | Common |     |

Our mill run contains everything the logs produce except the culls and clear.

Can load in a days notice if you have a rush order. Planing mill in connection.

If you have never used Lakefield Lumber we want to ship you a sample car—you will like it.

*We can supply all sizes in White Pine as the mill started April 24th. Complete list on request.*

## A Message to You

(Please read)

DOES it mean anything to you to know that **you** can get prompt shipments of the highest quality Lumber and Shingles at the same prices you are paying for inferior service and goods?

IS there anything more unsatisfactory to **you** than being held up by delays in receiving the stock you are in urgent need of—maybe it is only a few pieces of lumber or bundles of shingles out of a car?

HOW do **you** feel when stock for which you have been waiting arrives and is poor quality—unfit for the use you require it?

WHY don't **you** place your orders with a Company who can, in shipping you, obviate the worries and dissatisfaction mentioned above.

**OUR MESSAGE TO YOU — DEAL WITH US.**

## Are You Interested in British Colum- bia Trade?

The immensity of the Lumber Industry will within a few years make this Province the most important in the whole Dominion.

There is undoubtedly a big market for Mill Equipment of all kinds. Let us demonstrate our Advertising service. We please others, we can please you.

# Bathurst Lumber Company, Limited

BATHURST, NEW BRUNSWICK

Goodyear Conveyor Belt for the Rainy River Gravel Co., Vancouver. Made in one piece—seven hundred and fifty feet long.

A seven hundred and fifty feet Goodyear Conveyor Belt in actual service at Rainy River, Vancouver.

Part of our order of 140 rolls of Elevator Belting for the Saskatchewan Government Elevators

## Special Belts for Special Purposes

### *Goodyear Imperial High-speed Belting*

For high speed a High-speed Belt should be used. Great strength is demanded. A belt that is to grip a small pulley and transmit high power must be specially built for the purpose. It must resist the strong tendency to slip on the small, rapidly-revolving pulleys.

This Goodyear High-speed Belt is made with a friction surface that grips the face of the pulley—conveying *all* the power.

It gives long service. The Belt is durable because there is no internal friction—no ruinous grinding. That is where the Imperial High-speed Belt excels. It flies around a small, high-speed pulley without setting up internal friction.

In Goodyear Belts the elimination of all stretch, and the solid cohesion of duck and rubber, prevent any movement within the belt. Thus the Belt gives long and efficient service.

### Elevator Belts

Elevator Belts are a Goodyear specialty. The essential requirement in these belts is strength—and Goodyear Elevator Belts have it. That is why they are in constantly-increasing demand. The buckets do not pull out. Long wear in the belt is assured because the plies of fabric do not separate in service. Goodyear Rubber Belts are used in hundreds of elevators throughout Canada.

### Conveyor Belts

Where a sound and reliable belt is needed for hard service—for the conveying of stone, grain, ore, coal, etc., a Goodyear Conveyor Belt specially made for the work is the best investment. The Goodyear Conveyor Belt has a rubber face of great toughness, which prevents cutting and chipping, and increases the life of the belt. Not affected by weather. We make Conveyor Belts to any specifications. No better conveyor service can be given than that obtained from a Goodyear Belt.

### Endless Belts

We make Endless Belts to order in any width, length and thickness—and for any purpose.

*Send for our interesting book on the choosing of a Belt—you'll find it useful. It is free.*

# GOOD YEAR

Tire & Rubber Company

Branches at Victoria, Vancouver, Edmonton, Calgary, Regina,  
Winnipeg, Hamilton, London, Toronto,  
Montreal, St. John, N. B.

# Simonds

## Saws

By the building of our new steel mill in Lockport, N. Y., the expression—

### *Made of Simonds Steel*

will have a wider range of influence. More of our Saws can be made with this increased supply of the fundamental material. Quicker deliveries may also result.

Year after year we have been alert to furnish millmen with Saws above the average in quality. Our policy has been conservative, yet every Saw improvement of real merit has been instantly taken up by us and brought before the trade.

We prove first to our own satisfaction that a Saw, Knife or File is right. Then—but not until then—we let the mill have it. Our experience and endorsement are accepted by buyers everywhere as a guarantee of quality.

*Our pocket size catalog should be in every mill.*

**Simonds Canada Saw Co.,  
Limited**

Vancouver Montreal St. John

## Solid and Inserted Tooth Circular Saws

*We make a specialty of these lines*

**We remake old Solid Tooth Saws  
into new Inserted Tooth Saws**

*Write to us for quotations*

Our saws have been before the public of Canada since 1855, and have won a reputation far excelling any other make of saws, combining as they do so many points of marked superiority.

By the old method the tempering of circular saws was to a great extent a matter of chance.

By our Patent Process that uncertainty is entirely avoided.

Being tempered and straightened by heat and pressure in air-tight ovens at a uniform heat between heavy revolving plates, we produce a perfectly even temper throughout the plate, and being free from that uneven strain or tension caused by so much unequal hammering they are not so liable to buckle, which was a great source of trouble and expense in the old style of saw.

These saws will stand up to their work better under all circumstances, and being made of a higher quality steel than it is practical to use by the old method, they hold an edge longer and will do more work than any other saw on the market.

We are prepared to make prompt deliveries of all Saw Orders—Rush Orders by mail or wire receive immediate attention.

## TERMS OF SUBSCRIPTION:

Canada, United States and Great Britain, \$2.00 per year in advance; other foreign countries embraced in the General Postal Union, \$3.00.  
 Single copies 15 cents.

"The Canada Lumberman and Woodworker" is published in the interest of, and reaches regularly, persons engaged in the lumber, woodworking and allied industries in every part of Canada. It aims at giving full and timely information on all subjects touching these interests, and invites free discussion by its readers.

Special care is taken to secure for publication the latest and most trustworthy market quotations throughout the world, so as to afford to the trade at home and abroad information on which it can rely in its operations.

Advertisers will receive careful attention and liberal treatment. For manufacturing and supply firms wishing to bring their goods to the attention of owners and operators of saw and planing mills, woodworking factories, pulp mills, etc., "The Canada Lumberman and Woodworker" is undoubtedly the most direct and profitable advertising medium. Special attention is directed to the "Wanted" and "For Sale" advertisements.

Vol. 33

Toronto, June 15, 1913

No. 12

## The Lumber Trade Situation

During the last few weeks a remarkable change has come over the spirit of the lumber trade in eastern Canada. Almost without any advance notice and with practical unanimity, the members of the trade have commenced to trim their sails in anticipation of a possible financial squall. The peculiar part of the situation is the fact that although everyone is acting in much the same manner, no one seems to be quite confident when assigning reasons for the rapid change which has come over the trade. Yet a change there has been, a most remarkable change and one which is being watched with keen concern by everyone in the trade. Manufacturers, wholesalers and retailers are in an uncertain frame of mind as to the outlook and all are of one opinion only as to the best policy to pursue for the present, namely, a policy of conservative buying and careful scrutiny of accounts.

The closest approach to a satisfactory explanation of the change is a general belief that the banks have at last cried "halt" to the wild real estate speculation which has been in progress throughout Canada for many months past and which threatened to bring wide-spread disaster in the course of a few more months if permitted to proceed unchecked. If this is the true explanation, we may look forward to an improvement in the general situation so soon as the remains of the real estate troubles have been cleared away. It is probable however, that there have been other factors which combined to bring about the present conditions. For the beginning of the change which has recently developed, one must look back to the early days of last fall, when money became expensive as a result of the crop movement and as a result also of the financial unrest growing out of election disturbances in the United States and the wars in Turkey and Mexico. These factors combined to aggravate the actual tightness of the money which developed last fall. With the beginning of the present year, the

tightness in the money market did not decrease as usual under normal conditions. Prolongation of wars and continued agitation in the United States, as a result of the tariff situation, combined with the increased real estate activity to keep holders of money in an uneasy frame of mind.

\* \* \*

In Canada, real estate gambling has probably been the most important of all these factors. When spring arrived this year it was generally realized that the critical moment had come. Purchases which had been made during the winter and held in anticipation of an advance when spring commenced were all that kept the real estate movement active up till then. If these purchases, most of which were largely speculative, could be realized upon at a profit, the real estate movement would have continued and the day of reckoning have been postponed, perhaps for six months or another year. Unfortunately for the real estate speculators, but fortunately perhaps for the rest of the business community, it was found this spring that the public was in a more critical frame of mind in regard to real estate values than formerly. New purchasers were hard to find. The banks, ready always to put on the brakes so soon as public sentiment warrants, were among the first to note the direction of the wind—if present indications can be trusted—and began to draw in. The real estate movement in western Canada and in many parts of eastern Canada came suddenly to an end.

The stopping of the real estate speculation has had an immediate effect upon lumber markets. The tightness of money has increased the tension of trade. Many people have tried to persuade themselves that a vast amount of building would be carried out this year. Recent developments mean however, that many buildings which were in prospect will not be commenced and some which have been commenced will be delayed for lack of money to complete them.

\* \* \*

We have gone into these conditions rather in detail for the purpose of making it clear that the present situation is not one either to belittle or to magnify. The next few weeks will probably witness further important changes, one way or the other, though no one seems to foresee which way the change will tend. The result will depend a good deal upon the outcome of this year's crops. Crop progress reports will be watched with anxiety. A good crop will bring about confidence. It will of course increase the tightness of money, when it comes to be moved, but the confidence which it brings will be a useful tonic for trade. A poor crop will have at least the effect of delaying recovery.

So it appears that conditions to-day warrant the closest attention to trade developments and study of the class of trade which one is conducting. Most lumbermen have already adopted this course. Orders to-day are being accepted largely on a cash basis only. Firms which are asking for a renewal of their notes are being urged to make an attempt at settlement. Trade is largely of a hand-to-mouth character. Only immediate requirements are being filled by retailers. Wholesalers are not anxious to accept anything but orders which they know mean actual cash payments within a reasonable time. In spite of these conditions, prices, as a rule, are well maintained, with the peculiar exception of the high grades of white pine.

\* \* \*

The general conditions of the lumber trade are really exceptionally healthy. Manufacturers, wholesalers and retailers were never in a better position for weathering a possible storm than they are to-day. After a couple of years' excellent business, they are less than ever indebted to the banks. With the almost ravenous demand for lumber that continued during the last year and a half, stocks have been reduced to a lower level than for a great many years before. In many important lines the yards of retailers and manufacturers have been stripped bare. In conjunction with these conditions there is not any fear of over production this year. The winter which has just passed was a poor one comparatively speaking for woods operations and the quantity of logs taken out was not up to the average. This applies to practically every part of Canada and to many parts of the United States. There will not be any inducement on the part of manufacturers to flood the markets in order to make enough money to keep up

their payments to the banks. It is most fortunate that affairs have been thus arranged by natural conditions. The check which the business world seems to be experiencing is probably something for which to be truly thankful. This year we are probably in a position to absorb financial shock much better than we would be if conditions had continued unchecked for another six months or a year.

During the next month or two we will see how the crops are

likely to result; we will know how much of the building programme is to be carried out during the present year and we will know more about the ability of the trade in general to meet its obligations. The conditions to-day warrant some anxiety but they also warrant a reasonable amount of thankfulness that the brakes have apparently been applied and that there is a splendid chance of slowing down before the train of business gets permanently on the wrong track.

## Further Manufactured on One Edge

Correspondence has lately been received from readers of the Canada Lumberman asking for an explanation of the situation in connection with the duty upon lumber entering Canada since the Supreme court reversed the decision of the exchequer court and decided that was not dutiable. It will be remembered that this decision was received by lumber manufacturers as a serious injustice. The exchequer court had decided that lumber of this class was dutiable. The whole difficulty had arisen over the use of a surfacing machine on the edge of the lumber, which was then put through a roughing process so that the marks of the surfacer might be removed and the lumber made to appear as though it were rough lumber. When the Supreme court decided that such lumber was not dutiable lumbermen claimed that the interpretation of the law had been stretched unfairly, in order to admit into the country a class of lumber which ought to be subject to duty, but which the government wished to admit free so as to please the farmers of the country for whom it is an important building material.

The situation is now the same in some respects as it was before the courts considered the matter at all. If the decision of the exchequer court had prevailed, all lumber surfaced on one side and sawn to dimension on one edge would have been dutiable, whether the work was done by planer, re-saw or any other machine and whether the marks of the planer or other machine on the edge could be seen or not. The decision of the Supreme court makes it essential that such lumber, to be dutiable, must not only be surfaced on two sides, but must show the marks of the surfacing machine on the edge. Everything apparently hangs upon the marks of the surfacing machine on the edge being visible. If they have been removed by a roughing process, the lumber is not dutiable, unless this roughing has been so poorly done that the inspector of customs can still see the marks of the surfacing machine. Under these conditions the door is left open for a renewal of the heavy imports of United States lumber free of

duty which flooded Canadian markets until quite recently and demoralized trade.

A reader of the Canada Lumberman in a recent letter asks us to advise him what action has been taken by the customs department to off-set the decision of the Supreme court, as he understands that the customs officers are now collecting duty of 25 per cent. on lumber surfaced on one side and edged to a uniform width. We have made careful enquiries in this regard and are informed that, so long as the edging to a uniform width is done by means of a saw, no duty is being collected, but that if the marks of a surfacing machine are to be seen on the edge, the duty is being collected. The situation is apparently very much the same as it used to be, with the exception that there is now no question that stock which has been successfully roughed has nothing to fear in the way of duty. Customs officials when asked to explain the situation simply state that there has been no change in the tariff. In one sense this is true, but practically speaking it is not. A most important and unfortunate change has been made which assures those who have roughed the edge of their lumber that it may enter Canada without paying duty. Formerly there was doubt about the matter and this doubt had a slight restraining influence. Now, as soon as conditions arise which make it profitable for United States manufacturers to seek an outlet in the Canadian markets they will be in no doubt about the situation and will be able to flood the Canadian markets with this class of lumber to the serious injury of Canadian dimension stocks.

The Mountain Lumbermen's Association in a recent letter to the Pacific Coast Shippers' Association, Seattle, Wash., discussing the situation, explained that lumber dressed on one side and sawn on the remaining three sides entered Canada free of duty. This they claim "is an injustice since it is a simple matter to run lumber through size saws and the inspectors have no means of judging whether it has passed through re-saws or not."

## New Brunswick's Lease Problem

The government of New Brunswick surely owes the lumbering and pulp and paper industries of that province greater consideration than it has apparently been giving them during the last few months. The revised regulations, which were recently drawn up in connection with the timber leasing situation, state that the holders of leases may elect to come in under the new arrangement or may continue under their old leases until 1918, when they will expire. If they wish to come in under the new regulations they must notify the government before July 15th next. If they choose to adopt this course they must pay, by August 1st, 1913, one-half of the bonus which the government may decide upon. Under these conditions, the industry had a right to expect that the government would announce the amount of the bonus which is to be charged, at as early a date as possible, so that there might be ample time for consideration of the conditions, to enable operators to decide upon the course which would be most to their advantage. It is now only one month from the time when the holders of leases under the old system must make their declaration and 6 weeks from the date for the first payment on bonuses, yet they have no idea as to how much the government will charge. Not only has the government failed to declare its intention in this regard, but those who are interested have been unable to obtain information by inter-

view with the government which would help them in coming to a conclusion about the best course to pursue.

Naturally, those who hold leases which are to continue five years longer and who have not their plans fully completed as to what they will do at the end of that period, would like to know at once whether or not, if they fail to pay their money at the time stated and to make definite declaration, their interests will fail of any consideration at the end of the five year period. The time of making the first payment upon the bonus is in August of the present year and this is about the time when the lumbermen of last winter have demands almost to the limit on their finances, to close their previous year's accounts. Naturally it will be almost impossible for some of them, who would wish to take advantage of the new proposition, to raise the necessary funds with which to secure their lands.

All that has taken place of late in connection with the alteration in the system of leasing Crown Lands for timber in New Brunswick brings home forcibly, to those engaged in the industry, the objections connected with political administration of timber lands. However straightforward and well-meaning a minister of the Crown may be, the ordinary duties which devolve upon him in connection with his department are so great that he cannot give to such a matter as the lumbering industry the careful study which it deserves. There are

many in the lumbering business to-day who would welcome a change that would remove the care of the Crown lands from politics and vest it in the care of a non-partisan commissioner. Under such management conditions like those existing to-day would be far less liable to develop. A Commissioner whose whole duty was concerned with the management of Crown lands would have given the matter more intimate study and would have foreseen more clearly the working out of new regulations to be adopted.

The lumbering and pulp and paper interests of New Brunswick are so extensive that the present situation is both unwise and uneconomical. A complete change has been made in the regulations of the department and although this change is some months old the majority of the mill owners do not understand its conditions sufficiently to take advantage of any privileges which are to be obtained. The govern-

ment of New Brunswick has undoubtedly intended well and sought to make changes which would give to the people of the province as much as they are entitled to in the way of revenues from Crown lands, without injuring the interests of the lumbering and pulp and paper industries. Their efforts unfortunately have not met with approval or success. Happily, such policies are not irrevocable and it may be that the present situation is only a stage in the development of a system of Crown lands regulations which will, in the end, be satisfactory to all concerned. It is to be hoped that the government will lose no further time in announcing the remaining conditions of its regulations. When this has been done, timber owners will be in a position to put their representations in definite form and to point out to the government wherein the new regulations may have failed to work out to the benefit either to the industry or of the people of the province.

## Chemical Pulp Situation Becoming Interesting

The question developing out of the proposed imposition of a tax of \$2 a ton upon chemical pulp wood imported into the United States from Canada in retaliation for the prohibition of the export of pulpwood from several of the Canadian provinces, has recently come up, both in the House of Commons at Ottawa and in the Senate at Washington. On June 6th Hon. Wm. Pugsley called the attention of the government to the situation and stated that the proposed tax would be levied against Canada only and not against any countries with which Canadian chemical pulp came into competition in markets of the United States. Mr. Pugsley urged immediate action on the part of the Canadian government. The Prime Minister in reply stated that the Canadian government appreciated the difficulty and was already in communication with Washington, but it was not by any means clear that the interpretation placed on the clause in question would be enforced. In regard to the wider question of legislation by the Canadian Parliament in order to equalize matters in case Canada were discriminated against, he did not care to express any opinion at the present time.

In the United States Senate finance sub-committee, on June 6th the retaliatory feature of the proposed tax upon Canadian chemical pulp was discussed for several hours. Mr. John Norris chair-

man of the paper committee of the American Newspaper Publishers' Association appeared before the committee and opposed the imposition of any countervailing duty. No decision was reached, but it was learned from an authoritative source that that matter hangs in the balance with a tendency towards favoring the duty. Paper manufacturers in the United States are urging upon the government that the duty be imposed, in the belief that it will force Canada to yield on some of its restrictions against the exportation of pulpwood.

Mr. Norris in his evidence contended that every measure the United States had directed against the Canadian provinces had reacted against American paper makers and consumers; that instead of simplifying the situation they had provoked an ugly complication which will require years of intelligent and delicate handling to adjust. Nothing could be done, he argued, by compulsion or tariff threats, to provide wood for the American paper industry. That day had passed. Canada controlled the pulpwood supply, and insisted that it be dealt with upon a reasonable basis.

An interesting side light upon the situation is afforded by the reported probability of the treasury department revoking its action in admitting free of duty certain wood pulp and paper from British Columbia.

## Editorial Short Lengths for Busy Readers

During the month of April, 1913, prices of lumber, according to the report of the Department of Labour, showed an index number of 176.7, as compared with 175.9 for March, 1913, and 164.3 for April, 1912. These numbers compare with the decade from 1890-1899, during which the average price level is taken as being represented by 100.

J. G. Robson, New Westminster, B.C., in an address to the New Westminster Board of Trade recently stated that lumber imports from the United States into British Columbia had fallen off fifty per cent. during the last three months, as a result of better markets in the United States. Mr. Robson also reported that during the early part of the present year the lumber business in British Columbia had improved considerably, but during the last month or two, prices had fallen off by about \$1.50 per thousand. At the end of May the demand in the northwest was very small, as the banks were not advancing money to buyers. Stocks at the coast at that time were 30 per cent. lighter and those in the mountains 50 per cent. lighter than at the beginning of the present year.

The fifteenth convention of the Canadian Forestry Association for the presentation of addresses and papers, and the discussion of forestry questions, will be held in Winnipeg, July 7, 8 and 9, 1913. While special attention will be given to prairie conditions, the programme will bear testimony to the national character of the work in that the

problems now pressing for solution in both East and West will be carefully considered. Assurances have been received from the Dominion and nearly all the Provinces, that they will be officially represented. Many Canadian authorities on forestry and related problems will be present, and a number of the men in the United States, best qualified to give assistance in regard to our conditions have already signified their intention of attending. While the details of the programme cannot yet be given, it is expected that the proceedings will be opened by His Honor the Lieutenant-Governor, on Monday evening, July 7, at an official reception in which the delegates will be welcomed by the representatives of the Government of Manitoba, City of Winnipeg, etc. The following two days will be devoted to the work of the Convention, along with such entertainment features as shall be arranged. The public sessions will be held in one of the halls of the Winnipeg Industrial Bureau at the corner of Main and Water streets. Owing to the fact that the Canadian Forestry Association has never met before in Winnipeg, there will be brought up for the first time, a number of problems which relate to the great central part of Canada. These will include that of the protection and perpetuation of the forests of Western Ontario, and of northern Manitoba, Saskatchewan and Alberta; the best methods of handling prairie forest reserves, and the possibilities of the same in supplying timber, fence posts, poles and cordwood for the settlers; the need of getting under timber the sand lands which will never produce any other profitable crop but trees, and the rate of growth in the central parts of Canada as a basis for deciding the possibility of economical forestry, under these conditions.

# Successful Hardwood Lumber Merchants

The Wilson Lumber Company, Limited, Toronto—Experts in the Mahogany Business—Description of Their Operations

R. S. Wilson, Managing Director  
Wilson Lumber Co.

One of the most successful and interesting companies in Canada handling hardwood lumber is the Wilson Lumber Company, Limited, whose head office and distributing yards are at No. 1 Spadina Ave., Toronto. The yards located at this point are for distribution purposes only, filling orders for customers requiring stock in a hurry. The great majority of the company's shipments are sent direct from the mills at Valley Park and Smedes, Miss. In addition to handling the various classes of Canadian and United States hardwoods, the Wilson Lumber Company import great quantities of mahogany from Great Britain. They are in fact among the most extensive importers of mahogany in Canada. Their mahogany stocks come from South Africa by way of Liverpool. Liverpool,

as everyone knows, is the greatest wholesale mahogany market in the world. Practically all the important sales of mahogany are made at this centre and there are located at Liverpool, not only expert mahogany buyers and sellers, but also manufacturers who understand the business of sawing mahogany logs more thoroughly than anyone else in the world. By means of horizontal bands and very thin saws the manufacturers at Liverpool, are able to utilize a much greater percentage of the log than would be possible by the ordinary sawing methods in use in other parts of the world. These firms have in their employ men who do practically nothing but study the conversion of mahogany logs into lumber, during their whole working life. They become so expert, that, practically at a glance, they can tell exactly how much, and what quality of lumber can be turned out from any particular log.

Taking advantage of these specialized facilities for the manufacture of high grade mahogany logs into lumber the Wilson Lumber Company have been able to build up a remarkable trade in mahogany lumber in Canada. They have their own representative at Liverpool who devotes his extensive experience and ability to the purchase of mahogany logs at the various auction sales which take place so frequently at Liverpool, Messrs. Tickle, Bell & Company, of the Royal Liver Building, Liverpool, are the representatives of the Wilson Lumber Company at that centre. Mr. Gilbert Tickle, of this firm, who makes the purchasing of mahogany for the Wilson Lumber Company, has been engaged in the buying and selling of mahogany, longer probably than any other man in the Old Country, and has become a recognized expert in his own peculiar work. The logs which he purchases for the Wilson Lumber Company are always of excellent grade and the lumber from them demands a ready market. Much of the mahogany which is purchased at Liverpool by other firms is especially selected for use in veneers. All the good figure in these logs is invariably taken out and cut up into veneers. The narrow widths which are left contain no figure and are turned into lumber, which accounts for the fact that in many cases the purchaser of mahogany lumber, not understanding the peculiarities of the market, is disappointed at not being able to obtain stock with an attractive figure. The Wilson Lumber Company, appreciating the demand for handsomely figured mahogany adopted from the first the practice of having all the product of the log turned into lumber. In this way every bit of figure is obtained for the person who desires mahogany lumber. Moreover, the company are thus able to deal in much wider boards than are to be found in the ordinary mahogany dealer's yard.

## High Grade Mahogany For Furniture

One of the accompanying illustrations shows a car load of mahogany lumber which was recently shipped by the Wilson Lumber Company. The illustration gives an excellent idea of the widths and quality of mahogany lumber in which the company deals. The shipment contained about 19,500 superficial feet and was worth approxi-

mately \$3,500. The carload was sold to the D. Hibner Furniture Company, Berlin, Ont., manufacturers of high grade mahogany furniture.

Another of the illustrations accompanying this article shows a scene in the woods near Valley Park, Miss., and gives one a graphic impression of the splendid quality of oak logs which the company manufacture into lumber at this point. The company also maintain offices at Vicksburg, Miss., where Mr. G. E. Wilson is manager. This office attends to the shipments to Canada and the exports to the Old Country. Stock which is shipped to the Old Country is handled by Messrs. Tickle, Bell & Company. The export shipments are made by way of New Orleans and the company carries on an extensive and successful business in this line.

One of the most interesting illustrations accompanying this article shows a mahogany board taken at random from the product of a mahogany log, recently received at the Wilson yards at Toronto. The illustration gives a fair idea of the grade and texture of the lumber. This particular board was 24 feet long and contained 69 board feet. It is African mahogany of remarkably fine quality. The narrowest width of mahogany shipped out by the Wilson Lumber Company is about 18 inches. They carry in stock a large quantity of mahogany lumber and have, as a rule, extensive shipments in transit from Liverpool to their Toronto yards.

Another of the accompanying illustrations shows a car of high-grade cypress lumber manufactured by the Wilson Lumber Company at their mills at Valley Bank, Miss. This is all band sawn lumber, 1 inch thick and of various widths, up to 26 inches, standard lengths from 10 to 20 feet. This shipment was recently sent to Rhodes, Curry & Company, Amherst, N.S., to be used for interior finish.

## Modern Piling Methods Employed

In the background of the illustration showing the mahogany board are seen some of the piles in the Wilson yard. This illustration shows the care which the company exercise in the piling of their stock. To the left is shown a pile of bone dry chestnut, immediately to the right of which is another pile which is only "shipping dry." The bone dry stock, it will be seen, have been piled in what is known as a dead pile, no strips being used between the boards. The "shipping dry" stock is piled in a strip pile which permits circulation of air between the boards, so that they may be still further dried by

A. J. Morris, Assistant Manager  
Wilson Lumber Co.

Fine Oak Logs for the Wilson Lumber Co., Valley Park, Miss.

Typical of Fine Mahogany Stocks—Wilson Lumber Co., Toronto

exposure to the air. The chestnut shown in these piles comes from West Virginia. It is of 1½ inch and 2-inch stock, strictly firsts and seconds, the lengths running from 10 feet to 16 feet, and the widths from 6 inches to 16 inches.

Another of the accompanying illustrations shows the dry kilns operated by the Wilson Lumber Company at their Toronto yard. The two kilns, manufactured by the Grand Rapids Veneer Works, Grand Rapids, Mich., each have a capacity of 12 cars. Each kiln contains a steam chamber, one of which has a capacity of three cars and the other a capacity of four cars. The total capacity of the two kilns is 70,000 feet. The lumber when first put in goes into the steaming chamber and remains there from 24 to 48 hours, according to the thickness of the stock. Then it is taken out of the steaming chamber and goes through gradually to the other end of the kiln. At almost each movement of the truck a lower degree of humidity is applied. The steam comes through in pipes, running in coils underneath the trucks. It is obtained from an adjoining building being purchased from a planing mill company operating a few feet away.

The president of the Wilson Lumber Company, Toronto, is Mr. W. D. Wilson. Mr. R. S. Wilson is managing director and Mr. A. J. Morris occupies the position of assistant manager.

Mr. R. S. Wilson, managing director and principal stockholder of the Wilson Lumber Company, has been connected with it since it commenced business, eighteen years ago, and is also president of the Vicksburg Export Company of Vicksburg, Miss., an organization which is affiliated with the Wilson Lumber Company for the purpose of handling its export business. Mr. Wilson has made the hardwood business his life's study, and is counted among the most expert members of the hardwood business in Canada. He spends much of his time in the south looking after the various manufacturing interests of the company.

Mr. A. J. Morris, assistant manager of the Wilson Lumber Company, has been engaged in the lumber business for the past eight years, three of which have been spent with the Wilson Lumber Company. His first business experience was obtained with the Boake Manufacturing Company, Toronto, where he learned the retail end

Scene in Wilson Lumber Co's. Yard—Mahogany Stocks in Foreground

of the lumber business. He remained with this company for about five years, after which he joined the Wilson Lumber Company. His duties in connection with the Wilson Lumber Company cover practically every branch of the work. He pays particular attention to the travelling end of the business in Canada and also is in charge of all of the export contracts made by the Wilson Lumber Company. Mr. Morris has made a specialty of the mahogany end of the business

Ready to enter the Kilns—Stocks at Wilson Lumber Co's. Yard, Toronto

and is responsible for the company's trade in this class of lumber. Last summer he paid a visit to the Old Country and spent considerable time among the mahogany yards in Liverpool getting acquainted with the people engaged in the business and the stocks assembled at that great mahogany centre.

## Will Investigate Wood Utilization

Government Appoints A. G. McIntyre to Study Problems of Importance to Lumbermen, Foresters and Public

A. G. McIntyre—Appointed to Study Wood Utilization.

Hon. W. J. Roche, Minister of the Interior, has decided to increase the usefulness of the department by providing for investigation into the possibilities of conserving the forests, by reducing waste in manufacture, by prolonging the life of forest products used in construction, and by developing uses for products now wasted for the lack of knowledge as to how they may be employed. Forest services in older countries have felt the necessity of undertaking scientific investigation of such matters. Such work has been carried on in Germany and other European countries, in the United States and in some of the other British Dominions, and where it has been undertaken it has appealed strongly to those engaged in manufacturing who have given it every assistance and even material support.

The various classes of investigation to be undertaken will be as follows:—

**Timber Tests:**—Timber testing with the object of determining the strength and other properties of wood so as to arrive at a rating table for commercial woods. Much has been done by the United States Service in this line which is available for Canada but there are questions that are peculiarly our own and that we should test for ourselves. Such a question and one in which the lumbermen of British Columbia are certainly interested at the present time, is the relative properties of British Columbia fir and southern yellow pine, which meet each other in the eastern Canadian market.

**Timber Physics:**—It is the business of the section of timber physics to study the structural and physical properties of wood and to ascertain how these properties are affected by different methods of drying and handling. This section also includes microscopic investigations of wood structure.

### The Preservation of Wood

**Wood Preservation:**—The lengthening of the life of timber used in construction work is important and becoming more so as timber supplies become scarcer. Poles, posts, ties, bridge timbers and others are affected. The United States Forest Service are investigating the question from two sides: first, the study of the growth of fungi of various species in different timbers; and second, the investigation of wood preservatives and of methods of impregnating the wood.

**Wood Distillation:**—This section studies what products, such as alcohol, turpentine, wood creosote and acetates can be obtained from wood by distillation and the best processes for obtaining them. There is a great deal of waste material that might be used for such production if proper processes are developed.

**Wood Pulp:**—The special problems that this section is dealing with at present are (1) methods of making ground wood pulp to determine whether or not commercial pulp can be made from species other than spruce; (2) the practicability of treating different woods with the sulphite and soda processes; (3) the qualities of paper which can be made from different grades of the various sulphite, soda and ground wood fibers; and (4) the practicability of using different forms of wood waste for the manufacture of wood pulp and other fibre products. Wood pulp and paper are to be one of the largest industries in Canada and the problems that affect them are of vital interest to the country.

### A. G. McIntyre to be in Charge

To take charge of this work the Minister of the Interior has selected Mr. A. G. McIntyre, Editor of the Pulp and Paper Magazine and Acting Secretary of the Pulp and Paper Association. Mr. McIntyre is a graduate of Acadia University, Wolfville, N.S., where he took the degrees of B.A. and B.Sc., and he also graduated from McGill University in Chemical Engineering with the degree of B.Sc. In addition to the chemical engineering course he took the studies in hydraulics, strength of materials, mechanical engineering, etc., of the civil engineering course. He was chemical engineer for the Jonquiere Pulp Company where he had charge of the water power, water discharge measurements, etc., and he put in a bleaching system of his own design, saving in the value of the paper. He was engineer in

charge of construction for Price Bros., at Kenogami, P.Q., and did the investigations for the new sulphite mill. Mr. McIntyre's special qualifications should assure the carrying out of the project successfully.

The work will be carried on at present in co-operation with McGill University.

### Death of Charles King, of Quebec

Many readers of the Canada Lumberman learned with deep regret of the death of Mr. Charles King, for a long time one of Canada's prominent lumber merchants. The deceased who passed away on Sunday, May 25th, at his residence St. Genevieve avenue, Quebec City, was the only direct surviving member of the firm of King Bros. His death which was caused by a stroke of paralysis, occurred after only a few days' illness, at the age of 67 years.

Mr. King was born at Lyster, in the county of Megantic, P.Q., and was the fifth and only surviving son of the late Mr. Charles King, of St. Sylvestre, Lotbiniere. He received his education at Lennoxville College, and after leaving there started on a commercial life with his brothers. They were very active in the lumber trade, and formed the firm of King Bros. and subsequently King Bros. & Company, which was ranked as among the largest manufacturers in the province, having its limits and works scattered all over the Eastern Townships. The firm contributed greatly to the industrial development of the province of Quebec.

King Brothers & Company were largely interested in the important asbestos industry of the province of Quebec, being extensive proprietors of valuable areas of asbestos in the Eastern Townships, notably the Hampshire and Thetford Royal Mines in the county of Megantic. They were proprietors of large timber limits and saw mills, with seigniorial rights at St. Jean des Challons and Lake Metapedia.

Mr. King was a brother of the late Mr. James King, the senior member of the firm, who was elected to represent the county of Megantic in the Provincial Legislature of Quebec in 1892, but declined re-election at a subsequent election.

After the death of Mr. James King, a few years ago, Mr. Charles King decided to withdraw gradually from business, and commenced to dispose of his property. In fact, just before the time of his death he had practically given up business. He was a man of a retiring disposition, though a most agreeable companion with those with whom he was familiar, and was always welcome at their gatherings. Of a charitable nature, he has done a great amount of good, particularly to institutions and deserving people with whom he came in contact. At Christmastide his check book was ever open, and many a cheerful Christmas was passed by people who would have spent a dreary one, were it not for the kindness of Charles King. It was not at the festive alone that his hand was aiding his less favored fellow creatures, for almost daily there were calls on him for assistance, which, when deserving were never refused.

Mr. King is survived by his wife and two sisters, Miss King who resides at the Chateau Frontenac, Quebec, and Mrs. W. S. Thomas, whose husband has been connected with the firm of King Bros. for thirty years.

The interment took place privately at Lyster, county of Megantic, where Mr. King used principally to reside during the summer season.

John S. Playfair, father of James Playfair of the firm of Playfair & White, Midland, Ont., died at Toronto, on Monday, June 2nd. The late Mr. Playfair was 88 years of age and had been a prominent figure in financial and navigation circles in Canada for many years.

### Birch and Beech for Flooring

"Birch and beech, on account of their cheapness, are becoming more and more popular as the supply of oak and maple decreases." This statement, taken from a bulletin soon to be issued by the Forestry Branch, Department of the Interior, Ottawa, on the Wood-Using Industries of Ontario, is based on reports received from over twelve hundred firms, and is therefore worthy of consideration. The average wholesale price per thousand feet, board measure, given in the above bulletin for maple and oak flooring is twenty-two dollars and eighty-two cents and fifty-five dollars and seventy-eight cents, respectively. The average price for birch and beech flooring, on the other hand, is nineteen dollars and seventy-one cents and twenty-one dollars and seventy-four cents, respectively, which represents quite a saving, especially when compared with oak.

But these woods have other qualities to recommend them besides cheapness. Twenty-two per cent. of the flooring manufactured in Ontario is made from the wood of the black and the yellow birch, the more common white or paper birch not usually growing to a sufficient size for this purpose. Birch is a hard, strong, fine-grained, reddish-brown wood, which takes a high polish and, therefore, is very suitable for flooring. It can be stained to imitate more expensive

woods, such as mahogany, cherry or walnut, and, being easily worked, it is also extensively used for furniture and interior decoration.

Beech is one of Ontario's cheapest hardwoods, the ordinary grades of lumber costing only thirteen dollars and sixty-one cents per thousand feet, board measure. It frequently constitutes one-tenth to one-third of the cheaper grades of birch flooring, but its qualities justify its separate use, for it is strong, fine-grained and so hard that it becomes quite slippery in time. It is also used for furniture to some extent.

Of the birch and beech used in Ontario, ninety per cent. of the former and ninety-eight per cent. of the latter are home-grown. The existing supplies of these woods in Ontario are sufficient to meet a much greater demand, and, as oak and maple are growing increasingly dear, it is certain that the use of birch and beech, especially for flooring, will soon become much more widespread. Copies of the bulletin mentioned above can be obtained from the Forestry Branch, Ottawa.

## Personal News of Interest to Lumbermen

Mr. Alfred E. Read, of the firm of Read Bros., Limited, was married in Toronto on the 2nd inst., to Miss Alice M. Purchase. Mr. and Mrs. Read left for Atlantic City, Washington and other points of interest. The Canada Lumberman extends congratulations.

The Committee of Lumber Camp Work is making an appeal for magazines for the men in the woods, over a thousand of whom are furnished with reading matter annually. People who desire to help in this work may send the literature to Mr. John Mace, 2057 Hutchison street, Montreal.

The recent departure of Mr. John R. Collins, from Fassett, P.Q., where he had been manager for five years of the Fassett Lumber Company, Limited, was made the occasion for presenting him with a token of friendship and esteem by the employees of the Fassett Lumber Company. The gift was in the form of a very handsome tea service and tray, which were presented to Mr. and Mrs. Collins, on the eve of their departure for Coudersport, Pa.

Mr. Wm. Henderson, one of the missionaries of the Shantymen's Christian Association, recently visited Montreal and in the course of an interview referred forcibly to the destruction of timber by fire in northern Ontario. In spite of the experience of the Porcupine fire, he says, there is evidence of terrible carelessness, if not of deliberate starting of fires, on every hand. He also stated that there was every reason to believe that many so-called settlers only took up farm lands for the sake of the pulpwood they could get off them, never intending to settle and develop the land. Speaking of the Canadian Northern line from Sudbury to the head of the Great Lakes, Mr. Henderson stated that it traverses a magnificent country well timbered and mostly located in the great clay belt.

Among the recent appointments to the Canadian Senate, one of those honored was Mr. Alexander McCall, Simcoe, Ont., the well-known manufacturer and exporter of lumber. Mr. McCall's appointment will be received with pleasure by all who have known him in the business world. As a successful merchant and politician he has made an excellent name for himself and fully merits the honor which he has received. Mr. McCall is descended from U. E. Loyalist stock. His great grandfather, Donald McCall, was a soldier in the Highland regiment engaged in the taking of Quebec under General Wolfe. Mr. McCall was mayor of the town of Simcoe in the year 1893-4. He represented the county of Norfolk from 1908 to 1911. In the election of 1911 he was defeated by another lumberman, Hon. W. A. Charlton.

The Dominion Board of Railway Commissioners will hold a special sitting on June 16th to consider the adoption of reciprocal and average demurrage by Canadian railroads. Reciprocal demurrage was requested some time ago by shippers, and lumber and paper interests have been foremost in the application for the system, which aims to penalize the railway as well as the shipper in connection with delay in delivering or unloading cars. Average demurrage, however, though it has worked in the United States for some years with success, is new to this country. It is a form of demurrage for which any shipper may elect. Under its workings the charge on all cars held for loading or unloading by the shipper or receiver is to be computed on a basis of the average time of detention of all such cars released during each month. Each car released in the first twenty-four hours of free time will be credited one day, and each twenty-four hours of detention beyond the first forty-eight hours of free time will be debited. At the end of each month \$1 per diem will be charged for the difference between the two.

## Ontario Lumber Salesmen

### Men Who Keep the Stocks Moving

Martin Kehoe, North Bay

When it comes to a question of affording opportunities for seeing the world and gaining experience at the same time, the lumber industry occupies a position well in the lead. The young man who sets out to gain experience of the making and selling of lumber may visit practically all portions of the globe and learn something new wherever he goes. If he has the proper material in him, the experience he gains in this manner will be a valuable asset to him a few years later, when he turns his attention to the actual making or selling of lumber in his own interest. Many a man has realized the truth of this and has "gone through the mill" as they say, though properly speaking, he has gone through the woods, the mill, the yards, and has travelled the country far and wide when he comes forth a full fledged lumberman ready to make a living out of the experience and information he has gained. Take any successful lumber traveller in Canada to-day and ask him where he gathered the information and experience which have enabled him to go upon the road with confidence and the same old story will always be given in reply:—"worked in the woods for So-and-so, in the mill for somebody else, in the yards for another firm," and so on. There is a well defined course of education in lumber salesmanship and it has seldom failed to equip an ambitious young man with the means of making a satisfactory livelihood.

Martin Kehoe, North Bay, Ont.

In the year 1901 Martin Kehoe obtained a position as a lumber marker and log scaler at Huntsville, Ont. This was his first experience in the lumber business. He commenced where he thought he would be able to learn most and where, in addition to working for his salary he would be working for the future. For three years he remained at Huntsville getting the grounding which he considered necessary before making a move. In April, 1904, he was ready for a change and he found a position with the Central Lumber Company of Detroit, with whom he was engaged for one year. During that year he found that he needed a wider knowledge of the business so he resigned and knocked about the United States for the next twelve months, occupying during that period, positions with no less than twelve different lumber firms in about as many capacities, ranging from laborer to inspector, salesman and manager. During this period he saw the lumber business from the northern States to the extreme south. Next he worked his way back to Chicago and wound up his short jobs by staying for a year in that city as an inspector. During the monetary stringency in 1907 positions as salesmen were not numerous, so Mr. Kehoe spent the season getting more experience at Callendar, Ont., where he took a position with John B. Smith & Sons. After this he returned to Chicago in the fall. In the spring of 1908 he accepted a position with Wm. Milne & Son, of North Bay, and has remained with this firm up to the present.

If Mr. Kehoe were asked what position he occupied in connection with Wm. Milne & Son, he would probably be puzzled for a reply. The firm sells to a great number of wholesalers in Toronto and Mr. Kehoe looks after practically all of its sales. He gives a helping hand in connection with nearly all ends of the business. He spends three weeks at the head office and then a week in Toronto. He is well known and much liked by the members of the trade with whom he comes in contact. During the present season, Wm. Milne & Son will not be cutting quite so much lumber as last year and Mr. Kehoe will have a little more time than usual to devote to his wholesale friends in Toronto, who will undoubtedly appreciate this temporary alteration in his business habits.

One of the most interesting sales of mahogany which has ever taken place at Liverpool, the world's centre of the mahogany trade, was recently reported. A finely figured log was sold for £2,478. The log contained 3,802 feet and the price figured out at 13s 3d per foot. This was one of the largest amounts of money ever invested in a single piece of wood.

# Passing of the Trade in Square Timber

Conditions Which Have Led to the Decline of a Once Famous Forest Industry—  
Interesting Statistics from 1845 to Date

The accompanying table is the first of its kind that has been published, giving practically complete statistics of the export trade of Quebec in white pine hewn timber from 1845 to the present date. The figures in this table have been compiled for the Canada Lumberman by the Harper Wade Export Company, Quebec, P.Q., being secured principally from the J. Bell Forsyth annual circulars. The table shows the quantity of timber received, the quantity exported and the quantity of stocks wintered, together with current prices for timber measured off in the raft at Quebec coves. The course of the trade is very clearly indicated by these interesting figures. The most interesting fact, of course, is the gradual decline in the trade, which is shown practically from the year 1845, when the total supply was 24,223,000 cubic feet. The greatest total supply shown in any one year was in 1852, when it amounted to 27,631,000 cubic feet. In the earlier part of the last century the entire export of Quebec pine was in the form of timber in the squared log hewn with the axe and floated down to Quebec merchants to put it in shipping order by butting and dressing it at the Quebec shipping coves, disposing of the culls locally for wharf building and other similar purposes. The greater part of the timber so received and shipped was white pine, squared to a sharp edge on the four corners. Deals were made for export to other countries and only reached the English market in the character of stowage deals. The square logs (and later on waney) were converted into planks and boards at various sawmills in the great towns of England and in the country yards.

## The Waney Pine Trade

Waney pine was made for the first time in 1861 when the table shows that 6,735,000 cubic feet were received at Quebec. This wood was left with a wane of from 3 to 6 inches on the corners, thus avoiding the excessive waste which resulted from hewing the timber exactly square. Previous to this the timber was square and of large average, beautifully hewn by the lumbermen in the woods; but the board (waney) pine, that is, short logs of large girth were sent down the drives with the other timber and soon found their way into the market. Being cut from the lower part of the tree accounted for the waney character of the logs, but the quality of the timber was excellent. It has gradually almost altogether supplanted square pine as shown by the following comparison:

| Year           | Square Pine       | Waney Pine       | Total      |
|----------------|-------------------|------------------|------------|
| 1861 . . . . . | 15,731,000 c. ft. | 6,735,000 c. ft. | 22,466,000 |
| 1912 . . . . . | 2,000 c. ft.      | 1,172,000 c. ft. | 1,174,000  |

While the decline in the quantity of square and waney pine made for the Quebec market was to some extent due to the scarcity of suitable trees to manufacture into timber, it was in a far greater degree attributable to the increase in the deal and board trade. Gradually the produce of the sawmill took the place, for export, of timber in the hewn log. In the Ottawa region a large proportion of the trees are suitable to make deal logs, but would not be large enough to be made into waney board pine. This is exemplified by the smallness of the square pine that was latterly taken down from Ottawa. In

former days square pine was made 70, 80 and even 100 feet cube average; lately, it was with difficulty that 40 feet average cube was procurable in square pine, and the waney board pine is decreasing in girth annually. Formerly, 20 inches and over, average cube, was easily had. As late as 1904, 17 inch average was as large as most manufacturers would undertake to supply, and they frequently fell below this average on delivery at Quebec.

## Causes of The Decline

The main cause of the decline in the timber trade, was the operation of large sawmills for many years at Montmorency, the water power of the falls running the mills. There were also several other sawmills operated by steam and water power adjacent to Quebec or within a short distance of that city. For many of these mills, rafts of round pine logs were brought from the Gatineau and other limits. At Hawkesbury, the Hamilton mills (now owned by the Hawkesbury Limber Company) and the Gilmour & Company's mills at Chelsea, produced large quantities of deals for export, which were rafted down to Quebec, and shipped either wet as "floated deal" or after being landed and piled as "dry floated deals."

Present conditions are entirely different; the trade in hewn timber has gradually diminished, and seems to have come to an end, so far as the Ottawa country is concerned. The Montmorency mills have been dismantled long ago, like most of the other mills in the vicinity of Quebec and the Gilmour mills at Chelsea, have been demolished and the practice of floating deals to Quebec has disappeared.

The Hawkesbury mills still exist, but cut principally white pine lumber, that is, boards two inches and under, in thickness, for the United States market; the limited quantity of deals now cut at these mills goes to Montreal by rail or barge for shipment by ocean steamers loading at that port. Quite a large quantity of deals is manufactured by the larger mills in the Ottawa district, such as those of J. R. Booth, McLachlin Bros., W. C. Edwards & Co., Gilmour & Hughson, the Shepard & Morse Lumber Company and others.

As deals took the place of timber, so lumber is gradually supplanting deals for export. The sawn white pine exported is manufactured by Ottawa Valley and western mills, and shipped from Montreal as being nearer the point of production.

This change from the manufacture of timber hewed square in the woods, to the bringing of it to the mills in the form of round logs, has effected a very important saving of the very best material, formerly left in the woods in the form of chips cut in the process of squaring the trees, which were useless for any purpose except that of spreading the vast forest fires that have destroyed many times more timber than ever was cut with the axe.

The change from sailing vessels to steamer for ocean carriage has necessarily affected Quebec as a shipping port for wood goods, as steamers charge no more on freight from Montreal than from Quebec, and, as a matter of fact, prefer the first named port as offering more favorable conditions. Montreal also has the advantage of being nearer most of the mills that now produce pine lumber and deals,

Square Timber Camp—Showing Camboose and General Layout.

Square Timber Cutting—Marking the Fallen Tree.

as they are generally west of it, and the freight by barge or rail is much less than to Quebec.

Thus the export business in wood has changed from hewn timber made with the axe and floated down to Quebec in rafts, with a limited proportion of deals sawn at Quebec mills or floated to Quebec from Hawkesbury or Chelsea on the Gatineau to a small export of timber from Quebec where hewn timber can best be handled on account of the facilities given by the tides and an export of sawn lumber, including some deals from Montreal. A considerable proportion of the reduced quantity of timber now shipped comes from the United States, which is the source of all the oak exported, and most of the elm. The supply of oak suitable for export is exhausted in Canada and the supply of elm is rapidly tending in that direction. Another change is that of shipping by steamer instead of by sailing ship.

#### The Course of Timber Prices

The course of prices paid at Quebec for square and waney timber is of much interest. In the settlement of an old account between a Quebec merchant and an old lumber manufacturer, a raft of square pine, 70 cubic feet average, was valued at 3d (5c) per foot. In recent years, as shown by the accompanying table, the price went as high as 90c per cubic foot.

The following table, prepared by the supervisor of Cullers at Quebec, gives an interesting idea of the decline which has taken place in the timber trade of Quebec during the past two years. For the

first five months of the year 1911 it is shown that waney white pine was exported to the extent of 307,240 cubic feet. During 1912 the exports for the corresponding period were only 124,880 cubic feet. During the present year the total exports of waney pine timber for the first five months have dwindled down to the remarkably low total of 5,720 cubic feet.

The total figures for waney pine and other timbers measured at Quebec under date of June 4th are as follows:—

|                      | 1911       | 1912       | 1913       |
|----------------------|------------|------------|------------|
|                      | Cubic Feet | Cubic Feet | Cubic Feet |
| Waney White Pine ... | 307,240    | 124,880    | 5,720      |
| White Pine ...       | .....      | 80         | 40         |
| Red Pine ...         | 6,240      | 1,320      | .....      |
| Oak ...              | 760        | 1,320      | 560        |
| Elm ...              | 25,840     | 43,080     | 29,480     |
| Ash ...              | 80         | 120        | 840        |
| Birch and Maple ...  | 58,800     | 38,640     | 47,680     |

The first raft of square timber floated down the Ottawa River left the mouth of the Gatineau River on the 11th of June, 1806 and reached Montreal in twenty-eight days, having run the Long Sault and Carrillon Rapids in safety, passed Montreal by the Back river and down the St. Lawrence to Quebec. Before nine years had passed, the timber trade of the Ottawa was firmly established.

#### The Building of a Raft

In early days, as in later years, a raft was composed of a number

| Year    | SUPPLY     |           |            | EXPORT           |            | STOCKS    |            |            | Current Prices, end of year<br>cents per cubic foot |       |       |       |
|---------|------------|-----------|------------|------------------|------------|-----------|------------|------------|-----------------------------------------------------|-------|-------|-------|
|         | Square     | Waney     | Total      | Square and Waney |            | Square    | Waney      | Total      | Square                                              | Waney |       |       |

Square Timber Cutting—Scoring the Sides.

of cribs, which were built up as follows: A frame of the desired dimensions was made of small flatted timber, bound together at the corners by wooden pegs and often further secured by withes, then the longest and straightest timber was selected for the bottom of the crib. Stability was then secured by placing on the top of several pieces of traverses (being small flat timber placed across the timber in the frame and fastened to it also by withes), four or five rows of square timber, which latter was known as loading sticks. By the weight of these the timbers in the bottom of the crib were kept almost solid in place, nevertheless it was not unusual when running a rapid, that striking sunken rocks, the bottom sticks would slip and the crib be wrecked. As the cribs were completed they were secured together, by withe ropes, in oblong form, and were then termed a raft.

Until 1873 the prices quoted for squared waney timber were in pence currency, 3 pence being an equivalent to 5 cents, but for convenience of comparison the currency prices in the accompanying table have been reduced to cents and decimals of a cent. In many parts of the United Kingdom notably Glasgow and London, Canadian white pine is commonly known as yellow pine. The price as seen from the table, rose gradually, sometimes rapidly, with slight occasional set-backs until in 1911, waney timber was bringing 83 to 95 cts. per cubic foot. Square timber 30 cts. to 55 cts. During the present year, a most remarkable absence of demand for Canadian square timber has developed in Great Britain, as a result chiefly, it is believed of the keen competition of Siberian pine. A few operators in Ontario who expected to make a good profit by cutting square white pine timber for the English markets, find themselves to-day with unsaleable stock on hand, which is being kept in the water indefinitely, pending an improvement in the English market.

A special sitting of the Dominion Board of Railway Commissioners will be held at Ottawa, on June 16th to consider the adoption of reciprocal and average demurrage by Canadian railroads.

Square Timber Cutting—Finishing with the Broad-axe.

### How Mahogany is Measured

In the Canada Lumberman of June 1st an article was published dealing with the manner in which mahogany logs are measured at London, England. One of our readers writing to the Canada Lumberman regarding this article says:—"The rule by which mahogany logs are measured has two measurements stamped on it. On one side are the usual 24 inches to the foot, but on the other side 21 inches are shown as the measurement, thus allowing 3 inches in 24. In other words there is an allowance of  $1\frac{1}{2}$  inch to each foot. If, therefore, a log measures, say, 12 feet long and is exactly 24 inches square, it will be measured by the Liverpool broker as 21 inches square. Besides this cut in scaling, allowances are made by the scaler for knots, splits, worm-holes and other defects. We believe we are correct in saying that the large purchasers of mahogany logs on the Liverpool market during recent years are of the opinion that the brokers are not so liberal in their allowances for defects as they were a few years ago. The broker's sale measure originated in Liverpool and the London brokers did not adopt this scale of measurement for many years after this rule was established in Liverpool. The Liverpool auctioneers dispose of more than 75 per cent. of the total imports into England of African mahogany.

"It may be of interest to you and the readers of your journal that this company (The Dominion Mahogany & Veneer Company, Limited, Montreal West, P.Q.), import a large percentage of their logs direct from West Africa. Our Liverpool office is in No. 1 Bixteth St. The shipping points in West Africa include the French Ivory Coast, Gold Coast and Nigeria."

### Creosote as a Preservative for Posts

An interesting bulletin upon wood-rot has been published by the Forestry Branch of the Department of the Interior, special reference being made to the preservation of fence posts from decay. Creosote, a "dead" oil of coal tar, is perhaps the best preservative for this purpose, says the bulletin, as it does not dissolve out of the treated wood when in contact with moist earth. It costs from eight to fifteen cents per gallon. After the posts have been well seasoned by peeling the bark and stacking them in loose piles in the open air for several months, the creosote is applied. This is done by the brush method or the open tank method. By the brush method, the creosote is applied like a coat of paint to the lower portion of the post, up to a point 6 inches above the ground line, the creosote being first heated to 180 degrees Fahrenheit. Two or more coats may be applied, time being allowed between each application for the creosote to sink into the wood. The open tank method is more expensive, but secures better penetration and gives better results. The creosote is heated to boiling point in a metal tank. The posts are placed in the boiling liquid for about five hours, after which they are immediately transferred to another tank of creosote, or else the fire is extinguished and they are allowed to remain in the tank until the creosote becomes thoroughly cooled. The preliminary heating drives the air out of each wood-pore. When the posts are allowed to cool in the creosote, a partial vacuum is created in each pore which draws the creosote into every fibre. Poplar posts which originally last but three to four years, after the above treatment will last twenty years. The same applies to all other tree species in Canada. The essential thing is thorough seasoning before treatment. Further information on this subject can be obtained on application to the Forestry Branch at Ottawa.

### An Interesting New B. C. Plant

The Genoa Bay Lumber Company, Limited, of Cowichan Bay, B.C., has its new plant in operation. The plant is modern in every respect and has a capacity of 125,000 feet per day. The mill frame is 40 x 300 feet; engine room, 16 x 72 feet; boiler house, 52 x 74; filing room, 22 x 80. The machine shop is 22 x 200 and is modern in every respect and is driven by electricity. The power plant equipment consists of four horizontal return tube 72 x 16 boilers, one 13 x 16 twin engine, driving the head saws; one 24 x 30 engine, driving the main part of the mill; one 12 x 14 high speed engine, driving the electric plant. The mill is equipped with double circular head rig, 24-saw Pacific Coast edger, Wilkes gang, Berlin 8-inch resaw, trimmer, nigger, twin engine, feed, power networks, steam cant flipper, live rolls, etc.

The planing mill is 80 x 48 and is equipped with Hoyt matcher, Hoyt four-side machine, inside moulder, Stetson-Ross ready sizer. The planing mill has a blower system. The mill can cut up to 100-foot lengths and is fully equipped for taking care of export business as well as local. Later on in the season a ferry slip will be installed, enabling the company to make shipments by rail, connecting with the Great Northern Railway and Canadian Northern Railway. The company propose opening retail yards at Union Bay, on the Saanich Peninsula, connecting with the B. C. Electric Railway, running to Victoria, and at Cardova Bay, near Victoria, and will also ship considerable to the Victoria market by scows.

# The Motor Truck as a Logging Engine

Gasoline Logging Makes Interesting Progress in Connection With Woods Operation — Loads, Carries, Unloads and Ships the Logs

Motor trucks occasionally invade the forests and bring out loads of timber but rough logging is a branch of the lumber industry in which little is heard of the motor truck. Having revolutionized retail deliveries by building motor trucks to meet the special requirements of the lumber trade, motor truck manufacturers are giving greater attention to other fields of work in this industry.

While the logging locomotive is probably immune from any inroads upon its usefulness by gasoline trucks, enough progress has been made in gasoline logging to promise a wide field of activity and warrant serious consideration of the power truck from the standpoint of what it has actually accomplished.

Furthermore in the logging work to which the motor truck has already been assigned, it has not only proved to be thoroughly practical and economical but it has been the means of developing one branch of the industry that has suffered from expensive methods. This was brought out plainly in the work of a motor logging truck which was built by the White Company, Cleveland, Ohio, especially for Theodor Kundtz, of Cleveland, who has had a five-ton log tractor at work for nearly a year in the woods near Brecksville, in the southern part of Cuyahoga County, Ohio.

On a small scale, this truck has done the work of the logging locomotive, the skidder and the donkey engine. In addition, it loads the truck automatically by its own power and then transfers its load from truck to flat car by the same power.

While there can be no direct comparison between the work of this single truck and the enormous tonnage capacity of log trains, a careful analysis of the work, bearing in mind that it is merely a single unit, reveals interesting possibilities.

In order to appreciate the conditions under which the truck has been working, a few characteristic features should be mentioned. It is built with a six-cylinder motor and in all other respects, except the wheels, it is the standard design of the White Company's five-ton truck. The front and rear wheels, however, are special. The driving wheels are built of steel, with a twenty-two inch tread having the usual corrugated surface of tractor wheels, and enabling the truck to run over rough surfaces and soft ground such as will be encountered on any timber tract.

Experience has shown that the truck can get over the ground with its full load in practically all seasons of the year. Even in winter it has done its work on hard or frozen snow-covered ground. The driving effort is greatly multiplied by the use of a gear ratio much lower than used on trucks in normal service. This limits the speed to from 7 to 10 miles per hour.

A power winch, driven off the transmission of the truck, is built amidships and controlled by a lever similar to the brake and gear shifter. Loads as high as six tons have been carried without difficulty, although the rated capacity of the truck is five tons. By proper use of the power winch and a simple scheme of rope and chain tackle, the crews have loaded 1,000 feet of lumber on the truck in twenty minutes. Furthermore its remarkable capacity for loading is used in many ways,

White Log Tractor—Loading is a simple job.

notably in the salvage of fine specimens of hardwood which frequently fall into ravines and cannot be recovered except at the prohibitive cost of installing donkey engines and moving them from place to place, or else diverting the use of horses from more systematic and profitable work.

Fine grades of hardwood—particularly the best specimens of oak, walnut, hickory and ash—have an important part in the logging work of the owner of this truck and the driver is often called upon to take his crew into the most inaccessible places to bring out fine specimens which have been purchased for specific cabinet work.

The facility with which the truck has drawn heavy logs out of ravines five and six hundred feet deep, is appreciated no less than its capacity to load and haul rough logs on a heavy tonnage basis. The customary haul is approximately five tons for an average distance of about six miles. On arrival at the railroad siding the rapidity with which the truck drops its load and pulls the logs upon freight cars by the use of its power drum and cable, produces a great saving of time and labor.

Even when there are no log cars on the railroad siding, this loading efficiency is maintained. The logs ordinarily are dropped on the ground and then rolled up on the cars. If no cars are available, the crew simply drops the load and returns to the woods, knowing that the loading operation can be done quickly by the truck when the cars are ready. The truck therefore has no idle minutes.

White Log Tractor—Showing loading mechanism.

Off to Market—A Loaded White Log Tractor.

# The Retail Dealer and His Problems

The Dealer and The Contractor—Stopping the Leaks

## The Retail Lumberman and The Contractor

By T. H. Morrow\*

It is not my intention in this paper to undertake to tell the retail lumber dealers how they should handle the business derived from the sale of material to contractors, but, instead, it is my desire to call attention to certain important points which stand out as most essential in connection therewith.

In the first place, there are certain abuses being practised both by the dealer and the contractor which should be discontinued, and must be, before either party will ever reach a degree of success commensurate with his time, talents and amount of capital invested. To be more specific, the abuses referred to may be summed up as follows:

First, on the part of the dealer—Paying commissions to contractors; going on contractor's bonds; selling on open account to contractors who are not worthy of credit; failure to demand settlement on each job; encouraging customers to give work or let contract to transient or outside parties, when the home contractors can do the work at a reasonable figure; encouraging customers to believe that contractor's figures are too high, when same are not; giving one contractor an advantage over another in the way of price, grades or delivery of material; giving information to one contractor concerning the private business affairs of another; failure to keep proper account of all material on each job; lack of co-operation.

Second, on the part of the contractor—Unwillingness to pay dealer a reasonable profit; bidding on jobs beyond his ability to handle; taking work too cheap; failure to settle in full for each job; ordering out more material than is required; improper care of material to be returned; disloyalty to dealer who has helped contractor succeed; advising customers to ship in sash, doors, etc. when same can be bought from local dealer at a reasonable profit; playing one dealer against the other; lack of co-operation.

To elaborate on the above would take entirely too much time, and your attention is called only to the most important points.

Paying commissions to contractors—Regardless of the fact that it may be termed a time-honored custom, is nevertheless a vicious practice, absolutely profits no one, and only results in the dealer prostituting a legitimate opportunity to get returns on his investment.

Going on contractor's bonds—Because the contractor favors the dealer with his business is no reason why he should ask or expect the dealer to assume an obligation with no chance whatever for profit. There is no argument in favor of dealers signing contractors' bonds, and every reason against it. Those who doubt the above statement or have not had sufficient experience along that line can very easily become enlightened by asking any retailer who has "been through the mill," or by signing a few bonds just to try out the proposition. The reliable and trustworthy contractor, if not so situated financially as that his signature alone will be acceptable, can make the required bond through a bonding company, and one who cannot will certainly give some good man a lesson to be long remembered if he takes on the risk. Every time a dealer signs a contractor's bond he simply aids in creating more competition for the reliable contractor to whom he always looks for a prompt settlement of his account.

Selling on open account to contractors who are not worthy of credit—This is not only unbusinesslike, but worse still; it encourages the builder to place confidence in a man who will mistreat him and practically puts out of business the contractor who pays his bills. The whole country to-day is flooded with irresponsible contractors who go from town to town, demoralizing the business of men who have spent years in establishing themselves in the profession, and no one but the retail lumber dealer is to blame for such condition, because he has been too eager to sign the bonds of and sell without any security whatever to men calling themselves contractors but who, if thrown on their own resources and forced to earn a living as first-class mechanics, could not draw the wages of an ordinary hatchet-and-saw carpenter.

Failure to demand settlement on each job—Frequently contractors depend on the dealer to assist them in keeping up with their business, and where there is more than one job going on it is necessary to know the cost of material for each. By having a separate ledger page for each, the dealer can, with but very little extra trouble, keep the contractor posted concerning the same. This not only assists him, but will simplify matters for the dealer, if it should become necessary to file a lien or enter suit. When each job is finished settlement should be made for same and will be if the contractor is of the desirable kind; if not you are going to get in deep water if you allow him to get be-

hind, with the expectation that he will make enough money on the next job to pay up the old balance. If this be the case, he is doing one of two things—either operating on your capital or taking work too cheap, and you know what the final result will be.

Encouraging customers to give work or let contract to transient or outside contractors when the home contractors can do the work at a reasonable figure—This is one of the unpardonable sins on the part of a dealer, and if his competitors are live ones he had just about as well begin to arrange to move to another town. Further comment should be unnecessary.

Encouraging customers to believe contractor's figures are too high when same are not—Why a dealer should pander to the whims of a customer in such a manner is beyond understanding. However, it has been done on several occasions, and to the serious inconvenience and financial detriment of the contractor. A dealer who will do such a thing is bound to lose not only the respect of his customer; but also the friendship of the contractor.

Giving one contractor an advantage over another is the way of price, grades or delivery of material—This is a commercial outrage and would not be tolerated even among savages. If a man's business is not desirable, and cannot be made so, is it not better to tell him so frankly and let him have an opportunity to deal where his confidence will not be abused? If the dealer will exercise a little moral courage in such matters he will come out of same with a great deal more self-respect.

Giving information to one contractor concerning private business affairs of another. Sometimes a dealer does this unthinkingly, which is bad enough, but to knowingly betray the secrets of a contractor to his competitor is no better than to rob him of his earnings, which is the ultimate result. The above applies where both parties are customers of the same dealer.

Failure to keep proper account of all material on each job—Where contractor is depending on dealer to do this he has a right to expect that same be done correctly, and a failure to do so frequently works a hardship on the contractor and occasions loss to him which otherwise could have been prevented.

Lack of co-operation—Many a man possessing the elements of success and worthy of confidence has failed to succeed as a contractor for no other reason than lack of intelligent co-operation on the part of the dealer whose business he would have assisted in building up. In numbers of instances we find where the contractor has been unable to collect final payment from the owner, which condition left him without means to pay his material bill. This means that a loss must be borne by someone, and as the contractor has nothing left but good intentions, and through ignorance of the law failed to protect himself, the owner cannot be forced to pay; it is the same old story over again, the dealer is the loser. All of this loss and worry could have been prevented had the dealer had a plain understanding with the contractor and owner to see if the contractor had taken the necessary legal precaution to protect himself; in other words, the dealer frequently loses by not taking the precaution to see that the contractor is sure of his money before putting out any material. By cultivating a spirit of confidence and frankness, each party will profit and the little misunderstandings which are bound to arise in the ordinary course of business will be easily and pleasantly overcome.

Having discussed the ten sins of omission and commission on the part of the dealer, we should refer to those of the contractor so that the subject can be viewed from both standpoints.

First on the part of the contractor we have:

Unwillingness to pay dealer a reasonable profit—It is unfortunate that some of our contractors should fail to realize that it is necessary for the dealer to conduct his business on a profit paying basis if he desires to continue; however, we have that class to deal with occasionally, and unless they can be convinced of the folly of their way of thinking, it would be better to do without their business.

Bidding on jobs beyond his ability to handle—Occasionally we have to deal with a contractor who has no idea as to the limits of his ability and is ready and anxious to make an estimate on every job that comes up, regardless of size or amount of machinery necessary to handle same. If he should be awarded the contract it would only be a question of time until someone else would have to step in and finish the work. If he should not be considered favorably by the architect his bid might be used to beat down some reliable contractor who only figured on a reasonable margin of profit to begin with. This works a hardship on the latter and eventually affects the dealer.

Taking work too cheap—This epitaph is written at the head of so

\*Address delivered before The Lumbermen's Association of Texas.

many profit and loss accounts that are dead and gone and whose makers have long since departed. Men who might have succeeded as contractors had they realized the necessity of taking work only at a profit have not only made financial wrecks of themselves, but worse still, have turned what would have been a year of profit for the dealer into one of loss. The loss of one account in the present day of small margins and increased cost to sell, may represent the net amount of profit on a whole year's business.

Failing to settle in full for each job—When a contractor, for any reason, gets in the habit of standing off settlement in full on each job he is playing with fire and eventually someone will get burned. To do this evidences one of two things; either inability to pay or lack of proper regard for his obligations, and in either case it might be to the dealer's interest to begin to look around, as he may later become interested in knowing where his money is coming from.

Ordering out more material than is required for the job—There are two reasons for this; one is carelessness, the other is so that the best may be picked out. Either way works a hardship on the dealer. A little tact will overcome the former, but it will take moral courage for the latter.

Improper care of material to be returned—This will cause a loss to someone, and same should rightfully be borne by the contractor. There is no excuse for the above, and when a contractor returns material for full credit it should be in the same condition as when brought on the job; if not, would the contractor be willing for that same material to be sent to him on another job where the architect's specifications called for only first-class material?

#### Disloyalty Destroys Trade

Disloyalty to dealer who has helped contractor succeed—Assuming that the dealer in this instance has by patience and co-operation helped and the contractor to gain a foothold and establish himself, and that there is no good reason on the part of the contractor to trade elsewhere, is it fair for him to allow himself to be enticed away or, to gratify a whim give his business to another dealer who is not entitled to same? The inevitable result will be the loss of confidence and business friendship of the man who stood by him in times of need, and in future he will have to compete with another and probably stronger contractor who has behind him that moral support of the dealer who helped him succeed.

Advising customers to ship in sash, doors, etc., when same can be bought from local dealer at a reasonable profit—The disease of catalogitis is not confined altogether to the female side of humanity. Even contractors are at times affected with it. Physicians of the school of commerce have labored patiently in the laboratories of financial research to discover some germ which would counteract the deadly effects of this parasite, but so far their success has been limited only in such patients as are fully possessed of sound reason. Education is about the best remedy so far discovered. If the contractor will give the dealer an opportunity it will not take him but a few minutes, if he is a good business man, to make comparisons and show where it is to their mutual interest to buy at home, and especially from a man who contributes out of the profits of his business to the upbuilding of the community, and every year pays taxes in order that the contractor as well as himself may have a place to educate his children and that he may enjoy other comforts and conveniences which could not be if we all sent our money away from home.

Playing one yard against the other—Of course, both dealers soon find this out, and naturally each will give the advantage, if any is to be had, to the contractors who are loyal. Under such circumstances the contractor in question loses the confidence of both dealers and has the support of neither.

#### Co-operation an Important Factor

Lack of co-operation—Assuming that the dealer is a good business man and has any sense of appreciation whatever, it will certainly be to the contractor's interest to be loyal to him. Sometimes loyalty stands for more than independence. There are cases on record of where men have died in poverty and rags rather than surrender, as they thought, their independence. Such determination is to be admired, but what did they gain? If you will refer to each and every charge made herein against both the dealer and the contractor it will be plainly seen that the trouble could have been prevented or overcome if that spirit of co-operation which is so essential to their mutual success had only existed.

Co-operation of the interested parties is absolutely essential to the success of every undertaking. You will always find it to be the underlying principle of every victorious army; nations build their greatness on its never-dying virtues, and we find it exemplified in every successful association, partnership or undertaking from the building of King Solomon's temple down to the present day.

The millenium of commerce may not come in this or even the next generation, but as sure as the sword shall be beaten into the ploughshare and the spear into a pruning hook, so sure shall men learn that the highest and best and all that is worth having in life shall be gained by co-operation.

## Increasing the Profits by Stopping the Leaks

The idea of economy is distasteful to the average person. It is associated, in his mind, with deprivation of things that he wants or perhaps needs. It conveys the idea also of being stingy, parsimonious, and those who practise these habits as being "cheap skates" and all that sort of thing that savours of opprobrium and meanness of disposition. Considering it in this way is to regard it in its extreme phases, just as we think of a spendthrift in contrast with one who is careful in his expenditures. But real economy is conservation, without impairing the natural process of growth, and this is what is meant in its application to the conduct of a business. An old Hebrew sage had observed that "withholding more than is meet tendeth to poverty." And so the keeping out of a business what it needs—starving it, as it were—will yield scant returns.

It is a favorite saying of mine, as you may have observed, that we get out of a thing just about what we put into it, with the possible exception of mining and chicken raising. But it holds good nevertheless in our social relations and in our business pursuits as well. Economy in operating a business has always received the close attention of those who have attained success, but not until within late years have they been compelled to study and practice the science of economy as it has been evolved by those who sought to economize without impairing the efficiency and production of the work, and the constant aim now is to increase the quantity and value of both.

The old idea of economy that was generally practised was to cut down the wages of employees, and the quality of service and production. This did not require much study. They followed the lines of the least resistance and in this way they shifted the burden on to the employees and the public in general. But it is harder to do this nowadays because of the restrictions that have grown out from the practice of this false policy. The growing intelligence of the people demands better service, increased wages and the continuance of a high standard of production, and in order to comply with these demands the business interests of the larger character are employing the keenest minds in the country to work out a practical solution to the problem. These men are going down to the details of the lowest work and from there upward through those of every department and studying how to reduce the number and form of unnecessary actions, the economizing of materials, the general elimination of loss of power and the direct application of every ounce of energy to the objects and work in hand, all resulting in high efficiency and low cost.

#### Retail Lumbermen Are Learning

The retail lumber and coal men have only within late years begun to give their attention to this subject of economy in operation and it may be said that comparatively few of them previous to this time have thoroughly understood the details of what it cost them to do business. Even to-day there are a good many who don't know in a definite manner what it is, but all in general are discovering, however, that their expenses are increasing while their margin of profits is going the other way. This has created the important question of how to bring the profits up to a corresponding ratio with what it costs to carry on the business. There are a number of ways in which this could be done, but at present, they are hardly to be considered practicable. The elimination of superfluous yards and a larger growth in a time through the changes that are going on to effect this end, but in the meantime, the retailers can individually do much to improve their present conditions in this respect.

There are more or less leaks in the business of every yard and the larger the yard the more there are, although there are some small yards that have proportionately more than the larger ones, because of the slack system of looking after matters of detail. Some dealers never do find them because they don't realize they have any. Others know there is something the matter, but won't take the trouble to hunt it up, while there are a number who don't know how to stop the leaks if they should find them. About everybody considers leaks as a part of the business, and bunch them up in the profit and loss account.

Of course there are a few leaks that cannot very well be helped. You cannot do a business, such as running a lumber yard, without incurring some losses in various forms, and the thing is to know them, and watch closely to reduce them to the lowest possible minimum. It would be not only interesting but profitable for every dealer to make out a list of all the leaks, little and big, that he can think of that he has reason to believe are possible in his business. It would be a good idea to put them down in a concise and typewritten form, and have it before him on his desk, where it acts as a constant reminder to stimulate a closer watchful care in doing what he can to minimize them.

I have thought of a few that in a general way cover many more.

For instance, there is the loss from lack of proper care, and the breakage of stock. I have often written on this subject, but it is one that will bear repetition because of the habit we all have of ignoring it, and yet it is a leak that is constantly in operation. It requires several years of experience in running a yard to know how to take care of a stock as it should be, and none realize this so much as the dealer who is operating his own yard, because after a few inventories he can see the importance of it. It means, however, a good deal more to a system of line yards, because the amount lost in this way from each yard, comparatively small though it may be, aggregates a considerable sum from the whole. There is nothing in a lumber yard stock, but what has cost money to buy and put it there, and there is nothing we are so liable to forget, and ignore in our actions. We need to have this fact drilled into our minds and those of our employees, the latter especially, as it is natural for them to be careless and slack in their observing it, for whatever is a loss to the owner don't come out of their pockets. It is the business then, of the manager or owner, to have it constantly in mind himself and train his employees to do the same.

One of the first things I told a new hand that I was breaking in, was that everything he handled cost money and I wanted him to handle it as though it was his own. Of course, I didn't expect him always to do as I would myself, but my purpose was to impress him with this idea at the start as one of the things I would expect of him. In the unloading of lumber and millwork from the cars, there is nearly always more or less damage from careless handling before it is delivered in the yard. Even in common lumber, the man on the load lets it drop in a way that a weak piece of dimension or board strikes the edge of another and is broken in two, and when it gets to the yard is laid aside, and may be sold or not. Ceiling, flooring, and light stuff are very easily damaged. I have seen this class of stuff loaded so on a wagon that the fore wheels would dig into it when turning, damaging it perhaps from 25 to 50 cents. I have seen two-inch finish so marked by the wheels and split by careless handling as to cut down its value when it come to be sold. I have seen timber broken in two when being loaded. I have seen doors gauged, and windows broken, casing and base split and moldings damaged, just because of a little lack of care or ignorance in knowing how to handle them. I have seen stock lie rotting at the bottom of piles, because it took a little extra work to take it out and replace with new stock. Several dollars are lost each year through letting old stock lie too long at the bottom of the piles. Those who handle tile know that a good deal of the breakage may be prevented by proper piling and careful handling. The losses from being careless with their cement and plaster sacks would pay the postage expense of many dealers, who overlook such a small detail. Where there is a large stock piled out in the open, there is considerable loss from the warping and twisting due to the effect of the rain and hot sun in summer. Of course this is unavoidable, but it can be materially lessened if the piles are watched closely and the tops of piles turned over every day. It is the same with the loss of breakage from high winds. It cannot wholly be helped, but a good deal can be saved by tying down with wire the tops of the higher piles, as I have seen done by some careful dealers, and omitted by a good many more. There are other things about the care of stock that I have passed over which any dealer may discover if he studies the subject and looks for them in his own yard. We are more apt to notice carelessness in the conditions of another man's yard than in our own, and I don't pretend to say that I am free from it either.

#### Care of Buildings and Tools

It has been one of the characteristics of retail dealers to be careless about keeping up their buildings and working implements. I have known a good many who kept a stock of paints for sale and yet were extremely chary about using it on their own premises. This, however, has been remedied somewhat in the process of change and I think dealers generally now have more regard to the appearance of their yard buildings than formerly, but they do it more, I guess, for the sake of the looks than prevention of decay. I have seen well painted sheds whose foundations were rotting in the ground where they had sunken and I've no doubt but there are many sheds to-day whose roofs are not what they ought to be because of the more or less little leaky spots in them, and there is a probability that some may cause a leak in the yard receipts because of the damage done to stock of a higher value. A leak in my roof once caused me several dollars damage to a lot of hardwood flooring.

The running gears of a wagon will last longer if kept well painted, and so will the harness if oiled several times during the year. Dry weather and dirt are destructive to leather. A defect in the workings of the scales may leak out the value of several tons of coal in a season. There is nothing about the yard in the way of implements that require greater watching than a set of platform scales. Neglect in looking after tools is the cause of another little leak under this head. When left lying where they were used last, or loaned and not returned it often means another bill at the hardware store. When a farmer goes to the bin for a jag of coal see that the scoop is not in his

wagon as he drives off the scales. Where there are several employees in a yard, one man should be given the special duty of gathering up the tools at night and putting them in the place reserved for them. Otherwise, no one will be particular about picking up things that another has left lying around.

#### Economy in Arrangement

There is in many yards an unnecessary loss in the economy of operating by reason of the poor arrangement of both buildings and stock. There are few who, if they had to build over again, but who could improve on their present arrangement, but it is difficult to effect such a change and so they let them be as they are. All the same, however, it is a constant drain on their time and efficiency. I have seen double deck sheds without a platform to walk on to get stuff from the upper deck. They used a short ladder or saw-horse to stand on in putting up the stuff and getting it down. I always feel like saying something when I see this. At two different places we bought yards with sheds of this character, but they didn't stay long that way under my management. I have often thought it strange how some men can be content to get along with unhandy arrangements that are a waste on their time and energy. They are adjusted to it and have no realization of what they are wasting. If they were to put in a new yard somewhere else, they probably would follow along in the same plan they were used to, and thus it is, that habit often makes for poor economy.

I have seen yards where the manager would have to tramp through the mud to the lime house at the far end to get a nickel's worth of lime for a customer, instead of having a place connected with the office where he could keep a barrel open to peddle out in such small lots, and also with cement and plaster, and such things in packages that have to be broken. I used to have a room of this kind where I kept such items, even to having a loose bunch of shingles, and many a time have I enjoyed the comfort and convenience of such an arrangement. I had to lay out two yards before I got the arrangement of my stock to suit me, and after a few years, I believe I could have improved on that. In a large yard where there is plenty of help the need of economy in this respect is not so apparent, but in a one-man, or a two-man yard it cuts a good deal of a figure in the work. The year or two that I did all the work in both office and yard taught me a great lesson in the economizing of time and labor, and it made me continually on the lookout for "short cuts" in doing things. I think that a dealer has to have this kind of personal experience in order that he may really know how to arrange the stock so as to save time and labor in putting it out to the customer. One man can do a lot of business in a day, if it will come, one customer close after the other, but when they come in "bunches" as they frequently do in a busy season, he can do two men's work if his stock is arranged right and if he steers his customers in the right alleys for what they want. It is economy at all times to have an extra wagon, for in busy times the team can be kept going without having to stop for loading up, or unloading when taking stuff from the car. It is economy also to use the wide tire wagon when ground is soft. After one has had an extra wagon for awhile he will wonder how he ever got along without it, or it comes handy in so many ways. It is economy too, to have a pair of shafts so as to use but one horse in delivering coal and small lots of lumber. If there is much town delivery a lighter wagon is preferable for these smaller quantities.

#### Economy of Short Cuts

Now, I am going to speak of a kind of economy that is not generally practised, nor even thought of by the average business man. Sometimes we hear it said of a certain man that the reason for his ability to turn off work is, that he makes every move count for results. As we speak of a machine, there is no lost power in his movements. This is not done without thinking, but is a matter of study. The more natural way is the longest way round to the object to be gained. The "short cut" to do things is the result of thinking and experiment. This economy in movement has attracted the attention of scientific men working in the interests of the great manufacturing concerns of the country. It is also studied and used by experts where large numbers of people are employed, perhaps some of you have read of the series of experiments tried with a gang of ore shovelers with the view of getting each man to reduce the number of his motions. It was successful according to the intelligence of the unit, and there was an increase in the amount of work done and with less expenditure of energy in doing it. The pay of the men was according to what they did, which was an increase on what they formerly received. A like experiment was made by a large contractor of brick work, who studying the motions of laying a brick and found that it took just about so many on the average, sought to reduce them, and contrived a plan that succeeded in reducing them by nearly one-half. The result was, more brick laid and done easier than by the old way.

Now, the handling of lumber is one of many motions, and there is nothing very easy connected with the lightest part of the work. When you and I first commenced to handle lumber it tired every

muscle in our bodies and the first week or two, we hardly did more than half what an experienced man could do, but we thought we earned every cent of our day's pay. In course of time, however, we got so we could handle and pile as much, and as well as the average, and what was the reason? Simply because we made less motions, and these more effective. I have piled a good deal of lumber, and being not a physically strong man, I studied how to do it as easily and rapidly as possible. I have, single handed, piled long timbers, and plank, and done it without any particular straining, but I used my wits instead of "bug-a-bugging." With this "down at the bottom" experience, I feel competent to tell how lumber can be handled and piled the easiest and quickest way. Since that time, I never have seen men at work piling, but what I have noticed how they did it, and with

few exceptions, I could have shown them how to save their strength and do the same, if not more work. If the employee is shown how to place a piece of lumber on a pile with fewer movements than he habitually does, his natural gait of working will enable him to pile more lumber, with a resulting economy to the yard. And where there are several men employed the aggregate of saving would amount to something worth while in a year's business. It will be more still if this economy of movement and short cut methods is extended into every part of the work both in the office and outside in demonstration of the thing I have covered, but if you will make this subject a matter of study, you will have it better than I could show you. There are several other leaks that I will discuss at another time.—C. H. Ketrledge, in the Mississippi Valley Lumberman.

# The Importance of Systematic Delivery Methods

By a Lumber Association Secretary

In the larger towns and cities the matter of delivery not only becomes quite an item of expense, but during the busy season it is a source of considerable worry and trouble. Every contractor buying a bill of stuff wants it delivered at exactly the time he needs it on the ground, and quite commonly he wants it on the ground by the time his men are ready to go to work in the morning. Each contractor is rather impatient in this matter, too, and gets in the habit of thinking himself as the most important contractor, even if he is not the only one you are expected to serve. Half a dozen or a dozen contractors wanting service at the same time naturally leads to wrangles and to worry unless the yard man is carrying a mighty heavy equipment of teams and a young army of men to load them out and see to the handling of the lumber.

There is to be found in the rounds among the yard men a remarkable difference in the handling of this matter of delivery. One man talked to, for example, has only two teams, yet he does a volume of business equal to that of another man who has a half dozen teams, and during the busy season he has to employ outside teams to assist in making deliveries. The man with only the two teams was asked how he does it, and replied simply with the word "system." He says that they handle their delivery systematically, waste no time in idle runs and send no wagons out with half loads on them. The work for every wagon is figured out carefully in advance in the morning; it starts out with full loads, so arranged that the distribution can be made in the shortest practicable time.

There is evidently quite a lot in this system idea, and there is no question but, by figuring over the matter of deliveries carefully and handling it with a comprehensive system, one can save time and make the same teams and men perform better, and handle more stuff. Moreover, every man should make it a point to concentrate for a while, at least, on this subject of deliveries, see how much waste energy is involved and what can be done to eliminate it.

## Featuring Action

System in delivery for the sake of greater efficiency from the equipment and working force is a great thing, but it is not the only factor involved in this matter of making deliveries of lumber and mill work. For example, there are people who make a strong feature of getting quick action, and use this in their advertising to help get business. Such men do not follow the policy of having nothing but heavy two-horse wagons to make deliveries, refusing to send out a one-horse wagon with a half load. They figure that it is money in their pocket to have some extra equipment in the way of horses and wagons, even including special horses and wagons for light orders because this helps them get business and get more for their stuff. Usually the man that wants something in this country wants action, and if he knows a certain yard will give him quick action while at another yard the prices may be a little lower, but the delivery are a bit uncertain, he will often pay the higher price and get his action in delivery.

One well-known concern uses this idea as quite a strong feature and makes a boast that it can deliver an order for lumber anywhere within the city limits within half an hour's time after the order is received. This same idea of getting action is embodied in their planing mill work and they will take an order for an entire set of frames for an ordinary house and agree to deliver them at the house within twenty-four hours.

Here we have a picture of what might be termed two extremes in the matter of deliveries. One concern declining to use a one-horse delivery wagon, insisting on making deliveries when they have loads and can make up those loads to get efficiency out of their delivery system. The other makes a feature of the delivery to accommodate and humor the customer, figuring that it costs a little more, but they charge more for their stock and even things up in that way.

And now comes the motor truck to add a little complexity to this problem of delivery. One motor truck, according to a man who has experimented with it, will do more work than two teams so long as the deliveries are in territory that can be traversed by it. During the early spring, when there are rains and the roads are soft, the usefulness of the motor is practically limited to made streets and macadam roads. Later on, as the ground dries out and gets firm, the territory of the truck is very largely extended and it is worth a whole lot more to the retail lumberman. The truck usually calls for a heavier load than the two-horse team; therefore, does not make for convenience and quick action in delivering small orders. So the man operating with motor trucks only is likely to be handicapped in the matter of sending out small lots of stuff, as well as in the matter of reaching building sites on soft ground. A splendid combination, however, is to use the combination of trucks and teams, and it will be found that as a rule the truck in territory that it can cover and when there is enough to give it a load, can do more than two teams.

## The One-Horse Wagon

There is a remarkable difference of opinion in the matter of the usefulness of the one-horse wagon in the scheme of lumber delivery. There are some people who simply won't have one, and insist on those people ordering small orders waiting until enough of these small orders have been accumulated to make a load that can be sent around with a two-horse team. It makes for efficiency in delivery service, but it also makes for lots of kicks and wrangles with customers and gives a certain advantage to the man who has the light one-horse rig and can give quick and effective service to the man wanting small quantities and hurry-up orders filled now and then.

## Delivered Prices and Yard Prices

The retail lumberman, like the retail merchant in other lines, generally makes no distinction in the price of articles bought now and then and taken away by the customers themselves and articles delivered. In other words, we have what is called free delivery in all of the larger towns and cities. Occasionally some retailer or group of retailers will undertake to break away from this and establish a schedule of charges for making deliveries. Sometimes, too, they are able to handle the proposition successfully, but taking the country over the free delivery habit is so strongly entrenched that not much effort is made to get away from it. The cost of delivery is simply figured in the cost of operations, and charged up in the selling price of the product. This would be fair enough and there should perhaps not be any particular notice of the occasional times when the contractor comes to the yard for an extra window frame or a few extra pieces of lumber, and no discount made for it any more than the retail merchant will make any discount for the customer that buys an article and takes it away for themselves.

But when the farmers and country people drive in from considerable distance, come in to buy a house pattern or any quantity of lumber, and buy it at the yard, hauling it away themselves, it is hardly fair that they should pay the same price you charge your city trade and make deliveries. Some of the yard men don't bother about it, though, and make the one price good for all. The result of this and other influences is that to-day many city yard men find a lot of their country customers wanting free delivery quite a way out in the country. Competition between the yards in some cities has helped develop this until occasionally it becomes quite an expensive nuisance to the lumberman. There are occasions when the yard men may find it necessary to deliver lumber and millwork quite a way into the country, but for these long deliveries he should receive something extra in the way of prices. Then to equalize things, the yard prices should be slightly lower than the general delivery prices, so that the farmer who comes in with his own wagon after lumber may be encouraged to do so again.—St. Louis Lumberman.

# THE WOODWORKER

## Locating Trouble in the Edger

The distance from the edger to the carriage is not very great when measured in feet or inches, but when it comes to tracing the crooks made by the edger saws back to the dogs of the log carriage, then it seems quite a long way to go to find the right spot, writes A. H., in the Wood-Worker, Indianapolis. That is just what I was forced to do a few years ago, while I was still a tenderfoot, or, as some of the boys say, "Before I crossed the humps."

It was in the upper peninsula I hired to file a 12-in. band and a 52-in. circular. The band cut all the nicest logs and the circular cut the rough, small stuff. About all the circular got was logs that would just make a 4 x 4 or 4 x 6. They had two very good edgers, but they never would make straight lumber. The one on the circular side was the worst. They had had several millwrights on the job, and on at least two occasions a man from the factory came to align and put the edgers in perfect condition. Still the crooked lumber kept coming from them, and then the company went after the filer.

They tried quite a number of different filers and nearly every make of saws, but the result was always the same. At last, when the mill shut down one fall, the foreman was sent out to find a filer, the very best man he could get. After travelling around to a few of the mills, he chose me as the next victim. The wage inducement held out looked good to me, and about the first of April, the following spring, found me camping in their little neck of the woods.

The foreman proved to be a very good sort of a slave-driver, but when it came to machinery I doubt if he could understand the working parts of a wheelbarrow. Of course, he had no jurisdiction over the filing department, as I had that by contract. But he did demand straight lumber from those edgers, and that I could not give him, at least not with their outfit, nor could I locate the trouble at first.

I aligned the machines and got new arbors and collars before the mill was ready to start, and thought I had everything alright. We had new edger saws, and I tried them with nearly every degree of tension. I also tried both the swage and spring set, but I could not eradicate those crooks.

A piece would start in and make a graceful curve the whole length, sometimes one way and sometimes the other, then again several pieces would be perfectly straight. I knew there must be some cause for their misbehavior, and it bothered me to think that I could not find it. I got a line on it at last in a very unexpected manner.

The superintendent was an old, white-haired man, and one of the very finest that I have ever had the pleasure to work for. He came to my house one Sunday morning and said: "Hillie, old boy, I want you to come down into the lumber yard with me and see some of the stuff we are making." I went along about as willingly as a hog to the slaughter. At first we passed piles of 4 x 4 and 4 x 6 from the circular, and about one-half of them were crooked. I stopped to look it over, but he said: "Oh, come along; that is only rough stuff; it is the good lumber I want you to see."

Presently we stopped before a partly-completed pile of choice white pine, all wide pieces, 1¼, 1½ and 2-in. They all had about the same curve, but I noticed that the widest pieces had more crook than the narrower ones, and it started me off on a new line of thought. I asked, "Is all of the wide lumber like that?"

"No," he replied, "only, I should judge, about 20 per cent." The poor old fellow felt so badly he nearly cried.

I offered to quit and let him try some one else, but he said: "No, I have changed men until I am reasonably sure the trouble is not in the filer. It is something about the machine, and I want you to find it."

I went home to dinner and kept wondering why those crooks were so true a circle, and why the wider ones were crooked more than the narrower ones; also, why only about 20 per cent. were crooked and the rest straight. After dinner I fell to wondering if the thickness could have anything to do with the trouble.

I took my rule and went back to see, but I found that the crooks came in all thicknesses alike. The width seemed to gage the circle of the crook, and I set about to find out why. I sorted several piles over and compared the widths and crook, which tallied up about the same.

At last, I found one a great deal wider than the rest, with a great deal more crook. I looked at that board a long time, and, while turning it over, noticed that one edge was thicker than the other. "Could that have anything to do with the crook?" I wondered.

I measured the edges of several other pieces, and found a slight variation in all that were crooked. The wider the piece the more

variation and the more crook, while all that had no difference in thickness of the two edges were straights. The thickest edges were always at the outer side of the circle. I soon figured out why that was the thickest edge.

In passing through, the edger rolls received the most pressure, and, with a saw crowding back on each edge, the thickest one was bound to gain, thus making a crook according to the variation of the thickness. But where did that variation come from? That was my next problem to solve.

Of course, with the circular sawing two slabs from a log that would only make a 4 x 4 or 4 x 6, the sawyer did not waste time by sawing the slabs off, but just split them off on the saw, and the old thing would lop over a little, just enough to leave one edge thick. But my hand saws did not lop over. I was sure of that, and still they made some thick edges, but only about 20 per cent. Just why that was I could not figure out for several days.

I neglected my filing to stand around that old band mill, and at last I caught her at it. The carriage was light and had only two blocks, that were fitted with only boss dogs. If a log was big and heavy, the dogs would not hold it from rolling until after it was turned, with a flat side down.

As the setter shoved it out for the first two or three cuts, it would roll a little each time, just enough to leave a little variation, and the wider the piece the more variation there would be betwixt the two edges. Such a case might never happen again, for it was a bad combination of insufficient dogs on the carriage and smooth feed rolls on the edgers. I watched and measured until I knew that I was right, then hied me over to the office to herald the glad tidings boldly.

I marched into the private sanctity, chest thrown out and shoulders back, a Napoleon of the art. The superintendent and foreman were in deep consultation as I entered, but looked up inquiringly as I cleared my throat and said: "Well, gentlemen, I have solved the problem. We can stop this trouble easy enough."

"Good for you, old boy," cried the superintendent. "What is the trouble? We will have it fixed instantly."

"Well, sir," I continued, "the dogs on the band saw carriage are to blame for the wide nice stuff being crooked, and—"

But I got no farther, for the superintendent looked at the foreman and the foreman looked at the superintendent, then both looked at me, the foreman nearly fell off his chair, and both broke out in loud peals of laughter.

"Go back, go back!" cried the superintendent. "Tell that to the dump cart boy. The carriage dogs make the edger saws run crooked? Ha, ha, ha!"

They built the mill all over next winter, with new, up-to-date carriages and spiked feed rolls, but it burned before starting, and I left for another job.

## The Importance of Keeping Saws Set and Sharpened

One of our representatives, who is a practical man, not only in the making of saws, but in everything that pertains to the operation and management of the saw mill as well, dropped into the office of a large lumber manufacturing firm quite recently.

"Just the man I want to see!" exclaimed the manager.

This sounded like good news; but the next words dispelled the rosy glow.

"We are having no end of trouble in operating one of our large, taper ground circular resaws. Perhaps you can tell us what is wrong."

The manager led the way to the mill. Here our representative was introduced to the filer, who was about to start up the machine. At his request the start was delayed to enable him to examine the saw.

This saw was about 38 inches in diameter, 6 gauge at the centre, 18 gauge at the rim, and was used for resawing yellow pine bevel siding. Our representative found the saw thoroughly set and sharpened. Everything about the machine, in fact, indicated that the man who was operating it knew his business form A to Z.

"Go ahead," said our man, and the machine was started up at a very high rate of feed. The lumber came out smoothly and accurately sawed.

After some fifty pieces had been run through the machine, our representative asked the manager if his complaint was a joke. "This work has been done at a high rate of speed and in a perfectly satisfactory manner," he added.

"No," returned the manager, "my complaint is not a joke. I am perfectly aware that this saw will do first-class, satisfactory work when

sharp, but as soon as it becomes a little dull it will run both in and out of the work. There's something wrong with the saw."

"How long will this saw run before beginning to give poor results?"

"Probably four to four and one-half hours," replied the manager.

"How often do you change the large circular saws in the big mill?"

"Every two and one-half hours."

These saws were six gauge straight and were cutting green timber. This, our man called their attention to. "And," he added, "if you find it advantageous to sharpen these saws every two and one-half hours, why do you take it for granted that this resaw, with a much lighter plate, running a continuous feed on kiln-dried stock, should be able to run five hours on one sharpening?"

It did not take much further thought for them to realize their

gross error of judgment.

"I'll tell you what to do," said our representative; "sharpen this resaw every two and one-half hours, as it should be. Then, if you still think that the fault lies in the saw, we will investigate further. For my part, I am sure that the proper attention will show it to be one of the best saws you ever had. Write me when you have had time to try out the new arrangement."

The manager promised to make the experiment and our man left.

A little later a letter reached us, full of thanks and appreciation of the resaw. To quote the ending:

"Putting your suggestion into practice has increased the capacity of our resawing machines about 20 per cent. and entirely eliminated miscuts."

The moral of this little story is clear. Keeping your saws properly set and sharpened is the greatest trouble preventer around the mill.—Disston Crucible.

## A Few Hints to Young Filers

By Hapsburg Liebe

When a man swears at his grinder, he ought to remember that he's swearing at his best filing-room friend. It is to be admitted frankly that there is much that is provoking in having the points of one's teeth blued and case-hardened, gullets likewise; but there is always a cause for this evil that, when once located, seems ridiculously simple.

Nine times out of ten, grinder troubles arise by the feed-finger failing to leave all the teeth at the same point in relation to the falling of the emery wheel. There are several causes for this: The gate may be a bit loose, and thus make the work of the finger so light that it becomes "negligent"—and the saw may crawl either backward or forward a bit, too, when the gate is not sufficiently tight; a slot may be worn in the finger, catching the teeth sometimes in it, sometimes out of it, and cause irregular grinding; a slot may be worn in the metal upon which the saw rests in the grinder, and do much damage when the saw climbs out of it; and there may be lost motion in the lever which pushes the feed finger, and thus result in bad work unless the finger stop is sufficiently tight to take up this lost motion. And too much play in the slides in which the wheel-frame moves up and down raises another cause of devilment. The roller by which the cam,—or shoe, as the case may be,—raises the wheel will give trouble when it becomes worn out of round.

Caps should be kept on all oil-cups, plugs in all oil holes, of the automatic saw-sharpener. The dust from the emery wheel cuts out the bearing metal and wears out the shaft quickly if the holes and cups are left open. Use oil judiciously, but keep off the emery wheel.

When the roll dishes the saw, making for another levelling before it is possible to test for tension, it may be brought about by the operator allowing the saw to curve downward from the roll, or else by raising up on the saw as it enters. If the roll habitually dishes the plate when it is passing through on a level, however, it is the result of the rolls having been ground wrongly—that is, one of them being too sharp for the other, and acting on the order of hammer and anvil. This latter feature may be remedied to some extent by putting the upper roll down until it almost touches the lower, and then holding a strip of emery cloth of a fine grade between them, with the rough side to the sharper roll. Thus a little of the sharpness of the dishing roll may be ground away. Under any circumstances however, it is advisable to test with the straight-edge after rolling.

When one has tensioned the plate of a newly punched fracture, he should not neglect to apply the back-gauge at the same point. The back always changes with the doctoring of a crack. Allow for nothing here—except to run the tire down and around the fracture; use the same amount of crown that you use at the other portions of the saw. The unevenness of less strain on the cracked place is worse than the regular strain. Avoid unevenness, irregularity, in all the phases of band saw fitting.

When placing the run down saw on the bench for a hammering, one should be sure that all the gum and sawdust are off. A very small bit of this on the levelling block will make one attempt to hammer out a lump that is not in the saw at all. And place the swaged parts of the teeth off the block, that the plate may show up in the correct way.

Crumbling of the teeth, while being generally caused by overworking the steel with the swage and shaper, is sometimes brought about by the swage making weak, flimsy corners, which break off when the saw is at work. The face of the swaged point should extend down the tooth at least as far as the point is broad across; this gives strength to the points, and helps them to bring the dust from the cut. To

change the working of the swage, grinding the anvil to a different shape is usually the procedure; but, there being on the market and in use so many kinds of swages, it is next to impossible to give directions for changing the anvils of all. One's own good judgment, however, should serve to guide him aright in this.

When a nail, or other foreign matter, takes off the points of several teeth, one naturally has visions of sweat and the brazing clamp. But so long as no more than three teeth—four, if the spacing is short—are put out of commission, there is a remedy that will save cutting the saw. Supposing three teeth are missing, cut down the first tooth behind the three a little less than 1-16 of an inch; cut down the tooth behind that about 1-32 of an inch; cut down the tooth behind the latter about 1-64 of an inch.

Concerning emery wheels, any standard make should be all right—they had to be all right to get into the standard line; the thing to be careful about is to get the right kind of wheel for the particular work in hand. When ready to put a new wheel on, hold it on one hand and tap it lightly with the hammer. If it rings clear, it should be all right for any moderate speed; if it sounds dead, watch it for a few minutes and stay out of the way—if you put it on at all. Emery wheels become troublesome when they are filled with steel. A few common stamped washers on a bolt will answer almost as well as a dresser made for the purpose expressly.

A wornout swage die makes a splendid crack punch; but care must be observed in the grinding that the temper is not drawn. A bit of hacksaw blade makes a fair scratchawl when one is in a hurry to cut a saw for brazing. A little water sprinkled over the brazing fire after it is burning well will coke the coal quickly, thus releasing those sulphurous gases that are supposed to be dangerous to successful brazing. The big end of a flat file, ground to a chisel shape, is good for scraping the scale from the irons, preparatory to clamping them on the saw.—Berlin Quality.

### Toronto Blower Company's Good Business

Although they have not yet been established for quite a year, at 156 Duke street, Toronto, the Toronto Blower Company have made a number of large installations of blower and exhaust systems in some of the biggest mills in the country. Among these are the Gold Medal Furniture Company, Limited, Uxbridge, Ont.; The Gendron Manufacturing Company, Limited, Toronto; the Bain Waggon Company, Woodstock, Ont.; the National Casket Company, Limited, Toronto; the Meaford Manufacturing Company, Limited, Meaford, Ont., and the Pembroke Shook Mills, Limited, Pembroke, Ont. The head of the Toronto Blower Company, Mr. D. Prutsman, has had a wide experience in this work, having been connected for 12 years previous to starting in Toronto with the Sterling Blower Company, of Hartford, Conn.

### A. B. Ormsby Company Enlarge Their Organization

The A. B. Ormsby Company, Limited, Toronto and Winnipeg, announce that their organization has been further enlarged by the addition of a blow-pipe department. The new department is in charge of a blow-pipe expert, Mr. W. B. Crawford, formally engineer for one of the largest companies and first to develop the slow-speed principle. The saving in horse-power on a properly installed system is considerable. On receipt of inquiry the company will have their expert visit any firm, make a layout of the proposed system and submit a tender for complete installation.

## Estimating for the Jobbing Mill

The position of the estimator, I believe, is one of the most important in the executive staff of modern planing mills, especially those mills which make a specialty of getting out the higher grades of mill work and interior trim for the architect's plans, detail drawings and specifications.

The problem of listing off all work from plans and specifications is a question more or less serious to the average estimator, for the reason that every architect has a different manner of stating the requirements of the job. Each detailer will have a different style of making detail drawings, and some of them will write about half of the specifications on the drawings and in different places. This, of course, makes it necessary for the estimator to read each and every notation on the plans, elevations and details, whether it concerns him or not for fear that something may be included in the notes that will affect his branch and cause him to leave something out.

Some mills make a blanket estimate covering everything belonging to mill work, and all responsibility must rest with them as to the correctness of quantities contained therein. This puts the estimator in a position where he must know exactly what he is doing every minute, and how to do it. If he gets too much work off, he will, of course, have his estimate too high, and if he leaves something out he will be pretty certain to find out who was the "goat" when it is too late.

Right here I would just like to ask my fellow-estimators if they can stand up, raise their right hand and solemnly declare that they have never left anything out when tabulating or making up estimates? Now, do not all of you jump up at once and say you have not, for I do not want to be in a class all by myself. Neither do I want to be responsible for bringing to public notice an Annanias Club. I think the best estimator will omit something sometimes and some estimators will leave out something on all their work. A rigid system is the best remedy for this evil. The estimator should start every job from the same point and follow a route through on exactly the same line on every plan. He should not jump from one subject to another, but should tabulate all of one class before changing to another; then, if necessary, he can go back and check up with very little trouble.

After the work has been duly tabulated it is up to the estimator to say what each item is worth in dollars and cents; and right here is where a larger part of the rub comes in. Any one can go out and estimate for a stock mill which makes doors, sash, trim, etc., in 1,000 lots. This mill sets a price list before the estimator and he is instructed to figure 50 and 10 per cent. off, or 70 and 5 per cent., etc., as the case may be. But the estimator for special work must, or should, analyze each and every item contained in the building, as each house presents a different problem, not only to the estimator, but to almost every department of the mill. The estimator, to be accurate, should be sufficiently familiar with the different machines and their average daily output to know exactly what proportion of the work will be done by each one and how long it will take the average machine hand to do it; also, how to average the bench work and know what part should be done by the bench hand or by the machine. In fact, the estimator should know each and every productive mechanical or manual unit of labor necessary to complete a job of mill work, if he would make a rational estimate on it and arrive at anything like the true selling value of the work, and even then it is only an average price.

Since it is impossible to set all of the work to the extremely fast man, we find that it is equally impossible to set all of the work to the slow man, therefore we must buy average labor at an average price and must sell our product at an average rate. The estimator, therefore, who estimates special work by the square-foot process is taking long chances with his employer's business, and some day the bondsman will be called on to finish up the job.

Another item which is a very large factor in the cost of production is the overhead expense; and a part of the overhead is the maintenance and upkeep of the machinery necessary to operate a jobbing mill. The machines that operate the greatest number of hours will not exceed 75 per cent., and some of them will not operate over 15 per cent. of the time, yet they are necessary if we would meet the conditions during the rush season. Of all the machines, the four-side molder comes nearest to 75 per cent. of efficient working hours, so far as my experience and observation go. The universal woodworker comes next, and I do not think this machine will average over 65 per cent. While the double surfacer may run 75 per cent. of the time, unless it is dressing lumber for outside parties it is an overhead expense. It does nothing to increase the value of the material; at the same time it has added to the cost exactly the amount of time, power, etc., it required to dress material for the mill.

In figuring overhead, I figure that every operation that increases

the cost of an item without adding to its value, is an overhead expense. The handling of all material up to the cutters, moving from one department to another, detailing, billing out and laying off the works, is overhead. On the other hand, when the cutter starts the work, even though he must handle a great deal of material to and from the saw, he must either pile it on a truck or lay it on the floor out of his way. This is charged as productive labor, and for every machine this handling must be taken into consideration. Every time a piece of stuff is picked up, laid down or put through a machine, it represents a direct value in dollars and cents, and must be charged either to productive or overhead expense; and when the machine hand is required to handle it I charge it as productive. I figure, however, the productive hour cost of each machine separately, and make each one bear its portion of the overhead according to the value of the machine in place, floor space required, horse-power hours, heat, light, taxes, insurance, depreciation, wages, average yearly repairs and supplies, and to this department add overhead charge and also prorate the general overhead expense.

This method distributes the overhead burden to the productive branch of the business in direct proportion to the average yearly working hours. Notwithstanding the fact that some of the machines may operate only 15 per cent. of the actual working hours, yet they are a part of the necessary equipment and should return a profit to the owner in direct proportion to the service his investment renders to the public.

To get the material cost, a complete list is made of all material belonging to any special item. In fact, a practical cutting list is made out for each and every kind and grade of lumber, and an allowance is added for waste, from 10 to 25 per cent., according to grade and materials. When this material list is made out it is a very simple matter to determine by analysis the exact number of mechanical units of production which are necessary to complete the job. All this, of course, takes time, but it reduces to a large extent the possibility of omitting some of the important mechanical operations, and by this means be the cause of getting a contract at a losing price.

The rate of waste is a very important item in estimating. While some of the grades may cut a very large per cent. of waste, it can be used up in many different ways, and for this reason represents a comparatively small loss. For instance, all cuttings of cypress, white pine, poplar and yellow pine can be used up very closely. The long lengths can be cut into quarter-round, stops, lattice strips, etc., and the short lengths can be cut into corner blocks, plinths, jamb and base blocks, etc., as there is always a good demand for these in a jobbing mill.

The hardwoods are the most difficult to dispose of to advantage—quartered oak, mahogany, etc. While the material may be absolutely clear, the percentage of waste is a great deal larger than in the other kinds of lumber. The short ends will accumulate, and unless they are sorted and piled in a systematic manner, it will prove to be worth more than the value of the material for the cutter to dig it out of the pile and use it for something. As a general rule, the piece the cutter could use is not on the top of the pile, but is the last piece down at the bottom. If he took a half hour to remove the pile and another half hour to re-pile it, he has kept his saw idle just that long and has spent about \$1 worth of time to get perhaps 50c worth of lumber. The material, then, instead of costing the firm 10 to 15c per square foot, has cost from 30 to 45c per foot.

This matter of handling waste, however, is not so much a part of the estimator's troubles as it is efficient mill management. At the same time, the conscientious estimator should keep himself informed of these conditions of stock. Then, if a job should be sent in for an estimate, he would be in position to make an attractive figure on it, and thus get rid of undesirable material at a reasonable profit, instead of carrying it as a part of the moving assets and paying out insurance and other costs on it.

Would like to hear from other estimators (through these columns) who are estimating for jobbing mills, as we may evolve something that will be of interest to ourselves as well as to other readers of The Wood-Worker. I do not remember of having seen the estimating end of the business discussed to any length for some time past.—A. H. L., in the Wood-Worker, Indianapolis.

### Absorbine a Vegetable Compound

Absorbine is compounded scientifically of the best ingredients to be bought. The company guarantee that it is purely vegetable, containing no poisons or minerals and that careful laboratory tests prove its antiseptic and germicidal properties. Notwithstanding its powerful results, Absorbine is a mild and pleasant liniment to use, does not blister, stain or remove the hair, and the horse can be used during treatment. It is economical as only a few drops are required at an application. A bottle of Absorbine diluted according to the formula on the label, makes three gallons of liniment at a cost of 80c a gallon. Detailed laboratory reports are available on the germicidal value of Absorbine or Absorbine, Jr. Absorbine sells at druggists for \$2.00 a bottle, or is sent direct, express prepaid, upon receipt of price. W. F. Young, P.D.F., 424 Lymans' Building, Montreal, Que.

# Machinery and Equipment

What Manufacturers of Logging, Sawmill and Woodworking Appliances are Doing

## Pioneer Leather Belt Makers

The tanning of leather and the making of belts for power transmission are industries which are closely identified with the lumbering industry in more ways than one. The chief interest, however, which the lumberman has in these industries comes from the fact that he is an extensive consumer of leather belting as a means of power transmission. One of the most successful and oldest established companies in the business of manufacturing belting is the Graton & Knight Manufacturing Company, Worcester, Mass., oak leather tanners and belt makers. The company was established in 1851 and incorporated in 1872 with a capital of \$100,000. It has a paid-in capital of \$2,000,000, affording a concrete illustration of the steady and substantial growth of the industry. The first tannery built by the Graton & Knight Manufacturing Company was erected in 1867. It had a capacity of only a few hundred hides annually. This capacity has been added to steadily until the present day and the company now have what they claim to be the largest and best equipped plant in the world for tanning and currying hides and manufacturing them into leather belting; their capacity being over 200,000 hides per annum.

Such remarkable growth is the result solely of persistent, liberal and modern business policies. In the first place the company pur-

## Recent Grand Rapids Veneer Contracts

Among the recent contracts closed by the Grand Rapids Veneer Works, Grand Rapids, Mich., for their well known dry kilns are included the following:—Cottonwood Lumber Company, Vancouver, B.C.; Cushing Bros., Limited, Calgary, Alta.; D. E. Sprague, Winnipeg, Man.; Stewart-Hartshorn Company, Toronto, Ont.; Russel Company, Glasgow, Scotland; Barclay-Curle & Company, Glasgow, Scotland. An illustration of two of the Grand Rapids dry kilns is shown in an article regarding the Wilson Lumber Company of Toronto, which is published elsewhere in this issue.

## Dixon's Graphite Brushes

The Joseph Dixon Crucible Company, Jersey City, N.J., have published an attractive little booklet entitled "Dixon's Graphite Brushes." The booklet contains some exceptionally interesting information regarding the production of graphite brushes for dynamos and motors. Graphite brushes have had a long and enviable reputation for perfect commutation. They are composed almost entirely of high-grade graphite and prevent sparking and wear of the commutator. They do not gum the commutator. They are tough and strong and have very long life if properly adjusted. The company state that the losses from

General view of Plant of Graton & Knight Manufacturing Co., Leather Tanners and Belt Makers, Worcester, Mass.

chase their best hides at the most favorable time of year, securing in this manner the very best which the market affords in the form of raw material. They use the long time tanning process expressly for belting purposes. They devote careful and expert attention to the inspection of manufacturing processes at every stage. They utilize the by-products of the hide so economically that they are able to reduce the cost of belting leather greatly, thereby putting the greatest possible value into the belting itself. They have been successful pioneers in the education of belt users; advocating consistently the policy of using the proper belting in every instance for the conditions under which it is to be run, regardless of the initial cost. These principles have been the direct cause of their remarkable success and they have combined them with strict impartiality towards all users of belting, giving honest value and equal terms to all their customers, whether they are large consumers or small.

The fact that Graton & Knight leather belting has pleased thousands of customers for more than three score years indicates forcibly that they have never for one instance swerved from their original policies and principles. Their success proves more clearly than anything else that they have given minute attention to the production of leather especially adapted for belting. Their growth is an interesting evidence of the fact that it pays, and pays handsomely, to use belting especially adapted to the conditions under which it is to operate.

Every ten feet of belting which leaves the Graton & Knight plant bears their trade mark. The mark of care, skill and perfection which is a protection and a guarantee of satisfaction to the consumer.

friction on the commutator are less with graphite brushes than with carbon brushes and that the commutator are less with graphite brushes than with carbon brushes and that the commutator is always automatically lubricated, whereas with carbon brushes there are conditions under which applied lubrication is necessary. The booklet contains complete rules for using the brushes under various conditions of service, as well as many valuable suggestions for using Dixon's lubricating rods for manufacturing arc light plungers, oilless bearings, dash pots, and for other applications where oil or grease lubrication cannot be conveniently employed. Another interesting product mentioned in the booklet is Dixon's Graphite Resistance Rods. These are furnished in a large number of combinations of sizes and resistance.

## A Valuable Log Deck Equipment Catalogue

The E. Long Manufacturing Company, Limited, Orillia, Ont., manufacturers of sawmill machinery have issued a new catalogue No. 101, dealing with their log deck equipment. The catalogue is handsomely illustrated and attractively published on highly glazed paper. It contains instructive details and information relating to the splendid range of log deck equipment, manufactured by E. Long Manufacturing Company. The rapidly growing demand for the products of this company obliged them recently to more than treble their manufacturing facilities by the erection of a modern plant. The new plant is equipped with every up-to-date appliance for the production of high-class sawmill machinery.

# WANTED & FOR SALE DEPARTMENT

## PUBLISHER'S NOTICE

Advertisements other than "Employment Wanted" or "Employees Wanted" will be inserted in this department at the rate of 15 cents per agate line (\$2.10 per inch) each insertion, payable in advance. Space measured from rule to rule. When four or more consecutive insertions of the same advertisement are ordered a discount of 25 per cent. will be allowed.

Advertisements of "Wanted Employment" will be inserted at the rate of one cent a word, net. Cash must accompany order. If Canada Lumberman box number is used, enclose ten cents extra for postage in forwarding replies. Minimum charge 25 cents.

Advertisements of "Wanted Employees" will be inserted at the rate of two cents a word net. Cash must accompany the order. Minimum charge 50 cents.

Advertisement must be received not later than the 10th and 26th of each month to insure insertion in the subsequent issue.

## Wanted—Lumber

### Basswood Wanted

No. 2 Common and Mill Cull. Winter cut preferred. Apply Firstbrook Box Co., Ltd., Toronto, Ont. 7-t

### Wanted

Two million feet Maple, also quantity of Birch. Shipments during Fall and coming Winter. Address Seaman, Kent Co., Ltd., Meaford, Ont. 11-22

### Wanted to Buy

Pine, spruce, hemlock, railway ties, common and better, and cull basswood and birch. M. Brennen & Sons Mfg. Co., Limited, Hamilton, Ont. 8-13

### Birch Wanted

Want 200 M. ft. 10/4 1st and 2nds and No. 1 Common Birch. Give average widths and lengths and percentage of 14 and 16 ft. lengths. Want price delivered Philadelphia, Pa. and New York City.

Want 200 M. ft. 6/4 No. 1 Common Birch delivered Boston, Mass.

Want 5 cars 4 1/2 in. and 5 in. 1sts and 2nds. Birch delivered New York City and Philadelphia, Pa. Reply Box 526 Canada Lumberman, Toronto, Ont. 14 T.F.

## Wanted—Cedar Telegraph Poles

1000 poles, 25 ft. x 6-in. tops.  
500 poles, 25 ft. x 7-in. tops.  
1000 poles, 30 ft. x 7-in. tops.  
1000 poles, 35 ft. x 7-in. tops.  
400 poles, 40 ft. x 7-in. tops.

Quote price and quantity for sale, also delivery date.

HORACE HARTLEY

Wholesale Lumber,

19 Mayor Street, Montreal.

12-14

### Tenders Wanted

We are large buyers of Norway and Tamarack lumber and would like to get into touch with best mills which could supply us according to the following specifications:

We want 10,000,000 feet of above lumber, 3-in. thick, 6 to 8 inches wide (preferably 8-in. wide) any length over 6 ft. The lumber must be full size saw butted, all square edge and free from the following defects:—Unsound loose and hollow rod worm-holes, knot-holes through and round shakes, shakes on surface that show. Address Canada Creosoting Co., C. P. R. Building, Toronto. 12

### Hardwood Pickets Wanted

Beech, Birch and Hard Maple.

1 x 1 x 42.  
1 x 1 x 48.  
1 x 1 1/2 x 42.  
1 x 1 1/2 x 48.  
1 x 1 3/4 x 42.  
1 x 1 3/4 x 48.

Require Thickness, 1/16-in. Plump.

Quality—Free from all defects.

Can take delivery of green or dry stock.

Apply to The Canada Wood Specialty Co., Ltd., Orillia, for full particulars, price, etc.

24-1-TF

## Wanted Hardwood Lumber

Entire season's sawing or less; elm, ash, basswood, maple, beech and birch. All grades including the low end. Will ship promptly and pay cash. Write immediately, with full particulars and prices. Box 813, Canada Lumberman, Toronto, Ont. 12-13

## Do You Want to Buy or Sell?

If you wish to purchase or dispose of a particular stock of lumber or logs, a mill property or timber limit, or some second-hand machinery, the CANADA LUMBERMAN AND WOODWORKER will bring quick returns. Use our "Wanted and For Sale Department."

## For Sale—Lumber

### For Sale

2,000 acres timber. Georgian Bay, near Parry Sound; mostly hardwood, some pine, hemlock, cedar and Tamarac. C. A. Phillips, Parry Sound, Ont. 12

### Good Hard Maple

Five cars 2 in. No. 1 common and better in shipping condition. Write for prices. Georgian Bay Shook Mills, Limited, Midland, Ont. 12

### For Sale

Peeled cedar post 4 1/2-in. to 7-in. top, 8 ft. long. Best of quality and made from green cedar. Chas. Pedwell, Lions Head, Ont. 9-t.f.

Having been burnt out last Fall we offer all our timber for sale, some 2,000 acres. Easy terms. For particulars apply to Geo. Niebergall & Son, Parry Sound, Ont. 9-12

### Cedar For Sale

About one and a half million feet Cedar, Culvert Timber, 8 x 8 to 12 x 12. For particulars apply to Mason, Gordon & Company, 80 St. Francois Xavier Street, Montreal, Que. 10-12

### Lumber For Sale

400,000 ft. 3 x 7 and up Merchantable White Pine.  
200,000 ft. 2 in. Merchantable White Pine.  
200,000 ft. 1 1/2 in. Basswood, Log Run.  
500,000 ft. Hard Maple, 1 in. to 4 in.

Apply to

GEO. C. GOODFELLOW,

C

Montreal, Que.

### For Sale

1,000 acres good Hardwood Bush, estimated to cut six million feet. Distance five miles to siding and mill that could saw it. Large amount of Maple, Oak, Birch, Elm, Ash, also Cedar Ties, etc. Five years to take off. Must be sold at once. Low price and easy terms. Apply Box 807, Canada Lumberman, Toronto, Ont. 11-12

### For Sale

#### New Brunswick White Pine 1912 Cut

52,000 ft. 1 1/2 x 7 and up 10/16 ft. 1sts.  
93,000 ft. 1 1/2 x 7 and up 10/16 ft. 2nds.  
236,000 ft. 1 1/2 x 7 and up 10/16 ft. 3rds.  
31,000 ft. 2 x 7 and up 10/16 ft. 1sts.  
108,000 ft. 2 x 7 and up 10/16 ft. 2nds.  
57,000 ft. 2 x 6 x 10/16 ft. 1sts, 2nds, & 3rds.  
225,000 ft. 2 x 7 and up 10/16 ft. 3rds.  
28,000 ft. 3 x 7 and up 10/16 ft. 1sts & 2nds.  
58,000 ft. 3 x 7 and up 10/16 ft. 2nds & 3rds.  
225,000 ft. 3 x 7 and up 10/16 ft. 3rds.

Apply to

H. BOURGOUIN,

Dominion Express Bldg.,

Montreal, Que.

10-t.f.

## For Sale—Machinery

### For Sale

One Ballantyne, eighteen-inch self-feed rip saw. Only used eight months. In first-class condition. Reply The Webb Lumber Company, Limited, Toronto, Ont. 12-13

### For Sale

We have the following second-hand machinery for sale. The entire lot is in good working order and was taken out of the shop, either on account of changes in our production, or larger machines installed. Further particulars given on request.

3-20 in. plain lever drills.  
1-16 in. swing turret lathe.  
1-9 in. Seneca Falls bench lathe.  
1-13 in. sensitive bench drill.  
1 foot power mortiser.  
1-36 in. heavy pattern band saw.  
1 small bench emery grinder.  
1-24 in. x 7 in. single surface planer.  
1-26 in. single surface planer.  
1 No. 5 dimension rip and cross-cut saw.  
1 No. 7 dimension saw table.  
1-12 in. Perfection buzz planer.  
1 single sand papering drum.  
1 saw table.  
1 Mershon band re-saw.

The Wm. Gray-Sons-Campbell, Limited,  
Chatham, Ont. 12

## Wanted—Employment

Advertisements under this heading one cent a word per insertion. Box No. 10 cents extra. Minimum charge 25 cents.

Band Filer wants position, ten years experience in hard, soft and frozen timber. Married and strictly temperate. Box 811, Canada Lumberman, Toronto, Ont. 12

Do you need Male Help for sawmill, lumber camps, construction work or boats. We can furnish skilled and unskilled labor for all kinds of work.

O'Donnell's Employment Bureau,

116 Wellington street west,

Toronto, Ont.

Phone, Adelaide 3919. 12-14

## Wanted—Employees

Advertisements under this heading two cents a word per insertion. Minimum charge 50 cents

WANTED—First-class walking boss for bush operations. State age, experience, habits and salary expected. Apply, Box 812, Canada Lumberman, Toronto, Ont. 12-17

WANTED — A capable and responsible salesman to represent an American house, one must be familiar with hardwoods and the hardwood trade of Ontario and Quebec. Address, stating reference, etc., to Box 810, Canada Lumberman, Toronto, Ont. 12

## Business Chances

WANTED—Good man with Portable Mill to saw out 1,000,000 feet of logs. Apply Box 791, Canada Lumberman, Toronto, Ont. 10-11

### For Sale

Timber limit on Georgian Bay, conveniently located 75 miles out of Soo. Well timbered with Hemlock, Pine and Hardwood. Can be logged cheap. Apply Box 781, Canada Lumberman, Toronto, Ont. 9-12

## For Sale

Rare bargain. Band mill located in best lumber and log center on Puget Sound. Rail and cargo shipping facilities. Excellent log pond. Ten and a half acres of land. Price one-fourth of appraised valuation. Must sell quick. Box 765, Canada Lumberman, Toronto, Ont. 8-t.f.

## For Sale

On reasonable terms a Portable Saw Mill, Waterous Co. make, all complete, in first class condition. Just finished winter sawing. Good location, large quantity of good hemlock and birch timber close to mill. For particulars apply P. O. Box 426, Parry Sound, Ont. 9-12

## For Sale

Lumber mill on Three-mile Lake in Muskoka. Cost \$2,500, will sell for \$1,300. Apply to Thos. Going, 405 Charlton Ave. W., Hamilton, Ont. 11-14

## For Sale

On easy terms, sawmill, new; just installed 50 h.p. Water Power, with electric plant. Good location for pulp mill. Good quantity of pulpwood close to C. N. R. and station; on river. Two million feet timber and 600 acres of good land. Townsite laid out. Sawmill and power or land sold separately if desired. For further information write J. H. Latremouille, Mount Olie Power Co., Box 48, Kamloops, B.C. 8-13

We have just had placed in our hands for sale the entire equipment of the Peterboro' Planing Mill Co., including all real estate, buildings, etc.; we are offering this entire plant as a going concern at a very attractive figure; this offers a splendid opportunity for anyone with small capital to make an investment in an up-to-the-minute plant, with a good business connection and ideally located. For full particulars apply to The A. R. Williams Machinery Company, Limited, Toronto, Ont. 12

## Trustees' Sale of Valuable Timber Limits

The undersigned are authorized to call for tenders for the following timber limits situate in Block A, Upper Ottawa, Province of Quebec. These will be sold en bloc in two parcels.

Parcel Number 1, (Season 1913 and 1914). Limit 611 19 sq. miles River Ottawa, Grand Lake.

Limit 676, 25 sq. miles, S 1/2 16/4 Range, Block A.

Limit 677, 17 1/2 sq. miles, 14/3 Range, Block A.

Limit 678, 12 1/2 sq. miles, S 1/2 of N 1/2 16/4 Range, Block A.

Limit 679, 12 sq. miles, 16/3 Range, Block A.

Limit 680, 15 1/2 sq. miles, 15/3 Range, Block A.

Limit 681, 25 sq. miles, S 1/2 of 17/5 Range, Block A.

Limit 682, 25 sq. miles, N 1/2 of 17/5 Range, Block A.

Limit 696, 25 sq. miles, N 1/2 of 17/4 Range, Block A.

Limit 683, 6 1/4 sq. miles, S.E. corner of 1/2 S. No. 15/4.

Total, 185 square miles.

Parcel Number 2. Limits 633 and 634, 50 sq. miles, Lot 8, Range 4, Block A.

The limits described in both Parcels are all surveyed and easy of access. They comprise some of the best pine and pulp-wood areas in the province.

Tenders in writing for the purchase en bloc of each parcel separately will be received by the undersigned Trustees at their office, Victoria Chambers, Ottawa, up to 12 o'clock noon of Monday, the 21st day of July next.

An accepted cheque for 10 per cent. of the price offered should accompany each tender. If tender accepted the balance of the purchase price shall be paid in equal installments at one, three and six months thereafter with interest at the rate of 5 per cent per annum.

For further particulars apply to the Royal Trust Company (Ottawa Branch), or to Code & Burritt, solicitors, Carleton Chambers, Ottawa.

Dated this 16th day of May, A.D. 1913.  
The Royal Trust Company,  
Trustees for Sale.  
11-14

**Timber Limits For Sale**

Can be quickly and profitably disposed of by advertising them on this page. This is where buyers of timber property look for opportunities to invest. If your "ad" is here the investor will see it. Canada Lumberman, Toronto, Ont. tf

**Cash for Your Business**

factory or real estate. I bring buyers and sellers together. No matter where located if you want to buy or sell or exchange any kind of business or property anywhere address Frank P. Cleveland, 1479 Adams Express Building, Chicago, Illinois. Established 1881. 9-t.f.

**Sawmill For Sale**

On Georgian Bay, near Little Current, close to north shore; practically new, well built and equipped with shingle machinery; over one mile of water front, loading dock and sheltered booming ground; plenty of timber available locally or can be rafted in from north shore or Georgian Bay. Good opening for retail store in connection. This is a splendid chance for millman with small capital; price right. Good reason for selling. Great Lakes Lumber Co., Ltd., Owen Sound, Ont. 5-T.F.

**For Sale**

On Georgian Bay, saw mill in first class condition, with everything complete. Engine 75 h.p. Boiler 110 h.p. Sawing capacity 20,000 feet to 30,000 feet per day. Also including booms and chains. Good stable and office and everything complete. Shipping facilities by both rail and water. Size of mill site 40 rods by 5 acre water lot, with 4 acres of land. Owner retiring from business reason for selling. Address all enquiries to 201 Campbell Avenue, Toronto, Ont. 9-14

**Miscellaneous****Wanted**

WANTED—Eight or ten second-hand detachable or three-wheeled lumber buggies, also two heavy lumber wagons and one dump cart. Quote best cash prices to John Stirrett & Sons, Port Arthur, Ont. 12

**For Sale**

Three Driving Outfits complete, including tents, blankets, cookery, pike poles, peavies, punts, anchors, and wenches with lines, also several hundred boom chains 5/8 x 10 with clevis attachment. Box 797, Canada Lumberman, Toronto, Ont. 12-13

## Trustees Auction Sale of Valuable Timber Limits known as the McArthur Limits

AUCTION SALE of valuable timber limits in the Province of Quebec, held under License from the Quebec Government.

There will be offered for sale by Public Auction at the Russell House in the City of Ottawa, at twelve o'clock noon, on Wednesday the 1st day of October, A.D. 1913, the following timber limits:—

**Gatineau Limit**

Comprising timber berths numbers 252 to 260 inclusive, located in the district of Montcalm on the Gatineau and Ottawa Rivers, having a total area of four hundred square miles and being located about eighty miles above Maniwaki, the terminus of the Maniwaki Branch of the C. P. R.

These berths are well timbered and well watered, as will appear upon examination of the cruisers' reports below mentioned, and are believed to be among the most valuable timber properties now available.

**Lake St. John Limit**

Timber berths Numbers 7 and 8, Range 3, north of Lake St. John, situate on the River Alex flowing into the north arm of Lake St. John and containing about forty-five square miles.

Each limit will be offered for sale subject to a reserve bid.

Terms—Ten per cent. of the purchase money on date of sale and the balance within fifteen days thereafter (without interest), unless otherwise arranged with the vendors.

For particulars and conditions of sale and cruisers' reports and maps of the limits, application may be made to the undersigned solicitors.

Peter Ryan, Toronto,  
Auctioneer.

Robertson & MacLennan,  
54 Canada Life Building,  
Toronto, Ont.  
Solicitors for Vendors.

12

**MAIL CONTRACT**

Sealed tenders addressed to the Postmaster General, will be received at Ottawa until noon, on Friday, the 20th of June, 1913, for the conveyance of His Majesty's Mails on a proposed Contract for four years, six times per week over Rural Mail Route from Stouffville (via Altona and Glasgow), Ont. from the Postmaster General's pleasure.

Printed notices containing further information as to conditions of proposed Contract may be seen and blank forms of Tender may be obtained at the Post Office of Stouffville, Altona, Glasgow, Siloam, Goodwood, and at the Office of the Post Office Inspector at Toronto.

G. C. ANDERSON,  
Superintendent.

Post Office Department,  
Mail Service Branch,  
Ottawa, May 8th, 1913. 10-12

**Tenders for Pulpwood Limit****Tenders for Pulpwood Limit**

Tenders will be received by the undersigned up to and including Friday, the 15th day of August next, for the right to cut pulpwood on a certain area tributary to the Lake of the Woods, in the District of Kenora.

Tenderers shall state the amount they are prepared to pay as bonus in addition to dues of .40c. per cord for spruce, and .20c. per cord for other pulpwoods, or such other rates as may from time to time be fixed by the Lieutenant-Governor in Council, for the right to operate a pulp mill on or near the area referred to.

Such tendere shall be required to erect a mill or mills on or near the territory, or in such place as shall be approved by the Lieutenant-Governor in Council, and to manufacture the wood into paper in the Dominion of Canada.

Parties making tender will be required to deposit with their tender a marked cheque payable to the Honourable the Treasurer of the Province of Ontario for ten per cent. of the amount of their tender; to be forfeited in the event of their not entering into an agreement to carry out conditions, etc.

The highest or any tender not necessarily accepted.

For particulars as to description of territory, capital to be invested, etc., apply to the undersigned.

W. H. Hearst,  
Minister of Lands, Forests and Mines.  
Toronto, Ontario,  
May 20th, 1913. 12-15

**Spacing of Resaw Teeth**

What space is best for resaw teeth is a question that may be answered in many ways, each one seemingly being the right one.

Here is an instance of how an apparently assured position was shown to be wrong. After a good deal of experimenting a certain factory using cottonwood, all of it resawn, decided that one and three-quarter inches was just right and all the saws were brought to that spacing.

One day a 5-inch saw struck iron in the end of a board and was badly done up. More than half of the teeth were so badly broken that it appeared as if there was nothing to do but to have it cheared and recut. It was discovered that every other tooth was broken, and the filer decided that he would just break them off and use the others. By a little change in the grinder he got the saw gummed out in good shape and when fitted up there was much interest in the outcome.

With\* teeth having three and a half inch spaces things looked as if it was sure of the failure so freely predicted.

But there was a surprise in store for all of them. That saw went right on cutting cottonwood up to 24 inches wide at just as good feed as it had ever done and the work was as good. It run that way until worn down to 3 inches and was then recut and used on a small machine. There is no telling how far down the line might have gone had a fire not stopped its useful career.

With too many teeth you have to carry more feed than the blade can support and the fewer teeth seemed to do the works as fast, but they do not stay sharp as long. Each kind of timber must have a fitting best suited to it as regards the spacing of the teeth, but where the timber is mixed, of all sorts, experiments like the one here related have to decide. Even at that one is never quite sure, as was the case with this saw, where an accident revealed capabilities that were not thought possible.—H. C. in Wood-Craft.

**Tighten Your Bolts**

Just because a little effort is required to tighten the bolts in Berlin round cylinders, I find that some of our more careless operators even go so far as not to use a wrench at all in fastening these bolts.

It is quite unreasonable to expect knives to be held firmly in any kind of a cutter head, travel-in gat a terrific speed, unless a reasonable amount of precaution is taken.

The knives of Berlin round heads will never move from their position if a small "T" wrench is used to tighten them as firmly as possible.

Caution your operator against this and it may prevent a possible delay or accident.

# Review of Current Trade Conditions

## Ontario

Trade conditions in Ontario at present are rather uncertain and many causes are given by members of the trade. Labor unrest and monetary stringency are the chief factors mentioned, with real estate speculation frequently mentioned as the chief reason for the tightness of money. Travellers who have recently visited the chief markets in the northern States report unsatisfactory conditions. White pine manufacturers have been finding more difficulty than usual in disposing of their stocks. It is quite possible however, that this is to a large extent the result of the slowing up in trade which as a rule occurs during the month of June. About the only stock which is showing any activity is hemlock. In pine, no one seems to be looking for anything but special stuff. One inch and 1½ inch white pine are very slow. One and a half inch and 2 inch are a little better. Shipping lumber in general is quiet in the northern States. Keen competition from western white pine and southern yellow pine are having their effect upon Canadian white pine. Spruce also from West Virginia is cutting into the white pine trade. This does not apply of course to the north-eastern States, but in that district New Brunswick and Quebec spruce are having much the same effect. The shingle markets are brisk, both in the northern States and Eastern Canada owing to the heavy storm which unroofed a great many buildings early in the season. This trade however is well cared for by wholesalers.

White pine and hemlock lath are meeting with keen competition from yellow pine lath, the same being delivered, according to recent report, at New York points at about \$3.80. The building situation in Ontario at present is fairly satisfactory, but there is considerable anxiety about the immediate future, as a result of the apparent stop in real estate speculation. Retailers to-day are buying only for immediate requirements, in practically all parts of Canada. Trade during the month of May is reported to have been only about two-thirds as great as during the month of April. Low grades of white pine are fairly strong.

The Ottawa lumber trade has been feeling the effects of tight money in a manner similar to other parts of the country. The speculative erection of small houses, which was so noticeable last year has disappeared. Trade is about normal and prices are steady. A fair supply of labor is obtainable with wages unchanged as compared with a year ago. Export trade to England is only fair and the trade with the United States has dwindled to nothing, as everyone is waiting for the outcome of the tariff situation.

## Eastern Canada

The lumber trade at Montreal is quiet, but the volume of business is fairly satisfactory and prices continue firm. The tightness of the money market is holding back the trade. Building permits showed a slight decrease for the month of May as compared with May, 1912, the total up-to-date however, is considerably in advance of last year's total. Collections are slow. Exports to the Old Country are moderate. There is a good demand for birch for export. Recent rains in the province of Quebec have resulted in the logs coming down the river plentifully and the outlook is much brighter than it was a fortnight ago. News print paper is quiet at Montreal. It is believed that a better demand will develop as soon as the tariff question has been settled. Large stocks of ground wood are on hand and the demand is small. Chemical pulp continues strong and prices are firm.

The eastern spruce market is more in favor of the buyers at present than at any other time this year. In Boston, dimension is ranging from \$25 to \$26. Spruce boards, although offered more freely, are holding their own. Matched boards are a shade weaker, being offered at \$26, with some sales at 50c less. Stocks at New York are not large, but retailers are cautious about buying. Little improvement is reported in spruce at Buffalo, retailers expecting lower prices a little later on. White cedar shingles at Boston are quiet. Manufacturers are holding their prices firmly at \$4.25 for extras and \$4 for clears. Red cedars are not so steady. Lath are a shade easier. The New York market has fallen off considerably and manufacturers are directing their attention towards Boston. Buyers are rather cautious however, and the highest prices are \$4.50 for 1½ inch, and \$4.15 for 1½ inch, first-class lath.

## Great Britain

In spite of a period of delightful weather at London, trade has been rather slow of late. The Surrey Commercial and Millwall docks have not been more than ordinarily busy. The first rush of the f.o.w.

steamers was over and very few boats were discharging at the time of latest reports. Reports from the yards indicate only a small trade. Spot trading is slack, the principal demand being for seasoned deals, battens and boards in the better class of Swedish and White Sea stocks. Considerable annoyance is mentioned among importers as a result of certain underselling of White Sea and Finnish goods of late.

Trade in soft woods at Liverpool during the past fortnight has been rather quiet, the aggregate spot consumption having fallen away, although prices have been fairly steady. Consumers seem to be determined to purchase only what they need for immediate requirements. Under these conditions, importers are shy about contracts for future shipments. Business in the c.i.f. markets has not been important. Shippers' quotations are unchanged. Prices in the spruce deal c.i.f. market continue very firm and small liner lots have changed hands at full values. No change is reported in values for New Brunswick, etc., cargoes, agents holding firm under shippers' instructions, as a result of the good demand for these products in the United States. Importers' quotations on the spot at Liverpool are nearly steady, although a few clearing lines from liner shipments are reported to have been cut to the extent of about 2s. 6d., so as to avoid yarding. These sales however, have been of the fag-end of the specifications.

Trade conditions at Manchester are steady with a good demand. Importers and merchants generally are fairly well satisfied with conditions. Prices show no important alterations. There has been a sharp advance in freights, so that buyers, instead of getting on at less, will have to pay more, as f.o.b. prices are extremely firm. Spruce continues firm with a steady demand, so that there is no indication of a fall in prices for some months.

## United States

Travellers returning from the northern States report a very unsettled condition in connection with the lumber trade. It must be borne in mind however, that June is generally a month of restricted buying, a condition which sometimes lasts well into July. There are important signs of quieter trade in the northern States, during the next month or two. The disturbances in financial conditions and the attitude of the government upon the tariff have increased the tension to some extent. Most reports from leading lumber centres mention this restraining influence. A satisfactory indication however, is obtained from the steel industry which is generally considered to be an important trade barometer. Judging from its present condition, general business should see no falling off for the remainder of the year, as the steel mills report that they will not be entirely caught up on deliveries (if no more orders are placed) until well into the fourth quarter of the year.

The lumber demand of the country is apparently for current consumption and shows little interest in stocks for future use. This is rather a normal condition at the present time of year and no important increase is likely until well into July. Some markets have shown a perceptible easing off in Norway and white pine, but there is a fair demand for good pine at all middle west and eastern points. Some reports indicate that the supply at these points is not sufficient for the demand.

Production of northern pine at 48 mills, as against 57 mills last year shows nearly 77,000,000 feet increase over the first four months in 1912. For the same period 77,392,326 pieces of lath were manufactured, as against 55,569,502 for the corresponding period of last year. Shipments of lumber and lath for the first four months in 1913 show increases of 13,624,533 feet of lumber and 12,974,930 pieces of lath respectively. Reports received regarding Georgian Bay stocks are to the effect that not much unsold lumber is now in the hands of the manufacturers in that district. The active demand this spring enabled mill men to sell all they had accumulated during the winter. The market for the better grades of pine is reported to have eased off during the last thirty days. Norway pine is from \$1 to \$2 lower. Mill culls are holding up well. Manufacturers at the head of the lakes are expecting an excellent demand for all kinds of lumber in the fall. Trade in northern pine in the eastern States is reported quiet. A sluggish market is reported in northern pine at the Tonawandas.

All dry hemlock is selling well, with prices in general steady. Occasionally one hears reports of sales at 50c to \$1 off February list. This is thought to be for stocks that are only half dried. Hemlock prices at New York City are well maintained, the demand and the supply being about equal. Retailers are buying steadily on a hand-to-mouth basis. Hemlock at Buffalo is steady and a satisfactory trade is reported at the Tonawandas.

HOME AND ABROAD**

## Ottawa Feeling Tight Money Effect

Ottawa, June 9th (Special to the Canada Lumberman):—The tightness of money, which has been particularly noticeable during the past few weeks, causing the bottom to fall out of the stock market, is being felt by lumbermen in Ottawa and district. Last year at this time, small buildings, such as houses, were being built in abundance by speculators, but such is not the case just now, owing to the high price of money.

Though the value of the building permits in Ottawa for the first five months of 1913 has been much greater than for the same period last year, few of the permits are for small buildings. However, hope springs eternal in the breasts of lumbermen, as with other men in business, and though money is scarce at present, reliable financiers in London and New York say that the prospects for an improvement are bright.

Local trade is about normal with no alteration in prices during the last few weeks. Labor is fairly plentiful at the same scale of wages as prevailed last year. Export trade to England is not particularly brisk, while the business to the United States is almost at a standstill pending the settlement of the tariff changes on lumber. Not a single boat load of lumber has passed down the Rideau Canal this season bound for United States ports. Canal officials say they have never experienced such a dull period. When the tariff question is settled a rush of business is expected.

## International Report Denied

The report that was freely circulated in the Canadian newspapers that the International Pulp and Paper Company would build a \$10,000,000 plant at Deschenes, Que., five miles from Ottawa has been flatly denied by W. H. Lyman, head of the company's expansion policy. When asked about the accuracy of the report he said "There is no truth whatever in it. Our company, I may say, will eventually expand into Canada, but there are no immediate plans for such expansion. We do not contemplate any erection or acquisition of any plant in Canada at the present time. The future is full of promise, however, and when we determine to locate in Canada it may be near Ottawa."

Further corroboration that the company has not bought power or land at or near Deschenes is given in an interview your correspondent had with representatives of companies owning practically all the power in the district. They affirm that they have not released any of their holdings to the International Pulp and Paper Company and no sale of land to the firm has been made either at Deschenes or Chelsea.

Lumber manufacturers with all employers of labor are interested in the report of the Technical Education Commission issued a few days ago. The report is the result of three years of labor. A Dominion government grant of \$3,000,000 to be paid in ten annual payments for the promotion of technical education and industrial training is recommended in the report.

For some years past the Ottawa River has been badly choked up with logs to the detriment of the saw mills in the spring. This year, however, the river is more open than it has been for a long time and a plentiful supply of logs is coming down from the woods and getting through the booms.

## Montreal Trade Report—Market Quiet and Steady

Montreal, June 10th (Special to the Canada Lumberman):—With a satisfactory volume of business passing, prices keep firm. There is nothing like a rush of orders, although, considering the state of the money market, wholesalers and retailers have no cause to complain. Several large buildings are still being held up on account of the money stringency, and the building permits for last month showed a small decrease. The total for May was \$2,473,608, as against \$2,604,108 in the corresponding month last year. The total for this year is \$7,663,861, which compares with \$6,347,488 in 1912. Collections are still slow.

A moderate quantity of lumber is being shipped to European ports, birch being in good demand.

Owing to recent rains in the Province of Quebec, logs have been floated down in larger numbers and the outlook is distinctly brighter. Advices from the Cookshire district state that pulpwood has been coming down very freely, and a large quantity has been shipped to the United States.

A quiet feeling pervades the news print section—which is the usual condition during the summer months. In addition to this, the

tariff unrest is a disturbing factor, but it is believed that when the tariff question has been settled, a more active demand will set in.

Ground wood is still an unsatisfactory market with large stocks on hand. Except for deliveries under contract, business is slow.

Chemical pulp remains strong, and large sales are reported from the United States at considerably better prices than last year.

The Riordon Pulp and Paper Company are erecting an addition to their digester building at Hawkesbury, for the installation of two more digesters, of the same large type as the two recently put in. These will be cooking pulp in the late Fall. All other parts of the mill will be enlarged to meet the new conditions. The third Wilcox and Babcock boiler of 650 horse-power capacity is about to be installed. Large additions have been made to the wood preparing department, and new stone towers are also being constructed. The Canadian demand for sulphite has been heavy, and the Riordon Company are now prepared to supply these buyers as well as the company's American customers.

Damien Lalonde, Limited, Montreal, sash and door manufacturers, lumber merchants, and saw mill proprietors, have removed from St. Lawrence Boulevard to 1000 Christopher Columbus street, where a new factory has been erected; the company have also an office and yard at the corner of Rachel and Colonial streets. The following are the officers appointed at the incorporation of the company: Messrs. Damien Lalonde, president; Armand Lalonde, vice-president; Alphone Lalonde and Lucien Lionais, directors.

Mr. Arthur Tourville, secretary-treasurer of the Tourville Lumber Mills Company, with an office in Montreal, has been appointed a Justice of the Peace for the district of Montreal.

## Tonawanda Trade Topics—Opposition to Free Dressed Lumber

North Tonawanda, June 7th (Special to the Canada Lumberman):—Shipments of lumber by canal are again delayed by failure of the lock at Vischer's Ferry to be completed on time. Several million feet of lumber that left the Tonawandas ten days ago expecting the canal to open throughout its entire course are held up in the vicinity of Vischer's Ferry.

The J. W. Scribner Lumber Company of North Tonawanda have moved into new quarters in the new Sweeney office building at the corner of Sweeney and Webster streets.

Lumber receipts at the Tonawandas for May were up to the average of the same month for the last decade. An unusual feature of the month's receipts was the increased Canadian stock brought in by water. Considerably more lumber from across the border was unloaded on local docks last month than for the same month in the last dozen years. The total receipts for May, 1913, were 34,399,318 feet, as compared with 35,162,860 feet during May, 1912. Failure of the Erie Canal to open on time is one reason for the slight falling off. The greatest decline was in the amount of stock received at Tonawanda.

The W. G. Palmer Lumber Company of North Tonawanda has just been reorganized and incorporated with the following officers:—President, W. G. Palmer; vice-president, George Gilmore; secretary, William A. Kohl; treasurer, Fred R. Large. The capital stock is \$100,000 with \$60,000 paid in. President Palmer says that a general retail lumber and wood-working business will be continued with possible factory enlargement in the near future. The W. G. Palmer Lumber Company has operated a large plant in the Tonawanda several years.

Local customs offices whose chief business is collecting duty on Canadian lumber are not likely to be consolidated to conform with the order given by President Taft on the last day of his term of office.

The North Tonawanda Box & Lumber Company is one of the newest additions to the local lumber trade. The capital is \$10,000, paid in, by the following incorporators:—William H. Crabb, Lee E. Joslin and G. W. Gramm, all of the Tonawandas.

Mr. A. J. Brady, of Brady Brothers, and M. E. Preisch, of the Haines Lumber Company, were the local delegation that went to Washington last week to protest against the removal of duty on dressed lumber. Local and other lumber interests on the Niagara Frontier acquiesced in the move to put rough lumber on the free list but to take the duty from both dressed and rough stock was too much and strong delegations of lumbermen from every important lumber market from Seattle to Bangor, Me., were at Washington for the hearing. The protestants argued that since it costs more to ship rough lumber than the dressed product because of waste added to the greater

# DRY SPRUCE BOARDS

**W**E wish to inform our customers and friends that we have on hand in our Sayabec yard about 22 million feet of our 1912 late summer and autumn sawing. Is now dry and ready for prompt shipment.

OF DRY SPRUCE IN CANADA**

weight, all lumber destined for shipment to the United States would be dressed in Canada before shipment. The protesting delegations report difficulty in securing any assurance either way as to how the final draft of the tariff bill will leave lumber.

**A Large Cut in Dauphin District**

A dispatch from Dauphin, Man., reports that the winter's cut of logs for the district is larger than during any previous winter in its history, the total being about 90,000,000 feet. The winter, on the whole, was favorable, and the supply of labor was sufficient for the requirements. In nearly all cases experienced bush men were obtained. The report also states that prices for nearly all grades of lumber have advanced, so that the increased output is a source of considerable advantage to operators. The winter's cut of the various companies in the district is given as follows:—

|                                          | Feet       |
|------------------------------------------|------------|
| Red Deer Lumber Company, Barrows         | 15,000,000 |
| Mutchenbacker Bros., Mafeking            | 10,000,000 |
| Great West Lumber Company, Green Bush    | 8,000,000  |
| Ruby Lake, Hudson's Bay Junction         | 7,000,000  |
| Caverly Bros., Bowsman                   | 5,000,000  |
| Jefferson Caverly, Bowsman               | 2,000,000  |
| Standard Lumber Company, Winnipegosis    | 6,000,000  |
| T. A. Burrows, Birch River               | 5,000,000  |
| T. A. Burrows, Duck and Riding Mountains | 12,000,000 |
| Western Lumber Company, H. B. Junction   | 3,000,000  |
| Shaw Bros., Prairie River                | 4,000,000  |
| Sinclair Bros. & McCaffrey, Chemong      | 3,000,000  |
| Wm. Williams, Fork River                 | 500,000    |
| Portable Mills                           | 4,500,000  |
| Permit Berth Mills                       | 6,000,000  |
|                                          | 91,000,000 |

**Lower Prices for Spruce at New York**

Chase, Talbot & Company, New York, report under date of May 31st in part as follows:—"Several most desirable schedules of random spruce have recently been offered on this market, without finding ready buyers. Nine and ten inch, of choice lengths, is offered at \$22.90, instead of \$31 or \$32, which figures could have been real-

ized earlier in the season. There is no great activity in the yards, but nevertheless, the trade have long since been keyed up to a high range of values, and with the limited supply, it would seem that the earlier forcing of sales, might have been avoided. We understand there is a tendency in Boston and vicinity, toward softening of prices. This fact may be expected to divert some stock to this market, but as the season progresses, we are hopeful that the buyers may realize the light supply and the salesmen find a more cordial reception. The haste to get laths forward on a \$5 market, has resulted, exactly as might have been expected, and \$4.50 is the price to-day."

A recent report from Campbellton, N.B., states that between the month of November, 1912, and the end of May, 1913, the Intercolonial Railway alone shipped for lumber dealers at Campbellton some 1,500 cars of shingles and long lumber. There remained at that time some 500 cars to be shipped to finish up the winter's work.

Latest reports from New Brunswick points are to the effect that the recent heavy rains have provided sufficient water for bringing out practically all the log drives which were considered to be in danger of stranding three weeks ago.

**Barbados Lumber Trade Report**

S. P. Musson, Son & Company, Bridgetown, Barbados, report under date of May 22nd as follows:—Lumberstuffs—White pine—The position is the same as last advised. There have been no arrivals during the fortnight, and dealers' yards are getting bare. Supplies are wanted, and we would recommend shipments, which would sell to advantage. Spruce—The "Rosalie Belliveau" has arrived to our address, from Belliveau Cove, N.S., with a cargo of some 235 M. ft., and a small quantity of hemlock boards. We had placed this cargo to arrive some time ago. The market is but lightly supplied, and further receipts would do well. Pitch pine—No receipts. Shingles—We placed some 200 M. Long Gaspe which came to hand per Canadian steamer from Halifax at \$8, \$6.50 and \$5 duty paid, according to quality, and we note a further sale of 190 M. by the same opportunity at \$5. We would recommend further shipments of the best quality, which should bring around \$8 to \$6 per M., but further supplies of poor quality are not wanted. Wood hoops—We note the arrival of 500 bds. by steamer for dealers' account.

## Ontario

The Provincial Paper Mills Company, Limited, has been incorporated with a capital of \$5,000,000 to carry on business as manufacturers and dealers with head office at Toronto. The provisional directors are G. H. Sedgewick, A. G. Ross and A. E. Langman, barristers of Toronto.

Fleischman Bros. Company, Limited, has been incorporated with a capital of \$40,000 to carry on business as builders, contractors and engineers, with head office at Toronto. The provisional directors are Harry Riley, W. R. Anderson, law clerks, and W. H. Walter, accountant, all of Toronto.

Dalton Realty Company, Limited, has been incorporated with a capital of \$40,000 to carry on business as a land and building company, with head office at Toronto. The provisional directors are C. B. Bingham, manager, J. E. Lawson, law student, and J. M. McKinley, school teacher, all of Toronto.

C. B. Janes & Company, Limited, Orillia, Ont., have been incorporated with capital stock of \$40,000, to take over the sawmilling and lumber manufacturing business conducted by C. B. Janes and Nelson Hanes under the name of C. B. Janes and Company. The provisional directors are C. B. Janes and A. Wood.

The Ontario government is advertising for tenders until August 15th for the right to cut pulpwood on a certain area tributary to the Lake of the Woods, in the district of Kenora. Tenderers are to state the amount they are prepared to pay as bonus in addition to dues of 40c per cord for spruce and 20c per cord for other pulpwoods, or such other rates as may be fixed by Lieutenant-Governor-in-Council for the right to operate a pulp mill on or near the area referred to. The tender will be required to erect a mill or mills on the territory and to manufacture the wood into paper in the Dominion of Canada. A marked cheque for 10 per cent. of the tender will be required, which will be forfeited in case of failure to carry out the agreement. Particulars may be secured from the Minister of Lands, Forests and Mines, at Toronto.

An important paper mill deal was concluded at Toronto recently, which resulted in the incorporation of the Provincial Paper Mills Company, Limited, with capital stock of \$5,000,000. The new organization secures control of the St. Lawrence Paper Mills Company, Limited, and the Barber Paper & Coating Mills Company, Limited. The plants included are the original mill of the St. Lawrence Paper Company, at Mille Roches, near Montreal; The Montrose Paper Company, at Thorold, Ont., where extensive improvements have recently been made and the Barber Paper & Coating Mills, at Georgetown, Ont. At present the companies are under the management of Mr. Fred Duncan, formerly of the Bryant Paper Company, Kalamazoo, Mich., and Mr. I. H. Weldon, Toronto. The mills which have been taken over have six paper machines and seven coating machines.

## Eastern Canada

The St. Romuald Hardwood Flooring Company, Limited, St. Romuald, Que., have obtained a charter.

Cromwell & McRae, lumber manufacturers and dealers, have been registered to carry on business at Cookshire, Que.

Moses Haines, Hamtown, N.B., is advertising his sawmill, machinery and lumber property for sale by tender under a mortgage.

The E. B. Eddy Company, Hull, Que., have started work upon the erection of their pulp mill on the Aylmer road. The cost of the mill is to be \$500,000.

Robert Westgate and R. J. Westgate have been registered to carry on business as lumber manufacturers at Cookshire, Que., under the name of Robert Westgate & Son.

It is understood that the Brompton Pulp and Paper Company, of East Angus, Quebec, will shortly add another machine. The company is exceptionally busy at present, and has enjoyed a very prosperous year.

The Richford Lumber Company has been authorized to carry on business in the province of Quebec with its chief place of business at Sutton, P.Q. The attorney for the company is Mr. George Boright of Sutton, P.Q.

It is understood that plans and specifications for an immense plant for the manufacture of paper and pulp for the International Paper Company, to be erected at Deschenes, Quebec, have been completed. The estimated cost of the plant is \$10,000,000.

A despatch from Sutton, P.Q., states that the veneer mill in that village was destroyed by fire on June 7th. The large plant is an absolute ruin. The loss is estimated at \$75,000, partially covered by insurance. The plant was owned by the Veneer Mill Company, of Escanaba, Mich.

The Laurentide Company have several hundred men engaged in the construction of their new power plant at Grand Mere, P.Q. Within the last month the fourth digester has commenced operations, and the company are now turning out 115 tons of sulphite per day as compared with a previous production of 85 tons. The company are very busy and are receiving a large number of orders.

A recent newspaper report stated that the International Paper Company intended to erect a large pulp and paper mill at a cost of \$10,000,000 at Deschenes, P.Q. In reply to an inquiry by the Canada Lumberman, the International Paper Company report that nothing definite has been decided by them as yet, regarding operations outside of the United States. Press reports from New York are also to the effect that the International Paper Company positively deny that they are contemplating the erection of a plant at Deschenes. Mr. W. H. Lyman, head of the company's expansion policy is reported as saying:—"There is no truth whatever in the report. Our company, I may say, will eventually expand into Canada, but there are no immediate

plans for such expansions. We do not contemplate erection or acquisition of any plant anywhere in Canada at the present time. The future is full of promise, however, and Ottawa is a good city and when we determine to locate in Canada, it may be near that city."

### Western Canada

The Fleck Timber Company, Limited, has been incorporated in British Columbia with a capital of \$50,000 and head office at Vancouver.

Wm. Rutherford and M. N. Merrian are considering the erection of a planing mill to cost \$15,000 at Medicine Hat, Alta. They have entered into an agreement with the city to construct a woodworking and planing mill.

The Alberta Box Company, Limited, Calgary, Alta., report that their recent loss by fire amounted to about \$7,000 and that their plant is now running the same as formerly.

The Hudson's Bay Company has purchased the plant formerly belonging to the Calgary Woodworkers, Limited, at East Calgary, Alta., at a price in the neighborhood of \$50,000.

The Lake Lumber Company, Limited, has been incorporated with head office at Lozells, P. O., B.C., and capital stock of \$10,000 to acquire the mill property and business of Geo. Johnson and R. B. McLean at Burnaby, B.C.

A recent report from Vancouver states that Mr. R. C. Bidlake, of the Snowdon-Bidlake Logging Company has made a sale of a timber tract on Menzies Bay, Vancouver Island, containing about 100,000,000 feet, at a price in the neighborhood of \$3 per thousand feet.

The Empire Lumber Company who are largely interested in timber limits on Vancouver Island in the Cowichan Lake district are actively planning for the development of this property. Circumstances however, have compelled them to delay to some extent. The recent completion of the E. & N. railway branch to Cowichan Lake brings their plans much nearer a conclusion than formerly and it is expected that before long they will be in a position to commence operation upon the erection of a large new mill.

The Hardy Bay Lumber Company, Hardy Bay, B.C., which was recently organized and incorporated has commenced operations on an extensive scale near Hardy Bay, B.C. A mill with a capacity of 25,000 feet per day and a shingle mill with a capacity of 45,000 shingles per day will be erected. The company have secured the timber upon 3,000 acres immediately adjoining the mill site. The members of the company are as follows:—Mr. R. S. Hamilton, president; Mr. W. J. McNeil, vice-president; Mr. F. Middleton, treasurer; Mr. G. L. H. Middleton, secretary; Mr. James Shand, manager; Mr. J. G. Bourne and Mr. F. M. Williamson, directors. Tenders are to be addressed to R. C. Desrochers, Ottawa.

The Victoria Lumber & Manufacturing Company, Limited, Chemainus, B.C., are building an addition to their boiler house, 60 x 80 feet and are setting two 72 x 18 ft. return tubular boilers. They have just completed a new concrete three-roomed dry kiln with a capacity of 60,000 feet and are rebuilding two old kilns with a capacity of 90,000 feet. They have also built a new dry shed for sorting and bundling their lumber from their planing mill. They have also installed one Westinghouse 75 kw. generator with direct connection to an Ideal steam engine. In addition to the above the company are driving new piles on their old wharf and enlarging it, in order to give them greater shipping facilities.

A Vancouver despatch says: The opening of the Panama Canal and the prospect of free admission of Canadian lumber into the United States have induced the White Bros. Lumber Company, of Canada, to engage in logging and manufacturing in British Columbia on a large scale. This firm is an offshoot of a large Michigan corporation. W. H. White and Thomas White, of Boyce, Mich., and W. O. King, of Chicago, the three principal shareholders of the Canadian Company in that corporation, reached Vancouver recently, and will spend several weeks formulating their plans. Their limits comprise 90,000 acres on the Clanche River and tributaries in the Rupert district on the north-east end of Vancouver Island. Railways are to be built and a large district opened up for logging. Saw mills to cut half a million feet a day are to be erected according to the report.

One of the most modern, up-to-date lumber mills that have yet been erected in British Columbia will shortly be built on the north shore of Port Moody by the Vancouver Timber & Trading Company, of which Mr. Alvo von Alvensleben, the prominent financier of Vancouver, is managing director. Already over 30 acres of the land has been cleared, and work is expected to be started at the earliest possible moment. Mr. Alvensleben states that the cost of the mill would be somewhere in the neighborhood of \$300,000, with an output of 60 million feet a year. The site for the mill is a little west of the government reserve, having been purchased a few months back from C. T. Dunbar, of Vancouver. The mill site will occupy about 1,000 feet of water front and was purchased after a number of companies had negotiated for taking over the land. The mill will be electrically worked.

### More Forest Reserves

A bill is to be introduced by the Dominion government enlarging the western forest reserves from 25,000 square miles to 35,000 square miles. The chief reservation in the West, the Rocky Mountain Forest Reserve, is to be increased in area 2,680 square miles, and a new reserve of over 5,000 square miles is to be created in the Peace River country, close to the Lesser Slave Lake.

Shipments to the United States from Restigouche and Gloucester counties and Mission Point, N.B., during the month of January, February and March of the present year, totalled in value \$260,507, against \$97,660 during the corresponding period of 1912. Practically all of these shipments are lumber, lath and shingles.

**A New Fast Feed Inside Moulder that will reduce your manufacturing costs and raise the grades of your formed stock—**

## **FAY-EGAN "LIGHTNING" No. 305**

Fast feed matchers gave progressive mill men a taste of what could be accomplished in the way of getting the most out of their lumber at the lowest manufacturing costs.

This led to a demand for a molder built on the same lines—The demand has been satisfied in the new Fay-Egan No. 305—new in its many features of advanced molder construction, but thor-

oughly tried and tested in every respect, not only in our own shops, but in actual service as well. The No. 305 will effect as big a saving on your formed stock as you have already effected on your flooring and planing with the Fast Feed Matchers. And the grades will be raised as well, because the No. 305 with profile jointing attachment positively will not tear out on knotty

or cross-grained stock.

The 305 will take care of the heaviest classes of work,—it is built with lots of reserve power. Here is a proposition that you cannot afford to ignore. Send us some samples of work you are now doing, tell us how many feet per minute you are running, and let us figure how much a 305 will save for you,—It won't obligate you to buy.

*We have some large photos and a detailed description of the 305 which we'll be glad to send you upon application.*

is so carefully watched from the hides of the steers to the pulleys it drives that even when “first cost” is considered it always

### Costs Less Per Day of Service

Our thirty six years of belt making experience have taught us many things but nothing is so clear as the fact that “first cost” per foot length is no gauge as to belt value. Real belt value lies solely in the amount of service rendered per dollar invested.

*The far sighted purchaser will remember this and escape the pitfalls along the path of the purchase of low “first cost” belting.*

# Increased Cut Follows the Installation of **DISSTON BAND SAWS**

Being made exclusively of special Disston Crucible Band Saw Steel, they have a uniform tough temper, superior tension and edge holding qualities, and an even thickness throughout; all tending to produce saws that possess the highest efficiency.

## There's Quality in Every Foot

The universal recognition of that fact is evidenced by the enormous demand that now exists for Disston Brand Saws. This preference for Disston Saws has been steadily growing for many years, not only among the millmen of the United States and Canada, but in all sections of the world.

Reg. U.S.  
Pat. Off.

## HENRY DISSTON & SONS

INCORPORATED

Keystone Saw, Tool, Steel and File Works  
PHILADELPHIA, PA., U.S.A.

Established  
1840

Branch Houses:

Chicago, Boston, Cincinnati, New Orleans, Memphis, San Francisco,  
Seattle, Portland, Spokane, Toronto, Vancouver.

## Horizontal Slab Resaw

¶ A Horizontal Slab Resaw will increase the capacity of a saw-mill from 15 to 25 M ft. at a less cost for equipment and a less cost for operation, than can be accomplished in any other way.

## INDUSTRIAL LOCOMOTIVES

The day has come when only the very best locomotives will meet the needs of logging roads and switching around industrial plants. It is now necessary to produce special designs to meet special needs. For years we have been busy studying the conditions in all fields where locomotives are used and have designed our locomotives to meet those conditions.

Proper designs insure efficiency, reduce the coal bills, lessen repairs, and give maximum work for a minimum of expense.

Our locomotives embody the best construction and are sturdily built. They are simply in design, and all wearing parts are accessible for easy repairs.

Interchangeable repair parts, sure to fit, are kept in stock for prompt shipment.

Dominion Express Building, MONTREAL, CANADA

### Where the Pressure is Heaviest

There is the most severe test of any lubricant and the hardest duty on the bearings.

## DIXON'S FLAKE GRAPHITE

If mixed with the oil or grease, penetrates to every part of the bearing surfaces and stays there, not only building up these surfaces to perfect smoothness, but itself acting as a lubricant when the oil or grease

is squeezed out by the pressure. May we send you a sample to prove this—and our book "Graphite As A Lubricant," No. 238.

## Baldwin Logging Locomotives

The geared locomotive illustrated here-  
with is a well-designed, practical engine,  
suitable for heavy service on steep grades,  
sharp curves, and light, poorly con-  
structed tracks.

Baldwin Geared Locomotive

Investigate the merits of the design.  
Further particulars will be gladly fur-  
nished on application.

**The Baldwin Locomotive Works**

Philadelphia, Pa., U. S. A.

Not altogether what we  
say but what users say

"We have used the Alligator or Warping Tug man-  
ufactured by you for the last 7 or 8 years, and con-  
sider them indispensable to lumbermen on waters of  
French River or similar streams."

Will move a bag containing 60,000 logs,  
in calm weather, 30,000 in a head wind.

## Do you ever use Conveyors for conveying shavings or other material?

We have a special Scandinavia belt for this purpose, which is proving extremely satisfactory for this kind of work.

Write for Information and Prices. We can make you an attractive proposition.

# Federal Engineering Company, Limited

TORONTO, 90 Sherbourne St.

MONTREAL, Unity Building

# GOODHUE BELTING

## FACTORY TO YOUR MILL

**T**O the saw mill and woodworking industries we offer an unusually good belting value in our "Acme Waterproof." This belting is specially made from the best hides to run in wet places where only the best quality belt can "make good." If you require any belting you should enquire into the merits of "Goodhue Belts" then you will buy a "Goodhue."

According to the conditions under which a belt has to run we recommend "Extra" "Standard" or "Acme Waterproof"—each brand the best quality but each made for a different service.

Send for particulars and prices **J. L. GOODHUE CO., LIMITED, Danville, Quebec**

## GET 20 PER CENT. MORE LUMBER FROM YOUR LOGS

by using our

### Patent Steel Band Mill and Carriage

Results from logs of given dimensions cut on Breeze, Denison & Co. pat. band mill.

| Diam. | Log Length | Feet Lum. |
|-------|------------|-----------|
| 18in. | 16 ft.     | 45        |
| 10    | 12         | 54        |
| 10    | 16         | 69        |
| 1     | 15         | 96        |
| 14    | 16         | 171       |

This result was attained by different users of our mills during the season of 1912. We can prove to your satisfaction that this mill will cut more lumber and superior lumber than any other Band or Circular Mill on the market.

#### Special features of Mill

Concrete foundation not necessary. Frame constructed with brace bolted to same timbers which support base of mill. This prevents any movement of mill foundation throwing mill arbors out of cross line. Supporting timbers attached to track which prevents variation in cutting of boards.

#### Roller Bearing Carriage

designed to do away with lost side motion which is quite necessary for successful work in double cutting bands.

#### Double Action Friction Set Works

working on thin steel disc, which can be successfully used in place of usual foot friction in receding knees. This cuts down weight in pinion shaft, therefore reducing momentum, so that it is beyond speed of setter to over set by rapid work. Carriage can be changed from high to low speed instantly and can be operated without passing saw more than six inches either way. Knee opening to 44 inches. Guide prevents any binding motion to the gip and will automatically raise when coming in contact with knot in timber. Guides adjustable when mill is running.

A Canadian Built Mill of superior manufacture.

## Lumber Horses

We are specializing this season in an extra fine line of Lumber Horses, guaranteed to be young and sound in every particular, and of extra weight and quality.

Consignments of heavy horses received regularly from the best shippers of heavy horses in Ontario.

Clean and sanitary barns under Government Inspection.

Loading chutes at Barn Doors via all railways.

We can supply your wants on the very shortest notice.

WRITE US YOUR REQUIREMENT

**Union Stock Yards of Toronto, Limited**

HORSE DEPARTMENT

"The Place to Buy them Worth the Money"

## The Truck That Saves It's Cost Several Times Over in The Year

This truck is designed for lumber yards and planing mills and will be found invaluable for loading and unloading cars.

The front gearing is detachable and may be used with eight or twelve hind gearings. It is a double-header, nuts on axles being kept tight with Steel Cotter Keys.

Oil cups on the wheels and the fact that there is no resetting of tires saves any amount of trouble.

The old wooden-wheeled truck is a back number in comparison with this. It will pay you to write for our general catalogue which describes these trucks in detail, and pick out the style you want now.

**Tudhope - Anderson Co., Limited**  
ORILLIA, ONT.

CLOCK

## Watch Your Watchman

Not to keep track of him, but for the safety of your building. With

## The Hardinge Watchman's Clock

you can see at a glance if your building is being properly patrolled at night.

The Hardinge System is guaranteed accurate—reliable—fool proof. New catalog sent on request.

**Hardinge Bros. (Inc.)**  
3133-3141 Lincoln Avenue  
Chicago, Ill.

STATION

## "Dunbar" Shingle Mill

THIS mill is acknowledged the most complete and satisfactory shingle mill on the market. It has a capacity of from 15000 to 45000 per day according to the quality of the lumber.

### AUTOMATIC CUT-OFF SAW

ESTIMATED capacity: 30,000 feet, 2" stock in 10 hours. Cuts with perfect accuracy. Will carry from two to six 13" saws. A great labor saver.

Write for particulars.

## —SHIMER— Labor and Time-Saving Tools

### POPULAR MATCHING HEADS

Figs. 202 and 203 are leading tools for matching Flooring, Ceiling, etc., for feeds up to 130 lineal feet per minute. They are made with four, six or eight Bits to each Head according to the machine to be used upon, material to be worked, and the rate of feed desired.

Fig. 202

|                                           |         |
|-------------------------------------------|---------|
| Price, per set, with 4 Bits to each Head, | \$40.95 |
| " " " 6 " " "                             | 49.27   |
| " " " 8 " " "                             | 57.60   |

### DOUBLE CEILING HEADS

The Shimer Cutter Heads for matching Ceiling in double thickness to be re-sawed into two marketable strips, will double the capacity of any matcher or moulder.

These tools are very complete and are giving satisfaction in a large number of mills.

Price, per set, complete, only \$40.94.

These tools are turned out of Solid Steel Forgings—have the Shimer "make-ready" which saves you all the fitting and trying—keep your work up to the standard.

All F.O.B. Jamestown, New York.

## This Belt Formerly Ran Tight and Kept the Engineer Busy All the Time. See How It Acts After Cling-Surface Treatment!

This 8 in. single ply leather belt, in the power plant of the Chicago Laundry Co., runs 22 in. driving to 30 in. driven pulley on 10 ft. centers and at a speed of 1350 ft. per min., carries irregular load up to 20 h.p. and is, of course, subjected to dampness.

Before using Cling-Surface, many belt preparations had been tried without success. The belt remained hard and had to be shortened often. To get even fair transmission the belt had to be run so tight that several fillings of the oil cups on the engine were required daily.

Now, since Cling-Surface is being used, the belt is pliable and clean, proof against dampness, carries full load without slip, runs with a sag of two feet, and the engine bearings remain cool with one filling of the oil cups per day.

As Mr. J. C. Cantup, Chief Engineer of this plant says, "Engineers fail to realize the amount of labor and worry that belts cause them. Cling-Surface will prevent all of it and give good results to the plant at the same time."

You have all to gain and nothing to lose in trying Cling-Surface on one or two belts. Every pound is guaranteed on a money back basis. Want our literature? We quote f.o.b. Toronto.

# The Popular JUMBO Edger

Our latest model is an improvement on the one illustrated here

**T**HE Jumbo combined gang and edger is one of the most popular pieces of saw mill machinery that we manufacture and we have some very flattering recommends for it.

12 saws are used on the machine, 8 on the gang side and 4 on the edger part. "Jumbo" will rip up cants to 8 inches thick and it is impossible for a cant to fly back. Reverse friction is supplied in case cant binds and this prevents saw from being curved.

Let us quote you on saw mill equipment or repairs.

Our literature will interest you

"Everything for the saw mill, from the motive power to the trimmer"

**MOWRY & SONS, Gravenhurst, Ontario**

### "Dolphin"

is the belting to use in wet places. It is impervious to moisture and gives entire satisfaction. You can run it in water and the cement will hold fast. No rivets or sewing necessary. A water-proof belt in the full sense of the word. The cement is one of the most adhesive water-proofs known.

**We Solicit a Trial  
Order**

### "Black Diamond"

will do more work and easier than any other belt made. Give it a trial. Unequaled for Dynamos, Fans or any high speed machinery with small Pulleys. Does not require to be kept as tight as the regular Oak Belt.

# Dominion Timber Regulations

---

Licenses to cut timber on Dominion Lands in the Provinces of Manitoba, Saskatchewan, and Alberta, the Northwest Territories, within twenty miles on either side of the main line of the Canadian Pacific Railway in the Province of British Columbia, and in the tract of three and one-half million acres to be located by the Government in the Dominion in the Peace River district in the Province of British Columbia, lying east of the Rocky Mountains and adjoining the Province of Alberta, shall be disposed of by public auction at the office of the Dominion Timber Agent for the districts in which the berths are situated.

Before any parcel of timber is offered for sale it shall be surveyed by a duly qualified Dominion Land Surveyor into berths of an area not exceeding twenty-five square miles, and each of such berths shall then be thoroughly cruised by a duly qualified timber cruiser in the employ of the Dominion Government. The Minister shall then fix an upset price at which the berth shall be disposed of, and no berth shall be sold at less than the price so fixed.

Purchases to the amount of one thousand dollars or under shall be paid in cash at the time of sale. Purchases over one thousand dollars and not exceeding five thousand dollars shall be paid, one-half in cash at the time of sale, and a note or notes shall be given for the remaining half of the purchase price, payable in three months, with interest at the rate of five per cent. per annum. Purchases over five thousand dollars and not exceeding ten thousand dollars shall be paid one-third in cash at the time of sale, and notes shall be given for the remaining two-thirds of the purchase price, payable in three and six months, with interest at the rate of five per cent. per annum. Purchases exceeding ten thousand dollars shall be paid one-fourth in cash at time of sale, and notes shall be given for the remaining three-fourths of the purchase price, payable within three, six and nine months, with interest at the rate of five per cent. per annum. Notes shall be made payable at a bank in the city or town in which the sale is held or at a bank in the city of Ottawa. Cash payments must be made at the time of sale in legal tender or by an accepted cheque on a chartered bank, or by a draft issued by a chartered bank, payable to the order of the Deputy Minister of the Interior. If default is made in any payment required by this section the sale shall be forfeited and void.

The purchaser must also pay the cost or the estimated cost of the survey of the berth before a license is issued.

The licensee shall pay an annual ground rent of five dollars per square mile except for lands situated to the west of Yale, in the Province of British Columbia, in which case the yearly ground rent shall be five cents per acre.

The licensee shall pay the following dues on timber cut on his berth :—

Sawn lumber, 50 cents per thousand feet, board measure.

Railway ties, eight feet long,  $1\frac{1}{2}$  cents each.

Railway ties, nine feet long,  $1\frac{3}{4}$  cents each.

Shingle bolts, 25 cents per cord.

And 5 per cent. on the sale of all other products of the berth.

## Timber Permits

Yearly permits are granted to settlers, mine operators and others on application to the Dominion Timber Agents, from whom further information can be obtained.

**W. W. Cory,**

Deputy Minister.

Department of the Interior, Ottawa,

December 20th, 1912.

## We Sell "Service"— Not Simply Belting

For more than thirty years we have been selling Leviathan Belting on a make-good basis. We never cut prices or talk prices. Our guarantee is as fair and square as you can ask for. It protects the buyer.

We have ready to send you enough definite information concerning Leviathan Belting in your line of business, to convince you thoroughly that Leviathan Service gives you what you should get for your investment.

## Main Belting Company

MONTREAL of Canada, Limited TORONTO

# Merely Instances

Many years ago the great public domain of the lake states was offered by the federal government at \$1.25 an acre. Vast tracts of pine lands in the north have been sold since that time at \$150 to \$300 an acre.

Southern Pine Lands have increased in value from \$1.25 to \$100 an acre.

In ten years the hardwood lands of the north have increased in value from \$2.50 to \$5 an acre to \$20 to \$90 an acre.

Like gains will be disclosed by an examination of the history of timber values of any section.

We shall be pleased today to give you the history of timber land values in the section in which you may be interested.

1914 will usher in new influences. Make your investments this year and profit by the work of the new influences—make them work for you.

## HANCHETT New Hand Lap Grinders

**Hanchett Hand Lap Grinder**

**BUILT IN ALL SIZES**

The First Machine Designed Primarily as Hand Lap Grinder. All other lap grinders were designed as Automatic Lap Grinders and transformed to Hand Grinders by leaving off the automatic attachments. In this new lap grinder improvements are secured which greatly shorten the time required to grind a lap besides being more convenient and easier to operate.

We provide an adjustment for raising and lowering the emery-wheel, which is placed at the top of the machine and is controlled by a hand wheel which is under the hand of the operator while he is operating the carriage moving the emery-wheel back and forth across the saw. So that without changing his position or even moving his hand from one adjustment to another, the operator can change the adjustment so as to keep the emery-wheel in contact with the saw as the lap is ground down. In this way there is no time wasted in stopping to change adjustments, and the emery-wheel is kept in constant contact with the saw at any pressure desired. By the same adjustment the emery-wheel is quickly lowered to square the ends of the saw before grinding the lap.

This lap grinder is equipped with our improved saw table adjustment for moving the table out to square the ends of the saw before grinding the lap, or to inspect the lap in course of grinding. This adjustment is positive and will not wear loose. The table is always firmly held in position and perfectly rigid, and yet is easily released to move away from the emery-wheel by less than one-eighth turn of the hand wheel, and clamped at any point for inspecting or squaring the lap, and as easily returned. The pitch and height of the table are easily adjusted to grind a lap of any desired bevel or width.

The emery-wheel carriage runs on rollers so that the emery-wheel is moved back and forth across the saw with very little effort, and is much easier to operate than the ordinary hand lap grinders.

We also provide a hand wheel adjustment for tilting the track or ways on which the emery-wheel carriage runs, to insure that the emery-wheel shall always operate exactly parallel to the saw. This is a new adjustment which most filers who have had experience in grinding laps will appreciate. It insures equal grinding of the lap from end to end.

The improvements embodied in this construction put these machines in a class by themselves, and make the grinding of a lap by hand a very different operation from what it has always been heretofore. When a filer has familiarized himself with this machine we believe that within the time usually required to attach the saw to the older style automatic lap grinders and get the adjustments set ready to start the machine to grinding, he could have the lap practically completed on the new Hanchett Hand Lap Grinder.

DO YOU WANT  
**Belting Dependability**  
 IN YOUR MILL?

Do you want to insure your plant against transmission troubles—against stoppage—shut downs for repairs—continual power loss and inconvenience due to belts slipping?

**SPARTAN  
 LEATHER BELTING**

will solve for you these power transmission difficulties—will give you efficient service under abnormal conditions—will stand excessive strain, and at the same time absolutely insure you against expensive shutdowns and loss of time.

Spartan Belting is the result of sixty-two years' experience, and a steadfast determination to make the highest grade leather belting possible to produce.

Spartan is a special belt made from leather tanned particularly to withstand the effects of heat generated by excessive pulley friction, steam, water, oil, acid or gas fumes. It is especially adapted for hard service—adapted to the exacting demands of planers, matchers and other woodworking machinery—those demands which quickly ruin ordinary belts.

**The Only Belt of Its Kind on the Market**

There is no other belt like the Spartan, nor will there be while there is any premium on expert knowledge, on unlimited facilities and manufacturing experience.

In short, Spartan Belting means great pliability, instantaneous grip, less tension, and wonderful durability. It has the unqualified endorsement of thousands of users who did not know real belting efficiency until Spartan was put on the job.

Let us quote you for your next belting requirements—let us study the conditions under which your belts are to be used, and then recommend and furnish belts suited for the purpose.

# Have You Our Latest Catalogues ?

THE prestige attained by Waterous Sawmill Machinery is due to the fact that we have not been content to rest on our oars.

On the theory that the standard of to-day is not good enough for to-morrow—that to-day's "*best*" is to-morrow's "*good-enough*"—we have kept everlastingly plugging away.

As sawmill conditions have changed, our machines have been changed and redesigned to keep pace with them. For this

reason we have not published a general catalogue, but have issued small sized bulletins of each machine as we built it.

Assembled in a special binder these individual bulletins illustrate our complete line. **One of these binders is at your service.**

Tear out this page, write your name on the margin and send it to us—we will mail you our complete set of "Sawmill Machinery up-to-date." *You will find it the handiest reference volume on your shelf.*
